  - B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.
- 3.6 INSTALLATION OF ESCUTCHEONS
- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
  - B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
- 3.7 FIELD QUALITY CONTROL
- A. Sleeves and Sleeve Seals:
    1. Perform the following tests and inspections:
      - a. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.
      - b. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.
    2. Prepare test and inspection reports.

- B. Escutcheons:
  - 1. Using new materials, replace broken and damaged escutcheons and floor plates.

### 3.8 SLEEVES APPLICATION

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  - 1. Exterior Concrete Walls above and below Grade:
    - a. Sleeves with waterstops.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  - 2. Concrete Slabs-on-Grade:
    - a. Sleeves with waterstops.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  - 3. Concrete Slabs above Grade:
    - a. stack-sleeve fittings.
  - 4. Interior Walls and Partitions:
    - a. Sleeves without waterstops.

### 3.9 ESCUTCHEONS APPLICATION

- A. Escutcheons for New Piping and Relocated Existing Piping:
  - 1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
  - 2. Chrome-Plated Piping: One piece, cast brass with polished, chrome-plated finish.
  - 3. Insulated Piping:
    - a. One piece, cast brass with polished, chrome-plated finish.
  - 4. Bare Piping at Wall and Floor Penetrations in Finished Spaces:
    - a. One piece, cast brass with polished, chrome-plated finish.
  - 5. Bare Piping at Ceiling Penetrations in Finished Spaces:
    - a. One piece, cast brass with polished, chrome-plated finish.
  - 6. Bare Piping in Unfinished Service Spaces:
    - a. One piece, cast brass with polished, chrome-plated finish.
  - 7. Bare Piping in Equipment Rooms:
    - a. One piece, cast brass with polished, chrome-plated finish.
- B. Escutcheons for Existing Piping to Remain:
  - 1. Chrome-Plated Piping: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  - 2. Insulated Piping: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  - 3. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  - 4. Bare Piping at Ceiling Penetrations in Finished Spaces: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  - 5. Bare Piping in Unfinished Service Spaces: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  - 6. Bare Piping in Equipment Rooms: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
  - 1. New Piping and Relocated Existing Piping: One piece, floor plate.
  - 2. Existing Piping: Split floor plate.

END OF SECTION 21 05 00

## SECTION 21 05 23

### GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Two-piece ball valves with indicators.
  - 2. Bronze butterfly valves with indicators.
  - 3. Iron butterfly valves with indicators.
  - 4. Check valves.
  - 5. Bronze OS&Y gate valves.
  - 6. Iron OS&Y gate valves.
  - 7. NRS gate valves.
  - 8. Indicator posts.
  - 9. Trim and drain valves.

##### 1.2 DEFINITIONS

- A. NRS: Nonrising stem.
- B. OS&Y: Outside screw and yoke.
- C. SBR: Styrene-butadiene rubber.

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

##### 1.4 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
  - 1. Protect internal parts against rust and corrosion.
  - 2. Protect threads, flange faces, and weld ends.
  - 3. Set valves open to minimize exposure of functional surfaces.
- B. Use the following precautions during storage:
  - 1. Maintain valve end protection.
  - 2. Store valves indoors and maintain at higher-than-ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.
- D. Protect flanges and specialties from moisture and dirt.

#### PART 2 - PRODUCTS

##### 2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single manufacturer.

##### 2.2 PERFORMANCE REQUIREMENTS

- A. UL Listed: Valves shall be listed in UL's "Online Certifications Directory" under the headings listed below and shall bear UL mark:
  - 1. Fire Main Equipment: HAMV - Main Level.
    - a. Indicator Posts, Gate Valve: HCBZ - Level 1.
    - b. Ball Valves, System Control: HLUG - Level 3.
    - c. Butterfly Valves: HLXS - Level 3.
    - d. Check Valves: HMER - Level 3.
    - e. Gate Valves: HMRZ - Level 3.

2. Sprinkler System and Water Spray System Devices: VDG T - Main Level.
    - a. Valves, Trim and Drain: VQGU - Level 1.
  - B. FM Global Approved: Valves shall be listed in its "Approval Guide," under the headings listed below:
    1. Automated Sprinkler Systems:
      - a. Indicator posts.
      - b. Valves.
        - 1) Gate valves.
        - 2) Check valves.
        - 3) Miscellaneous valves.
  - C. ASME Compliance:
    1. ASME B1.20.1 for threads for threaded-end valves.
    2. ASME B16.1 for flanges on iron valves.
    3. ASME B31.9 for building services piping valves.
  - D. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
  - E. NFPA Compliance for Valves:
    1. Comply with NFPA 13, NFPA 14, NFPA 20, and NFPA 24.
  - F. Valve Pressure Ratings: Not less than the minimum pressure rating indicated or higher, as required by system pressures.
  - G. Valve Sizes: Same as upstream piping unless otherwise indicated.
  - H. Valve Actuator Types:
    1. Worm-gear actuator with handwheel for quarter-turn valves, except for trim and drain valves.
    2. Handwheel: For other than quarter-turn trim and drain valves.
    3. Handlever: For quarter-turn trim and drain valves NPS 2 and smaller.
- 2.3 TWO-PIECE BALL VALVES WITH INDICATORS
- A. Description:
    1. UL 1091, except with ball instead of disc and FM Global approved for indicating valves (butterfly or ball type), Class Number 1112.
    2. Minimum Pressure Rating: 175 psig.
    3. Body Design: Two piece.
    4. Body Material: Forged brass or bronze.
    5. Port Size: Full or standard.
    6. Seats: PTFE.
    7. Stem: Bronze or stainless steel.
    8. Ball: Chrome-plated brass.
    9. Actuator: Worm gear
    10. End Connections for Valves NPS 1 through NPS 2: Threaded ends.
    11. End Connections for Valves NPS 2-1/2: Grooved ends.
- 2.4 BRONZE BUTTERFLY VALVES WITH INDICATORS
- A. Description:
    1. Standard: UL 1091 and FM Global standard for indicating valves, (butterfly or ball type), Class Number 1112.
    2. Minimum: Pressure rating: 175 psig.
    3. Body Material: Bronze.
    4. Seat Material: EPDM.
    5. Stem Material: Bronze or stainless steel.
    6. Disc: Stainless steel with EPDM coating.
    7. Actuator: Worm gear.
    8. Ends Connections for Valves NPS 1 through NPS 2: Threaded ends.
    9. Ends Connections for Valves NPS 2-1/2: Grooved ends.
- 2.5 IRON BUTTERFLY VALVES WITH INDICATORS
- A. Description:
    1. Standard: UL 1091 and FM Global standard for indicating valves, (butterfly or ball type), Class Number 112.
    2. Minimum Pressure Rating: 175 psig.
    3. Body Material: Cast or ductile iron with nylon, EPDM, epoxy, or polyamide coating.

4. Seat Material: EPDM.
5. Stem: Stainless steel.
6. Disc: Ductile iron, nickel plated and EPDM or SBR coated.
7. Actuator: Worm gear.
8. Supervisory Switch: Internal or external.
9. Body Design: Grooved-end connections.

## 2.6 CHECK VALVES

### A. Description:

1. Standard: UL 312 and FM Global standard for swing check valves, Class Number 1210.
2. Minimum Pressure Rating: 175 psig.
3. Type: Single swing check.
4. Body Material: Cast iron, ductile iron, or bronze.
5. Clapper: Bronze, ductile iron, or stainless steel with elastomeric seal.
6. Clapper Seat: Brass, bronze, or stainless steel.
7. Hinge Shaft: Bronze or stainless steel.
8. Hinge Spring: Stainless steel.
9. End Connections: Flanged, grooved, or threaded.

## 2.7 BRONZE OS&Y GATE VALVES

### A. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Bronze or brass.
4. Wedge: One-piece bronze or brass.
5. Wedge Seat: Bronze.
6. Stem: Bronze or brass.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.
9. End Connections: Threaded.

## 2.8 IRON OS&Y GATE VALVES

### A. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Cast or ductile iron.
4. Wedge: Cast or ductile iron, or bronze with elastomeric coating.
5. Wedge Seat: Cast or ductile iron, or bronze with elastomeric coating.
6. Stem: Brass or bronze.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.
9. End Connections: Flanged.

## 2.9 NRS GATE VALVES

### A. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Cast or ductile iron.
4. Wedge: Cast or ductile iron with elastomeric coating.
5. Wedge Seat: Cast or ductile iron, or bronze with elastomeric coating.
6. Stem: Brass or bronze.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.

## 2.10 INDICATOR POSTS

### A. Description:

1. Standard: UL 789 and FM Global standard for indicator posts.

2. Type: Underground, Pit, Upright.
3. Base Barrel Material: .
4. Extension Barrel: Cast or ductile iron.
5. Cap: Cast or ductile iron.
6. Operation: Wrench.

## 2.11 TRIM AND DRAIN VALVES

### A. Ball Valves:

1. Description:
  - a. Pressure Rating: 175 psig.
  - b. Body Design: Two piece.
  - c. Body Material: Forged brass or bronze.
  - d. Port size: Full or standard.
  - e. Seats: PTFE.
  - f. Stem: Bronze or stainless steel.
  - g. Ball: Chrome-plated brass.
  - h. Actuator: Handlever.
  - i. End Connections for Valves NPS 1 through NPS 2-1/2: Threaded ends.
  - j. End Connections for Valves NPS 1-1/4 and NPS 2-1/2: Grooved ends.

### B. Angle Valves:

1. Description:
  - a. Pressure Rating: 175 psig.
  - b. Body Material: Brass or bronze.
  - c. Ends: Threaded.
  - d. Stem: Bronze.
  - e. Disc: Bronze.
  - f. Packing: Asbestos free.
  - g. Handwheel: Malleable iron, bronze, or aluminum.

### C. Globe Valves:

1. Description:
  - a. Pressure Rating: 175 psig.
  - b. Body Material: Bronze with integral seat and screw-in bonnet.
  - c. Ends: Threaded.
  - d. Stem: Bronze.
  - e. Disc Holder and Nut: Bronze.
  - f. Disc Seat: Nitrile.
  - g. Packing: Asbestos free.
  - h. Handwheel: Malleable iron, bronze, or aluminum.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.2 INSTALLATION, GENERAL

- A. Comply with requirements in the following Sections for specific valve-installation requirements and applications:
  - 1. Section 21 10 00 "Water-Based Fire-Suppression Systems" for application of valves in fire-suppression standpipes; wet-pipe, fire-suppression sprinkler systems; and dry-pipe, fire-suppression sprinkler systems.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply, except from fire-department connections. Install permanent identification signs, indicating portion of system controlled by each valve.
- C. Install double-check valve assembly in each fire-protection water-supply connection.
- D. Install valves having threaded connections with unions at each piece of equipment arranged to allow easy access, service, maintenance, and equipment removal without system shutdown. Provide separate support where necessary.
- E. Install valves in horizontal piping with stem at or above the pipe center.
- F. Install valves in position to allow full stem movement.
- G. Install valve tags. Comply with requirements in Section 21 05 53 "Identification for Fire-Suppression Piping and Equipment" for valve tags and schedules and signs on surfaces concealing valves; and the NFPA standard applying to the piping system in which valves are installed. Install permanent identification signs indicating the portion of system controlled by each valve.

END OF SECTION 21 05 23

## SECTION 21 05 29

### HANGERS AND SUPPORTS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Pipe hangers and supports for fire-suppression piping - metal.
  - 2. Pipe hangers for fire-suppression piping - metal, trapeze type.
  - 3. Thermal Hanger Shield Inserts
  - 4. Fastener systems.
  - 5. Equipment supports.

##### 1.2 ACTION SUBMITTALS

- A. Product Data:
  - 1. For each type of product.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following:
  - 1. Trapeze pipe hangers.
  - 2. Equipment supports.
- C. Delegated Design Submittals: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Detail fabrication and assembly of trapeze hangers.
  - 2. Include design calculations for designing trapeze hangers.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

##### 1.4 QUALITY ASSURANCE

- A. Structural-Steel Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
- B. Pipe Welding Qualifications: Qualify procedures and operators in accordance with 2021 ASME Boiler and Pressure Vessel Code, Section IX.

#### PART 2 - PRODUCTS

##### 2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design trapeze pipe hangers and equipment supports.
- B. Structural Performance: Hangers and supports for fire-suppression piping and equipment are to withstand the effects of gravity loads and stresses within limits and under conditions indicated in accordance with ASCE/SEI 7.
  - 1. Design supports for multiple pipes, including pipe stands capable of supporting combined weight of supported systems, system contents, and test water.
  - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- C. NFPA Compliance: Comply with NFPA 13.
- D. UL Compliance: Comply with UL 203.

2.2 PIPE HANGERS AND SUPPORTS FOR FIRE-SUPPRESSION PIPING - METAL

- A. Pipe Hangers and Supports for Fire-Suppression Piping - Carbon Steel:
  - 1. Description: Factory-fabricated components, NFPA approved, UL listed, or FM Global approved for fire-suppression piping support.
  - 2. Galvanized Metallic Coatings: Pregalvanized or hot-dip galvanized.
  - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.

2.3 PIPE HANGERS FOR FIRE-SUPPRESSION PIPING - METAL, TRAPEZE TYPE

- A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly, made from structural-carbon-steel shapes, with NFPA-approved, UL-listed, or FM Global-approved carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.4 FASTENER SYSTEMS

- A. Fastener System - NFPA/UL/FM Powder-Actuated Fasteners: NFPA-approved, UL-listed, or FM Global-approved threaded-steel stud, for use in hardened portland cement concrete, with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- B. Fastener System - NFPA/UL/FM Mechanical-Expansion Anchors: NFPA-approved, UL-listed, or FM Global-approved, insert-wedge-type anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
  - 1. Indoor Applications: Zinc coated or Stainless.
  - 2. Outdoor Applications: Stainless steel.

2.5 EQUIPMENT SUPPORTS

- A. Description: NFPA-approved, UL-listed, or FM Global-approved, welded, shop- or field-fabricated equipment support, made from structural-carbon-steel shapes.

2.6 MATERIALS

- A. Aluminum: ASTM B221.
- B. Carbon Steel: ASTM A1011/A1011M.
- C. Structural Steel: ASTM A36/A36M, carbon-steel plates, shapes, and bars; black and galvanized.
- D. Stainless Steel: ASTM A240/A240M.
- E. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout, suitable for interior and exterior applications.
  - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
  - 2. Design Mix: 5000 psi, 28-day compressive strength.

**PART 3 - EXECUTION**

3.1 APPLICATION

- A. Comply with requirements in Section 07 84 13 "Penetration Firestopping" for firestopping materials and installation, for penetrations through fire-rated walls, ceilings, and assemblies.
- B. Strength of Support Assemblies: Where not indicated, select sizes of components, so strength will be adequate to carry static loads within specified loading limits. Minimum static design load used for strength determination is to comply with NFPA 13 requirements, minimum 5 times the water-filled weight of piping and supported components plus 250 lb.

3.2 INSTALLATION OF HANGERS AND SUPPORTS

- A. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, permit freedom of movement between pipe anchors, and facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- B. Install lateral bracing with pipe hangers and supports to prevent swaying.
- C. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Coordinate location of concrete inserts before concrete is placed.

- D. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
  - E. Pipe Slopes: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
  - F. Metal Pipe-Hanger Installation: Comply with installation requirements of approvals and listings. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.
  - G. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
    - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size, or install intermediate supports for smaller-diameter pipes as specified for individual pipe hangers.
    - 2. Field fabricate from ASTM A36/A36M carbon-steel shapes selected for loads being supported. Weld steel in accordance with AWS D1.1/D1.1M.
  - H. Thermal Hanger-Shield Installation: Install in pipe hanger or shield for insulated piping.
  - I. Fastener System Installation:
    - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete, after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners in accordance with powder-actuated tool manufacturer's operating manual. Install in accordance with approvals and listings.
    - 2. Install mechanical-expansion anchors in concrete, after concrete is placed and completely cured. Install fasteners in accordance with manufacturer's written instructions. Install in accordance with approvals and listings.
  - J. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
  - K. Equipment Support Installation:
    - 1. Fabricate from welded-structural-steel shapes.
    - 2. Grouting: Place grout under supports for floor-mounted equipment and make bearing surface smooth.
    - 3. Provide lateral bracing, to prevent swaying.
- 3.3 INSTALLATION OF EQUIPMENT SUPPORTS
- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
  - B. Grouting: Place grout under supports for equipment, and make bearing surface smooth.
  - C. Provide lateral bracing, to prevent swaying, for equipment supports.
- 3.4 METAL FABRICATIONS
- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
  - B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
  - C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
    - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
    - 2. Obtain fusion without undercut or overlap.
    - 3. Remove welding flux immediately.
    - 4. Finish welds at exposed connections, so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.
- 3.5 ADJUSTING
- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
  - B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.
- 3.6 PAINTING
- A. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas, and apply galvanizing-repair paint to comply with ASTM A780/A780M.

3.7 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with NFPA requirements for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finishes.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports and metal trapeze pipe hangers and attachments for general service applications.
- F. Use stainless steel pipe hangers and stainless steel or corrosion-resistant attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.
- H. Use thermal hanger-shield inserts for insulated piping and tubing.
- I. Horizontal-Piping Hangers and Supports: Comply with NFPA requirements. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
  - 2. Steel Pipe Clamps (MSS Type 4): For suspension of NPS 1/2 to NPS 24 if little or no insulation is required.
  - 3. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  - 4. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.
  - 5. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
  - 6. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
  - 7. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  - 8. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  - 9. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
- J. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
  - 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- K. Hanger-Rod Attachments: Comply with NFPA requirements.
- L. Building Attachments: Comply with NFPA requirements. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Steel or Malleable-Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  - 2. C-Clamps (MSS Type 23): For structural shapes.
  - 3. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
- M. Saddles and Shields: Comply with NFPA requirements. Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  - 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  - 3. Thermal Hanger-Shield Inserts: For supporting insulated pipe.
- N. Comply with NFPA requirements for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

- O. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

END OF SECTION 21 05 29

## SECTION 21 05 53

### IDENTIFICATION FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Warning tape
  - 4. Pipe labels.
  - 5. Valve tags.
  - 6. Warning tags.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment-Label Schedule: Include a listing of all equipment to be labeled and the proposed content for each label.
- D. Valve-numbering scheme.
- E. Valve Schedules: Provide for fire-suppression piping system. Include in operation and maintenance manuals.

#### PART 2 - PRODUCTS

##### 2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
  - 1. Material and Thickness: Brass, 0.032 inch thick, with predrilled or stamped holes for attachment hardware.
  - 2. Letter and Background Color: As indicated for specific application under Part 3.
  - 3. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - 4. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  - 5. Fasteners: Stainless steel rivets or self-tapping screws.
  - 6. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.

##### 2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Maximum Temperature: Able to withstand temperatures of up to 160 deg F.
- D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

- F. Fasteners: Stainless steel rivets or self-tapping screws.
- G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- H. Arc-Flash Warning Signs: Provide arc-flash warning signs in locations and with content in accordance with requirements of OSHA and NFPA 70E, and other applicable codes and standards.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

### 2.3 WARNING TAPE

- A. Material: Vinyl.
- B. Minimum Thickness: 0.005 inch.
- C. Letter, Pattern, and Background Color: As indicated for specific application under Part 3.
- D. Waterproof Adhesive Backing: Suitable for indoor or outdoor use.
- E. Maximum Temperature: 160 deg F.
- F. Minimum Width: 2 inches.

### 2.4 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color coded, with lettering indicating service and showing flow direction in accordance with ASME A13.1.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings. Also include the following:
  - 1. Pipe size.
  - 2. Flow-Direction Arrows: Include flow-direction arrows on main distribution piping. Arrows may be either integral with label or applied separately.
  - 3. Lettering Size: Size letters in accordance with ASME A13.1 for piping.

### 2.5 VALVE TAGS

- A. Description: Stamped or engraved with 1/4-inch letters for piping-system abbreviation and 1/2-inch numbers.
  - 1. Tag Material: Brass, 0.04 inch thick, with predrilled or stamped holes for attachment hardware.
  - 2. Fasteners: Brass wire or S-hook.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  - 1. Include valve-tag schedule in operation and maintenance data.

### 2.6 WARNING TAGS

- A. Description: Preprinted accident-prevention tags, of plasticized card stock.
  - 1. Size: Approximately 4 by 7 inches.
  - 2. Fasteners: Brass grommet and wire.
  - 3. Nomenclature: Large-size primary caption, such as "DANGER," "CAUTION," or "DO NOT OPERATE."
  - 4. Letter and Background Color: As indicated for specific application under Part 3.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

3.2 INSTALLATION GENERAL REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be installed.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.
- D. Locate identifying devices so that they are readily visible from the point of normal approach.

3.3 INSTALLATION OF EQUIPMENT LABELS, WARNING SIGNS, AND LABELS

- A. Permanently fasten labels on each item of fire-suppression equipment.
- B. Sign and Label Colors:
  - 1. White letters on an ANSI Z535.1 safety-red background.
- C. Locate equipment labels where accessible and visible.
- D. Arc-Flash Warning Signs: Provide arc-flash warning signs on electrical disconnects and other equipment where arc-flash hazard exists, as indicated on Drawings, and in accordance with requirements of OSHA and NFPA 70E, and other applicable codes and standards.

3.4 INSTALLATION OF WARNING TAPE

- A. Warning Tape Color and Pattern: Yellow background with black diagonal stripes.
- B. Install warning tape on pipes and ducts, with cross-designated walkways providing less than 6 ft. of clearance.
- C. Locate tape so as to be readily visible from the point of normal approach.

3.5 INSTALLATION OF PIPE LABELS

- A. Install pipe labels showing service and flow direction with permanent adhesive on pipes.
- B. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Within 3 ft. of each valve and control device.
  - 2. At access doors, manholes, and similar access points that permit a view of concealed piping.
  - 3. Within 3 ft. of equipment items and other points of origination and termination.
  - 4. Spaced at maximum intervals of 25 ft. along each run. Reduce intervals to 10 ft. in areas of congested piping and equipment.
- C. Flow- Direction Arrows: Provide arrows to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
- D. Fire-Suppression Pipe Label Color Schedule:
  - 1. Fire-Suppression Pipe Labels: White letters on an ANSI Z535.1 safety-red background.

3.6 INSTALLATION OF VALVE TAGS

- A. Install tags on valves and control devices in fire-suppression piping systems. List tagged valves in a valve-tag schedule in the operating and maintenance manual. Include the identification "FSV" on all fire-suppression system valve tags.

3.7 INSTALLATION OF WARNING TAGS

- A. Warning Tag Color: Black letters on an ANSI Z535.1 safety-yellow background.
- B. Attach warning tags, with proper message, to equipment and other items where required.

END OF SECTION 21 05 53

## SECTION 21 10 00

### WATER-BASED FIRE-SUPPRESSION SYSTEMS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Fire-suppression piping, fittings, and appurtenances.
  - 2. Fire department connections.
  - 3. Hose connections and hose stations.
  - 4. System control valves.
  - 5. Fire-suppression piping specialties.
  - 6. Cover systems for sprinkler piping.
  - 7. Sprinklers.
  - 8. Alarm devices.
  - 9. Manual control stations.
  - 10. Control panels.
  - 11. Pressure gauges.

##### 1.2 DEFINITIONS

- A. Standard-Pressure Fire-Suppression System Piping: Piping designed to operate at working pressure of 175 psig maximum.

##### 1.3 ACTION SUBMITTALS

- A. Product Data:
  - 1. For each type of product.
    - a. Include construction details, material descriptions, dimensions of individual components and profiles.
    - b. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
  - 1. Prepare in accordance with NFPA 13 section "Working Plans."
    - a. Include plans, elevations, and sections of the system piping and details.
    - b. Include detailed riser diagram and schematic diagram showing system supply, supply connection, devices, valves, pipe and fittings, as well as the delineation of the standard-pressure and high-pressure portions of the fire-suppression system.
    - c. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Prepare computer-generated hydraulic calculations in accordance with the following:
    - a. Minimum operating pressure at hydraulically most remote fire hose valve is to be 65 psig.
    - b. Water supply information, including fire hydrant flow test data report.
  - 3. Submit documents and calculations prepared by NICET Level III-certified technician, "Water-Based Systems Layout."
  - 4. Include diagrams for power, signal, and control wiring.
  - 5. Delegated Design Submittals: For fire-suppression systems indicated to comply with performance requirements and design criteria, including analysis data prepared by NICET Level III-certified technician, "Water-Based Systems Layout."

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Fire-suppression system plans and sections, or Building Information Model (BIM), drawn to scale, showing the items described in this Section and coordinated with all building trades.
- B. Qualification Data: For qualified Installer and NICET-certified technician.
- C. Design Data: Approved fire-suppression piping working plans, prepared in accordance with NFPA 13, including documented approval by AHJs, and including hydraulic calculations if applicable.

- D. Welding certificates.
  - E. Field Test Reports:
    - 1. Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
    - 2. Fire-hydrant flow test report.
  - F. Field quality-control reports.
- 1.5 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For fire-suppression systems and specialties to include in emergency, operation, and maintenance manuals.
- 1.6 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
    - 1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.
    - 2. System control valves.
- 1.7 QUALITY ASSURANCE
- A. Installer Qualifications:
    - 1. Installer's responsibilities include designing, fabricating, and installing fire-suppression systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
      - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by NICET Level III-certified technician, "Water-Based Systems Layout."
  - B. Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code.
- 1.8 FIELD CONDITIONS
- A. Interruption of Existing Fire-Suppression Service: Do not interrupt fire-suppression service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fire-suppression service in accordance with requirements indicated:
    - 1. Notify Construction Manager and Owner no fewer than seven days in advance of proposed interruption of fire-suppression service.
    - 2. Do not proceed with interruption of fire-suppression service without Owner's written permission.

## **PART 2 - PRODUCTS**

- 2.1 SYSTEM DESCRIPTION
- A. Automatic wet-type, Class III standpipe system.
  - B. Automatic wet-pipe sprinkler system.
  - C. Automatic deluge sprinkler system.
- 2.2 PERFORMANCE REQUIREMENTS
- A. Fire-Suppression System Components, Devices, and Accessories: Listed in UL's "Fire Protection Equipment Directory" and FM Approvals' "Approval Guide."
  - B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - C. Fire-suppression system equipment, specialties, accessories, installation, and testing to comply with NFPA 13 and ASME A17.1.
  - D. Standard-Pressure Piping System Component: Listed for 175 psig minimum working pressure.

- E. Delegated Design: Engage a NICET Level III-certified technician, "Water-Based Systems Layout" to design fire-suppression systems.
1. Fire-Hydrant Flow Test:
    - a. Available fire-hydrant flow test records indicate the following conditions:
      - 1) Date: 12/13/2022.
      - 2) Time: 8:30 a.m.
      - 3) Performed by: Charles Nelson of Service Fire.
      - 4) Location of Residual Fire Hydrant R: Back of school on the curb north of Accessible Parking spaces.
      - 5) Location of Flow Fire Hydrant F: Supply hydrant on North Access Road around the school.
      - 6) Static Pressure at Residual Fire Hydrant R: 76 psig.
      - 7) Measured Flow at Flow Fire Hydrant F: 1130 gpm.
      - 8) Residual Pressure at Residual Fire Hydrant R: 58 psig.
    - b. Fire-hydrant flow test must be performed within previous 12 months prior to completion of design documents and hydraulic calculations.
  2. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
  3. Sprinkler Occupancy Hazard Classifications:
    - a. Educational: Light Hazard.
    - b. Electrical Equipment Rooms: Ordinary Hazard, Group 1.
    - c. Elevator Machine Room and Hoistway: Ordinary Hazard, Group 1.
    - d. Exterior Loading Docks, Only Handling Ordinary Combustibles: Ordinary Hazard, Group 2.
    - e. General Storage Areas: Ordinary Hazard, Group 1.
    - f. Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
    - g. Offices, including Data Processing: Light Hazard.
    - h. Stages: Ordinary Hazard, Group 2.
    - i. Theaters and Auditoriums, excluding Stages and Prosceniums: Light Hazard.
  4. Minimum Density for Automatic-Sprinkler Piping Design:
    - a. Light-Hazard Occupancy: 0.10 gpm/sq. ft. over 1500 sq. ft. area.
    - b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm/sq. ft. over 1500 sq. ft. area.
    - c. Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm/sq. ft. over 1500 sq. ft. area.
  5. Minimum Density for Deluge-Sprinkler Piping Design:
    - a. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm/sq. ft. over entire area.
    - b. Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm/sq. ft. over entire area.
  6. Maximum protection area per sprinkler in accordance with UL listing.
  7. Maximum Protection Area per Sprinkler:
    - a. Office Spaces: 120 sq. ft.
    - b. Storage Areas: 130 sq. ft.
    - c. Mechanical Equipment Rooms: 130 sq. ft.
    - d. Electrical Equipment Rooms: 130 sq. ft.
    - e. Other Areas: In accordance with NFPA 13 recommendations unless otherwise indicated.
  8. Total Combined Hose-Stream Demand Requirement: In accordance with NFPA 13 unless otherwise indicated:
    - a. Light-Hazard Occupancies: 100 gpm for 30 minutes.
    - b. Ordinary-Hazard Occupancies: 250 gpm for 60 to 90 minutes.
  9. Minimum residual pressure at each hose-connection outlet is as follows:
    - a. NPS 1-1/2 (DN 40) Hose Connections: 65 psig.
- F. Obtain documented approval of fire-suppression system design from AHJs.

### 2.3 FIRE-SUPPRESSION PIPING, FITTINGS, AND APPURTENANCES

- A. Steel Pipe, Fittings, and Appurtenances:
1. Schedule 40 Steel Pipe: black-steel pipe, ASTM A53/A53M, ASTM A135/A135M, or ASTM A795/A795M.
    - a. Standards:
      - 1) UL 852.
      - 2) FM 1630.
    - b. Factory-applied exterior coating.
    - c. Factory-applied bacterial-resistant internal coating to reduce microbiologically influenced corrosion.
    - d. Pipe ends may be factory or field formed to match joining method.

2. Schedule 10 Steel Pipe: black-steel pipe, ASTM A53/A53M, ASTM A135/A135M, or ASTM A795/A795M.
    - a. Standards:
      - 1) UL 852.
      - 2) FM 1630.
    - b. Factory-applied exterior coating.
    - c. Factory-applied bacterial resistant internal coating to reduce microbiologically influenced corrosion.
    - d. Pipe ends may be factory or field formed to match joining method.
  3. Steel Pipe Nipples: black steel, ASTM A733, made of ASTM A53/A53M, standard-weight, seamless steel pipe with threaded ends.
  4. Steel Couplings: Galvanized and uncoated steel, ASTM A865/A865M, threaded.
  5. Gray-Iron Threaded Fittings: Galvanized and uncoated gray-iron threaded fittings, ASME B16.4, Class 125, standard pattern.
  6. Malleable- or Ductile-Iron Unions: ASME B16.3.
  7. Cast-Iron Flanges: ASME B16.1, Class 125.
  8. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
    - a. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic and asbestos free or EPDM rubber gasket.
      - 1) Class 125 and Class 250, Cast-Iron, Flat-Face Flanges: Full-face gaskets.
      - 2) Class 150 and Class 300, Ductile-Iron or -Steel, Raised-Face Flanges: Ring-type gaskets.
    - b. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1 carbon steel unless otherwise indicated.
  9. Steel Welding Fittings: ASTM A234/A234M and ASME B16.9.
    - a. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
  10. Plain-End-Pipe Fittings:
    - a. Pressure Rating: 175 psig minimum.
    - b. Plain-End Fittings for Steel Piping: Galvanized plain-end fittings, ASTM A53/A53M, carbon steel or ASTM A106/A106M, forged steel with dimensions matching steel pipe.
    - c. Plain-End-Pipe Couplings for Steel Piping: Rigid pattern for steel-pipe dimensions, ductile-iron or malleable-iron housing. Include EPDM-rubber gasket, and bolts and nuts.
  11. Grooved-Joint, Steel-Pipe Appurtenances:
    - a. Pressure Rating: 175 psig minimum.
    - b. Grooved-End Fittings for Steel Piping: Galvanized grooved-end fittings, ASTM A47/A47M, malleable-iron casting or ASTM A536, ductile-iron casting, with dimensions matching steel pipe.
    - c. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213 rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.
  12. Carbon Steel Pressure-Seal Fittings: UL 213, FM Approvals-approved, 175 psig pressure rating with carbon steel-, zinc-nickel-coated housing, EDPM O-rings, and pipe stop; for use with fitting manufacturers' pressure-seal tools.
- B. Stainless Steel Pipe, Fittings, and Appurtenances:
1. Stainless Steel Pipe: ASTM A312/A312M, Type 316/316L, Schedule 10S, dimensions conforming to ASME B36.19M.
  2. Stainless Steel Pipe Fittings: ASTM A403/A403M.
  3. Fittings for Grooved-End, Stainless Steel Pipe:
    - a. Source Limitations: Obtain appurtenance for grooved-end, stainless steel pipe from single manufacturer.
    - b. Fittings for Grooved-End, Stainless Steel Pipe: Stainless steel casting with dimensions matching stainless steel pipe.
  4. Mechanical Couplings for Grooved-End, Stainless Steel Pipe:
    - a. AWWA C606 for stainless steel pipe dimensions.
    - b. Stainless steel housing sections.
    - c. Stainless steel bolts and nuts.
    - d. EPDM-rubber gaskets suitable for hot and cold water.
    - e. Minimum Pressure Rating:
      - 1) NPS 8 (DN 200) and Smaller: 600 psig.
      - 2) NPS 10 and NPS 12 (DN 250 to DN 300): 400 psig.
      - 3) NPS 14 to NPS 24 (DN 350 to DN 600): 250 psig.

5. Stainless Steel Piping, Pressure-Seal-Joint Fittings:
    - a. Source Limitations: Obtain pressure-seal-joint fittings from single manufacturer.
    - b. Material: Type 316 stainless steel, ASTM A312/A312M.
    - c. Fittings: Type 316 stainless steel with EPDM O-ring seal in each end, and FM approved for fire protection applications.
  - C. Copper Tube, Fittings, and Appurtenances:
    1. Copper Tube, Drawn Temper: ASTM B88, Type K.
    2. Solder-Joint Fittings, Cast Copper: ASME B16.18 pressure fittings.
    3. Solder-Joint Fittings, Wrought Copper: ASME B16.22 pressure fittings.
    4. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
    5. Unions, Cast Copper: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces and solder-joint or threaded ends.
    6. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
    7. Copper Tube, Mechanically Formed Tee Fitting: For forming T-branch on copper water tube.
      - a. Description: Tee formed in copper tube in accordance with ASTM F2014.
    8. Grooved, Mechanical-Joint, Copper-Tube Appurtenances:
      - a. Standard: UL 213.
      - b. Grooved-End Copper Fittings: ASTM B75/B75M copper tube or ASTM B584 bronze castings.
      - c. Grooved-End-Tube Couplings: To fit copper tube dimensions; rigid pattern unless otherwise indicated; gasketed fitting EPDM-rubber gasket rated for minimum 180 deg F for use with ferrous housing and steel bolts and nuts; 300 psig minimum CWP pressure rating.
    9. Copper-Tube, Pressure-Seal-Joint Fittings:
      - a. Fittings: Cast brass, cast bronze, or wrought copper with EPDM O-ring seal in each end.
      - b. Minimum 200 psig working-pressure rating at 250 deg F.
  - D. CPVC Pipe, Fittings, and Appurtenances:
    1. CPVC Pipe: ASTM F442/F442M and UL 1821, SDR 13.5, for 175 psig rated pressure at 150 deg F, with plain ends. Include "LISTED" and "CPVC SPRINKLER PIPE" markings.
    2. CPVC Fittings: UL listed or FM Approvals approved, for 175 psig rated pressure at 150 deg F, socket type. Include "LISTED" and "CPVC SPRINKLER FITTING" markings.
      - a. NPS 3/4 to NPS 1-1/2 (DN 20 to DN 40): ASTM F438 and UL 1821, Schedule 40, socket type.
      - b. NPS 2 to NPS 3 (DN 50 to DN 80): ASTM F439 and UL 1821, Schedule 80, socket type.
      - c. CPVC-to-Metal Transition Fittings: CPVC, one piece, with dimensions equivalent to pipe; one end with threaded brass insert, and one socket end.
      - d. CPVC-to-Metal Transition Unions: CPVC, with dimensions equivalent to pipe; one end with threaded brass insert, and one socket end.
      - e. Flanges: CPVC, one or two pieces.
    3. Solvent Cements for Joining CPVC Piping and Tubing: ASTM F493 solvent cement recommended by pipe and fitting manufacturer, and made for joining CPVC sprinkler pipe and fittings. Include cleaner or primer recommended by pipe and fitting manufacturer.
    4. Plastic Pipe-Flange Gasket and Bolts and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.
- 2.4 FIRE DEPARTMENT CONNECTIONS
- A. Fire Department Connection, Exposed Type:
    1. Standard: UL 405.
    2. Description: Exposed, projecting, for wall mounting.
    3. Pressure Rating: 175 psig minimum.
    4. Body Material: Corrosion-resistant metal.
    5. Inlets: Brass with threads in accordance with NFPA 1963 and matching local fire department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
    6. Caps: Brass, lugged type, with gasket and chain.
    7. Escutcheon Plate: Round, brass, wall type.
    8. Outlet: Back, with pipe threads.
    9. Number of Inlets: Two.
    10. Escutcheon Plate Marking

11. Finish: Polished chrome plated.
12. Outlet Size: NPS 4.

B. Fire Department Connection, Yard Type:

1. Standard: UL 405.
2. Description: Exposed, freestanding.
3. Pressure Rating: 175 psig minimum.
4. Body Material: Corrosion-resistant metal.
5. Inlets: Brass with threads in accordance with NFPA 1963 and matching local fire department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
6. Caps: Brass, lugged type, with gasket and chain.
7. Escutcheon Plate: Round, brass, floor type.
8. Outlet: Bottom, with pipe threads.
9. Number of Inlets: Two (2).

2.5 HOSE CONNECTIONS AND HOSE STATIONS

A. Hose Connections, Adjustable Valve:

1. Standards:
  - a. UL 668.
  - b. UL 1468.
2. Description: Fire hose valve, with integral reducing or restricting pressure-control device, for connecting fire hose.
3. Pressure Rating: 175 psig maximum inlet.
4. Material: Brass or bronze.

B. Hose Connections, Nonadjustable Valve:

1. Standard: UL 668.
2. Description: Fire hose valve for connecting fire hose.
3. Pressure Rating: 300 psig minimum.
4. Material: Brass or bronze.

2.6 SYSTEM CONTROL VALVES

A. Listed in UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."

B. Pressure Rating:

1. Standard-Pressure Piping Valves: 175 psig minimum.

C. Body Material: Cast or ductile iron.

D. Size: Same as connected piping.

E. End Connections: Flanged or grooved.

F. System Control Valve, Alarm Valve:

1. Standard: UL 193.
2. Design: For horizontal or vertical installation.
3. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gauges, and fill-line attachment with strainer.
4. Drip cup assembly pipe drain

G. System Control Valve, Dry-Pipe Valve:

1. Standards:
  - a. UL 260.
  - b. UL 1486.
2. Design: Differential-pressure type.
3. Include quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gauges, priming chamber attachment, and fill-line attachment.
4. Air Compressor for Dry-Pipe Valve:
  - a. Motor Horsepower: Fractional.
  - b. Power: 120 V ac, 60 Hz, single phase.
  - c. Sized for application and capable of achieving system supervisory pressure within 30 minutes in accordance with requirements of NFPA standards. Provide ASME air receiver tank as required to meet requirements on larger systems.
  - d. Include filters, relief valves, coolers, automatic drains, and gauges.

- H. System Control Valve, Deluge Valve:
  - 1. Standard: UL 260.
  - 2. Design: Hydraulically operated, differential-pressure type.
  - 3. Include trim sets for alarm-test bypass, drain, electrical water-flow alarm switch, pressure gauges, drip cup assembly piped without valves and separate from main drain line, and fill-line attachment with strainer.
  - 4. Wet, Pilot-Line Trim Set: Include gauge to read diaphragm-chamber pressure and manual control station for manual operation of deluge valve, and connection for actuation device.

## 2.7 FIRE-SUPPRESSION PIPING SPECIALTIES

- A. Branch Outlet Fittings:
  - 1. Standard: UL 213.
  - 2. Pressure Rating: 175 psig minimum.
  - 3. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
  - 4. Type: Mechanical-tee and -cross fittings.
- B. Flow Detection and Test Assemblies:
  - 1. Standard: UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."
  - 2. Pressure Rating: 175 psig minimum.
  - 3. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
  - 4. Size: Same as connected piping.
  - 5. Inlet and Outlet: Threaded or grooved.
- C. Sprinkler Inspector's Test Fittings:
  - 1. Standard: UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."
  - 2. Pressure Rating: 175 psig minimum.
  - 3. Body Material: Cast- or ductile-iron housing with sight glass.
  - 4. Size: Same as connected piping.
  - 5. Inlet and Outlet: Threaded.
- D. Flexible Sprinkler Hose Fittings:
  - 1. Standards:
    - a. UL 2443.
    - b. FM 1637.
  - 2. Description: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
  - 3. Pressure Rating: 175 psig minimum.
  - 4. Size: Same as connected piping, for sprinkler.
- E. Automatic (Ball-Drip) Drain Valves:
  - 1. Pressure Rating: 175 psig minimum.
  - 2. Type: Automatic draining, ball check.
  - 3. Size: NPS 3/4.
  - 4. End Connections: Threaded.

## 2.8 COVER SYSTEMS FOR SPRINKLER PIPING

- A. Cover System, Extruded PVC:
  - 1. Description: System of support brackets and covers designed to protect sprinkler piping.
  - 2. Brackets: Per cover manufacturer.
  - 3. Covers: Factory-fabricated extruded-PVC cover with concealed attachment clips.

## 2.9 SPRINKLERS

- A. Standards:
  - 1. UL 199.
  - 2. UL 1767.
  - 3. UL 1626.
- B. Listed in UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."
- C. Pressure Rating for Sprinklers:
  - 1. Standard Automatic Sprinklers: 175 psig minimum.

- D. Sprinklers, Automatic Wet with Heat-Responsive Element:
    - 1. Characteristics: Nominal 1/2-inch orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
    - 2. Standard Spray, Quick Response:
      - a. Upright.
      - b. Pendent.
      - c. Recessed pendent.
      - d. Flat, concealed pendent.
      - e. Vertical sidewall.
      - f. Horizontal sidewall.
      - g. Flat, concealed horizontal sidewall.
  - E. Sprinkler Finishes: bronze.
  - F. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
    - 1. Ceiling Mounting: Chrome-plated steel, one piece, flat.
    - 2. Sidewall Mounting: Chrome-plated steel, one piece, flat.
  - G. Sprinkler Guards and Water Shields:
    - 1. Standard: UL 199.
    - 2. Description: Wire cage with fastening device for attaching to sprinkler.
- 2.10 ALARM DEVICES
- A. Match alarm-device material and connection types to piping and equipment materials and connection types.
  - B. Water-Motor-Operated Alarm:
    - 1. Standard: UL 753.
    - 2. Type: Mechanically operated, with Pelton wheel.
    - 3. Alarm Gong: Cast aluminum with red-enamel factory finish.
    - 4. Size: 8-1/2-inch or 10-inch diameter.
    - 5. Components: Shaft length, bearings, and sleeve to suit wall construction.
    - 6. Inlet: NPS 3/4.
    - 7. Outlet: NPS 1 drain connection.
  - C. Electrically Operated Notification Appliances:
    - 1. Electric Bell:
      - a. Standard: UL 464.
      - b. Type: Vibrating, metal alarm bell.
      - c. Finish: Red-enamel or polyester powder-coat factory finish, suitable for outdoor use with approved and listed weatherproof backbox.
    - 2. Strobe/Horn:
      - a. Standard: UL 464.
      - b. Finish: Red, suitable for outdoor use with approved and listed weatherproof backbox. White letters on housing identifying device as for "Fire."
      - c. Sign, Integrated: Mount between backbox and strobe/horn with text visible on both sides, above and below strobe/horn. Housing to be shaped to cover surface-mounted weatherproof backbox. Sign is to consist of white lettering on red plastic identifying it as a "Sprinkler Fire Alarm" and instructing viewers to call 911, police or fire department.
  - D. Water-Flow Indicators:
    - 1. Standard: UL 346.
    - 2. Water-Flow Detector: Electrically supervised.
    - 3. Type: Paddle operated.
    - 4. Pressure Rating: 250 psig.
    - 5. Design Installation: Horizontal or vertical.
  - E. Pressure Switches - Water-Flow Alarm Detection:
    - 1. Description: Electrically supervised, pressure-activated water-flow switch with retard feature.
    - 2. Components: Two single-pole, double-throw switches with normally closed contacts.
    - 3. Design Operation: Rising pressure to 6 psi, plus or minus 2 psi signals water flow.
    - 4. Adjustability: Each switch is to be independently adjustable.
    - 5. Wire Separation: Pressure switch to provide for separation of wiring to each switch connection to allow for low- and high-voltage connections to comply with NFPA 70, Article 760 requirements.

- F. Valve Supervisory Switches:
    - 1. Standard: UL 346.
    - 2. Type: Electrically supervised.
    - 3. Design: Signals that controlled valve is in other than fully open position.
    - 4. Wire Terminal Designations: Indicates normal switch position when switch is properly installed on valve and valve is fully open.
    - 5. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
    - 6. OS&Y Valve Supervisory Switches:
      - a. One or two single-pole, double-throw switches.
      - b. NEMA Rating: NEMA 4 and NEMA 6P enclosures suitable for mounting in any position indoors or outdoors.
      - c. Visual Switch Indication: Indicates device is properly installed and OS&Y valve is fully open.
      - d. Mounting Hardware: Mounting bracket to grip valve yoke and prevent movement of switch assembly on OS&Y valve.
      - e. Trip Rod Length: Adjustable
    - 7. Butterfly Valve Supervisory Switches:
      - a. Two single-pole, double-throw switches.
      - b. NEMA Rating: NEMA 4 and NEMA 6P enclosures suitable for mounting in any position indoors or outdoors.
      - c. Mounting Hardware: Removable nipple.
      - d. Trip Rod Length: Adjustable
    - 8. Ball Valve Supervisory Switches:
      - a. One single-pole, double-throw switch.
      - b. NEMA Rating: NEMA 4 enclosure suitable for mounting in any position indoors or outdoors.
      - c. Mounting Hardware: Suitable for mounting directly to pipe, ball valves, or backflow preventers sized from up to NPS 2.
  - G. Indicator-Post Supervisory Switches:
    - 1. Type: Electrically supervised.
    - 2. Components: Single-pole, double-throw switch with normally closed contacts.
    - 3. Design: Signals that controlled indicator-post valve is in other than fully open position.
- 2.11 MANUAL CONTROL STATIONS
- A. Listed in UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide"
  - B. Description: For hydraulic operation, with union, NPS 1/2 pipe nipple, and bronze ball valve.
  - C. Include metal enclosure labeled "MANUAL CONTROL STATION," with operating instructions and cover held closed by breakable strut to prevent accidental opening.
- 2.12 CONTROL PANELS
- A. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves.
    - 1. Listed in UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide" when used with thermal detectors and Class A detector circuit wiring.
    - 2. Electrical characteristics are 120 V ac, 60 Hz, with 24 V dc rechargeable batteries.
    - 3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - B. Manual Control Stations, Electric Operation: Metal enclosure, labeled "MANUAL CONTROL STATION," with operating instructions and cover held closed by breakable strut to prevent accidental opening.
  - C. Manual Control Stations, Hydraulic Operation: Provide union, NPS 1/2 pipe nipple, and bronze ball valve. Include metal enclosure, labeled "MANUAL CONTROL STATION," with operating instructions and cover held closed by breakable strut to prevent accidental opening.
  - D. Panel Components:
    - 1. Power supply.
    - 2. Battery charger.
    - 3. Standby batteries.
    - 4. Field-wiring terminal strip.

5. Electrically supervised solenoid valves and polarized fire-alarm bell.
6. Lamp test facility.
7. Single-pole, double-throw auxiliary alarm contacts.
8. Rectifier.

2.13 PRESSURE GAUGES

- A. Standard: UL 393.
- B. Dial Size: 3-1/2- to 4-1/2-inch diameter.

**PART 3 - EXECUTION**

3.1 PREPARATION

- A. Perform fire-hydrant flow test. Use results for system design calculations required in "Quality Assurance" Article.
  1. Flow test is to be performed to meet the criteria established by NFPA 13.
  2. Flow test is to be conducted in accordance with NFPA 291.
  3. Test is to be performed during a period of ordinary demand for the water system.
    - a. To obtain satisfactory test results of expected flow or rated capacities, sufficient discharge should be achieved to cause drop of at least 10 percent.
  4. Pitot readings are to be taken at the 2-1/2-inch orifice connection.
  5. The pitot reading is to range from 10 to 35 psig.
  6. Open additional hydrant outlets as needed to control pitot readings.
  7. The pitot pressure and corresponding residual pressure readings are to be taken consecutively as pressure fluctuates between a high number and low number.
- B. Flow Test Data Written Report:
  1. Flow data report is to be written in accordance with NFPA 291.
  2. Flow data report is to include a copy of all flow data recorded during the test, including a site plan showing the tested fire hydrants with respect to the fire water service to the building. Site plan is to indicate which hydrant was flowed and which hydrant was used for pressure reading. Provide date of test, name of testing agency, and name of individual performing test.
- C. Water Supply Curve: Provide water supply curve based on the lowest supply for a given set of test data. For a given residual pressure reading, the supply is to be graphed utilizing the corresponding pitot pressure/flow reading and static pressure reading.
- D. Documentation is to include calibration certifications for gauges used in the flow tests. The certifications are to be from within the previous six (6) months from a reputable agency recognized for certifying pressure gauges.
- E. Report flow test results promptly and in writing. A copy of the flow test data report is to be submitted with the hydraulic calculations.

3.2 INSTALLATION OF FIRE-SUPPRESSION WATER-SERVICE PIPING

- A. Comply with requirements for fire-suppression water-service piping in Section 33 14 15 "Site Water Distribution Piping."

3.3 INSTALLATION OF DOMESTIC WATER-SUPPLY CONNECTIONS

- A. Connect fire-suppression water piping to building's interior domestic water-distribution piping. Comply with requirements for interior piping in Section 22 11 16 "Domestic Water Piping."
- B. Install shutoff valve, backflow preventer, pressure gauge, drain, and other accessories indicated at connection to water-distribution piping. Comply with requirements for backflow preventers in Section 33 14 15 "Site Water Distribution Piping."

3.4 INSTALLATION OF FIRE-SUPPRESSION PIPING

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated on approved working plans.
  1. Deviations from approved working plans for piping require written approval from AHJs. File written approval with Architect before deviating from approved working plans.

2. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.
- B. Piping Standard: Comply with NFPA 13 requirements for installation of fire-suppression piping.
- C. Install seismic restraints on piping. Comply with NFPA standards requirements for seismic-restraint device materials and installation.
- D. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install unions adjacent to each valve in pipes NPS 2 and smaller.
- F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.
- G. Install inspector's test connections in sprinkler system piping, complete with shutoff valve, and sized and located in accordance with NFPA 13.
- H. Install fire-suppression system piping with drains for complete system drainage. Extend drain piping to exterior of building where possible.
- I. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- J. Install automatic (ball drip) drain valve at each check valve for fire department connection, to drain piping between fire department connection and check valve. Install drain piping to and spill over floor drain or to exterior of building.
- K. Install alarm devices in piping systems.
- L. Install hangers and supports for fire-suppression piping in accordance with NFPA standards. Comply with requirements for hanger materials in NFPA standards. In seismic-rated areas, refer to Section 21 05 48 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
- M. Install pressure gauges on riser or feed main, at each sprinkler test connection, and at top of each standpipe/sprinkler supply. Include pressure gauges with connection not less than NPS 1/4 and with soft-metal seated globe valve, arranged for draining pipe between gauge and valve. Install gauges to permit removal, and install where they are not subject to freezing.
- N. Fill wet-type fire-suppression system piping with water.
- O. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 21 05 00 "Common Work Results for Fire-Suppression Piping."
- P. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 21 05 00 "Common Work Results for Fire-Suppression Piping."
- Q. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 21 05 00 "Common Work Results for Fire-Suppression Piping."

### 3.5 INSTALLATION OF PIPING JOINTS

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in pipes NPS 2 and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts in accordance with ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  1. Apply appropriate tape or thread compound to external pipe threads.
  2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

- H. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.
  - I. Steel-Piping, Pressure-Sealed Joints: Join steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.
  - J. Welded Joints: Construct joints in accordance with AWS D10.12M/D10.12, using qualified processes and welding operators in accordance with "Quality Assurance" Article.
    - 1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
  - K. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe in accordance with AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings in accordance with AWWA C606 for steel-pipe joints.
  - L. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe in accordance with AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings in accordance with AWWA C606 for steel-pipe grooved joints.
  - M. Brazed Joints: Join copper tube and fittings in accordance with Copper Development Association's "Copper Tube Handbook," "Braze Joints" chapter.
  - N. Copper-Tubing Grooved Joints: Roll rounded-edge groove in end of tube in accordance with AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join copper tube and grooved-end fittings in accordance with AWWA C606 for steel-pipe grooved joints.
  - O. Copper-Tubing, Pressure-Sealed Joints: Join copper tube and copper pressure-seal fittings with tools recommended by fitting manufacturer.
  - P. Extruded-Tee Connections: Form tee in copper tube in accordance with ASTM F2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.
  - Q. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.
  - R. Plastic-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings in accordance with the following:
    - 1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
    - 2. CPVC Piping: Join in accordance with ASTM D2846/D2846M Appendix.
- 3.6 INSTALLATION OF FIRE DEPARTMENT CONNECTIONS
- A. Install wall-type fire department connections.
  - B. Install yard-type fire department connections in concrete slab support. Comply with requirements for concrete in Section 03 30 00 "Cast-in-Place Concrete."
  - C. Install three protective pipe bollards around each fire department connection. Comply with requirements for bollards in Section 05 50 00 "Metal Fabrications."
  - D. Install automatic (ball-drip) drain valve at each check valve for fire department connection.
- 3.7 INSTALLATION OF HOSE CONNECTIONS AND HOSE STATIONS
- A. Examine roughing-in for hose connections and hose stations to verify actual locations of piping connections before installation.
  - B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and hose stations are to be installed.
  - C. Proceed with installation only after unsatisfactory conditions have been corrected.
  - D. Install hose connections adjacent to standpipes.
  - E. Install freestanding hose connections and hose stations for access and minimum passage restriction.
  - F. Install NPS 1-1/2 hose-connection and hose-station valves with flow-restricting device unless otherwise indicated.
  - G. Install NPS 2-1/2 hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 reducer adapter and flow-restricting device unless otherwise indicated.

- H. Install wall-mounted-type hose connections and wall-mounted, rack hose stations in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Section 10 44 13 "Fire Protection Cabinets."
  - I. Install freestanding hose stations with support or bracket attached to standpipe.
  - J. Install hose-reel hose stations on wall with bracket.
- 3.8 INSTALLATION OF COVER SYSTEM FOR SPRINKLER PIPING
- A. Install cover system, brackets, and cover components for sprinkler piping in accordance with manufacturer's installation manual and in accordance with NFPA 13 or NFPA 13R for supports.
- 3.9 INSTALLATION OF VALVES AND SPECIALTIES
- A. Install listed fire-suppression system control valves, trim and drain valves, specialty valves and trim, controls, and specialties in accordance with manufacturer's installation instructions, NFPA standards, and AHJ.
  - B. Install listed fire-suppression system shutoff valves in supervised open position, located to control sources of water supply except from fire department connections. Install permanent identification signs indicating portion of system controlled by each valve.
  - C. System Control Valves:
    - 1. Install alarm valves with bypass check valve and retarding chamber drain-line connection.
    - 2. Install deluge valves with trim sets for drain, priming level, alarm connections, ball-drip valves, pressure gauges, priming chamber attachment, and fill-line attachment.
  - D. Air Vent:
    - 1. Provide at least one air vent at high point in each wet-pipe fire-suppression system in accordance with NFPA standards. Connect vent into top of fire-suppression piping.
    - 2. Provide dielectric union for dissimilar metals, ball valve, and strainer upstream of automatic air vent.
    - 3. Pipe from outlet of air vent to drain.
- 3.10 INSTALLATION OF SPRINKLERS
- A. Install sprinklers in suspended ceilings symmetrically in center of acoustical ceiling panels. Coordinate entire pattern of sprinkler locations with approved reflected ceiling plan.
  - B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
  - C. Install sprinklers into flexible, sprinkler hose fittings, and install hose into bracket on ceiling grid.
- 3.11 IDENTIFICATION
- A. Install labeling and pipe markers on equipment and piping in accordance with requirements for identification specified in Section 21 05 53 "Identification for Fire-Suppression Piping and Equipment."
  - B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."
- 3.12 FIELD QUALITY CONTROL
- A. Perform tests and inspections.
  - B. Perform the following tests and inspections:
    - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
    - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
    - 3. Flush, test, and inspect fire-suppression systems in accordance with NFPA standards.
    - 4. Energize circuits to electrical equipment and devices.
    - 5. Start and run air compressors.
    - 6. Coordinate with fire-alarm tests. Operate as required.
    - 7. Coordinate with fire-pump tests. Operate as required.
    - 8. Verify that equipment hose threads are same as local fire department equipment.

9. Verify that sprinklers original factory finish has not been contaminated with dirt, debris, or paint. Sprinklers containing other-than-original factory finish are to be considered defective and replaced with new products. Repair and/or cleaning is not acceptable.
  - C. Fire-suppression piping system will be considered defective if it does not pass tests and inspections.
  - D. Fire-suppression piping system components considered defective during testing will be replaced with new components. Repair of defective components is not acceptable.
  - E. Prepare test and inspection reports.
- 3.13 CLEANING
- A. Clean dirt and debris from fire-suppression system piping, system control valves, sprinklers, and associated components.
  - B. Only sprinklers with their original factory finish are acceptable. Remove and replace any sprinklers that are painted or have any other finish than their original factory finish.
- 3.14 PIPING SCHEDULE
- A. Piping between Fire Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends, cast-iron threaded fittings, and threaded grooved ends, grooved-end fittings, grooved-end-pipe couplings, and grooved joints.
  - B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
  - C. Copper-tube, extruded-tee connections may be used for tee branches in copper tubing instead of specified copper fittings. Branch-connection joints must be brazed.
  - D. Standard-Pressure, Wet-Pipe Sprinkler System, NPS 2 (DN 50) and Smaller, to Be One of the Following:
    1. Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
    2. Schedule 40, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
    3. Schedule 40, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
    4. Schedule 10, steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
    5. Steel pipe with plain ends; welding fittings; and welded joints.
  - E. Standard-Pressure, Wet-Pipe Sprinkler System, NPS 2-1/2 to NPS 4 (DN 65 to DN 100), to Be One of the Following:
    1. Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
    2. Schedule 40, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
    3. Schedule 10, steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
  - F. Standard-Pressure, Wet-Pipe Sprinkler System, NPS 5 (DN 125) and Larger, to Be One of the Following:
    1. Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
    2. Schedule 40, black-steel pipe with cut or roll grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
    3. Schedule 40, black-steel pipe with plain ends; steel welding fittings; and welded joints.
    4. Schedule 10, steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
    5. Schedule 10, steel pipe with plain ends; welding fittings; and welded joints.
- 3.15 SPRINKLER SCHEDULE
- A. Use sprinkler types in subparagraphs below for the following applications:
    1. Rooms without Ceilings: Upright sprinklers.
    2. Rooms with Suspended Ceilings: Flat concealed sprinklers.
    3. Wall Mounting: Horizontal sidewall sprinklers.
    4. Spaces Subject to Freezing: Dry sidewall sprinklers.
    5. Deluge-Sprinkler Systems: Upright and pendent, open sprinklers.

- B. Provide sprinkler types in subparagraphs below with finishes indicated.
1. Upright, Pendent, and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces and locations not generally exposed to view; and wax coated where exposed to acids, chemicals, or other corrosive fumes.
  2. Recessed Sprinklers: Bright chrome, with factory-painted white escutcheon.
  3. Flat Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
  4. Residential Sprinklers: Dull chrome.

END OF SECTION 21 10 00

## SECTION 22 05 00

### COMMON WORK RESULTS FOR PLUMBING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Motors.
  - 2. Packless expansion joints.
  - 3. Sleeves without waterstop.
  - 4. Sleeves with waterstop.
  - 5. Stack-sleeve fittings.
  - 6. Sleeve-seal systems.
  - 7. Grout.
  - 8. Silicone sealants.
  - 9. Escutcheons.
  - 10. Thermometers, liquid in glass, lead free.
  - 11. Thermowells, lead free.
  - 12. Pressure gauges, dial type, lead free.
  - 13. Gauge attachments, lead free.
  - 14. Test plugs, lead free.
  - 15. Test-plug kits, lead free.

##### 1.2 DEFINITIONS

- A. Existing Piping to Remain: Existing piping that is not to be removed and that is not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

##### 1.3 ACTION SUBMITTALS

- A. Product Data:
  - 1. For each type of product, excluding motors which are included in Part 1 of the plumbing equipment Sections.
    - a. Include construction details, material descriptions, and dimensions of individual components, and finishes.
    - b. Include operating characteristics and furnished accessories.
- B. Delegated Design Submittals: For each anchor and alignment guide, including analysis data, signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
  - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
  - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
  - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Field quality-control reports.

##### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of gauge to include in operation and maintenance manuals.

##### 1.6 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.

- B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with 2021 ASME Boiler and Pressure Vessel Code, Section IX.

#### 1.7 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
  - 1. Motor controllers.
  - 2. Torque, speed, and horsepower requirements of the load.
  - 3. Ratings and characteristics of supply circuit and required control sequence.
  - 4. Ambient and environmental conditions of installation location.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Domestic water expansion fittings and loops for plumbing piping intended to convey or dispense water for human consumption are to comply with the U.S. Safe Drinking Water Act, with requirements of authorities having jurisdiction, and with NSF 61 and NSF 372, or be certified in compliance with NSF 61 and NSF 372 by an ANSI-accredited third-party certification body, in that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.
- B. Compatibility: Provide products suitable for piping service fluids, materials, working pressures, and temperatures.
- C. Capability: Provide products and installations to accommodate maximum axial movement as scheduled or indicated on Drawings.

#### 2.2 MOTORS

- A. Motor Requirements, General:
  - 1. Content includes motors for use on alternating-current power systems of up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
  - 2. Comply with requirements in this Section except when stricter requirements are specified in equipment schedules or Sections.
  - 3. Comply with NEMA MG 1 unless otherwise indicated.
  - 4. Comply with IEEE 841 for severe-duty motors.
- B. Motor Characteristics:
  - 1. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 ft. above sea level.
  - 2. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
- C. Polyphase Motors:
  - 1. Description: NEMA MG 1, Design B, medium induction motor.
  - 2. Efficiency: Premium Efficient, as defined in NEMA MG 1.
  - 3. Service Factor: 1.15.
  - 4. Multispeed Motors: Variable torque.
    - a. For motors with 2:1 speed ratio, consequent pole, single winding.
    - b. For motors with other than 2:1 speed ratio, separate winding for each speed.
  - 5. Multispeed Motors, Two Winding: Separate winding for each speed.
  - 6. Rotor: Random-wound, squirrel cage.
  - 7. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
  - 8. Temperature Rise: Match insulation rating.
  - 9. Insulation: Class F.
  - 10. Code Letter Designation:
    - a. Motors 15 HP and Larger: NEMA starting Code F or Code G.
    - b. Motors Smaller Than 15 HP: Manufacturer's standard starting characteristic.
  - 11. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.
- D. Additional Requirements for Polyphase Motors:

1. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
  2. Motors Used with Variable-Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
    - a. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time-rise pulses produced by pulse-width-modulated inverters.
    - b. Premium-Efficient Motors: Class B temperature rise; Class F insulation.
    - c. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
    - d. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
  3. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.
- E. Single-Phase Motors:
1. Motors larger than 1/20 hp must be one of the following, to suit starting torque and requirements of specific motor application:
    - a. Permanent-split capacitor.
    - b. Split phase.
    - c. Capacitor start, inductor run.
    - d. Capacitor start, capacitor run.
  2. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
  3. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
  4. Motors 1/20 HP and Smaller: Shaded-pole type.
  5. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device will automatically reset when motor temperature returns to normal range.
- F. Electronically Commutated Motors:
1. Microprocessor-Based Electronic Control Module: Converts 120 V single-phase AC power to three-phase DC power to operate the brushless DC motor.
  2. Three-phase power motor module with permanent magnet rotor.
  3. Digital speed controller/LED display.
  4. Building Automation System Interface.
- 2.3 EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING
- A. Performance Requirements:
1. Compatibility: Provide products suitable for piping service fluids, materials, working pressures, and temperatures.
  2. Capability: Provide products and installations that will accommodate maximum axial movement as scheduled or indicated on Drawings.
- B. Grooved-Joint Expansion Joints, Lead Free:
1. Source Limitations: Obtain grooved-joint expansion joints from single manufacturer.
  2. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.
  3. Standard: AWWA C606, for grooved joints.
  4. Material: ASTM A53/A53M, Schedule 40 stainless steel pipe with grooved ends.
  5. Couplings: ASTM A312/A312M ductile-iron flexible type for stainless steel pipe dimensions. Include ferrous housing sections, Grade E EPDM rubber gasket or Grade P fluoroelastomer blend gasket, and bolts and nuts.
- 2.4 SLEEVES AND SLEEVE SEALS
- A. Sleeves without Waterstop:
1. Cast-Iron Pipe Sleeves: Cast or fabricated of cast or ductile iron, with plain ends.
  2. Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, hot-dip galvanized, with plain ends.
  3. Steel Sheet Sleeves: ASTM A653/A653M, 24 gauge minimum thickness; hot-dip galvanized, round tube closed with welded longitudinal joint.
  4. PVC Pipe Sleeves: ASTM D1785, Schedule 40.
  5. Molded-PVC Sleeves: With nailing flange.
  6. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange.

- B. Sleeves with Waterstop:
    - 1. Description: Manufactured steel galvanized-steel, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall.
  - C. Stack-Sleeve Fittings:
    - 1. Description: Manufactured, Dura-coated or Duco-coated galvanized cast-iron sleeve with integral clamping flange for use in waterproof floors and roofs. Include clamping ring, bolts, and nuts for membrane flashing.
      - a. Underdeck Clamp: Clamping ring with setscrews.
  - D. Sleeve-Seal Systems:
    - 1. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
      - a. Hydrostatic Seal: 20 psig minimum.
      - b. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
      - c. Pressure Plates: Carbon steel.
      - d. Connecting Bolts and Nuts: Carbon steel, with zinc coating, ASTM B633 of length required to secure pressure plates to sealing elements.
  - E. Grout:
    - 1. Description: Nonshrink, for interior and exterior sealing openings in non-fire-rated walls or floors.
    - 2. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
    - 3. Design Mix: 5000 psi, 28-day compressive strength.
    - 4. Packaging: Premixed and factory packaged.
  - F. Silicone Sealants:
    - 1. Silicone Sealant, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant.
      - a. Standard: ASTM C920, Type S, Grade NS, Class 25, Use NT.
    - 2. Silicone Sealant, S, P, T, NT: Single-component, 100/50, pourable, plus 25 percent and minus 25 percent plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant.
      - a. Standard: ASTM C920, Type S, Grade P, Class 100/50, Uses T and NT.
    - 3. Silicone Foam Sealant: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- 2.5 ESCUTCHEONS
- A. Escutcheon Types:
    - 1. One-Piece, Steel Type: With polished, chrome-plated finish and setscrew fastener.
    - 2. One-Piece, Stainless Steel Type: With polished stainless steel finish.
    - 3. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.
    - 4. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped steel brass with polished, chrome-plated finish and spring-clip fasteners.
    - 5. One-Piece, Stamped-Steel Type: With polished, chrome-plated finish and spring-clip fasteners.
  - B. Floor Plates:
    - 1. Split Floor Plates: Cast brass with concealed hinge.
- 2.6 METERS AND GAUGES FOR PLUMBING PIPING
- A. Thermometers, Bimetallic Actuated, Lead Free:
    - 1. Source Limitations: Provide lead-free bimetallic-actuated thermometers from a single manufacturer.
    - 2. Standard: ASME B40.200.
    - 3. Case: Liquid-filled and sealed type(s); stainless steel with 3-inch nominal diameter.
    - 4. Dial: Nonreflective aluminum with permanent scale markings and scales in deg F and deg C.
    - 5. Connector Type(s): Union joint, rigid, back and rigid, bottom; with ASME B1.1 or ASME B1.20.1 screw threads to fit thermowell.
    - 6. Stem: 0.25 or 0.375 inch in diameter; lead-free brass.
    - 7. Window: Plain glass .
    - 8. Ring: Stainless steel.
    - 9. Element: Bimetal coil.
    - 10. Pointer: Dark-colored metal.
    - 11. Accuracy: Plus or minus 1 percent of span.

- B. Thermometers, Liquid in Glass, Lead Free - Metal Case, Compact Style:
1. Source Limitations: Provide liquid-in-glass, lead-free, metal-case, compact-style thermometers by single manufacturer.
  2. Standard: ASME B40.200.
  3. Case: Cast aluminum; 6-inch nominal size.
  4. Case Form: Back angle unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue or red organic liquid; mercury free.
  6. Tube Background: Nonreflective aluminum with permanent scale markings graduated in deg F.
  7. Window: Glass or plastic.
  8. Stem: Aluminum or lead-free brass and of length to suit installation.
    - a. Design for Thermowell Installation: Bare stem.
  9. Connector: 3/4 inch, with ASME B1.1 or ASME B1.20.1 screw threads to fit thermowell.
  10. Accuracy: Plus or minus 1 percent of span or one scale division, to a maximum of 1.5 percent of span.
- C. Thermometers, Liquid in Glass, Lead Free - Plastic Case, Compact Style:
1. Source Limitations: Provide liquid-in-glass, lead-free, plastic-case, compact-style thermometers from single manufacturer.
  2. Standard: ASME B40.200.
  3. Case: Plastic; 6-inch nominal size.
  4. Case Form: Back angle unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue or red organic liquid, mercury free.
  6. Tube Background: Nonreflective with permanent scale markings graduated in deg F and deg C.
  7. Window: Glass or plastic.
  8. Stem: Aluminum or lead-free brass and of length to suit installation.
    - a. Design for Thermowell Installation: Bare stem.
  9. Connector: 3/4 inch, with ASME B1.1 or ASME B1.20.1 screw threads to fit thermowell.
  10. Accuracy: Plus or minus 1 percent of span or one scale division, to a maximum of 1.5 percent of span.
- D. Thermometers, Liquid in Glass, Lead Free - Plastic Case, Industrial Style:
1. Source Limitations: Provide liquid-in-glass, lead-free, plastic-case, industrial-style thermometers from single manufacturer.
  2. Standard: ASME B40.200.
  3. Case: Plastic; 7-inch nominal size unless otherwise indicated.
  4. Case Form: Adjustable angle unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue or red organic liquid, mercury free.
  6. Tube Background: Nonreflective aluminum with permanent scale markings graduated in deg F and deg C.
  7. Window: acrylic plastic.
  8. Stem: Aluminum, lead-free brass, or stainless steel and of length to suit installation.
    - a. Design for Thermowell Installation: Bare stem.
  9. Connector: 1-1/4 inches, with ASME B1.1 or ASME B1.20.1 screw threads to fit thermowell.
  10. Accuracy: Plus or minus 1 percent of span or one scale division, to a maximum of 1.5 percent of span.
- E. Thermowells, Lead Free:
1. Standard: ASME B40.200.
  2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
  3. Material for Use with Copper Tubing: Lead-free copper.
  4. Material for Use with Steel Piping: Type 304 stainless steel.
  5. Type: Stepped shank unless straight or tapered shank is indicated.
  6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, or as required to match threaded opening in pipe.
  7. Internal Threads: Size and thread type as required to match thermometer mounting threads.
  8. Bore: Diameter required to match thermometer bulb or stem.
  9. Insertion Length: Length to extend to center of pipe.
  10. Lagging Extension: Include on thermowells for insulated piping and tubing. Extension is to be of sufficient length to extend beyond the finished insulation surface.
  11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.
- F. Pressure Gauges, Dial Type, Lead Free - Direct Mounted, Metal Case:
- 1.

2. Source Limitations: Provide dial-type, lead-free, direct-mounted, metal-case pressure gauges from single manufacturer.
  3. Standard: ASME B40.100.
  4. Case: Liquid-filled Sealed type(s); 4-1/2-inch nominal diameter.
  5. Pressure-Element Assembly: Lead-free Bourdon tube.
  6. Pressure Connection: Lead-free brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  7. Movement: Mechanical, with link to pressure element and connection to pointer.
  8. Dial: Nonreflective aluminum with permanent scale markings graduated in psi and kPa.
  9. Pointer: Dark-colored metal.
  10. Window: Safety glass or plastic.
  11. Ring: Stainless steel.
  12. Accuracy: Grade B, plus or minus 2 percent of middle half of span.
- G. Pressure Gauges, Dial Type, Lead Free - Direct Mounted, Plastic Case:
1. Source Limitations: Provide dial-type, lead-free, direct-mounted, plastic-case pressure gauges from a single manufacturer.
  2. Standard: ASME B40.100.
  3. Case: Sealed type; plastic; 4-1/2-inch nominal diameter.
  4. Pressure-Element Assembly: Lead-free Bourdon tube.
  5. Pressure Connection: Lead-free brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  6. Movement: Mechanical, with link to pressure element and connection to pointer.
  7. Dial: Nonreflective aluminum with permanent scale markings graduated in psi.
  8. Pointer: Dark-colored metal.
  9. Window: Safety glass or acrylic plastic.
  10. Accuracy: Grade B, plus or minus 2 percent of middle half of Grade C, plus or minus 3 percent of middle half of span.
- H. Gauge Attachments, Lead Free:
1. Snubbers: ASME B40.100, lead-free brass; with NPS 1/4, ASME B1.20.1 pipe threads and porous-metal-type surge-dampening device. Include extension for use on insulated piping.
  2. Valves: Lead-free brass ball, with NPS 1/4, ASME B1.20.1 pipe threads.
- I. Test Plugs, Lead Free:
1. Source Limitations: Provide lead-free test plugs from single manufacturer.
  2. Description: Test-station fitting made for insertion into piping tee fitting.
  3. Body: Lead-free brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
  4. Thread Size: NPS 1/4, ASME B1.20.1 pipe thread.
  5. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.
  6. Core Inserts: EPDM self-sealing rubber.

### **PART 3 - EXECUTION**

- 3.1 INSTALLATION OF EXPANSION JOINTS, GENERAL
  - A. Install expansion joints of sizes matching sizes of piping in which they are installed.
- 3.2 INSTALLATION OF PACKLESS EXPANSION JOINTS
  - A. Install metal-bellows expansion joints in accordance with EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
  - B. Install rubber packless expansion joints in accordance with FSA-PSJ-703.
- 3.3 INSTALLATION OF GROOVED-JOINT EXPANSION JOINTS
  - A. Install grooved-joint expansion joints to grooved-end steel piping.
- 3.4 INSTALLATION OF PIPE LOOP AND SWING CONNECTIONS
  - A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
  - B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.

- C. Connect risers and branch connections to terminal units with at least four pipe fittings, including tee in riser.
- D. Connect mains and branch connections to terminal units with at least four pipe fittings, including tee in main.

### 3.5 INSTALLATION OF SLEEVES - GENERAL

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
  - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
  - 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
  - 2. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
  - 3. Using grout or silicone sealant, seal the space outside of sleeves in floors/slabs/walls without sleeve-seal system. Select to maintain fire resistance of floor/slab/wall.
- D. Install sleeves for pipes passing through interior partitions.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
  - 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
  - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants that joint sealant manufacturer's literature indicates is appropriate for size, depth, and location of joint.
- E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 07 84 13 "Penetration Firestopping."

### 3.6 INSTALLATION OF SLEEVES WITH WATERSTOP

- A. Install sleeve with waterstop as new walls and slabs are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange centered across width of concrete slab or wall.
- C. Secure nailing flanges to wooden concrete forms.
- D. Using grout or silicone sealant, seal space around outside of sleeves. Select to maintain fire resistance of floor/slab/wall.

### 3.7 INSTALLATION OF STACK-SLEEVE FITTINGS

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
  - 1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
  - 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 07 62 00 "Sheet Metal Flashing and Trim."
  - 3. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
  - 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  - 5. Using silicone sealant, seal space between top hub of stack-sleeve fitting and pipe.
- B. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping specified in Section 07 84 13 "Penetration Firestopping."

### 3.8 INSTALLATION OF SLEEVE-SEAL SYSTEMS

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building, and passing through exterior walls.

- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.9 INSTALLATION OF ESCUTCHEONS

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.

### 3.10 INSTALLATION OF METERS AND GAUGES

- A. Install thermometer with thermowell at each required thermometer location.
- B. Install thermowells in vertical position in piping tees.
- C. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- D. Install thermowells with extension on insulated piping.
- E. Fill thermowells with heat-transfer medium.
- F. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- G. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks.
- H. Install direct-mounted pressure gauges in piping tees with pressure gauge located on pipe at most readable position.
- I. Install remote-mounted pressure gauges on panel.
- J. Install valve and snubber in piping for each pressure gauge for fluids.
- K. Install test plugs in piping tees.
- L. Install thermometers in the following locations:
  - 1. Inlet and outlet of each water heater.
  - 2. Inlets and outlets of each domestic water heat exchanger.
  - 3. Inlet and outlet of each domestic hot-water storage tank.
  - 4. Inlet and outlet of each remote domestic water chiller.
  - 5. Outlet side of hot-water-balancing valve.
  - 6. Each main hot-water-recirculating line return pipe.
- M. Install pressure gauges in the following locations:
  - 1. Building water service entrance into building.
  - 2. Inlet and outlet of each pressure-reducing valve.
  - 3. Suction and discharge of each domestic water pump.

### 3.11 CONNECTIONS

- A. Install meters and gauges adjacent to machines and equipment to allow space for service and maintenance of meters, gauges, machines, and equipment.

### 3.12 ADJUSTING

- A. After installation, calibrate meters according to manufacturer's written instructions.
- B. Adjust faces of meters and gauges to proper angle for best visibility.

### 3.13 FIELD QUALITY CONTROL

- A. Sleeves and Sleeve Seals:
  - 1. Perform the following tests and inspections:
    - a. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.
    - b. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.
  - 2. Prepare test and inspection reports.
- B. Escutcheons:

1. Using new materials, replace broken and damaged escutcheons and floor plates.

### 3.14 SLEEVES APPLICATION

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  1. Exterior Concrete Walls above and below Grade:
    - a. Sleeves with waterstops.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  2. Concrete Slabs-on-Grade:
    - a. Sleeves with waterstops.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  3. Concrete Slabs above Grade:
    - a. stack-sleeve fittings.
  4. Interior Wall and Partitions:
    - a. Sleeves without waterstops.

### 3.15 ESCUTCHEONS APPLICATION

- A. Escutcheons for New Piping and Relocated Existing Piping:
  1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
  2. Chrome-Plated Piping: One piece, cast brass with polished, chrome-plated finish.
  3. Insulated Piping:
    - a. One piece, cast brass with polished, chrome-plated finish.
  4. Bare Piping at Wall and Floor Penetrations in Finished Spaces:
    - a. One piece, cast brass with polished, chrome-plated finish.
  5. Bare Piping at Ceiling Penetrations in Finished Spaces:
    - a. One piece, cast brass with polished, chrome-plated finish.
  6. Bare Piping in Unfinished Service Spaces:
    - a. One piece, cast brass with polished, chrome-plated finish.
  7. Bare Piping in Equipment Rooms:
    - a. One piece, cast brass with polished, chrome-plated finish.
- B. Escutcheons for Existing Piping to Remain:
  1. Chrome-Plated Piping: Split casting, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  2. Insulated Piping: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish
  3. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  4. Bare Piping at Ceiling Penetrations in Finished Spaces: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  5. Bare Piping in Unfinished Service Spaces: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
  6. Bare Piping in Equipment Rooms: Split plate, stamped steel with concealed or exposed-rivet hinge with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
  1. New Piping and Relocated Existing Piping: One piece, floor plate.
  2. Existing Piping: Split floor plate.

### 3.16 THERMOMETER, LEAD FREE, APPLICATION

- A. Thermometers at inlet and outlet of each domestic water heater are to be the following:
  1. Liquid-filled, bimetallic-actuated type.
- B. Thermometers at inlets and outlets of each domestic water heat exchanger are to be the following:
  1. Liquid-filled, bimetallic-actuated type.
- C. Thermometers at inlet and outlet of each domestic hot-water storage tank are to be the following:
  1. Liquid-filled, bimetallic-actuated type.
- D. Thermometer stems are to be of length to match thermowell insertion length.

3.17 THERMOMETER, LEAD FREE, SCALE-RANGE APPLICATION

- A. Scale Range for Domestic Cold-Water Piping:
  - 1. 0 to 100 deg F and minus 20 to plus 50 deg C.
- B. Scale Range for Domestic Hot-Water Piping:
  - 1. 0 to 250 deg F and 0 to 150 deg C.
- C. Scale Range for Domestic Cooled-Water Piping:
  - 1. 0 to 100 deg F and minus 20 to plus 50 deg C.

3.18 PRESSURE-GAUGE APPLICATION

- A. Pressure gauges at discharge of each water service into building are to be the following:
  - 1. Liquid filled, mounted, metal case.
- B. Pressure gauges at inlet and outlet of each water pressure-reducing valve are to be the following:
  - 1. Liquid filled, mounted, metal case.
- C. Pressure gauges at suction and discharge of each domestic water pump are to be the following:
  - 1. Liquid filled, mounted, metal case.

3.19 PRESSURE-GAUGE SCALE-RANGE APPLICATION

- A. Scale Range for Water Service Piping:
  - 1. 0 to 160 psi.
- B. Scale Range for Domestic Water Piping:
  - 1. 0 to 100 psi.
- C. Insert additional paragraphs for pressure-gauge scale ranges and applications.

END OF SECTION 22 05 00

## SECTION 22 05 23

### GENERAL-DUTY VALVES FOR PLUMBING PIPING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Bronze ball valves.
  - 2. Ductile-iron, single-flange butterfly valves.
  - 3. Bronze lift check valves.
  - 4. Bronze swing check valves.
  - 5. Bronze gate valves.
  - 6. Iron gate valves

##### 1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. RPTFE: Reinforced polytetrafluoroethylene.
- C. WOG: Water, oil, gas.

##### 1.3 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.4 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code.
  - 2. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.5 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.

- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

#### 1.6 PERMITS, INSPECTIONS AND LICENSES

- A. All permits, inspections and licenses required by the legally constituted authorities for installation of the work according to the plans and specifications shall be obtained and paid as a part of the work of this section.

#### 1.7 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

#### 1.8 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

#### 1.9 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

#### 1.10 SUBMITTAL DATA

- A. Submittal Requirements:
  1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
  2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
  4. To be valid, all submittals must:
    - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
    - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
    - c. Include all pertinent construction, installation, performance, and technical data.

- d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
  - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
  - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
- e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.

B. Substitution Requirements:

1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
  - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
    - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
  - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
  1. Protect internal parts against rust and corrosion.
  2. Protect threads, flange faces, and soldered ends.
  3. Set ball valves open to minimize exposure of functional surfaces.
- B. Use the following precautions during storage:
  1. Maintain valve end protection.
  2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.

1.12 UNINSPECTED WORK

- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
- B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

1.13 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blueline prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible shall be delivered to the Architect.

1.14 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

**PART 2 - PRODUCTS**

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Standards:
  - 1. Domestic water valves intended to convey or dispense water for human consumption must comply with the SDWA, requirements of authorities having jurisdiction, and NSF 61 and NSF 372, or must be certified to be in compliance with NSF 61 and NSF 372 (by an ANSI-accredited third-party certification body) that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.
- B. ASME Compliance:
  - 1. ASME B1.20.1 for threads for threaded end valves.
  - 2. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
  - 3. ASME B16.18 for cast copper solder-joint connections.
  - 4. ASME B16.22 for wrought copper and copper alloy solder-joint connections.
  - 5. ASME B16.34 for flanged and threaded end connections
  - 6. ASME B31.9 for building services piping valves.
- C. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.
- D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream piping unless otherwise indicated.
- F. Valve Actuator Type:
  - 1. Gear Actuator: For quarter-turn valves NPS 4 and larger.
  - 2. Hand Lever: For quarter-turn valves smaller than NPS 4.

- G. Valves in Insulated Piping:
  - 1. Provide 2-inch extended neck stems.
  - 2. Extended operating handles with nonthermal-conductive covering material and protective sleeves that allow operation of valves without breaking vapor seals or disturbing insulation.
  - 3. Memory stops that are fully adjustable after insulation is applied.

## 2.3 BRONZE BALL VALVES

- A. Three-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim & Nib-Seal Handle:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model S-595-Y-66-LF or T-595-Y-66-LF or a comparable product by one of the following:
    - a. Milwaukee Valve Company.
    - b. Apollo.
  - 2. Description:
    - a. Standard: MSS SP-110, NSF 61-G.
    - b. CWP Rating: 600 psig.
    - c. Body Design: Three piece with threaded body packnut design (no threaded stem designs allowed) with adjustable stem packing.
    - d. Body Material: Bronze ASTM B 584 Alloy C87850 or C87600.
    - e. Ends: Threaded or Solder.
    - f. Seats: PTFE or TFE.
    - g. Stem: 316 Stainless-steel.
    - h. Ball: 316 Stainless-steel, vented.
    - i. Port: Full.
- B. Two-Piece, Full-Port, Bronze Ball Valves with Stainless-Steel Trim & Nib-Seal Handle:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model S-585-66-LF or T-585-66-LF or a comparable product by one of the following:
    - a. Industries, Inc.; Apollo Div.
    - b. Milwaukee Valve Company.
  - 2. Description:
    - a. Standard: MSS SP-110, NSF 61-G.
    - b. CWP Rating: 600 psig.
    - c. Body Design: Two piece with threaded body packnut design (no threaded stem designs allowed) with adjustable stem packing.
    - d. Body Material: Bronze ASTM B 584 Alloy C87600.
    - e. Ends: Threaded or Solder.
    - f. Seats: PTFE or TFE.
    - g. Stem: 316 Stainless-steel.
    - h. Ball: 316 Stainless-steel, vented.
    - i. Port: Full.
- C. 200 CWP, Sizes 2-1/2" – 24", Ductile Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model LD-2000-3/5, or a comparable product by one of the following:
    - a. Cooper Cameron Corp.; Cooper Cameron Valves Div.
    - b. Tyco International, Ltd.; Tyco Valves & Controls
  - 2. Description:
    - a. Standard: MSS SP-67, Type I, IAPMO.
    - b. NPS 24 (DN 300) and Smaller CWP Rating: 200 psig (1380 kPa).
    - c. Body Design: Full Lug type; Bubble tight shutoff, suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
    - d. Body Material: ASTM A 536, ductile iron.
    - e. Seat: EPDM.
    - f. Stem: One- or two-piece stainless steel.
    - g. Disc: Aluminum bronze

## 2.4 BRONZE LIFT CHECK VALVES

- A. Class 125, Lift Check Valves with Nonmetallic TFE Disc:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model S-480-Y-LF or T-480-Y-LF or a comparable product by one of the following:
    - a. Hammond.

- b. Milwaukee.
- 2. Description:
  - a. Standard: MSS SP-80, Type 2, NSF 61-G.
  - b. CWP Rating: 200 psig.
  - c. Body Design: Vertical flow.
  - d. Body Material: ASTM B 584 Alloy C87850, lead free bronze.
  - e. Ends: Threaded or Solder.
  - f. Disc: PTFE, or TFE.

## 2.5 BRONZE SWING CHECK VALVES

- A. Class 125, Bronze Swing Check Valves with Nonmetallic TFE Disc:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model S-413-Y-LF or T-413-Y-LF or a comparable product by one of the following:
    - a. Crane Co.; Crane Valve Group; Crane Valves.
    - b. Powell Valves.
  - 2. Description:
    - a. Standard: MSS SP-80, Type 4, NSF 61-G.
    - b. CWP Rating: 200 psig.
    - c. Body Design: Y-pattern Horizontal flow.
    - d. Body Material: ASTM B 584 Alloy C87850, lead free bronze.
    - e. Ends: Threaded or Solder.
    - f. Disc: PTFE or TFE.

## 2.6 BRONZE GATE VALVES

- A. NRS Bronze Gate Valves:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model S-113-LF or T-113-LF or a comparable product by one of the following:
    - a. Crane Co.; Crane Valve Group; Crane Valves.
    - b. Powell Valves.
  - 2. Description:
    - a. Standard: MSS SP-139, Type 2, NSF 61-G.
    - b. CWP Rating: 200 psig.
    - c. Body Material: ASTM B 584, dezincification-resistant bronze with integral seat and threaded bonnet.
    - d. Ends: Threaded or Solder.
    - e. Stem: Lead free Silicon Bronze.
    - f. Disc: Solid wedge; lead free bronze.
    - g. Packing: Asbestos free.
    - h. Handwheel: Malleable iron.
- B. RS Bronze Gate Valves:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model S-111-LF or T-111-LF or a comparable product by one of the following:
    - a. Crane Co.; Crane Valve Group; Crane Valves.
    - b. Powell Valves
  - 2. Description:
    - a. Standard: MSS SP-80, Type 2, NSF 61-G.
    - b. CWP Rating: 200 psig.
    - c. Body Material: ASTM B584 C87850 dezincification resistant bronze with integral seat and threaded bonnet.
    - d. Ends: Threaded or Solder.
    - e. Stem: Lead free silicon bronze.
    - f. Disc: Solid wedge, lead free bronze.
    - g. Packing: Asbestos free.
    - h. Handwheel: Malleable iron.

## 2.7 IRON GATE VALVES

- A. Class 125, Ductile-Iron Resilient Wedge Gate Valves:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide NIBCO Model F-619-RWS (NRS) or F-607-RWS (OS&Y) or a comparable product by one of the following:
    - a. Clow

- b. Mueller
- 2. Description:
  - a. Standard: AWWA C-509 and C-515,
  - b. CWP Rating: 300 psig.
  - c. Body Material: ASTM A 536 ductile iron, fusion-bonded epoxy coating inside and out.
  - d. Ends: Flanged.
  - e. Trim: stainless-steel.
  - f. Disc: Rubber encapsulated ductile iron wedge.
  - g. Packing and Gasket: Asbestos free.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves. Remove defective valves from site.

#### **3.2 INSTALLATION OF VALVES**

- A. Install valves with unions or flanges at each piece of equipment arranged to allow space for service, maintenance, and equipment removal without system shutdown.
- B. Provide support to piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access.
- D. For valves in horizontal piping, install valves with stem at or above center of pipe.
- E. Install valves in position to allow full valve actuation movement.
- F. Valve Tags: Comply with requirements in Section 22 05 53 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
- G. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve manufacturer's recommended maximum.

#### **3.3 ADJUSTING**

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves exhibiting leakage.

#### **3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS**

- A. If valves with specified CWP ratings are unavailable, provide the same types of valves with higher CWP ratings.
- B. Select valves with the following end connections:
  - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option or press-end option is indicated in valve schedules below.
  - 2. For Steel Piping, NPS 2 and Smaller: Threaded ends.
  - 3. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
  - 4. For Stainless Steel Piping, NPS 2 and Smaller: Threaded ends.
  - 5. For Stainless Steel Piping, NPS 2 and Smaller: Press ends.

3.5 LOW-PRESSURE, COMPRESSED-AIR VALVE SCHEDULE - 150 PSIG OR LESS

- A. Pipe NPS 2 and Smaller:
  - 1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
  - 2. Brass ball valves, two piece with full port, and brass trim.
  - 3. Bronze ball valves, two piece with full port, and bronze or brass trim.
  - 4. Brass ball valves, three piece with full port, and brass trim.
  - 5. Bronze ball valve, three piece with full port, and bronze or brass trim.
- B. Pipe NPS 2-1/2 and Larger:
  - 1. Steel and Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
  - 2. Steel ball valves, Class 150 with full port.
  - 3. Iron ball valves, Class 150.

3.6 DOMESTIC HOT- AND COLD-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller:
  - 1. Brass ball valve, one piece. Provide with solder joint ends.
  - 2. Bronze ball valve, one piece with bronze trim. Provide with solder-joint ends.
  - 3. Brass ball valves, two piece with full port, and brass trim. Provide with solder-joint ends.
  - 4. Bronze ball valves, two piece with full port, and bronze or brass trim. Provide with solder-joint ends.
- B. Pipe NPS 2-1/2 and Larger:
  - 1. Steel and Iron Valves, NPS 2-1/2 to NPS 4: May be provided with threaded ends instead of flanged ends.
  - 2. Steel ball valves, Class 150 with full port.
  - 3. Iron ball valves, Class 150.

END OF SECTION 21 05 23

## SECTION 22 05 29

### HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Metal pipe hangers and supports.
  - 2. Trapeze pipe hangers.
  - 3. Metal framing systems.
  - 4. Thermal hanger-shield inserts.
  - 5. Fastener systems.
  - 6. Pipe stands.
  - 7. Pipe-positioning systems.
  - 8. Equipment supports.

##### 1.2 DEFINITIONS

- A. MSS: Manufacturers Standardization Society of The Valve and Fittings Industry Inc.

##### 1.3 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
- C. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
- D. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- E. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

##### 1.4 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.5 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code
  - 2. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.
- C. Structural-Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M.
- D. Pipe Welding Qualifications: Qualify procedures and operators according to 2021 ASME Boiler and Pressure Vessel Code, Section IX.

#### 1.6 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

#### 1.7 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

#### 1.8 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

#### 1.9 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following:
  - 1. Trapeze pipe hangers.
  - 2. Metal framing systems.
  - 3. Fiberglass strut systems.
  - 4. Pipe stands.
  - 5. Equipment supports.

- C. Delegated-Design Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Detail fabrication and assembly of trapeze hangers.
  - 2. Include design calculations for designing trapeze hangers.

1.10 SUBMITTAL DATA

A. Submittal Requirements:

- 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
- 2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
- 3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
- 4. To be valid, all submittals must:
  - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
  - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
  - c. Include all pertinent construction, installation, performance, and technical data.
  - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
    - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
    - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
  - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.

B. Substitution Requirements:

- 1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
  - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
    - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
  - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
- 2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.

3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.

#### 1.11 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

#### 1.12 UNINSPECTED WORK

- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
- B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

#### 1.13 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible tracings shall be delivered to the Architect.

#### 1.14 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design trapeze pipe hangers and equipment supports.
- B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
  1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.

2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

## 2.2 METAL PIPE HANGERS AND SUPPORTS

### A. Carbon-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
3. Nonmetallic Coatings: Plastic coated or epoxy powder coated.
4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
5. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

### B. Stainless-Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

### C. Copper Pipe and Tube Hangers:

1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel.

## 2.3 TRAPEZE PIPE HANGERS

- ### A.
- Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly, made from structural-carbon-steel shapes, with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

## 2.4 THERMAL HANGER-SHIELD INSERTS

### A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ERICO International Corporation.
2. PHS Industries, Inc.
3. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
4. Piping Technology & Products, Inc.

### B. Insulation-Insert Material for Cold Piping: ASTM C552, Type II cellular glass with 100-psig or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength and vapor barrier.

### C. Insulation-Insert Material for Hot Piping: ASTM C552, Type II cellular glass with 100-psig or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psig minimum compressive strength.

### D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

### E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

### F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

## 2.5 FASTENER SYSTEMS

### A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

### B. Mechanical-Expansion Anchors: Insert-wedge-type anchors, for use in hardened portland cement concrete, with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Indoor Applications: Zinc-coated or stainless steel.
2. Outdoor Applications: Stainless steel.

## 2.6 PIPE STANDS

### A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

### B. Compact Pipe Stand:

1. Description: Single base unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
  3. Hardware: Galvanized steel or polycarbonate.
  4. Accessories: Protection pads.
- C. Low-Profile, Single-Base, Single-Pipe Stand:
1. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane protection.
  2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
  3. Vertical Members: Two galvanized-steel, continuous-thread, 1/2-inch rods.
  4. Horizontal Member: Adjustable horizontal, galvanized-steel pipe support channels.
  5. Pipe Supports: Clevis hanger.
  6. Hardware: Galvanized steel.
  7. Accessories: Protection pads.
  8. Height: 12 inches above roof.
- D. High-Profile, Single-Base, Single-Pipe Stand:
1. Description: Single base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
  2. Base: Single vulcanized rubber or molded polypropylene.
  3. Vertical Members: Two galvanized-steel, continuous-thread, 1/2-inch rods.
  4. Horizontal Member: One adjustable-height, galvanized-steel, pipe-support slotted channel or plate.
  5. Pipe Supports: Clevis hanger.
  6. Hardware: Galvanized steel.
  7. Accessories: Protection pads, 1/2-inch, continuous-thread, galvanized-steel rod.
  8. Height: 36 inches above roof.
- E. High-Profile, Multiple-Pipe Stand:
1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
  2. Bases: Two or more; vulcanized rubber.
  3. Vertical Members: Two or more, galvanized-steel channels.
  4. Horizontal Members: One or more, adjustable-height, galvanized-steel pipe support.
  5. Pipe Supports: Clevis hanger.
  6. Hardware: Galvanized steel.
  7. Accessories: Protection pads, 1/2-inch, continuous-thread rod.
  8. Height: 36 inches above roof.
- F. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.
- 2.7 PIPE-POSITIONING SYSTEMS
- A. Description: IAPMO PS 42 positioning system composed of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.
- 2.8 EQUIPMENT SUPPORTS
- A. Description: Welded, shop- or field-fabricated equipment support made from structural-carbon-steel shapes.
- 2.9 MATERIALS
- A. Aluminum: ASTM B221.
  - B. Carbon Steel: ASTM A1011/A1011M.
  - C. Structural Steel: ASTM A36/A36M carbon-steel plates, shapes, and bars; black and galvanized.
  - D. Stainless Steel: ASTM A240/A240M.
  - E. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
    1. Properties: Nonstaining, noncorrosive, and nongaseous.
    2. Design Mix: 5000-psi, 28-day compressive strength.

### **PART 3 - EXECUTION**

#### **3.1 APPLICATION**

- A. Comply with requirements in Section 07 84 13 "Penetration Firestopping" for firestopping materials and installation, for penetrations through fire-rated walls, ceilings, and assemblies.
- B. Strength of Support Assemblies: Where not indicated, select sizes of components, so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

#### **3.2 HANGER AND SUPPORT INSTALLATION**

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
  - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size, or install intermediate supports for smaller-diameter pipes as specified for individual pipe hangers.
  - 2. Field fabricate from ASTM A36/A36M carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Fiberglass Pipe-Hanger Installation: Comply with applicable portions of MSS SP-58. Install hangers and attachments as required to properly support piping from building structure.
- D. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- E. Thermal Hanger-Shield Installation: Install in pipe hanger or shield for insulated piping.
- F. Fastener System Installation:
  - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete, after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
  - 2. Install mechanical-expansion anchors in concrete, after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- G. Pipe Stand Installation:
  - 1. Pipe Stand Types, except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
  - 2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 07 72 00 "Roof Accessories" for curbs.
- H. Pipe-Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.
- I. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- J. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- K. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- L. Install lateral bracing with pipe hangers and supports to prevent swaying.
- M. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- N. Load Distribution: Install hangers and supports, so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- O. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

- P. Insulated Piping:
1. Attach clamps and spacers to piping.
    - a. Piping Operating Above Ambient Air Temperature: Clamp may project through insulation.
    - b. Piping Operating Below Ambient Air Temperature: Use thermal hanger-shield insert with clamp sized to match OD of insert.
    - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
  2. Install MSS SP-58, Type 39 protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    - a. Option: Thermal hanger-shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
  3. Install MSS SP-58, Type 40 protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
    - a. Option: Thermal hanger-shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
  4. Shield Dimensions for Pipe: Not less than the following:
    - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
    - b. NPS 4: 12 inches long and 0.06 inch thick.
    - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
    - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
    - e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
  5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
  6. Thermal Hanger Shields: Install with insulation of same thickness as piping insulation.

### 3.3 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

### 3.4 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
  1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  2. Obtain fusion without undercut or overlap.
  3. Remove welding flux immediately.
  4. Finish welds at exposed connections, so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

### 3.5 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

### 3.6 PAINTING

- A. Touchup: Clean field welds and abraded, shop-painted areas. Paint exposed areas immediately after erecting hangers and supports. Use same materials as those used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded, shop-painted areas on miscellaneous metal are specified in Section 09 91 13 "Exterior Painting." Section 09 91 23 "Interior Painting" or Section 09 96 00 "High-Performance Coatings."

- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas, and apply galvanizing-repair paint to comply with ASTM A780/A780M.

### 3.7 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finishes.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports, metal trapeze pipe hangers and metal framing systems and attachments for general service applications.
- F. Use stainless-steel pipe hangers and stainless-steel or corrosion-resistant attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal hanger-shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
  2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F pipes NPS 4 to NPS 24 requiring up to 4 inches of insulation.
  3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
  4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
  5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
  6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8.
  7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  8. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  9. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.
  10. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
  11. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
  12. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
  13. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  14. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36 with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  15. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
  16. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction occurs.
  17. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction occurs.
  18. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction occurs but vertical adjustment is unnecessary.

19. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction occurs and vertical adjustment is unnecessary.
  20. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation, in addition to expansion and contraction, is required.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
  2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment of up to 6 inches for heavy loads.
  2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
  3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11 split pipe rings.
  4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
  5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable-Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
  3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
  4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
  5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
  6. C-Clamps (MSS Type 23): For structural shapes.
  7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
  8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
  9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
  10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
  11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
  12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    - a. Light (MSS Type 31): 750 lb.
    - b. Medium (MSS Type 32): 1500 lb.
    - c. Heavy (MSS Type 33): 3000 lb.
  13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
  14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
  15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  3. Thermal Hanger-Shield Inserts: For supporting insulated pipe.
- O. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- P. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

- Q. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.
- R. Use pipe-positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION 22 05 29

## SECTION 22 05 53

### IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Warning tape.
  - 4. Pipe labels.
  - 5. Stencils.
  - 6. Valve tags.
  - 7. Warning tags.

##### 1.2 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.3 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code
  - 2. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.4 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

1.5 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

1.6 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.8 SUBMITTAL DATA

- A. Submittal Requirements:
  - 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
  - 2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  - 3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
  - 4. To be valid, all submittals must:
    - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
    - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
    - c. Include all pertinent construction, installation, performance, and technical data.
    - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
      - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
      - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.

- e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.
- B. Substitution Requirements:
- 1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
    - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
      - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
    - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
  - 2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
  - 3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
  - 4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
  - 5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
  - 6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.
- 1.9 UNINSPECTED WORK
- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
  - B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.
- 1.10 RECORD DRAWINGS
- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible shall be delivered to the Architect.

1.11 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

**PART 2 - PRODUCTS**

- A. Metal Labels for Equipment:
    - 1. Material and Thickness: Brass, 0.032-inch minimum thickness, with predrilled or stamped holes for attachment hardware.
    - 2. Letter and Background Color: As indicated for specific application under Part 3.
    - 3. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
    - 4. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
    - 5. Fasteners: Stainless steel rivets or self-tapping screws.
    - 6. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
  - B. Plastic Labels for Equipment:
    - 1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
    - 2. Letter and Background Color: As indicated for specific application under Part 3.
    - 3. Maximum Temperature: Able to withstand temperatures of up to 160 deg F.
    - 4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
    - 5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
    - 6. Fasteners: Stainless steel rivets or self-tapping screws.
    - 7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
  - C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- 2.2 WARNING SIGNS AND LABELS
- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
  - B. Letter and Background Color: As indicated for specific application under Part 3.
  - C. Maximum Temperature: Able to withstand temperatures of up to 160 deg F.
  - D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  - F. Fasteners: Stainless steel rivets or self-tapping screws.
  - G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
  - H. Arc-Flash Warning Signs: Provide arc-flash warning signs in locations and with content in accordance with requirements of OSHA and NFPA 70E, and other applicable codes and standards.
  - I. Label Content: Include caution and warning information plus emergency notification instructions.

### 2.3 WARNING TAPE

- A. Material: Vinyl.
- B. Minimum Thickness: 0.005 inch.
- C. Letter, Pattern, and Background Color: As indicated for specific application under Part 3.
- D. Waterproof Adhesive Backing: Suitable for indoor or outdoor use.
- E. Maximum Temperature: 160 deg F.
- F. Minimum Width: 2 inches.

### 2.4 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color coded, with lettering indicating service and showing flow direction in accordance with ASME A13.1.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings. Also include:
  - 1. Pipe size.
  - 2. Flow-Direction Arrows: Include flow-direction arrows on distribution piping. Arrows may be either integral with label or applied separately.
  - 3. Lettering Size: Size letters in accordance with ASME A13.1 for piping for viewing distances of up to 72 inches and proportionately larger lettering for greater viewing distances.

### 2.5 VALVE TAGS

- A. Description: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
  - 1. Tag Material: Brass, 0.04-inch minimum thickness, with predrilled or stamped holes for attachment hardware.
  - 2. Fasteners: Brass link chain or beaded chain.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  - 1. Include valve-tag schedule in operation and maintenance data.

### 2.6 WARNING TAGS

- A. Description: Preprinted accident-prevention tags of plasticized card stock.
  - 1. Size: 3 by 5-1/4 inches.
  - 2. Fasteners: Brass grommet and wire.
  - 3. Nomenclature: Large-size primary caption, such as "DANGER," "CAUTION," or "DO NOT OPERATE."
  - 4. Letter and Background Color: As indicated for specific application under Part 3.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

### 3.2 INSTALLATION, GENERAL REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.
- D. Locate identifying devices so that they are readily visible from the point of normal approach.

### 3.3 INSTALLATION OF EQUIPMENT LABELS, WARNING SIGNS, AND LABELS

- A. Permanently fasten labels on each item of plumbing equipment.
- B. Sign and Label Colors.
  - 1. White letters on an ANSI Z535.1 safety-green background.
- C. Locate equipment labels where accessible and visible.
- D. Arc-Flash Warning Signs: Provide arc-flash warning signs on electrical disconnects and other equipment where arc-flash hazard exists, as indicated on Drawings, and in accordance with requirements of OSHA and NFPA 70E, and other applicable codes and standards.

### 3.4 INSTALLATION OF WARNING TAPE

- A. Warning Tape Color and Pattern: Yellow background with black diagonal stripes.
- B. Install warning tape on pipes and ducts, with cross-designated walkways providing less than 6 ft. of clearance.
- C. Locate tape so as to be readily visible from the point of normal approach.

### 3.5 INSTALLATION OF PIPE LABELS

- A. Install pipe labels showing service and flow direction with permanent adhesive on pipes.
- B. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Within 3 ft. of each valve and control device.
  - 2. At access doors, manholes, and similar access points that permit view of concealed piping.
  - 3. Within 3 ft. of equipment items and other points of origination and termination.
  - 4. Spaced at maximum intervals of 25 ft. along each run. Reduce intervals to 10 ft. in areas of congested piping and equipment.
- C. Do not apply plastic pipe labels or plastic tapes directly to bare pipes conveying fluids at temperatures of 125 deg F or higher. Where these pipes are to remain uninsulated, use a short section of insulation or use stenciled labels.
- D. Flow-Direction Flow Arrows: Use arrows, in compliance with ASME A13.1, to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
- E. Pipe-Label Color Schedule:
  - 1. Domestic Cold-Water Piping: White letters on an ANSI Z535.1 safety-green background.
  - 2. Domestic Hot-Water Piping: White letters on an ANSI Z535.1 safety-green background.
  - 3. Domestic Hot-Water Return Piping: White letters on an ANSI Z535.1 safety-green background.
  - 4. Sanitary Waste and Storm Drainage Piping: White letters on a black background.

### 3.6 INSTALLATION OF VALVE TAGS

- A. Install tags on valves and control devices in piping systems, except check valves, valves within factory-fabricated equipment units, shutoff valves, faucets, convenience and lawn-watering hose connections, and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule in the operating and maintenance manual.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in "Valve-Tag Size and Shape" Subparagraph below:
  - 1. Valve-Tag Size and Shape:
    - a. Domestic Cold Water: 1-1/2 inches
    - b. Domestic Hot Water: 1-1/2 inches
    - c. Domestic Hot-Water Return: 1-1/2 inches.
  - 2. Valve-Tag Colors:
    - a. For each piping system, use the same lettering and background coloring system on valve tags as used in the piping system labels and background.

3.7 INSTALLATION OF WARNING TAGS

- A. Warning Tag Color: Black letters on an ANSI Z535.1 safety-yellow background.
- B. Attach warning tags, with proper message, to equipment and other items where indicated on Drawings or schedule.

END OF SECTION 22 05 53

## SECTION 22 07 19

### PLUMBING PIPING INSULATION

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section includes insulating the following plumbing piping services:
  - 1. Domestic cold-water piping.
  - 2. Domestic hot-water piping.
  - 3. Domestic chilled-water piping for drinking fountains.
  - 4. Roof drains and rainwater leaders.
  - 5. Supplies and drains for handicap-accessible lavatories and sinks.
  - 6. Condensate drainage for mechanical units.

##### 1.2 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.3 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code
  - 2. Any other legally constituted body having jurisdiction thereof.
  - 3. Water supply and drainpipes under accessible lavatories and sinks shall be insulated or otherwise configured to protect against contact. There shall be no sharp or abrasive surfaces under accessible lavatories or sinks. TAS Chapter 6.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.
- C. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.
- D. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Architect. Use materials indicated for the completed Work.
  - 1. Piping Mockups:
    - a. One 10-foot section of NPS 2 straight pipe.
    - b. One each of a 90-degree threaded, welded, and flanged elbow.
    - c. One each of a threaded, welded, and flanged tee fitting.
    - d. One NPS 2 or smaller valve and one NPS 2-1/2 or larger valve.
    - e. Four support hangers, including hanger shield and insert.
    - f. One threaded strainer and one flanged strainer with removable portion of insulation.
    - g. One threaded reducer and one welded reducer.
    - h. One pressure temperature tap.
    - i. One mechanical coupling.
    - j. One union.
  - 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
  - 3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
  - 4. Obtain Architect's approval of mockups before starting insulation application.
  - 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
  7. Demolish and remove mockups when directed.
- E. Comply with the following applicable standards and other requirements specified for miscellaneous components:
1. Supply and Drain Protective Shielding Guards: ICC A117.1.
- 1.4 DRAWINGS
- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
  - B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
  - C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
  - D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.
- 1.5 PROTECTION
- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
  - B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.
- 1.6 LOCATIONS
- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
  - B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
  - C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.
- 1.7 ACTION SUBMITTALS
- A. Product Data: For each type of product. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any).

- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
  - 2. Detail attachment and covering of heat tracing inside insulation.
  - 3. Detail insulation application at pipe expansion joints for each type of insulation.
  - 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
  - 5. Detail removable insulation at piping specialties, equipment connections, and access panels.
  - 6. Detail application of field-applied jackets.
  - 7. Detail application at linkages of control devices.
- C. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
  - 1. Preformed Pipe Insulation Materials: 12 inches long by NPS 2.
  - 2. Jacket Materials for Pipe: 12 inches long by NPS 2.
  - 3. Sheet Jacket Materials: 12 inches square.
  - 4. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

## 1.8 SUBMITTAL DATA

- A. Submittal Requirements:
  - 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
  - 2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  - 3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
  - 4. To be valid, all submittals must:
    - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
    - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
    - c. Include all pertinent construction, installation, performance, and technical data.
    - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
      - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
      - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
    - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.
- B. Substitution Requirements:
  - 1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
    - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.

- 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
    - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
  2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
  3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
  4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
  5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
  6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.
- 1.9 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For qualified Installer.
  - B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
  - C. Field quality-control reports.
- 1.10 DELIVERY, STORAGE, AND HANDLING
- A. Packaging: Insulation system materials are to be delivered to the Project site in unopened containers. The packaging is to include name of the manufacturer, fabricator, type, description, and size.
- 1.11 COORDINATION
- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
  - B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
  - C. Coordinate installation and testing of heat tracing.
- 1.12 SCHEDULING
- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- 1.13 UNINSPECTED WORK
- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
  - B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

1.14 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible tracings shall be delivered to the Architect.

1.15 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation, jacket materials, adhesive, mastic, tapes, and cement material containers with appropriate markings of applicable testing agency.
  - 1. All Insulation Installed Indoors and Outdoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2.2 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials are applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come into contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.
- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.
- F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Comply with ASTM C552.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; Micro-Lok.
    - b. Owens Corning; Fiberglas Pipe Insulation.
  - 2. Preformed Pipe Insulation, Type II, Class 1: Unfaced.
  - 3. Preformed Pipe Insulation, Type II, Class 2: With factory-applied ASJ-SSL jacket.
  - 4. Fabricated shapes in accordance with ASTM C450, ASTM C585, and ASTM C1639.
  - 5. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- G. Flexible Elastomeric: Closed-cell or expanded-rubber materials; suitable for maximum use temperature between minus 70 deg F and 220 deg F. Comply with ASTM C534/C534M, Type I for tubular materials.
- H. Glass-Fiber, Preformed Pipe: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 850 deg F in accordance with ASTM C411. Comply with ASTM C547.
  - 1. Preformed Pipe Insulation: Type I, Grade A with factory-applied ASJ-SSL.
  - 2. Fabricated shapes in accordance with ASTM C450 and ASTM C585.

3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - I. Mineral Wool, Preformed Pipe: Mandrel-wound mineral wool fibers bonded with a thermosetting resin, unfaced; suitable for maximum use temperature up to 1200 deg F in accordance with ASTM C447. Comply with ASTM C547.
    1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Johns Manville; Micro-Lok.
      - b. Knauf Insulation; 1000-Degree Pipe Insulation.
      - c. Owens Corning; Fiberglas Pipe Insulation.
    2. Preformed Pipe Insulation: Type II, Grade A with factory-applied ASJ-SSL.
    3. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
  - J. Phenolic: Fabricated pipe insulation of rigid, expanded, closed-cell structure. Comply with ASTM C1126, Type III.
    1. Pre-fabricated Pipe Insulation: Type III with factory-applied ASJ+ jacket.
    2. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
    3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - K. Polyolefin: Polyethylene thermal plastic insulation. Comply with ASTM C534/C534M or ASTM C1427, Type I, Grade 1, for tubular materials, self-seal.
    1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Armacell LLC; Tubolit.
      - b. Nomaco Insulation; IMCOLOCK and NOMALOCK.
- 2.3 INSULATING CEMENTS
- A. Glass-Fiber and Mineral Wool Insulating Cement: Comply with ASTM C195.
  - B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C196.
  - C. Glass-Fiber and Mineral Wool Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C449.
- 2.4 ADHESIVES
- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
  - B. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F.
  - C. Flexible Elastomeric and Polyolefin Adhesive: Solvent-based adhesive.
    1. Flame-spread index is 25 or less and smoke-developed index is 50 or less as tested in accordance with ASTM E84.
    2. Wet Flash Point: Below 0 deg F.
    3. Service Temperature Range: 40 to 200 deg F.
    4. Color: Black.
  - D. Glass-Fiber and Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
  - E. Phenolic Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.
  - F. ASJ Adhesive and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A, for bonding insulation jacket lap seams and joints.
  - G. PVC Jacket Adhesive: Compatible with PVC jacket.
- 2.5 MASTICS AND COATINGS
- A. Materials are compatible with insulation materials, jackets, and substrates.
  - B. Vapor-Retarder Mastic, Water Based: Suitable for indoor use on below-ambient services.
    1. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
    2. Service Temperature Range: 0 to plus 180 deg F.
    3. Comply with MIL-PRF-19565C, Type II, for permeance requirements, with supplier listing on DOD QPD - Qualified Products Database.
    4. Color: White.
  - C. Vapor-Retarder Mastic, Solvent Based, Indoor Use: Suitable for indoor use on below-ambient services.
    1. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
    2. Service Temperature Range: 0 to 180 deg F.

3. Color: White.
  - D. Vapor-Retarder Mastic, Solvent Based, Outdoor Use: Suitable for outdoor use on below-ambient services.
    1. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
    2. Service Temperature Range: Minus 50 to plus 220 deg F.
    3. Color: White.
  - E. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.
    1. Water-Vapor Permeance: ASTM E96/E96M, greater than 1.0 permat manufacturer's recommended dry film thickness.
    2. Service Temperature Range: 0 to plus 180 deg F.
    3. Color: White.
- 2.6 LAGGING ADHESIVES
- A. Adhesives comply with MIL-A-3316C, Class I, Grade A, and are compatible with insulation materials, jackets, and substrates.
    1. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
    2. Service Temperature Range: 20 to plus 180 deg F
    3. Color: White.
- 2.7 SEALANTS
- A. Materials are as recommended by the insulation manufacturer and are compatible with insulation materials, jackets, and substrates.
  - B. Joint Sealants:
    1. Permanently flexible, elastomeric sealant.
    2. Service Temperature Range: Minus 58 to plus 176 deg F.
    3. Color: White or gray.
  - C. FSK and Metal Jacket Flashing Sealants:
    1. Fire- and water-resistant, flexible, elastomeric sealant.
    2. Service Temperature Range: Minus 40 to plus 250 deg F.
    3. Color: Aluminum.
  - D. ASJ Flashing Sealants and PVC Jacket Flashing Sealants:
    1. Fire- and water-resistant, flexible, elastomeric sealant.
    2. Service Temperature Range: Minus 40 to plus 250 deg F.
    3. Color: White.
- 2.8 FACTORY-APPLIED JACKETS
- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
    1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
    2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
    3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.
    4. ASJ+: Aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with an outer film leaving no paper exposed; complying with ASTM C1136 Types I, II, III, IV, and VII.
    5. PSK Jacket: Aluminum foil fiberglass reinforced scrim with polyethylene backing, complying with ASTM C1136, Type II.
- 2.9 FIELD-APPLIED JACKETS
- A. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
  - B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
    1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
    2. Adhesive: As recommended by jacket material manufacturer.
    3. Color: White.

4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
    - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
  - C. Metal Jacket:
    1. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
      - a. Sheet and roll stock ready for shop or field sizing or factory cut and rolled to size.
      - b. Finish and thickness are indicated in field-applied jacket schedules.
      - c. Moisture Barrier for Indoor Applications: 3-mil-thick, heat-bonded polyethylene and kraft paper.
      - d. Moisture Barrier for Outdoor Applications: 3-mil-thick, heat-bonded polyethylene and kraft paper.
      - e. Factory-Fabricated Fitting Covers:
        - 1) Same material, finish, and thickness as jacket.
        - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
        - 3) Tee covers.
        - 4) Flange and union covers.
        - 5) End caps.
        - 6) Beveled collars.
        - 7) Valve covers.
        - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
    2. Stainless Steel Jacket: ASTM A240/A240M.
      - a. Sheet and roll stock ready for shop or field sizing or Factory cut and rolled to size.
      - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
      - c. Moisture Barrier for Indoor Applications 3-mil-thick, heat-bonded polyethylene and kraft paper.
      - d. Moisture Barrier for Outdoor Applications: 3-mil-thick, heat-bonded polyethylene and kraft paper.
      - e. Factory-Fabricated Fitting Covers:
        - 1) Same material, finish, and thickness as jacket.
        - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
        - 3) Tee covers.
        - 4) Flange and union covers.
        - 5) End caps.
        - 6) Beveled collars.
        - 7) Valve covers.
        - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
  - D. Underground Direct-Buried Jacket: 125-mil-thick vapor barrier and waterproofing membrane, consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.
  - E. Self-Adhesive Outdoor Jacket (Asphaltic): 60-mil-thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with white aluminum-foil facing.
  - F. Self-Adhesive Indoor/Outdoor Jacket (Non-Asphaltic): Vapor barrier and waterproofing jacket for installation over insulation located aboveground outdoors or indoors. Specialized jacket with five layers of laminated aluminum and polyester film with low-temperature acrylic pressure-sensitive adhesive. Outer aluminum surface is coated with UV-resistant coating for protection from environmental contaminants.
    1. Permeance: 0.00 perm as tested in accordance with ASTM F1249.
    2. Flamespread/Smoke Developed: 25/50 as tested in accordance with ASTM E84.
    3. Aluminum Finish: Smooth.
- 2.10 FIELD-APPLIED FABRIC-REINFORCING MESH
- A. Woven Glass-Fiber Mesh: Approximately 2 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in. for covering pipe and pipe fittings.
  - B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in, in a Leno weave, for pipe.

2.11 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd.

2.12 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ABI, Ideal Tape Division; 428 AWF ASJ.
    - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
    - c. Compac Corporation; 104 and 105.
    - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
  - 2. Width: 3 inches.
  - 3. Thickness: 11.5 mils.
  - 4. Adhesion: 90 ounces force/inch width.
  - 5. Elongation: 2 percent.
  - 6. Tensile Strength: 40 lbf/inch width.
  - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
  - 1. Width: 3 inches.
  - 2. Thickness: 6.5 mils.
  - 3. Adhesion: 90 ounces force/inch width.
  - 4. Elongation: 2 percent.
  - 5. Tensile Strength: 40 lbf/inch width.
  - 6. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ABI, Ideal Tape Division; 370 White PVC tape.
    - b. Compac Corporation; 130.
    - c. Venture Tape; 1506 CW NS.
  - 2. Width: 2 inches.
  - 3. Thickness: 6 mils.
  - 4. Adhesion: 64 ounces force/inch width.
  - 5. Elongation: 500 percent.
  - 6. Tensile Strength: 18 lbf/inch width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
  - 1. Width: 2 inches.
  - 2. Thickness: 3.7 mils.
  - 3. Adhesion: 100 ounces force/inch width.
  - 4. Elongation: 5 percent.
  - 5. Tensile Strength: 34 lbf/inch width.

2.13 SECUREMENTS

- A. Bands:
  - 1. Stainless Steel: ASTM A240/A240M, Type 304 or Type 316; 0.015-inchthick 3/4 inchwide with closed seal.
  - 2. Aluminum: ASTM B20, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020-inchthick, 3/4 inchwide with closed seal.
- B. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless-steel, or Monel.
- C. Wire: 0.080-inchnickel-copper alloy.

2.14 PROTECTIVE SHIELDING GUARDS

- A. Protective Shielding Pipe Covers:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. McGuire Manufacturing.

2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.
- B. Protective Shielding Piping Enclosures:
1. Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
1. Verify that systems to be insulated have been tested and are free of defects.
  2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 milsthick and an epoxy finish 5 milsthick if operating in a temperature range of between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
  2. Carbon Steel: Coat carbon steel operating at a service temperature of between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

#### **3.3 GENERAL INSTALLATION REQUIREMENTS**

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and of thicknesses required for each item of pipe system, as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket.
- D. Install insulation with longitudinal seams at top and bottom (12 o'clock and 6 o'clock positions) of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during storage, application, and finishing. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with Contract Documents, unless otherwise approved by the engineer-of-record.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
1. Install insulation continuously through hangers and around anchor attachments.

2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.
  3. Install insert materials and insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
  4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
  2. Cover circumferential joints with 3-inch-wide strips of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches o.c.
  3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at 4 inches o.c.
    - a. For below-ambient services, apply vapor-barrier mastic over staples.
  4. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
  5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
  2. Testing agency labels and stamps.
  3. Nameplates and data plates.
  4. Cleanouts.

### 3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
  4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
  4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
1. Comply with requirements in Section 07 84 13 "Penetration Firestopping" for firestopping and fire-resistant joint sealers.

- F. Insulation Installation at Floor Penetrations:
  - 1. Pipe: Install insulation continuously through floor penetrations.
  - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 84 13 "Penetration Firestopping."

### 3.5 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials, except where more specific requirements are specified in various pipe insulation material installation articles below.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, Mechanical Couplings, and Unions:
  - 1. Install insulation over fittings, valves, strainers, flanges, mechanical couplings, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
  - 2. Insulate pipe elbows using preformed fitting insulation or mitered or routed fittings made from same material and density as that of adjacent pipe insulation. Each piece is butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
  - 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as that used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
  - 4. Insulate valves using preformed fitting insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
  - 5. Insulate strainers using preformed fitting insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers, so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
  - 6. Insulate flanges, mechanical couplings, and unions, using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Stencil or label the outside insulation jacket of each union with the word "union" matching size and color of pipe labels.
  - 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
  - 8. For services not specified to receive a field-applied jacket, except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing, using PVC tape.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation conforms to the following:
  - 1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as that of adjoining pipe insulation.
  - 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union at least 2 times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless steel or aluminum bands. Select band material compatible with insulation and jacket.
  - 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
  - 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover

assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

### 3.6 INSTALLATION OF CELLULAR-GLASS INSULATION

#### A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

#### B. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

#### C. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered or routed sections of cellular-glass insulation. Secure insulation materials with wire or bands.

#### D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

### 3.7 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

#### A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

#### B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as that of pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

#### C. Insulation Installation on Pipe Fittings and Elbows:

1. Install sections of pipe insulation and miter if required in accordance with manufacturer's written instructions.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

#### D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated valve covers manufactured of same material as that of pipe insulation when available.

2. When prefabricated valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

### 3.8 INSTALLATION OF GLASS-FIBER AND MINERAL WOOL INSULATION

- A. Insulation Installation on Straight Pipes and Tubes:
  1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
  2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
  3. For insulation with jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
  4. For insulation with jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.
- B. Insulation Installation on Pipe Flanges:
  1. Install prefabricated pipe insulation to outer diameter of pipe flange.
  2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
  3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with glass-fiber or mineral-wool blanket insulation.
  4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.
- C. Insulation Installation on Pipe Fittings and Elbows:
  1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available.
  2. When prefabricated insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.
- D. Insulation Installation on Valves and Pipe Specialties:
  1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available.
  2. When prefabricated sections are not available, install fabricated sections of pipe insulation to valve body.
  3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
  4. Install insulation to flanges as specified for flange insulation application.

### 3.9 INSTALLATION OF PHENOLIC INSULATION

- A. General Installation Requirements:
  1. Secure single-layer insulation with stainless steel bands at 12-inch intervals and tighten bands without deforming insulation materials.
  2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with 0.062-inch wire spaced at 12-inch intervals. Secure outer layer with stainless steel bands at 12-inch intervals.
- B. Insulation Installation on Straight Pipes and Tubes:
  1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
  2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
  3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.
  4. For insulation with jackets with vapor retarders on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.
- C. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
  2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
  3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
- D. Insulation Installation on Pipe Fittings and Elbows:
1. Install preformed insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.
- E. Insulation Installation on Valves and Pipe Specialties:
1. Install preformed insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.
  2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
  3. Install insulation to flanges as specified for flange insulation application.
- 3.10 INSTALLATION OF POLYOLEFIN INSULATION
- A. Insulation Installation on Straight Pipes and Tubes:
1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive, or via self-seal mechanism to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Flanges:
1. Install pipe insulation to outer diameter of pipe flange.
  2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
  3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as that of pipe insulation.
  4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install mitered sections of polyolefin pipe insulation.
  2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- D. Insulation Installation on Valves and Pipe Specialties:
1. Install cut sections of polyolefin pipe and sheet insulation to valve body.
  2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
  3. Install insulation to flanges as specified for flange insulation application.
  4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- 3.11 INSTALLATION OF FIELD-APPLIED JACKETS
- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  2. Embed glass cloth between two 0.062-inch-thick coats of lagging adhesive.
  3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
  2. Install lap or joint strips with same material as jacket.
  3. Secure jacket to insulation with manufacturer's recommended adhesive.
  4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
  5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches o.c. and at end joints.

### 3.12 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting."
  1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
    - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

### 3.13 FIELD QUALITY CONTROL

- A. Owner will engage a qualified testing agency to perform tests and inspections.
- B. Engage a qualified testing agency to perform tests and inspections.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- D. Perform tests and inspections with the assistance of a factory-authorized service representative.
- E. Tests and Inspections: Inspect pipe, fittings, strainers, and valves, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- F. All insulation applications will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports.

### 3.14 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
  1. Drainage piping located in crawl spaces.
  2. Underground piping.
  3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

### 3.15 INDOOR PIPING INSULATION SCHEDULE

- A. Domestic Cold Water:
  1. NPS 2 and Smaller: Insulation is one of the following:
    - a. Cellular Glass: 1 inch thick.
    - b. Glass-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
    - c. Mineral Wool, Preformed Pipe Insulation, Type II: 1 inch thick.
  2. NPS 2-1/2" and Larger: Insulation is one of the following:
    - a. Cellular Glass: 1-1/2 inches thick.
    - b. Glass-Fiber, Preformed Pipe Insulation, Type I: 1-1/2 inches thick.
    - c. Mineral Wool, Preformed Pipe Insulation, Type II: 1-1/2 inches thick.
- B. Domestic Chilled Water (Potable):
  1. All Pipe Sizes: Insulation is one of the following:
    - a. Cellular Glass: 1-1/2 inches thick.

- b. Glass-Fiber, Preformed Pipe Insulation, Type I: 1-1/2 inches thick.
    - c. Mineral Wool, Preformed Pipe Insulation, Type II: 1-1/2 inches thick.
  - C. Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities:
    - 1. All Pipe Sizes: Insulation is one of the following:
      - a. Flexible Elastomeric: 1/2 inch thick.
      - b. Polyolefin: 1/2 inchthick.
  - D. Floor Drains, Traps, and Sanitary Drain Piping within 10 Feet of Drain Receiving Condensate and Equipment Drain Water below 60 Deg F:
    - 1. All Pipe Sizes: Insulation is one of the following:
      - a. Cellular Glass: 1-1/2 inchesthick.
      - b. Flexible Elastomeric: 1 inchthick.
      - c. Glass-Fiber, Preformed Pipe Insulation, Type I: 1 inchthick.
      - d. Mineral Wool, Preformed Pipe Insulation, Type II: 1 inchthick.
      - e. Phenolic: 1 inchthick.
      - f. Polyolefin: 1 inchthick.
  - E. Condensate Piping:
    - 1. All condensate piping within the building shall be insulated with "Imcoa" "Imcolock" 3/4" nominal wall thickness closed-cell insulation. Insulation shall have a flame spread of not more than 25 and a smoke density not exceeding 50 per 2019 CMC. All joints shall be mitered and secured with black duct tape.
- 3.16 INDOOR, FIELD-APPLIED JACKET SCHEDULE
  - A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
  - B. If more than one material is listed, selection from materials listed is Contractor's option.
  - C. Piping, Concealed:
    - 1. None.
    - 2. PVC, Color-Coded by System: 30 milsthick.
  - D. Piping, Exposed:
    - 1. None.
    - 2. PVC, Color-Coded by System: 30 milsthick.
    - 3. Stainless Steel, Type 316, Smooth No. 2B Finish: 0.020 inch
- 3.17 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE
  - A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
  - B. If more than one material is listed, selection from materials listed is Contractor's option.
  - C. Piping, Concealed:
    - 1. None.
    - 2. PVC, Color-Coded by System: 30 milsthick.
  - D. Piping, Exposed:
    - 1. Stainless Steel, Type 316, Smooth No. 2B Finish with Z-Shaped Locking Seam: 0.024 inchthick.
- 3.18 UNDERGROUND, FIELD-APPLIED INSULATION JACKET
  - A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

END OF SECTION 22 07 19

## SECTION 22 11 16

### DOMESTIC WATER PIPING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Copper tube and fittings.
  - 2. Piping joining materials.
  - 3. Encasement for piping.
  - 4. Transition fittings.
  - 5. Dielectric fittings.

##### 1.2 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.3 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code
  - 2. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.4 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

##### 1.5 PERMITS, INSPECTIONS AND LICENSES

- A. All permits, inspections and licenses required by the legally constituted authorities for installation of the work according to the plans and specifications shall be obtained and paid as a part of the work of this section.

1.6 UTILITIES

- A. See Drawings for Points of Connection.
- B. Certain site utilities are to be connected to and extended. Before laying of any pipe or digging of any trenches, Contractor shall determine by actual excavation and measurement exact location and depth of lines to which he is to connect. In event depth of lines is not sufficient to permit connection in manner indicated, Contractor shall obtain direction from the Owner's representative before proceeding with this work.
- C. Verify that utility companies size their services and meters to suit ultimate demand indicated on the drawings.
- D. Domestic Water: The Contractor shall be responsible for the domestic water service outside of the building within five feet (5') of the foundation, and within the building itself. See Civil Engineer's plans for onsite domestic water system.

1.7 EXAMINATION OF PREMISES

- A. Before bidding on this work, Contractors shall make a careful examination of the premises and shall thoroughly familiarize themselves with the requirements of the contract. By the act of submitting a proposal for the work included in this contract, the Contractor shall be deemed to have made such study and examination, and that he is familiar with and accepts all conditions of the site.

1.8 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

1.9 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

1.10 ACTION SUBMITTALS

- A. Product Data:
  - 1. Pipe and tube.
  - 2. Fittings.
  - 3. Joining materials.
  - 4. Transition fittings.

1.11 SUBMITTAL DATA

- A. Submittal Requirements:
  - 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.

2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
  4. To be valid, all submittals must:
    - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
    - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
    - c. Include all pertinent construction, installation, performance, and technical data.
    - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
      - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
      - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
    - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.
- B. Substitution Requirements:
1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
    - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
      - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
    - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
  2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
  3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
  4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
  5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.

6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.

#### 1.12 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Piping layout, or BIM model, drawn to scale, showing the items described in this Section, and coordinated with all building trades.
- B. System purging and disinfecting activities report.
- C. Field quality-control reports.

#### 1.13 FIELD CONDITIONS

- A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
  1. Notify Architect, Construction Manager and/or Owner no fewer than two days in advance of proposed interruption of water service.
  2. Do not interrupt water service without Architect's, Construction Manager's and/or Owner's written permission.

#### 1.14 UNINSPECTED WORK

- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
- B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

#### 1.15 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible tracings shall be delivered to the Architect.

#### 1.16 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

#### 1.17 WARRANTY

- A. Polypropylene Piping (PP-R) Manufacturer's Warranty: Manufacturer agrees to repair or replace PP-R pipe and fittings that fail in materials or workmanship within 10 years from date of Substantial Completion.
  1. Warranty is to cover labor and material costs of repairing and/or replacing defective materials and repairing any incidental damage caused by failure of the piping system due to defects in materials or manufacturing.
  2. Warranty is to be in effect only upon submission by the Contractor to the manufacturer of valid pressure/leak documentation indicating that the system was tested and passed the manufacturer's pressure/leak test.

## PART 2 - PRODUCTS

### 2.1 PIPING MATERIALS

- A. Potable-water piping, and components shall comply with NSF 14, NSF 61, and NSF 372. Include marking "NSF-pw" on piping.

### 2.2 COPPER TUBE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Mueller Streamline Co.
  - 2. Cerro Flow Products
- B. Drawn-Temper Copper Tube: ASTM B88, Type L.
- C. Annealed-Temper Copper Tube: ASTM B88, Type K.
- D. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.
- E. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, pressure fittings.
- F. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
- G. Cast Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces and solder-joint or threaded ends.
- H. Wrought Copper Unions: ASME B16.22.

### 2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials:
  - 1. AWWA C110/A21.10, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
  - 2. Full-face or ring type unless otherwise indicated.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Solder Filler Metals: ASTM B32, 95-5 silver lead-free alloys.
- D. Flux: ASTM B813, water flushable.
- E. Brazing Filler Metals: AWS A5.8M/A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- F. Solvent Cements for Joining CPVC Piping and Tubing: ASTM F493.
- G. Solvent Cements for Joining PVC Piping: ASTM D2564. Include primer according to ASTM F656.
- H. Plastic, Pipe-Flange Gaskets, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

### 2.4 ENCASEMENT FOR PIPING

- A. Standard: ASTM A674 or AWWA C105/A21.5.
- B. Form: Sheet or tube.
- C. Color: Black or natural.
- D. The minimum Polywrap flat tube width for each pipe diameter shall be as follows:

<u>Pipe Size / Type</u>	<u>Polywrap Flat Tube Width</u>
1. ½" to ¾" copper	2"
3. 1" to 1-½" copper	3"
4. 2" copper	4"
5. 2-1/2" copper	5"
6. 3" copper	6"

### 2.5 TRANSITION FITTINGS

- A. General Requirements:
  - 1. Same size as pipes to be joined.
  - 2. Pressure rating at least equal to pipes to be joined.
  - 3. End connections compatible with pipes to be joined.
- B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.

- C. Sleeve-Type Transition Coupling: AWWA C219.
- D. Plastic-to-Metal Transition Fittings:
  - 1. Description:
    - a. CPVC or PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions.
    - b. One end with threaded brass insert and one solvent-cement-socket or threaded end.
- E. Plastic-to-Metal Transition Unions:
  - 1. Description:
    - a. CPVC or PVC four-part union.
    - b. Brass or stainless-steel threaded end.
    - c. Solvent-cement-joint or threaded plastic end.
    - d. Rubber O-ring.
    - e. Union nut.

## 2.6 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
  - 1. Standard: ASSE 1079.
  - 2. Pressure Rating: 125 psig minimum at 180 deg F.
  - 3. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:
  - 1. Standard: ASSE 1079.
  - 2. Factory-fabricated, bolted, companion-flange assembly.
  - 3. Pressure Rating: 150 psig.
  - 4. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
  - 1. Nonconducting materials for field assembly of companion flanges.
  - 2. Pressure Rating: 150 psig.
  - 3. Gasket: Neoprene or phenolic.
  - 4. Bolt Sleeves: Phenolic or polyethylene.
  - 5. Washers: Phenolic with steel backing washers.
- E. Dielectric Nipples:
  - 1. Standard: IAPMO PS 66.
  - 2. Electroplated steel nipple complying with ASTM F1545.
  - 3. Pressure Rating and Temperature: 300 psig at 225 deg F.
  - 4. End Connections: Male threaded or grooved.
  - 5. Lining: Inert and noncorrosive, propylene.

## PART 3 - EXECUTION

### 3.1 PIPING APPLICATIONS

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
- D. Under-building-slab, domestic water, building-service piping, NPS 3 and smaller, shall be the following:
  - 1. Annealed-temper copper tube, ASTM B88, Type K; wrought-copper, solder-joint fittings; and brazed joints.
- E. Under-building-slab, domestic water, building-service piping, NPS 4 to NPS 8 and larger, shall be one of the following:
  - 1. Annealed-temper copper tube, ASTM B88, Type K; wrought-copper, solder-joint fittings; and brazed joints.
- F. Under-building-slab, domestic water piping, NPS 2, shall be the following:

1. Drawn-temper or annealed-temper copper tube, ASTM B88, Type L; wrought-copper, solder-joint fittings; and brazed joints.
  - G. Aboveground domestic water piping, NPS 2, shall be the following:
    1. Drawn-temper copper tube, ASTM B88, Type L; wrought-copper, solder-joint fittings; and soldered joints.
  - H. Aboveground domestic water piping, NPS 2-1/2 to NPS 4, shall be the following:
    1. Drawn-temper copper tube, ASTM B88, Type L; wrought-copper, solder-joint fittings; and soldered joints.
- 3.2 EARTHWORK
- A. Comply with requirements in Section 31 20 00 "Earth Moving" for excavating, trenching, and backfilling.
- 3.3 INSTALLATION OF PIPING
- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
  - B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
  - C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
  - D. Install underground copper tube in PE encasement according to ASTM A674 or AWWA C105/A21.5.
  - E. Install valves according to the following:
    1. Section 22 05 23 "General-Duty Valves for Plumbing Piping."
  - F. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements for pressure-reducing valves in Section 22 11 19 "Domestic Water Piping Specialties."
  - G. Install domestic water piping level without pitch and plumb.
  - H. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
  - I. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
  - J. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
  - K. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
  - L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and coordinate with other services occupying that space.
  - M. Install piping to permit valve servicing.
  - N. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
  - O. Install piping free of sags and bends.
  - P. Install fittings for changes in direction and branch connections.
  - Q. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
  - R. Install pressure gauges on suction and discharge piping for each plumbing pump and packaged booster pump. Comply with requirements for pressure gauges in Section 22 05 19 "Meters and Gages for Plumbing Piping."
  - S. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Section 22 11 23 "Domestic Water Pumps."
  - T. Install thermometers on outlet piping from each water heater. Comply with requirements for thermometers in Section 22 05 19 "Meters and Gages for Plumbing Piping."
  - U. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
  - V. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."

- W. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

### 3.4 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- D. Brazed Joints for Copper Tubing: Comply with CDA's "Copper Tube Handbook," "Brazed Joints" chapter.
- E. Soldered Joints for Copper Tubing: Apply ASTM B813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B828 or CDA's "Copper Tube Handbook."
- F. Pressure-Sealed Joints for Copper Tubing: Join copper tube and pressure-seal fittings with tools and procedure recommended by pressure-seal-fitting manufacturer. Leave insertion marks on pipe after assembly.
- G. Push-on Joints for Copper Tubing: Clean end of tube. Measure insertion depth with manufacturer's depth gage. Join copper tube and push-on-joint fittings by inserting tube to measured depth.
- H. Extruded-Tee Connections: Form tee in copper tube according to ASTM F2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.
- I. Joint Construction for Grooved-End Copper Tubing: Make joints according to AWWA C606. Roll groove ends of tubes. Lubricate and install gasket over ends of tubes or tube and fitting. Install coupling housing sections over gasket with keys seated in tubing grooves. Install and tighten housing bolts.
- J. Joint Construction for Grooved-End, Ductile-Iron Piping: Make joints according to AWWA C606. Cut round-bottom grooves in ends of pipe at gasket-seat dimension required for specified (flexible or rigid) joint. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket with keys seated in piping grooves. Install and tighten housing bolts.
- K. Joint Construction for Grooved-End Steel Piping: Make joints according to AWWA C606. Square cut or Roll groove ends of pipe as specified. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket with keys seated in piping grooves. Install and tighten housing bolts.
- L. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
- M. Joint Construction for Solvent-Cemented Plastic Piping: Clean and dry joining surfaces. Join pipe and fittings according to the following:
  - 1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
  - 2. CPVC Piping: Join according to ASTM D2846/D2846M Appendix.
  - 3. PVC Piping: Join according to ASTM D2855.
- N. Joints for PEX Tubing, ASTM: Join according to ASTM F1807 for metal insert and copper crimp ring fittings and ASTM F1960 for cold expansion fittings and reinforcing rings.
- O. Joints for PEX Tubing, ASSE: Join according to ASSE 1061 for push-fit fittings.
- P. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

### 3.5 INSTALLATION OF TRANSITION FITTINGS

- A. Install transition couplings at joints of dissimilar piping.
- B. Transition Fittings in Underground Domestic Water Piping:
  - 1. Fittings for NPS 1-1/2 and Smaller: Fitting-type coupling.
  - 2. Fittings for NPS 2 and Larger: Sleeve-type coupling.

### 3.6 INSTALLATION OF DIELECTRIC FITTINGS

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings, nipples, or unions.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.
- D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

### 3.7 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for hangers, supports, and anchor devices in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
- C. Install hangers for copper tubing and piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Support horizontal piping within 12 inches of each fitting.
- E. Support vertical runs of copper tubing and piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

### 3.8 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
- C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
- D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
  - 1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
  - 2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
  - 3. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.
  - 4. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

### 3.9 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Section 22 05 53 "Identification for Plumbing Piping and Equipment."

### 3.10 ADJUSTING

- A. Perform the following adjustments before operation:
  - 1. Close drain valves, hydrants, and hose bibbs.
  - 2. Open shutoff valves to fully open position.
  - 3. Open throttling valves to proper setting.
  - 4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
    - a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
    - b. Adjust calibrated balancing valves to flows indicated.
  - 5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
  - 6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
  - 7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
  - 8. Check plumbing specialties and verify proper settings, adjustments, and operation.

### 3.11 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
1. Piping Inspections:
    - a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
    - b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
      - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
      - 2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
    - c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections, and arrange for reinspection.
    - d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
  2. Piping Tests:
    - a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
    - b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
    - c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
    - d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
    - e. Hydrostatic testing and documentation of test results for polypropylene piping to be in accordance with the manufacturer's instructions and submitted to the manufacturer upon successful completion per warranty requirements.
    - f. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
    - g. Prepare reports for tests and for corrective action required.
- B. Domestic water piping will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### 3.12 CLEANING

- A. Clean and disinfect potable domestic water piping as follows:
1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
  2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
    - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
    - b. Fill and isolate system according to either of the following:
      - 1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
      - 2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
    - c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
    - d. Repeat procedures if biological examination shows contamination.
    - e. Submit water samples in sterile bottles to authorities having jurisdiction.
- B. Clean non-potable domestic water piping as follows:
1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
  2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:
    - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.

- b. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.
- C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.
- D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

END OF SECTION 22 11 16

## SECTION 22 11 19

### DOMESTIC WATER PIPING SPECIALTIES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Vacuum breakers.
  - 2. Backflow preventers.
  - 3. Temperature-actuated, water mixing valves.
  - 4. Strainers for domestic water piping.
  - 5. Outlet boxes.
  - 6. Hose bibbs.
  - 7. Wall hydrants.
  - 8. Roof hydrants.
  - 9. Drain valves.
  - 10. Water-hammer arresters.
  - 11. Trap-seal primer device.
  - 12. Trap-seal primer systems.
  - 13. Flexible connectors.

##### 1.2 DEFINITIONS

- A. AMI: Advanced Metering Infrastructure.
- B. AMR: Automatic Meter Reading.
- C. FKM: A family of fluoroelastomer materials defined by ASTM D1418.

##### 1.3 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.4 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code.
  - 2. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.5 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.

- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

#### 1.6 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

#### 1.7 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For domestic water piping specialties.
  - 1. Include diagrams for power, signal, and control wiring.

#### 1.9 SUBMITTAL DATA

- A. Submittal Requirements:
  - 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
  - 2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  - 3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.

4. To be valid, all submittals must:
  - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
  - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
  - c. Include all pertinent construction, installation, performance, and technical data.
  - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
    - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
    - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
  - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.

B. Substitution Requirements:

1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
  - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
    - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
  - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.

1.10 INFORMATIONAL SUBMITTALS

- A. Test and inspection reports.
- B. Field quality-control reports.

1.11 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

1.12 UNINSPECTED WORK

- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
- B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

1.13 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible tracings shall be delivered to the Architect.

1.14 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

**PART 2 - PRODUCTS**

2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

- A. Domestic water piping specialties intended to convey or dispense water for human consumption are to comply with the SDWA, requirements of authorities having jurisdiction, and NSF 61 and NSF 372, or to be certified in compliance with NSF 61 and NSF 372 by an American National Standards Institute (ANSI)-accredited third-party certification body that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.

2.2 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig unless otherwise indicated.

2.3 VACUUM BREAKERS

- A. Hose-Connection Vacuum Breakers:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
    - b. Woodford Manufacturing Company; a division of WCM Industries, Inc.
    - c. Zurn Industries, LLC; Plumbing Products Group; Light Commercial Products.
    - d. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - 2. Standard: ASSE 1011.
  - 3. Body: Bronze, nonremovable, with manual drain.
  - 4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
  - 5. Finish: Rough bronze.

## 2.4 BACKFLOW PREVENTERS

- A. Reduced-Pressure-Principle Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
    - b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
    - c. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  2. Standard: ASSE 1013.
  3. Operation: Continuous-pressure applications.
  4. Pressure Loss: 12 psigmaximum, through middle third of flow range.
  5. Size: See plumbing drawings.
  6. Design Flow Rate: See plumbing drawings.
  7. Selected Unit Flow Range Limits: See plumbing drawings.
  8. Pressure Loss at Design Flow Rate: See plumbing drawings.
  9. Body: Bronze for NPS 2and smaller; ductile or cast iron with interior lining that complies with AWWA C550 or that is FDA approved or stainless steel for NPS 2-1/2and larger.
  10. End Connections: Threaded for NPS 2and smaller; flanged for NPS 2-1/2and larger.
  11. Configuration: See plumbing drawings.
  12. Accessories:
    - a. Valves NPS 2and Smaller: Ball type with threaded ends on inlet and outlet.
    - b. Valves NPS 2-1/2and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.
    - c. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.
- B. Dual-Check-Valve Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
    - b. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  2. Standard: ASSE 1024.
  3. Operation: Continuous-pressure applications.
  4. Size: See plumbing drawings.
  5. Body: Bronze with union inlet.
- C. Hose-Connection Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
    - b. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  2. Standard: ASSE 1052.
  3. Operation: Up to 10-foot head of waterback pressure.
  4. Inlet Size: NPS 3/4.
  5. Outlet Size: Garden-hose thread complying with ASME B1.20.7.
  6. Capacity: At least 3-gpm flow.

## 2.5 TEMPERATURE-ACTUATED, WATER MIXING VALVES

- A. Individual-Fixture, Water Tempering Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Symmons Industries, Inc.
    - b. Bradley Corp.
    - c. Leonard Valve Company.
  2. Standard: ASSE 1016, thermostatically controlled, water tempering valve.
  3. Pressure Rating: 125 psigminimum unless otherwise indicated.
  4. Material: Bronze body with corrosion-resistant interior components.
  5. Temperature Control: Adjustable.
  6. Connections: Threaded inlets and outlet.
  7. Finish: Chrome plated.
  8. Tempered-Water Setting: See plumbing drawings.
  9. Tempered-Water Design Flow Rate: See plumbing drawings.
- B. Primary Water Tempering Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Symmons Industries, Inc.
    - b. Bradley Corp.
    - c. Leonard Valve Company.

2. Standard: ASSE 1017, thermostatically controlled, water tempering valve, listed as tempering valve.
3. Pressure Rating: 125 psig minimum unless otherwise indicated.
4. Material: Bronze body.
5. Temperature Control: Manual.
6. Connections: Threaded inlets and outlet.
7. Selected Primary Water Tempering Valve Size: See plumbing drawings.
8. Tempered-Water Setting: See plumbing drawings.
9. Tempered-Water Design Flow Rate: See plumbing drawings.
10. Pressure Drop at Design Flow Rate: See plumbing drawings.
11. Tempered-Water Outlet Size: See plumbing drawings.
12. Cold-Water Inlet Size: See plumbing drawings.
13. Hot-Water Inlet Size: See plumbing drawings.
14. Valve Finish: Rough bronze.

## 2.6 STRAINERS FOR DOMESTIC WATER PIPING

### A. Y-Pattern Strainers:

1. Pressure Rating: 125 psig minimum unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved, epoxy coated and for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations unless otherwise indicated.
5. Perforation Size:
  - a. Strainers NPS 2 and Smaller: 0.020 inch
  - b. Strainers NPS 2-1/2 to NPS 4: 0.045 inch.
  - c. Strainers NPS 5 and Larger: 0.10 inch.
6. Drain: Factory-installed, hose-end drain valve.

## 2.7 OUTLET BOXES

### A. Clothes Washer Outlet Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Acorn Engineering Company.
  - b. Guy Gray Manufacturing Co., Inc.
  - c. IPS Corporation.
  - d. Symmons Industries, Inc.
  - e. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - f. Whitehall Manufacturing; a div. of Acorn Engineering Company.
  - g. Zurn Industries, LLC; Plumbing Products Group; Light Commercial Products.
2. Mounting: Recessed.
3. Material and Finish: Enameled-steel, epoxy-painted-steel, or plastic box and faceplate.
4. Faucet: Combination valved fitting or separate hot- and cold-water valved fittings complying with ASME A112.18.1. Include garden-hose thread complying with ASME B1.20.7 on outlets.  
Drain Outlet Connection: NPS 2
5. Accessory: Water hammer arresters.
7. Supply Shutoff Fittings: NPS 1/2 gate, globe, or ball valves and NPS 1/2 copper, water tubing.
8. Drain: NPS 2 standpipe and P-trap for direct waste connection to drainage piping.
9. Inlet Hoses: Two 60-inch-long, rubber, household clothes washer inlet hoses with female, garden-hose-thread couplings. Include rubber washers.
10. Drain Hose: One 48-inch-long, rubber, household clothes washer drain hose with hooked end.

### B. Icemaker Outlet Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Acorn Engineering Company.
  - b. IPS Corporation.
2. Mounting: Recessed.
3. Material and Finish: Enameled-steel, epoxy-painted-steel, or plastic box and faceplate.
4. Faucet: Valved fitting complying with ASME A112.18.1. Include NPS 1/2 or smaller copper tube outlet.
5. Accessory: Water hammer arrestor.
6. Supply Shutoff Fitting: NPS 1/2 gate, globe, or ball valve and NPS 1/2 copper, water tubing.

2.8 HOSE STATIONS

- A. Single-Temperature-Water Hose Stations:
1. Standard: ASME A112.18.1.
  2. Cabinet: Stainless steel enclosure with exposed valve handle, hose connection, and hose rack. Include thermometer in front.
  3. Hose-Rack Material: Stainless steel.
  4. Body Material: Bronze with stainless steel wetted parts.
  5. Body Finish: Rough bronze or chrome plated.
  6. Mounting: Wall, with reinforcement.
  7. Supply Fittings: Two NPS 3/4gate, globe, or ball valves and check valves and NPS 3/4copper, water tubing. Omit check valves if check stops are included with fitting.
  8. Hose: Manufacturer's standard, for service fluid, temperature, and pressure; 50 feetlong.
  9. Nozzle: With hand-squeeze, on-off control.
  10. Vacuum Breaker:
    - a. Integral or factory-installed, nonremovable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052.
    - b. Garden-hose thread complying with ASME B1.20.7 on outlet.

2.9 HOSE BIBBS

- A. Hose Bibbs:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Acorn Engineering Company.
    - b. Woodford Manufacturing Company; a division of WCM Industries, Inc.
    - c. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
  2. Standard: ASME A112.18.1 for sediment faucets.
  3. Body Material: Bronze.
  4. Seat: Bronze, replaceable.
  5. Supply Connections: NPS 1/2 or NPS 3/4threaded or solder-joint inlet.
  6. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
  7. Pressure Rating: 125 psig.
  8. Vacuum Breaker: Integral, nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.

2.10 WALL HYDRANTS

- A. Nonfreeze Wall Hydrants:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Acorn Engneering Company.
    - b. Woodford Manufacturing Company; a division of WCM Industries, Inc.
    - c. Zurn Industries, LLC; Plumbing Products Group.
  2. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
  3. Pressure Rating: 125 psig.
  4. Operation: Loose key.
  5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
  6. Inlet: NPS 3/4 or NPS 1.
  7. Outlet, Concealed: With integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
  8. Box: Deep, flush mounted with cover.
  9. Box and Cover Finish: Polished nickel bronze.
  10. Outlet, Exposed: With integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
  11. Nozzle and Wall-Plate Finish: Polished nickel bronze.
  12. Operating Keys(s): Two with each wall hydrant.
- B. Nonfreeze Vacuum Breaker Wall Hydrants:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Acorn Engineering Company.
    - b. Woodford Manufacturing Company; a division of WCM Industries, Inc.
    - c. Zurn Industries, LLC; Plumbing Products Group.
  2. Standard: ASSE 1019, Type A or Type B.
  3. Type: Automatic draining with integral air-inlet valve.

4. Classification: Type A, for automatic draining with hose removed or Type B, for automatic draining with hose removed or with hose attached and nozzle closed.
5. Pressure Rating: 125 psig.
6. Operation: Loose key.
7. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
8. Inlet: NPS 1/2 or NPS 3/4.
9. Outlet: Exposed with garden-hose thread complying with ASME B1.20.7.

## 2.11 ROOF HYDRANTS

### A. Nonfreeze, Draining-Type Roof Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Acorn Engineering Company.
  - b. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - c. Zurn Industries, LLC; Plumbing Products Group.
2. Standard: ASME A112.21.3M.
3. Type: Nonfreeze, exposed-outlet roof hydrant with coated cast-iron head and lift handle with lock option. Provide with deck flange and under deck clamp.
4. Casing and Operating Rod: Bronze interior parts, galvanized-steel casing, and bronze valve housing designed with hole to drain.
5. Inlet: NPS 3/4.
6. Outlet: Garden-hose thread complying with ASME B1.20.7.
7. Vacuum Breaker:
  - a. Nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052.
  - b. Garden-hose thread complying with ASME B1.20.7 on outlet.

## 2.12 DRAIN VALVES

### A. Ball-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 400-psig minimum CWP.
3. Size: NPS 3/4.
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.
6. Seats and Seals: Replaceable.
7. Handle: Vinyl-covered steel.
8. Inlet: Threaded or solder joint.
9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

### B. Gate-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-80 for gate valves.
2. Pressure Rating: Class 125.
3. Size: NPS 3/4.
4. Body: ASTM B62 bronze.
5. Inlet: NPS 3/4 threaded or solder joint.
6. Outlet: Garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

### C. Stop-and-Waste Drain Valves:

1. Standard: MSS SP-110 for ball valves or MSS SP-80 for gate valves.
2. Pressure Rating: 200-psig minimum CWP or Class 125.
3. Size: NPS 3/4.
4. Body: Copper alloy or ASTM B62 bronze.
5. Drain: NPS 1/8 side outlet with cap.

## 2.13 WATER-HAMMER ARRESTERS

### A. Water-Hammer Arresters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Precision Plumbing Products, Inc.
  - b. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Metal bellows.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

2.14 TRAP-SEAL PRIMER DEVICE

- A. Supply-Type, Trap-Seal Primer Device:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. MIFAB, Inc.
    - b. Precision Plumbing Products, Inc.
    - c. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
  2. Standard: ASSE 1018.
  3. Pressure Rating: 125 psig minimum.
  4. Body: Bronze.
  5. Inlet and Outlet Connections: NPS 1/2 threaded, union, or solder joint.
  6. Gravity Drain Outlet Connection: NPS 1/2 threaded or solder joint.
  7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

2.15 TRAP-SEAL PRIMER SYSTEMS

- A. Trap-Seal Primer Systems:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. MIFAB, Inc.
    - b. Precision Plumbing Products, Inc.
  2. Standard: ASSE 1044.
  3. Inlet Size: NPS 3/4, ASTM B88, Type L; copper, water tubing.
  4. Cabinet: Recessed-mounted steel box with stainless steel cover.
  5. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120 V ac power.
    - a. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  6. Vacuum Breaker: ASSE 1001.
  7. Number Outlets: See plumbing drawings.
  8. Size Outlets: NPS 1/2.

2.16 FLEXIBLE CONNECTORS

- A. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
1. Working-Pressure Rating: Minimum 200 psig
  2. End Connections NPS 2 and Smaller: Threaded copper pipe or plain-end copper tube.
  3. End Connections NPS 2-1/2 and Larger: Flanged copper alloy.
- B. Stainless Steel-Hose Flexible Connectors: Corrugated-stainless steel tubing with stainless steel wire-braid covering and ends welded to inner tubing.
1. Working-Pressure Rating: Minimum 200 psig.
  2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.
  3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

**PART 3 - EXECUTION**

3.1 INSTALLATION OF PIPING SPECIALTIES

- A. Backflow Preventers: Install in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.
1. Locate backflow preventers in same room as connected equipment or system.
  2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
  3. Do not install bypass piping around backflow preventers.
- B. Temperature-Actuated, Water Mixing Valves: Install with check stops or shutoff valves on inlets and with shutoff valve on outlet.
1. Install cabinet-type units recessed in or surface mounted on wall as specified.
- C. Y-Pattern Strainers: For water, install on supply side of each control valve, water pressure-reducing valve, solenoid valve, and pump.

- D. Outlet Boxes: Install boxes recessed in wall or surface mounted on wall. Install 1-1/2-by-3-1/2-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 06 10 00 "Rough Carpentry."
  - E. Ground Hydrants: Install with 1 cu. yd. of crushed gravel around drain hole. Set ground hydrants with box flush with grade.
  - F. Nonfreeze, Draining-Type Roof Hydrants: Install with drain connection piped to nearest floor drain or to the exterior.
  - G. Water-Hammer Arresters: Install in water piping in accordance with PDI-WH 201.
  - H. Supply-Type, Trap-Seal Primer Device: Install with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.
  - I. Drainage-Type, Trap-Seal Primer Device: Install as lavatory trap with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting.
  - J. Trap-Seal Primer Systems: Install with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.
- 3.2 PIPING CONNECTIONS
- A. Drawings indicate general arrangement of piping, fittings, and specialties.
  - B. When installing piping specialties adjacent to equipment and machines, allow space for service and maintenance.
- 3.3 ELECTRICAL CONNECTIONS
- A. Connect wiring in accordance with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
  - B. Ground equipment in accordance with Section 26 05 26 "Grounding and Bonding for Electrical Systems."
  - C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- 3.4 CONTROL CONNECTIONS
- A. Connect control wiring in accordance with Section 26 05 23 "Control-Voltage Electrical Power Cables."
- 3.5 IDENTIFICATION
- A. Plastic Labels for Equipment: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
    - 1. Vacuum breakers.
    - 2. Backflow preventers.
    - 3. Temperature-actuated, water mixing valves.
    - 4. Outlet boxes.
    - 5. Wall hydrants.
    - 6. Roof hydrants.
    - 7. Trap-seal primer device.
    - 8. Trap-seal primer systems.
  - B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."
- 3.6 ADJUSTING
- A. Set field-adjustable pressure set points of water pressure-reducing valves.
  - B. Set field-adjustable flow set points of balancing valves.
  - C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.
  - D. Adjust each pressure vacuum breaker, reduced-pressure-principle backflow preventer, double-check, backflow-prevention assembly, and double-check, detector-assembly backflow preventer in accordance with manufacturer's written instructions, authorities having jurisdiction and the device's reference standard.

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections.
  - 1. Test each pressure vacuum breaker, reduced-pressure-principle backflow preventer, double-check, backflow-prevention assembly, and double-check, detector-assembly backflow preventer according to authorities having jurisdiction and the device's reference standard.
  - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: After electrical circuitry has been energized, start units to confirm unit operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

END OF SECTION 22 11 19

## SECTION 22 13 16

### SANITARY WASTE AND VENT PIPING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Hubless, cast-iron soil pipe and fittings.
  - 2. Copper tube and fittings.
  - 3. Specialty pipe fittings.
  - 4. Encasement for underground metal piping.

##### 1.2 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.3 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code.
  - 2. Any other legally constituted body having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.4 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
  - 1. Soil, Waste, and Vent Piping: 10-foot head of water.
- B. Seismic Performance: Soil, waste, and vent piping and support and installation shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

##### 1.5 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.

- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

1.6 PERMITS, INSPECTIONS AND LICENSES

- A. All permits, inspections and licenses required by the legally constituted authorities for installation of the work according to the plans and specifications shall be obtained and paid as a part of the work of this section.

1.7 UTILITIES

- A. See Drawings for Points of Connection.
- B. Certain site utilities are to be connected to and extended. Before laying of any pipe or digging of any trenches, Contractor shall determine by actual excavation and measurement exact location and depth of lines to which he is to connect. In event depth of lines is not sufficient to permit connection in manner indicated, Contractor shall obtain direction from the Owner's representative before proceeding with this work.
- C. Verify that utility companies size their services and meters to suit ultimate demand indicated on the drawings.
- D. Sanitary Sewer: The Contractor shall be responsible for the soil and waste piping inside and outside of the buildings. See Civil Engineer's plans for connection into the sanitary sewer street main or lateral to property as indicated on drawings.

1.8 EXAMINATION OF PREMISES

- A. Before bidding on this work, Contractors shall make a careful examination of the premises and shall thoroughly familiarize themselves with the requirements of the contract. By the act of submitting a proposal for the work included in this contract, the Contractor shall be deemed to have made such study and examination, and that he is familiar with and accepts all conditions of the site.

1.9 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

1.10 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

1.11 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For hubless, single-stack drainage system. Include plans, elevations, sections, and details.

1.12 SUBMITTAL DATA

A. Submittal Requirements:

1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
4. To be valid, all submittals must:
  - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
  - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
  - c. Include all pertinent construction, installation, performance, and technical data.
  - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
    - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
    - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
  - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.

B. Substitution Requirements:

1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
  - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
    - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
  - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.

4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.

#### 1.13 UNINSPECTED WORK

- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
- B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

#### 1.14 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible shall be delivered to the Architect.

#### 1.15 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

#### 1.16 FIELD CONDITIONS

- A. Interruption of Existing Sanitary Waste Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with requirements indicated:
  1. Notify Architect, Construction Manager, and/or Owner no fewer than two days in advance of proposed interruption of sanitary waste service.
  2. Do not proceed with interruption of sanitary waste service without Architect's, Construction Manager's, and/or Owner's written permission.

#### 1.17 WARRANTY

- A. Listed manufacturers to provide labeling and warranty of their respective products.

## **PART 2 - PRODUCTS**

### **2.1 PERFORMANCE REQUIREMENTS**

- A. Components and installation are capable of withstanding the following minimum working pressure unless otherwise indicated:
  - 1. Soil, Waste, and Vent Piping: 10 ft. head of water.
  - 2. Waste, Force-Main Piping: 150 psig
- B. Seismic Performance: Soil, waste, and vent piping and support and installation to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7. See Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment":
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Component Importance Factor: 1.5.

### **2.2 PIPING MATERIALS**

- A. Piping materials to bear label, stamp, or other markings of specified testing agency.
- B. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

### **2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Charlotte Pipe.
  - 2. Tyler Pipe.
  - 3. AB&I Foundry.
- B. Pipe and Fittings:
  - 1. Marked with CISPI collective trademark.
  - 2. ASTM A888 or CISPI 301.
- C. ASTM C1540 CISPI, Hubless-Piping Couplings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ANACO-Husky SD 4000 series.
    - b. Clamp All HI\_TORQ 125 series
  - 2. Standards: ASTM C1277 and CISPI 310.
  - 3. Description: Stainless steel corrugated shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.
- D. Soil and waste piping within the building itself and outside within five feet (5') of the foundation, shall be no-hub cast iron pipe and fittings, asphaltum coated, free from defects, and shall comply with CISPI. Standard 301, ASTM A-888 or ASTM A-74. Pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute. Fittings shall be made up with "Husky" SD 4000 series or "Clamp All" HI-TORQ 125 series stainless steel type 304 couplings and shall conform to ASTM C1540 & ASTM C564 except all above ground vent pipe fittings may be made with "Anaco" or "Tyler" stainless steel two band couplings conforming to CISPI Standard 310.
- E. Except where otherwise indicated on the plans, building sewer piping from five feet (5') outside of the building to connections at the sewer shall be PVC (polyvinyl chloride) ASTM D3034, SDR-35 sewer pipe with locked-in gasket (ASTM F477, Elastomeric Seal)
- F. Heavy-Duty, Hubless-Piping Couplings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Charlotte Pipe.
    - b. Tyler Pipe.
    - c. AB&I Foundry.
  - 2. Standards: ASTM C1277 and ASTM C1540.
  - 3. Description: Stainless steel shield with stainless steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

### **2.4 COPPER TUBE AND FITTINGS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Mueller Streamline Co.

2. Cerro Flow Products
  - B. Copper Type DWV Tube: ASTM B306, drainage tube, drawn temper.
  - C. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought copper, solder-joint fittings.
  - D. Hard Copper Tube: ASTM B88, Type L and Type M, water tube, drawn temper.
  - E. Soft Copper Tube: ASTM B88, Type L, water tube, annealed temper.
  - F. Copper Pressure Fittings:
    1. Copper Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
    2. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
  - G. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.
    1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
    2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
  - H. Solder: ASTM B32, lead free with ASTM B813, water-flushable flux.
- 2.5 PVC PIPE AND FITTINGS
  - A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    1. Charlotte Pipe.
    2. Tyler Pipe.
    3. AB&I Foundry.
  - B. Comply with NSF 14 for plastic piping components. Include "NSF-dwv" marking for plastic drain, waste, and vent piping and "NSF-sewer" marking for plastic sewer piping.
  - C. Solid-Wall PVC Pipe: ASTM D2665 drain, waste, and vent.
  - D. PVC Socket Fittings: ASTM D2665, made in accordance with ASTM D3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
  - E. Adhesive Primer: ASTM F656.
  - F. Solvent Cement: ASTM D2564.
- 2.6 SPECIALTY PIPE FITTINGS
  - A. Transition Couplings:
    1. General Requirements: Fitting or device for joining piping with small differences in ODs or of different materials. Include end connections of same size as and compatible with pipes to be joined.
    2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
    3. Unshielded, Nonpressure Transition Couplings:
      - a. Standard: ASTM C1173.
      - b. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
      - c. End Connections: Same size as and compatible with pipes to be joined.
      - d. Sleeve Materials:
        - 1) For Cast-Iron Soil Pipes: ASTM C564, rubber.
        - 2) For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926 PVC.
        - 3) For Dissimilar Pipes: ASTM D5926 PVC or other material compatible with pipe materials being joined.
    4. Shielded, Nonpressure Transition Couplings:
      - a. Standard: ASTM C1460.
      - b. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
      - c. End Connections: Same size as and compatible with pipes to be joined.
    5. Pressure Transition Couplings:
      - a. Standard: AWWA C219.
      - b. Description: Metal sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.
      - c. Center-Sleeve Material: Manufacturer's standard.

- d. Gasket Material: Natural or synthetic rubber.
  - e. Metal Component Finish: Corrosion-resistant coating or material.
- B. Dielectric Fittings:
- 1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
  - 2. Dielectric Unions:
    - a. Description:
      - 1) Standard: ASSE 1079.
      - 2) Pressure Rating: 125 psig minimum at 180 deg F.
      - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
  - 3. Dielectric Flanges:
    - a. Description:
      - 1) Standard: ASSE 1079.
      - 2) Factory-fabricated, bolted, companion-flange assembly.
      - 3) Pressure Rating: 125 psig minimum at 180 deg F.
      - 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
  - 4. Dielectric-Flange Insulating Kits:
    - a. Description:
      - 1) Nonconducting materials for field assembly of companion flanges.
      - 2) Pressure Rating: 150 psig
      - 3) Gasket: Neoprene or phenolic.
      - 4) Bolt Sleeves: Phenolic or polyethylene.
      - 5) Washers: Phenolic with steel backing washers.
  - 5. Dielectric Nipples:
    - a. Description:
      - 1) Standard: IAPMO PS 66.
      - 2) Electroplated steel nipple.
      - 3) Pressure Rating: 300 psig at 225 deg F.
      - 4) End Connections: Male threaded or grooved.
      - 5) Lining: Inert and noncorrosive, propylene.

2.7 ENCASUREMENT FOR UNDERGROUND METAL PIPING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Scotchwrap No. 50
  - 2. Polyken No. 900
  - 3. Tapecoat CT
  - 4. Johns-Manville No. V-10
- B. Standard: ASTM A674 or AWWA C105/A 21.5.
- C. Material: Linear low-density polyethylene film of 0.008-inch or high-density, cross-laminated polyethylene film of 0.004-inch minimum thickness.
- D. Form: Sheet or tube.
- E. Color: Black or natural.
- F. The minimum Polywrap flat tube width for each pipe diameter shall be as follows:

	<u>Pipe Size / Type</u>	<u>Polywrap Flat Tube Width</u>
1.	½" to ¾" copper	2"
2.	1" to 1-½" copper	3"
3.	2" copper	4"
4.	2-1/2" copper	5"
5.	3" copper	6"
6.	2" to 3" cast iron	14"
7.	4" cast iron	16"
8.	6" cast iron	20"
9.	8" cast iron	24"
- G. Piping through exterior walls shall be sealed using Link Seal modular seal with nitrile seal elements and stainless-steel bolts.

### **PART 3 - EXECUTION**

#### **3.1 EARTH MOVING**

- A. Comply with requirements for excavating, trenching, and backfilling specified in Section 31 20 00 "Earth Moving."

#### **3.2 PIPING INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.
  - 1. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
  - 2. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment".
- K. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends.
  - 1. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical.
  - 2. Use long-turn, double Y-branch, and 1/8-bend fittings if two fixtures are installed back-to-back or side by side with common drainpipe.
    - a. Straight tees, elbows, and crosses may be used on vent lines.
  - 3. Do not change direction of flow more than 90 degrees.
  - 4. Use proper size of standard increasers and reducers if pipes of different sizes are connected.
    - a. Reducing size of waste piping in direction of flow is prohibited.
- L. Lay buried building waste piping beginning at low point of each system.
  - 1. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream.
  - 2. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
  - 3. Maintain swab in piping and pull past each joint as completed.
- M. Install soil and waste and vent piping at the following minimum slopes unless otherwise indicated:
  - 1. Building Sanitary Waste: Two percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
  - 2. Horizontal Sanitary Waste Piping: Two percent downward in direction of flow.
  - 3. Vent Piping: One percent down toward vertical fixture vent or toward vent stack.
- N. Install cast-iron soil piping in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
  - 1. Install encasement on underground piping in accordance with ASTM A674 or AWWA C105/A 21.5.
- O. Install aboveground copper tubing in accordance with CDA's "Copper Tube Handbook."
- P. Install aboveground PVC piping in accordance with ASTM D2665.
- Q. Install underground ABS and PVC piping in accordance with ASTM D2321.
- R. Install engineered soil and waste and vent piping systems as follows:
  - 1. Combination Waste and Vent: Comply with standards of authorities having jurisdiction.
  - 2. Hubless, Single-Stack Drainage System: Comply with ASME B16.45 and hubless, single-stack aerator fitting manufacturer's written installation instructions.

3. Reduced-Size Venting: Comply with standards of authorities having jurisdiction.
  - S. Install underground, ductile-iron, force-main piping according to AWWA C600.
    1. Install buried piping inside building between wall and floor penetrations and connection to sanitary sewer piping outside building with restrained joints.
    2. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
    3. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.
  - T. Install underground, copper, force-main tubing in accordance with CDA's "Copper Tube Handbook."
    1. Install encasement on piping in accordance with ASTM A674 or AWWA C105/A 21.5.
  - U. Install force mains at elevations indicated.
  - V. Plumbing Specialties:
    1. Install backwater valves in sanitary waster gravity-flow piping.
      - a. Comply with requirements for backwater valves specified in Section 22 13 19 "Sanitary Waste Piping Specialties."
    2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary waste gravity-flow piping.
      - a. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping.
      - b. Comply with requirements for cleanouts specified in Section 22 13 19 "Sanitary Waste Piping Specialties."
    3. Install drains in sanitary waste gravity-flow piping.
      - a. Comply with requirements for drains specified in Section 22 13 19 "Sanitary Waste Piping Specialties."
  - W. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
  - X. Install sleeves for piping penetrations of walls, ceilings, and floors.
    1. Comply with requirements for sleeves specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
  - Y. Install sleeve seals for piping penetrations of concrete walls and slabs.
    1. Comply with requirements for sleeve seals specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
  - Z. Install escutcheons for piping penetrations of walls, ceilings, and floors.
    1. Comply with requirements for escutcheons specified in Section 22 05 18 "Escutcheons for Plumbing Piping."
  - AA. Encasement:
    1. The polyethylene tubing shall be cut into lengths approximately 2 feet longer than the pipe sections. Slip the tube around the pipe, centering it to provide a 1-ft overlap on each adjacent pipe section, and bunching it accordion fashion lengthwise until it clears the pipe ends. Lower the pipe into the trench and make up the pipe joint with the preceding section of pipe. A shallow bell hole must be made at each joint to facilitate installation of the polywrap. The bunched-up polywrap shall be pulled from the preceding length of pipe, slipped over the end of the new length of pipe, and secured in place with one circumferential turn of tape plus enough overlap to assure firm adhesion. The end of the polywrap shall be slipped from the new pipe section over the end of the first wrap until it overlaps the joint at the end of the preceding length of pipe and tape it in place. The loose wrapping on the barrel of the pipe shall be pulled snugly around the barrel of the pipe and excess material folded over the top of the pipe and the folds held in place by means of short strips of adhesive tape, at about 3-foot intervals along the pipe.
    2. Rips, punctures, or other damage to the tube shall be repaired with the adhesive tape or pieces of tube material secured with tape. Bends and reducers in the line shall be covered with polyethylene in the same manner as pipe.
    3. Valves, tees, crosses, and outlets shall be wrapped with flat sheets of the same material. The sheets shall be passed under valves and brought up around the body to the stem. Edges shall be brought together, folded twice, and secured with the adhesive tape.
- 3.3 JOINT CONSTRUCTION
- A. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

- B. Hub-and-Spigot, Cast-Iron Soil Piping Caulked Joints: Join in accordance with CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum caulked joints.
- C. Hubless, Cast-Iron Soil Piping Coupled Joints:
  - 1. Join hubless, cast-iron soil piping in accordance with CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
- D. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1.
  - 1. Cut threads full and clean using sharp dies.
  - 2. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
    - a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
    - b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
    - c. Do not use pipe sections that have cracked or open welds.
- E. Join copper tube and fittings with soldered joints in accordance with ASTM B828. Use ASTM B813, water-flushable, lead-free flux and ASTM B32, lead-free-alloy solder.
- F. Grooved Joints: Cut groove ends of pipe in accordance with AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket, with keys seated in piping grooves. Install and tighten housing bolts.
- G. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.
- H. Plastic, Nonpressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings in accordance with the following:
  - 1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
  - 2. ABS Piping: Join in accordance with ASTM D2235 and ASTM D2661 appendixes.
  - 3. PVC Piping: Join in accordance with ASTM D2855 and ASTM D2665 appendixes.
- I. Joint Restraints and Sway Bracing:
  - 1. Provide joint restraints and sway bracing for storm drainage piping joints to comply with the following conditions:
    - a. Provide axial restraint for pipe and fittings 5 inches and larger, upstream, and downstream of all changes in direction, branches, and changes in diameter greater than two pipe sizes.
    - b. Provide rigid sway bracing for pipe and fittings 4 inches and larger, upstream, and downstream of all changes in direction 45 degrees and greater.
    - c. Provide rigid sway bracing for pipe and fittings 5 inches and larger, upstream, and downstream of all changes in direction and branch openings.

### 3.4 SPECIALTY PIPE FITTING INSTALLATION

- A. Transition Couplings:
  - 1. Install transition couplings at joints of piping with small differences in ODs.
  - 2. In Waste Drainage Piping: Shielded, nonpressure transition couplings.
  - 3. In Aboveground Force Main Piping: Fitting-type transition couplings.
  - 4. In Underground Force Main Piping:
    - a. NPS 1-1/2 and Smaller: Fitting-type transition couplings.
    - b. NPS 2 and Larger: Pressure transition couplings.
- B. Dielectric Fittings:
  - 1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
  - 2. Dielectric Fittings for NPS 2 and Smaller: Use dielectric nipples or unions.
  - 3. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges, flange kits, or nipples.
  - 4. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

### 3.5 VALVE INSTALLATION

- A. General valve installation requirements for general-duty valve installation are specified in the following Sections:
  - 1. Section 22 05 23.12 "Ball Valves for Plumbing Piping."
  - 2. Section 22 05 23.13 "Butterfly Valves for Plumbing Piping."
  - 3. Section 22 05 23.14 "Check Valves for Plumbing Piping."
  - 4. Section 22 05 23.15 "Gate Valves for Plumbing Piping."

- B. Shutoff Valves:
  - 1. Install shutoff valve on each sewage pump discharge.
  - 2. Install gate or full-port ball valve for piping NPS 2 and smaller.
  - 3. Install gate valve for piping NPS 2-1/2 and larger.
- C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.
- D. Backwater Valves: Install backwater valves in piping subject to backflow.
  - 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated.
  - 2. Floor Drains: Drain outlet backwater valves unless drain has integral backwater valve.
  - 3. Install backwater valves in accessible locations.
  - 4. Comply with requirements for backwater valve specified in Section 22 13 19 "Sanitary Waste Piping Specialties."

### 3.6 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for pipe hanger and support devices and installation specified in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment".
  - 1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
  - 2. Install stainless steel pipe hangers for horizontal piping in corrosive environments.
  - 3. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
  - 4. Install stainless steel pipe support clamps for vertical piping in corrosive environments.
  - 5. Vertical Piping: MSS Type 8 or Type 42 clamps.
  - 6. Install individual, straight, horizontal piping runs:
    - a. 100 Ft. and Less: MSS Type 1, adjustable, steel clevis hangers.
    - b. Longer Than 100 Ft.: MSS Type 43, adjustable roller hangers.
    - c. Longer Than 100 Ft. if Indicated: MSS Type 49, spring cushion rolls.
  - 7. Multiple, Straight, Horizontal Piping Runs 100 Ft. or Longer: MSS Type 44 pipe rolls. Support pipe rolls on trapeze.
  - 8. Base of Vertical Piping: MSS Type 52 spring hangers.
- C. Install hangers for cast-iron and copper soil piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for ABS and PVC piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping and tubing within 12 inches of each fitting, valve, and coupling.
- F. Support vertical runs of cast-iron and copper soil piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- G. Support vertical runs of ABS and PVC piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

### 3.7 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect waste and vent piping to the following:
  - 1. Plumbing Fixtures: Connect waste piping in sizes indicated, but not smaller than required by plumbing code.
  - 2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
  - 3. Plumbing Specialties: Connect waste and vent piping in sizes indicated, but not smaller than required by plumbing code.
  - 4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
  - 5. Install horizontal backwater valves with cleanout cover flush with floor.

6. Comply with requirements for backwater valves, cleanouts, and drains specified in Section 22 13 19 "Sanitary Waste Piping Specialties."
  7. Equipment: Connect waste piping as indicated.
    - a. Provide shutoff valve if indicated and union for each connection.
    - b. Use flanges instead of unions for connections NPS 2-1/2 and larger.
  - D. Connect force-main piping to the following:
    1. Sanitary Sewer: To exterior force main.
    2. Sewage Pump: To sewage pump discharge.
  - E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
  - F. Make connections in accordance with the following unless otherwise indicated:
    1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
    2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
- 3.8 IDENTIFICATION
- A. Identify exposed sanitary waste and vent piping.
  - B. Comply with requirements for identification specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."
- 3.9 FIELD QUALITY CONTROL
- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
    1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
    2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
  - B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections, and arrange for reinspection.
  - C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
  - D. Test sanitary waste and vent piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
    1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.
      - a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
    2. Leave uncovered and unconcealed new, altered, extended, or replaced waste and vent piping until it has been tested and approved.
      - a. Expose work that was covered or concealed before it was tested.
    3. Roughing-in Plumbing Test Procedure: Test waste and vent piping except outside leaders on completion of roughing-in.
      - a. Close openings in piping system and fill with water to point of overflow, but not less than 10 ft. head of water.
      - b. From 15 minutes before inspection starts to completion of inspection, water level must not drop.
      - c. Inspect joints for leaks.
    4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight.
      - a. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg.
      - b. Use U-tube or manometer inserted in trap of water closet to measure this pressure.
      - c. Air pressure must remain constant without introducing additional air throughout period of inspection.
      - d. Inspect plumbing fixture connections for gas and water leaks.
    5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
    6. Prepare reports for tests and required corrective action.

- E. Test force-main piping in accordance with procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
  - 1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved.
    - a. Expose work that was covered or concealed before it was tested.
  - 2. Cap and subject piping to static-water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials.
    - a. Isolate test source and allow to stand for four hours.
    - b. Leaks and loss in test pressure constitute defects that must be repaired.
  - 3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  - 4. Prepare reports for tests and required corrective action.

### 3.10 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect sanitary waste and vent piping during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.
- D. Exposed ABS and PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.
- E. Repair damage to adjacent materials caused by waste and vent piping installation.

### 3.11 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground, soil and waste piping NPS 4 and smaller are to be any of the following:
  - 1. Sewer and waste: hubless, cast-iron soil pipe and fittings and hubless, single-stack aerator fittings; Heavy-duty hubless-piping couplings; and coupled joints.
  - 2. Vent: hubless, cast-iron soil pipe and fittings and hubless, single-stack aerator fittings; CISPI, hubless-piping couplings; and coupled joints.
  - 3. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
  - 4. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- C. Aboveground, soil and waste piping NPS 5 and larger are to be any of the following:
  - 1. Sewer and waste: hubless, cast-iron soil pipe and fittings and hubless, single-stack aerator fittings; Heavy-duty hubless-piping couplings; and coupled joints.
  - 2. Vent: hubless, cast-iron soil pipe and fittings and hubless, single-stack aerator fittings; CISPI, hubless-piping couplings; and coupled joints.
  - 3. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
  - 4. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- D. Aboveground, vent piping NPS 4 and smaller is to be any of the following:
  - 1. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty hubless-piping couplings; and coupled joints.
  - 2. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
  - 3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- E. Aboveground, vent piping NPS 5 and larger is to be any of the following:
  - 1. Hubless, cast-iron soil pipe and fittings; Heavy-duty hubless-piping couplings; and coupled joints.
  - 2. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
  - 3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- F. Underground, soil, waste, and vent piping NPS 4 and smaller are to be any of the following:
  - 1. Hubless, cast-iron soil pipe and fittings; Heavy-duty cast-iron hubless-piping couplings; and coupled joints.
  - 2. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
  - 3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- G. Underground, soil and waste piping NPS 5 and larger are to be any of the following:
  - 1. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty cast-iron hubless-piping couplings; coupled joints.
  - 2. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
  - 3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.

- H. Aboveground sanitary-sewage force mains NPS 2 and NPS 4 are to be any of the following:
  - 1. Hard copper tube, Type M; copper pressure fittings; and soldered joints.
- I. Underground sanitary-sewage force mains NPS 4 and smaller are to be any of the following:
  - 1. Hard copper tube, Type M; wrought-copper pressure fittings; and soldered joints.
  - 2. Fitting-type transition coupling for piping smaller than NPS 1-1/2 and pressure transition coupling for NPS 1-1/2 and larger if dissimilar pipe materials.

END OF SECTION 22 13 16

## SECTION 22 14 13

### STORM DRAINAGE PIPING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Hubless, cast-iron soil pipe and fittings.
  - 2. PVC pipe and fittings.
  - 3. Specialty pipe and fittings.
  - 4. Encasement for underground metal piping.

##### 1.2 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.3 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code.
  - 2. Any other legally constituted body having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.4 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
  - 1. Storm Drainage Piping: 10-foot head of water.

##### 1.5 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

1.6 PERMITS, INSPECTIONS AND LICENSES

- A. All permits, inspections and licenses required by the legally constituted authorities for installation of the work according to the plans and specifications shall be obtained and paid as a part of the work of this section.

1.7 UTILITIES

- A. See Drawings for Points of Connection.
- B. Certain site utilities are to be connected to and extended. Before laying of any pipe or digging of any trenches, Contractor shall determine by actual excavation and measurement exact location and depth of lines to which he is to connect. In event depth of lines is not sufficient to permit connection in manner indicated, Contractor shall obtain direction from the Owner's representative before proceeding with this work.
- C. Verify that utility companies size their services and meters to suit ultimate demand indicated on the drawings.
- D. Storm Drain: The Contractor shall be responsible for the storm drain service outside of the building within five feet (5') of the foundation, and within the building itself. See Civil Engineer's plans for onsite storm drain system.

1.8 EXAMINATION OF PREMISES

- A. Before bidding on this work, Contractors shall make a careful examination of the premises and shall thoroughly familiarize themselves with the requirements of the contract. By the act of submitting a proposal for the work included in this contract, the Contractor shall be deemed to have made such study and examination, and that he is familiar with and accepts all conditions of the site.

1.9 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

1.10 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

1.11 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.12 SUBMITTAL DATA

A. Submittal Requirements:

1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
4. To be valid, all submittals must:
  - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
  - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
  - c. Include all pertinent construction, installation, performance, and technical data.
  - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
    - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
    - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
  - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.

B. Substitution Requirements:

1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
  - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
    - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
  - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.

4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.

#### 1.13 UNINSPECTED WORK

- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
- B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

#### 1.14 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible shall be delivered to the Architect.

#### 1.15 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

#### 1.16 FIELD CONDITIONS

- A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
  1. Do not proceed with interruption of storm drainage service without Construction Manager's written permission.

### **PART 2 - PRODUCTS**

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
  1. Storm Drainage Piping: 10-foot head of water
  2. Storm Drainage, Force-Main Piping: 150 psig.

2.2 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Charlotte Pipe.
  - 2. Tyler Pipe.
  - 3. AB&I Foundry.
- B. Pipe and Fittings:
  - 1. Marked with CISPI collective trademark and NSF certification mark.
  - 2. Standard: ASTM A 888 or CISPI 301.
- C. Heavy-Duty, Hubless-Piping Couplings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ANACO-Husky SD 4000 series.
    - b. Clamp All HI\_TORQ 125 series
  - 2. Standard: ASTM C 1540.
  - 3. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

2.3 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type L, water tube, drawn temper.
- B. Soft Copper Tube: ASTM B 88, Type L, water tube, annealed temper.
- C. Copper Pressure Fittings:
  - 1. Copper Fittings: ASME B16.18, cast-copper-alloy fittings or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
  - 2. Copper Unions: MSS SP-123, copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
- D. Copper Flanges: ASME B16.24, Class 150, cast copper with solder-joint end.
  - 1. Flange Gasket Materials: ASME B16.21, full-face, flat, nonmetallic, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
  - 2. Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- E. Solder: ASTM B 32, lead free with ASTM B 813, water-flushable flux.

2.4 PVC PIPE AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Charlotte Pipe.
  - 2. Tyler Pipe.
  - 3. AB&I Foundry.
- B. NSF Marking: Comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic storm drain and "NSF-sewer" for plastic storm sewer piping.
- C. Solid-Wall PVC Pipe: ASTM D 2665; drain, waste, and vent.
- D. Cellular-Core PVC Pipe: ASTM F 891, Schedule 40.
- E. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
- F. Adhesive Primer: ASTM F 656.
- G. Solvent Cement: ASTM D 2564.

2.5 SPECIALTY PIPE FITTINGS

- A. Transition Couplings:
  - 1. General Requirements: Fitting or device for joining piping with small differences in ODs or of different materials. Include end connections same size as and compatible with pipes to be joined.
  - 2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified-piping-system fitting.
  - 3. Unshielded, Nonpressure Transition Couplings:
    - a. Standard: ASTM C 1173.
    - b. Description: Elastomeric sleeve, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
    - c. Sleeve Materials:
      - 1) For Cast-Iron Soil Pipes: ASTM C 564, rubber.

- 2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
- 3) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.
- 4. Shielded, Nonpressure Transition Couplings:
  - a. Standard: ASTM C 1460.
  - b. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
  - c. End Connections: Same size as and compatible with pipes to be joined.
- 5. Pressure Transition Couplings:
  - a. Standard: AWWA C219.
  - b. Description: Metal, sleeve-type couplings same size as pipes to be joined, and with pressure rating at least equal to and ends compatible with pipes to be joined.
  - c. Center-Sleeve Material: Carbon steel.
  - d. Gasket Material: Natural or synthetic rubber.
  - e. Metal Component Finish: Corrosion-resistant coating or material.
- B. Dielectric Fittings:
  - 1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
  - 2. Dielectric Unions:
    - a. Description:
      - 1) Standard: ASSE 1079.
      - 2) Pressure Rating: 150 psig minimum at 180 deg F.
      - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
  - 3. Dielectric Flanges:
    - a. Description:
      - 1) Standard: ASSE 1079.
      - 2) Factory-fabricated, bolted, companion-flange assembly.
      - 3) Pressure Rating: 150 psig minimum at 180 deg F.
      - 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
  - 4. Dielectric-Flange Insulating Kits:
    - a. Description:
      - 1) Nonconducting materials for field assembly of companion flanges.
      - 2) Pressure Rating: 150 psig.
      - 3) Gasket: Neoprene or phenolic.
      - 4) Bolt Sleeves: Phenolic or polyethylene.
      - 5) Washers: Phenolic with steel-backing washers.
  - 5. Dielectric Nipples:
    - a. Description: Electroplated steel nipple.
    - b. Standard: IAPMO PS 66.
    - c. Pressure Rating: 300 psig at 225 deg F.
    - d. End Connections: Male threaded or grooved.
    - e. Lining: Inert and noncorrosive, propylene.

2.6 ENCASEMENT FOR UNDERGROUND METAL PIPING

- A. Standard: ASTM A 674 or AWWA C105/A 21.5.
- B. Material: High-density, cross laminated polyethylene film of 0.004-inch minimum thickness.
- C. Form: Sheet or tube.
- D. Color: Black.
- E. The minimum Polywrap flat tube width for each pipe diameter shall be as follows:

	<u>Pipe Size / Type</u>	<u>Polywrap Flat Tube Width</u>
1.	2" copper	4"
2.	2-1/2" copper	5"
3.	3" copper	6"
4.	2" to 3" cast iron	14"
5.	4" cast iron	16"
6.	6" cast iron	20"
7.	8" cast iron	24"

- F. Piping through exterior walls shall be sealed using Link Seal modular seal with nitrile seal elements and stainless-steel bolts.

### **PART 3 - EXECUTION**

#### **3.1 EARTH MOVING**

- A. Comply with requirements for excavating, trenching, and backfilling specified in Section 31 20 00 "Earth Moving."

#### **3.2 PIPING INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.
  - 1. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.
  - 2. Install piping as indicated unless deviations from layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- K. Make changes in direction for piping using appropriate branches, bends, and long-sweep bends.
  - 1. Do not change direction of flow more than 90 degrees.
  - 2. Use proper size of standard increasers and reducers if pipes of different sizes are connected.
    - a. Reducing size of drainage piping in direction of flow is prohibited.
- L. Lay buried building piping beginning at low point of each system.
  - 1. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream.
  - 2. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
  - 3. Maintain swab in piping and pull past each joint as completed.
- M. Install piping at the following minimum slopes unless otherwise indicated:
  - 1. Building Storm Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
  - 2. Horizontal Storm Drainage Piping: 1 percent downward in direction of flow.
- N. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
  - 1. Install encasement on underground piping according to ASTM A 674 or AWWA C105/A 21.5.
- O. Install steel piping according to applicable plumbing code.
- P. Install aboveground PVC piping according to ASTM D 2665.
- Q. Install underground PVC piping according to ASTM D 2321.
- R. Install engineered controlled-flow drain specialties and storm drainage piping in locations indicated.
- S. Install underground, ductile-iron, force-main piping according to AWWA C600.
  - 1. Install buried piping inside building between wall and floor penetrations and discharge indirectly into sanitary floor sink when oil sensing controls prohibit oil water from be discharged into system.
  - 2. Otherwise, connection to oil water separator outside building with restrained joints. Continue piping to connect to public sanitary sewer system.
  - 3. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.

4. Install encasement on piping according to ASTM A 674 or AWWA C105/A 21.5.
  - T. Plumbing Specialties:
    1. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping.
  - U. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
  - V. Install sleeves for piping penetrations of walls, ceilings, and floors.
  - W. Install sleeve seals for piping penetrations of concrete walls and slabs.
  - X. Install escutcheons for piping penetrations of walls, ceilings, and floors.
- 3.3 JOINT CONSTRUCTION
- A. Hubless, Cast-Iron Soil Piping Coupled Joints:
    1. Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
  - B. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1.
    1. Cut threads full and clean using sharp dies.
    2. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
      - a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
      - b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
      - c. Do not use pipe sections that have cracked or open welds.
  - C. Join copper tube and fittings with soldered joints according to ASTM B 828 procedure. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.
  - D. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fittings. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.
  - E. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.
  - F. Joint Restraints and Sway Bracing:
    1. Provide joint restraints and sway bracing for storm drainage piping joints to comply with the following conditions:
      - a. Provide axial restraint for pipe and fittings 5 inches and larger, upstream and downstream of all changes in direction, branches, and changes in diameter greater than two pipe sizes.
      - b. Provide rigid sway bracing for pipe and fittings 4 inches and larger, upstream and downstream of all changes in direction 45 degrees and greater.
      - c. Provide rigid sway bracing for pipe and fittings 5 inches and larger, upstream and downstream of all changes in direction and branch openings.
- 3.4 SPECIALTY PIPE FITTING INSTALLATION
- A. Transition Couplings:
    1. Install transition couplings at joints of piping with small differences in ODs.
    2. In Drainage Piping: Shielded, nonpressure transition couplings.
    3. In Aboveground Force-Main Piping: Fitting-type transition couplings.
    4. In Underground Force-Main Piping:
      - a. NPS 1-1/2 and Smaller: Fitting-type transition couplings.
      - b. NPS 2 and Larger: Pressure transition couplings.
  - B. Dielectric Fittings:
    1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
    2. Dielectric Fittings for NPS 2 and Smaller: Use dielectric nipples or unions.
    3. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges or flange kits.
    4. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

### 3.5 VALVE INSTALLATION

- A. General valve installation requirements for general-duty valve installations are specified in the following Sections:
  - 1. Section 22 05 23.12 "Ball Valves for Plumbing Piping."
  - 2. Section 22 05 23.13 "Butterfly Valves for Plumbing Piping."
  - 3. Section 22 05 23.14 "Check Valves for Plumbing Piping."
  - 4. Section 22 05 23.15 "Gate Valves for Plumbing Piping."
- B. Shutoff Valves:
  - 1. Install shutoff valve on each sump pump discharge.
  - 2. Install full port ball valve for piping NS 2and smaller.
  - 3. Install gate valve for piping NPS 2-1/2and larger.
- C. Check Valves: Install swing-check valve, between pump and shutoff valve, on each sump pump discharge.
- D. Backwater Valves: Install backwater valves in piping subject to backflow.
  - 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated.
  - 2. Install backwater valves in accessible locations.
  - 3. Comply with requirements for backwater valves specified in Section 22 14 23 "Storm Drainage Piping Specialties."

### 3.6 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for hangers, supports, and anchor devices specified in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
  - 1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
  - 2. Install stainless-steel pipe hangers for horizontal piping in corrosive environments.
  - 3. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
  - 4. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
  - 5. Vertical Piping: MSS Type 8 or Type 42, clamps.
  - 6. Install individual, straight, horizontal piping runs:
    - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
    - b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
    - c. Longer Than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
  - 7. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
  - 8. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Install hangers for cast-iron galvanized steel ductile iron and copper soil tubing and piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- D. Install hangers for ABS and PVC piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping and tubing within 12 inches of each fitting, valve, and coupling.
- F. Support vertical cast-iron galvanized steel ductile iron and copper tubing and piping to comply with MSS-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent, but as a minimum at base and at each floor.
- G. Support vertical ABS and PVC piping with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

### 3.7 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect storm drainage piping to roof drains and storm drainage specialties.
  - 1. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.

2. Install horizontal backwater valves with cleanout cover flush with floor.
  3. Comply with requirements for backwater valves cleanouts and drains specified in Section 22 14 23 "Storm Drainage Piping Specialties."
- D. Connect force-main piping to the following:
1. Storm Sewer: To exterior force main.
  2. Sump Pumps: To sump pump discharge.
- E. Where installing piping adjacent to equipment, allow space for service and maintenance.
- F. Make connections according to the following unless otherwise indicated:
1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
  2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
- 3.8 IDENTIFICATION
- A. Identify exposed storm drainage piping.
- B. Comply with requirements for identification specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."
- 3.9 FIELD QUALITY CONTROL
- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
  2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Test storm drainage piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired.
    - a. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved.
    - a. Expose work that was covered or concealed before it was tested.
  3. Test Procedure:
    - a. Test storm drainage piping on completion of roughing-in.
    - b. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts until completion of inspection, water level must not drop. Inspect joints for leaks.
  4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  5. Prepare reports for tests and required corrective action.
- C. Test force-main piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:
1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved.
    - a. Expose work that was covered or concealed before it was tested.
  2. Cap and subject piping to static-water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials.
    - a. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
  3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  4. Prepare reports for tests and required corrective action.
- D. Piping will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.10 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.11 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground and underground storm drainage piping shall be the following:
  - 1. Hubless, cast-iron soil pipe and fittings; heavy-duty, hubless-piping couplings; and coupled joints.
  - 2. Galvanized-steel pipe, drainage fittings, and threaded joints.
  - 3. Solid-wall ABS pipe, ABS socket fittings, and solvent-cemented joints.
  - 4. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
  - 5. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- C. Aboveground storm drainage force mains NPS 5 and larger shall be the following:
  - 1. Galvanized-steel pipe, pressure fittings, and threaded joints.
  - 2. Grooved-end, galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.
  - 3. Fitting-type transition couplings if dissimilar pipe materials.
- D. Aboveground and underground storm drainage force mains NPS 4 and smaller shall be the following:
  - 1. Hard copper tube; Type M wrought-copper pressure fittings; and soldered joints.
  - 2. Fitting-type transition coupling for piping smaller than NPS 1-1/2 and pressure transition coupling for NPS 1-1/2 and larger if dissimilar pipe materials.
- E. Underground storm drainage force mains NPS 5 and larger shall be any of the following:
  - 1. Ductile-iron, mechanical-joint piping, and mechanical joints.
  - 2. Pressure transition couplings if dissimilar pipe materials.

END OF SECTION 22 14 13

## SECTION 22 14 29

### SUMP PUMPS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Submersible sump pumps.
  - 2. Sump-pump basins and basin covers.

##### 1.2 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.3 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code.
  - 2. National Fire Protection Association.
  - 3. Texas Division of Industrial Safety.
  - 4. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.4 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

##### 1.5 PERMITS, INSPECTIONS AND LICENSES

- A. All permits, inspections and licenses required by the legally constituted authorities for installation of the work according to the plans and specifications shall be obtained and paid as a part of the work of this section.

1.6 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

1.7 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, and mounting and attachment details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
  - 4. Include diagrams for power, signal, and control wiring.

1.9 SUBMITTAL DATA

- A. Submittal Requirements:
  - 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
  - 2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  - 3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
  - 4. To be valid, all submittals must:
    - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
    - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
    - c. Include all pertinent construction, installation, performance, and technical data.

- d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
  - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.
  - 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
- e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.

B. Substitution Requirements:

1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
  - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
    - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
  - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.

1.10 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Retain shipping flange protective covers and protective coatings during storage.
- B. Protect bearings and couplings against damage.
- C. Comply with manufacturer's written instructions for handling.

1.12 UNINSPECTED WORK

- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
- B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

1.13 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blueline prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible shall be delivered to the Architect.

1.14 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

2.2 SUBMERSIBLE SUMP PUMPS

- A. Submersible, Fixed-Position, Double-Seal Sump Pumps:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Chicago Pump Company; a division of Yeomans Chicago Corporation.
    - b. Liberty Pumps Company
    - c. PACO Pumps; Grundfos Pumps Corporation, U.S.A.
    - d. Peerless Pump, Inc.
    - e. Weil Pump Company, Inc.
    - f. Yeomans Chicago Corporation.
  - 2. Description: Factory-assembled and -tested sump-pump unit
  - 3. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sump pump as defined in HI 1.1-1.2 and HI 1.3.
  - 4. Pump Casing: Cast iron, with strainer inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.
  - 5. Impeller: Statically and dynamically balanced, ASTM A48/A48M, Class No. 25 A cast iron design for clear wastewater handling, and keyed and secured to shaft.
  - 6. Pump and Motor Shaft: Stainless-steel, with factory-sealed, grease-lubricated ball bearings.
  - 7. Seals: Mechanical.
  - 8. Moisture-Sensing Probe: Internal moisture sensor and moisture alarm.

9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
  - a. Motor Housing Fluid: Oil.
10. Controls:
  - a. Enclosure: NEMA 250, Type 1 (indoors) and Type 4 (outdoors).
  - b. Automatic Alternator: Start pumps on successive cycles and start multiple pumps if one cannot handle load.
  - c. Automatic: Start pump.
  - d. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120 V ac, with transformer and contacts for remote alarm bell.
  - e. Oil sensing switch allowing pumps operation on high or low water levels.
11. Control-Interface Features:
  - a. Remote Alarm Contacts: For remote alarm interface.
  - b. Building Automation System Interface: Auxiliary contacts in pump controls for interface to building automation system and capable of providing the following:
    - 1) On-off status of pump.
    - 2) Alarm status.

### 2.3 SUMP-PUMP CAPACITIES AND CHARACTERISTICS

- A. Unit Capacity: See plumbing drawings and details.
- B. Number of Pumps: One.
- C. Each Pump:
  1. Capacity: See plumbing drawings and details.
  2. Total Dynamic Head: See plumbing drawings and details.
  3. Speed: See plumbing drawings and details.
  4. Discharge Size: See plumbing drawings and details.
  5. Electrical Characteristics:
    - a. Motor Horsepower: See plumbing drawings and details.
    - b. Volts: See plumbing drawings and details.
    - c. Phases: See plumbing drawings and details.
    - d. Hertz: 60.
- D. Unit Electrical Characteristics:
  1. Full-Load Amperes: See plumbing drawings and details.
  2. Minimum Circuit Ampacity: See plumbing drawings and details.
  3. Maximum Overcurrent Protection: See plumbing drawings and details.

### 2.4 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 22 05 13 "Common Motor Requirements for Plumbing Equipment."
  1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- B. Motors for submersible pumps shall be hermetically sealed.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine roughing-in for plumbing piping to verify actual locations of pumped drainage piping connections before sump pump installation.

### 3.2 INSTALLATION

- A. Pump Installation Standards: Comply with HI 1.4 for installation of sump pumps.

### 3.3 CONNECTIONS

- A. Where installing piping adjacent to equipment, allow space for service and maintenance.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test, inspect, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections:
  - 1. Perform each visual and mechanical inspection.
  - 2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Pumps and controls will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.

3.6 ADJUSTING

- A. Adjust pumps to function smoothly and lubricate as recommended by manufacturer.
- B. Adjust control set points.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain controls and pumps.

END OF SECTION 22 14 29

## SECTION 22 33 00

### ELECTRIC, DOMESTIC-WATER HEATERS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Flow-control, electric, tankless, domestic-water heaters.
  - 2. Thermostat-control, electric, tankless, domestic-water heaters.
  - 3. Domestic-water heater accessories.

##### 1.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Commercial domestic-water heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

##### 1.3 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.4 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code.
  - 2. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.5 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

1.6 PERMITS, INSPECTIONS AND LICENSES

- A. All permits, inspections and licenses required by the legally constituted authorities for installation of the work according to the plans and specifications shall be obtained and paid as a part of the work of this section.

1.7 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

1.8 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

1.9 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.10 SUBMITTAL DATA

- A. Submittal Requirements:
  - 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
  - 2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  - 3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
  - 4. To be valid, all submittals must:
    - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
    - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
    - c. Include all pertinent construction, installation, performance, and technical data.
    - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
      - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.

- 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
  - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.
- B. Substitution Requirements:
1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
    - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
      - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
    - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
  2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
  3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
  4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
  5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
  6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.
- 1.11 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For electric, domestic-water heaters to include emergency, operation, and maintenance manuals.
- 1.12 COORDINATION
- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- 1.13 UNINSPECTED WORK
- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
  - B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

1.14 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible tracings shall be delivered to the Architect.

1.15 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

1.16 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of electric, domestic-water heaters that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures including storage tank and supports.
    - b. Faulty operation of controls.
    - c. Deterioration of metals, metal finishes, and other materials beyond normal use.
  - 2. Warranty Periods: From date of Substantial Completion.
    - a. Commercial, Electric, Storage, Domestic-Water Heaters:
      - 1) Storage Tank: Five years.
      - 2) Controls and Other Components: Five years.
    - b. Electric, Tankless, Domestic-Water Heaters: Five year(s).
    - c. Expansion Tanks: Five years.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and use.
- B. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.
- C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 and NSF 372.

2.2 ELECTRIC, TANKLESS, DOMESTIC-WATER HEATERS

- A. Flow-Control, Electric, Tankless, Domestic-Water Heaters:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Chronomite Laboratories, Inc.
    - b. Rheem Manufacturing Company.
  - 2. Source Limitations: Obtain domestic-water heaters from single source from single manufacturer.
  - 3. Standard: UL 499 for electric, tankless, (domestic-water-heater) heating appliance.
  - 4. Construction: Copper piping or tubing complying with NSF 61 and NSF 372 barrier materials for potable water, without storage capacity.
    - a. Connections: ASME B1.20.1 pipe thread.
    - b. Pressure Rating: 150 psig.

- c. Heating Element: Resistance heating system.
  - d. Temperature Control: Flow-control fitting.
  - e. Safety Control: High-temperature-limit cutoff device or system.
  - f. Jacket: Aluminum or steel with enameled finish or plastic.
  - 5. Support: Bracket for wall mounting.
  - 6. Capacity and Characteristics:
    - a. Flow Rate: 0.35 gpm.
    - b. Maximum Temperature Setting: 120 deg. F.
    - c. Power Demand: See Water Heater Schedule.
    - d. Electrical Characteristics:
      - 1) Volts: See Water Heater Schedule.
      - 2) Phases: See Water Heater Schedule.
      - 3) Hertz: 60 Hz.
      - 4) Full-Load Amperes: See Water Heater Schedule.
      - 5) Minimum Circuit Ampacity: See Water Heater Schedule.
      - 6) Maximum Overcurrent Protection: See Water Heater Schedule.
- B. Thermostat-Control, Electric, Tankless, Domestic-Water Heaters:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Chronomite Laboratories, Inc.
    - b. Rheem Manufacturing Company.
  - 2. Source Limitations: Obtain domestic-water heaters from single source from single manufacturer.
  - 3. Standard: UL 499 for electric, tankless, (domestic-water-heater) heating appliance.
  - 4. Construction: Copper piping or tubing complying with NSF 61 and NSF 372 barrier materials for potable water, without storage capacity.
    - a. Connections: ASME B1.20.1 pipe thread.
    - b. Pressure Rating: 150 psig.
    - c. Heating Element: Resistance heating system.
    - d. Temperature Control: Thermostat.
    - e. Safety Control: High-temperature-limit cutoff device or system.
    - f. Jacket: Aluminum or steel with enameled finish or plastic.
  - 5. Support: Bracket for wall mounting.
  - 6. Capacity and Characteristics:
    - a. Flow Rate: 0.35 gpm105 deg F temperature rise.
    - b. Temperature Setting: 120 deg F.
    - c. Power Demand: See Water Heater Schedule.
    - d. Electrical Characteristics:
      - 1) Volts: See Water Heater Schedule.
      - 2) Phases: See Water Heater Schedule.
      - 3) Hertz: 60 Hz.
      - 4) Full-Load Amperes: See Water Heater Schedule.
      - 5) Minimum Circuit Ampacity: See Water Heater Schedule.
      - 6) Maximum Overcurrent Protection: See Water Heater Schedule.

### 2.3 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect domestic-water heaters specified to be ASME-code construction, in accordance with ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test commercial domestic-water heaters to minimum of one and one-half times pressure rating before shipment.
- C. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

## PART 3 - EXECUTION

### 3.1 DOMESTIC-WATER HEATER INSTALLATION

- A. Electric, Tankless, Domestic-Water Heater Mounting: Install electric, tankless, domestic-water heaters **at least** 18 inches above floor on wall bracket.
  - 1. Maintain manufacturer's recommended clearances.
  - 2. Arrange units so controls and devices that require servicing are accessible.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  4. Install anchor bolts to elevations required for proper attachment to supported equipment.
  5. Anchor domestic-water heaters to substrate.
- B. Install electric, domestic-water heaters level and plumb, in accordance with layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- C. Fill electric, domestic-water heaters with water.
- D. Install dielectric fittings in all locations where piping of dissimilar metals is to be joined. The wetted surface of the dielectric fitting contacted by potable water shall contain less than 0.25 percent of lead by weight.
- 3.2 PIPING CONNECTIONS
- A. Comply with requirements for piping specified in Section 22 11 16 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.
- 3.3 IDENTIFICATION
- A. Identify system components. Comply with requirements for identification specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."
- 3.4 FIELD QUALITY CONTROL
- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- D. Perform tests and inspections with the assistance of a factory-authorized service representative.
- E. Tests and Inspections:
1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  2. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
  3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- F. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports.
- 3.5 DEMONSTRATION
- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial and tankless, electric, domestic-water heaters. Training shall be a minimum of two hour(s).

END OF SECTION 22 33 00

## SECTION 22 42 00

### COMMERCIAL PLUMBING FIXTURES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Commercial lavatories.
  - 2. Commercial showers.
  - 3. Commercial sinks.
  - 4. Commercial urinals.
  - 5. Commercial water closets.
  - 6. Flushometer valves.
  - 7. Toilet seats.
  - 8. Fixture carriers.

##### 1.2 DEFINITIONS

- A. FRP: Fiberglass-reinforced plastic.
- B. PMMA: Polymethyl methacrylate; also known as "acrylic."
- C. Standard-Efficiency Flush Volume: 1.6 gal. per flush.
- D. High-Efficiency Flush Volume: 1.28 gal. or less per flush.
- E. WaterSense Fixture: Water closet and/or flushometer valve/tank certified by the EPA to meet the WaterSense performance criteria.

##### 1.3 ACTION SUBMITTALS

- A. Product Data:
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for plumbing fixtures.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
  - 1. Plans, elevations, sections, and mounting details.
  - 2. Details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Diagrams for power, signal, and control wiring.

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories and/or counter-mounted sinks.

##### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data:
  - 1. For lavatories and faucets.
    - a. In addition to items specified provide "Operation and Maintenance Data," include the following:
      - 1) Servicing and adjustments of automatic faucets.
  - 2. For shower valves to include in maintenance manuals
  - 3. For sinks and faucets to include in operation and maintenance manuals.
    - a. In addition to items specified provide "Operation and Maintenance Data," include the following:
      - 1) Servicing and adjustments of automatic faucets.
  - 4. For flushometer valves and electronic sensors to include in operation and maintenance manuals.
  - 5. For wash fountains and components to include in operation and maintenance manuals.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Lavatory faucets, sink faucets, shower valves, and wash fountain spray heads and faucets intended to convey or dispense water for human consumption are to comply with the U.S. Safe Drinking Water Act (SDWA), with requirements of the Authority Having Jurisdiction (AHJ), and with NSF 61 and NSF 372, or be certified in compliance with NSF 61 and NSF 372 by an ANSI-accredited third-party certification body, in that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.2 COMMERCIAL LAVATORIES

- A. Lavatory Systems:
  - 1. Lavatory Systems - Single or Multiple Stations LV-1, LV-2 & LV-3:
    - a. Source Limitations: Obtain lavatory systems from single source from single manufacturer.
    - b. Standards:
      - 1) ASME A112.18.1/CSA B125.1.
      - 2) CSA B45.5/IAPMO Z124.
      - 3) NSF 61.
      - 4) NSF 372.
      - 5) UPC, IPC, and GREENGUARD Certified.
    - c. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
    - d. Bowl(s) and Counter:
      - 1) Material: Solid-surface or natural quartz surface.
      - 2) Height to Rim: Accessible in accordance with ICC A117.1.
      - 3) Color or Finish: See Plumbing Fixture Schedule.
      - 4) Access Panel: 16-1/8-inch access panel.
      - 5) Number of Bowls or User Stations: One, Two, Three
      - 6) Bowl Shape: Trough Rectangular.
      - 7) Drain: Grid with NPS 1-1/2 tailpiece, each bowl.
    - e. Faucets:
      - 1) Type: Manufacturer's standard, chrome-plated solid brass, each bowl/station.
      - 2) Control: AC Power Adapter Transformer Type, control-voltage, sensor-actuated actuation with thermostatic mixing valve with check stops for each bowl or user station.
    - f. Mixer Point-of-Use:
      - 1) Material: Solid bimetal (bronze, brass, stainless steel).
      - 2) Security: Hot limit stop set to a maximum of 109.4 deg F.
      - 3) Set: Screwdriver adjustment temperature dial with scale: Cold-hot.
      - 4) Operation: Electronic "no-touch" wired powered.
      - 5) Power: 120 V ac.
    - g. Mounting: Manufacturer's wall-mounting bracket.
    - h. Supply Fittings:
      - 1) Piping: NPS 1/2 copper tubing, each bowl.
      - 2) Valves: Shutoff valve on each supply.
      - 3) Supply Piping: From wall.
    - i. Waste Fittings:
      - 1) Standard: ASME A112.18.2/CSA B125.2.
      - 2) Trap and Drain Piping: NPS 1-1/2, each basin.
- B. Lavatory Faucets, Manually Operated SK-3:
  - 1. Standard: ASME A112.18.1/CSA B125.1.
  - 2. Operation Type: Two handle, mixing
  - 3. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
  - 4. Body Type: Widespread.
  - 5. Body Material: Commercial, solid-brass, or die-cast housing with brazed copper and brass waterway.
  - 6. Finish: Polished chrome plate.
  - 7. Maximum Flow Rate: 1.2 gpm.

8. Mounting Type: Deck, concealed.
9. Valve Handle(s): Lever handles.
10. Spout: Rigid, gooseneck type.
11. Spout Outlet: Aerator.

C. Lavatory Supply Fittings:

1. NSF Standard: Comply with NSF 61 and NSF 372 for supply-fitting materials that will be in contact with potable water.
2. Standard: ASME A112.18.1/CSA B125.1.
3. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless steel wall flange.
4. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
5. Operation: Loose key or Wheel handle.
6. Risers:
  - a. Chrome-plated, soft-copper flexible tube riser.

D. Lavatory Waste Fittings:

1. Standard: ASME A112.18.2/CSA B125.2.
2. Drain: Grid type with NPS 1-1/4 offset and straight tailpiece.
3. Trap:
  - a. Size: NPS 1-1/2 by NPS 1-1/4.
  - b. Material:
    - 1) Chrome-plated, two-piece, cast-brass trap and swivel elbow with 0.032-inch-thick brass tube to wall; and chrome-plated, brass or steel wall flange.
    - 2) Stainless steel, two-piece trap and swivel elbow with 0.012-inch thick stainless steel tube to wall, and stainless steel wall flange.

2.3 COMMERCIAL SHOWERS

A. Showers, Individual:

B. Shower Valve Assemblies:

1. Shower Valve Assemblies - Single-Handle, Pressure-Balanced Mixing Valve with Head:
  - a. Source Limitations: Obtain shower heads and shower valves from single source from single manufacturer.
  - b. Description: Single-handle, accessible, pressure-balance mixing valve with hot- and cold-water indicators; diverting valve check stops; and hose with handheld shower head on sliding rod shower head.
  - c. Shower Valve:
    - 1) Standards:
      - a) ASME A112.18.1/CSA B125.1.
    - 2) Body Material: Solid brass.
    - 3) Finish: Polished chrome plate.
    - 4) Operation: Single-handle, twist or rotate control.
    - 5) Antiscald Device: Integral with mixing valve.
    - 6) Check Stops: Check-valve type, integral with or attached to body; on hot- and cold-water supply connections.
  - d. Supply Connections: NPS 1/2.
  - e. Shower Head:
    - 1) Standard: ASME A112.18.1/CSA B125.1.
    - 2) EPA WaterSense: Required.
    - 3) Shower Head Maximum Flow Rate: 1.5 gpm.
    - 4) Shower Head Material: Metallic with chrome-plated finish.

C. Grout:

1. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
2. Characteristics: Nonshrink; recommended for interior and exterior applications.
3. Design Mix: 5000 psi, 28-day compressive strength.
4. Packaging: Premixed and factory packaged.

2.4 COMMERCIAL SINKS

A. Utility Sinks:

1. Utility Sinks, Freestanding - Stainless Steel (SK-1):
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Advance Tabco.
    - 2) Elkay.
  - b. Source Limitations: Obtain sinks from single source from single manufacturer.
  - c. Fixture:
    - 1) Standards:
      - a) ASME A112.19.3/CSA B45.4.
      - b) NSF 2.
    - 2) Type: Stainless steel, freestanding, sound-deadened unit with backsplash.
    - 3) Number of Compartments: One.
    - 4) Material: 16 gauge, Type 304 stainless steel.
    - 5) Compartment:
      - a) Drain: NPS 1-1/2 tailpiece with stopper.
      - b) Drain Location: Centered in compartment.
    - 6) Integral Drainboard(s): Both side(s).
  - d. Legs and Feet: Stainless steel tubing legs with adjustable bullet feet.
  - e. Faucet(s): Sink Faucets, Manually Operated.
    - 1) Number Required: One.
    - 2) Mounting: On backsplash.
  - f. Supply Fittings:
    - 1) Standard: ASME A112.18.1/CSA B125.1.
    - 2) Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
      - a) Operation: Loose key Wheel handle.
      - b) Risers: NPS 1/2, chrome-plated, rigid-copper pipe and ASME A112.18.6/CSA B125.6, braided or corrugated stainless steel flexible hose.
2. Utility Sinks, Freestanding - Stainless Steel (SK-2):
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Advance Tabco.
    - 2) Elkay.
  - b. Source Limitations: Obtain sinks from single source from single manufacturer.
  - c. Fixture:
    - 1) Standards:
      - a) ASME A112.19.3/CSA B45.4.
      - b) NSF 2.
    - 2) Type: Stainless steel, freestanding, sound-deadened unit with backsplash.
    - 3) Number of Compartments: One.
    - 4) Material: 18 gauge, Type 304 stainless steel.
    - 5) Compartment:
      - a) Drain: NPS 1-1/2 tailpiece with stopper.
      - b) Drain Location: Centered in compartment.
  - d. Legs and Feet: Stainless steel tubing legs with adjustable bullet feet.
  - e. Faucet(s): Manually Operated.
    - 1) Number Required: One.
    - 2) Mounting: On backsplash.
  - f. Supply Fittings:
    - 1) Standard: ASME A112.18.1/CSA B125.1.
    - 2) Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
      - a) Operation: Loose key or Wheel handle.
      - b) Risers: NPS 1/2, chrome-plated, rigid-copper pipe ASME A112.18.6/CSA B125.6, braided or corrugated stainless steel flexible hose.
    - c)

- g. Waste Fittings:
  - 1) Standard: ASME A112.18.2/CSA B125.2.
  - 2) Trap(s) Size: NPS 1-1/2.
  - 3) Trap(s) Material:
    - a) Chrome-plated, two-piece, cast-brass trap and swivel elbow with 17-gauge brass tube to wall; and chrome-plated brass or steel wall flange.
    - b) Stainless steel, two-piece trap and swivel elbow with 0.012-inch-thick stainless steel tube to wall; and stainless steel wall flange.
- B. Handwash Sinks:
  - 1. Handwash Sinks:
    - a. Source Limitations: Obtain sinks from single source from single manufacturer.
    - b. Fixture:
      - 1) Standards: ASME A112.19.3/CSA B45.4.
      - 2) Type: Undercounter mounting.
      - 3) Overall Dimensions: 21 by 19 inches.
      - 4) Material: Vitreous china
    - c. Supply Fittings: Comply with requirements in "Sink Supply Fittings" Paragraph.
    - d. Waste Fittings: Comply with requirements in "Sink Waste Fittings" Paragraph.
- C. Sink Faucets, Manually Operated:SK-3
  - 1. Sink Faucets, Manually Operated: Two handle, mixing.
    - a. Source Limitations: Obtain sink faucets from single source from single manufacturer.
    - b. Standards: ASME A112.18.1/CSA B125.1.
    - c. Description: Coordinate faucet inlets with supplies; coordinate outlet with spout and sink receptor.
    - d. Body Type: Widespread.
    - e. Body Material: Commercial, solid-brass, or die-cast housing with brazed copper and brass waterway.
    - f. Finish: Polished chrome plate.
    - g. Maximum Flow Rate: 1.0 to 1.28 gpm.
    - h. Mounting Type: Deck, concealed.
    - i. Valve Handle(s): Lever.
    - j. Spout Type: Rigid.
    - k. Spout Outlet: Aerator.
  - 2. Sink Faucets, Manually Operated - Service Sink:MS-1
    - a. Source Limitations: Obtain sink faucets from single source from single manufacturer.
    - b. Description: Wall/back mounted, brass body, with integral service stops, checks, spout with bucket/pail hook, 3/4-inch hose thread end, integral vacuum breaker, inlets 8 inches o.c., and two-handle mixing.
    - c. Faucet:
      - 1) Standards:
        - a) ASME A112.18.1/CSA B125.1.
        - b) NSF 61 and NSF 372.
        - c) ICC A117.1.
        - d) ASSE 1001 (VB).
      - 2) Finish: Polished chrome plated.
      - 3) Handles: Lever.
      - 4) Cartridges: Ceramic.
      - 5) Brace: Adjustable top brace.
    - d. Vacuum Breaker: Required for hose outlet.
    - e. Spout Outlet: Hose thread in accordance with ASME B1.20.7.
- D. Sink Faucets, Automatically Operated:LV-1, LV-2, LV-3
  - 1. Sink Faucets, Automatically Operated: Hardwired, electronic sensor operated, nonmixing.
    - a. Source Limitations: Obtain sink faucets from single source from single manufacturer.
    - b. Standards:
      - 1) ASME A112.18.1/CSA B125.1.
      - 2) UL 1951
    - c. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
    - d. General: coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.

- e. Body Type: Single hole.
  - f. Body Material: Commercial, solid-brass, or die-cast housing with brazed copper and brass waterway.
  - g. Finish: Polished chrome1 plate.
  - h. Maximum Flow Rate: 0.5 gpm.
  - i. Mounting Type: Deck.
  - j. Spout Type: Rigid.
  - k. Spout Outlet: Aerator.
  - l. Thermostatic Mixing Valve: Below deck, Single temperature, with check valves.
- E. Sink Supply Fittings:
- 1. NSF Standard: Comply with NSF 61 and NSF 372 for supply-fitting materials that will be in contact with potable water.
  - 2. Standard: ASME A112.18.1/CSA B125.1.
  - 3. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless steel wall flange.
  - 4. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
  - 5. Operation: Loose key.
  - 6. Risers:
    - a. NPS 3/8.
    - b. Chrome-plated, soft-copper flexible tube ASME A112.18.6/CSA B125.6, braided or corrugated stainless steel flexible hose.
- F. Sink Waste Fittings:
- 1. Standard: ASME A112.18.2/CSA B125.2.
  - 2. Drain: Grid type with NPS 1-1/2 offset and straight tailpiece.
  - 3. Trap:
    - a. Size: NPS 1-1/2.
    - b. Material:
      - 1) Chrome-plated, two-piece, cast-brass trap and swivel elbow with 17-gauge brass tube to wall; and chrome-plated brass or steel wall flange.
- G. Grout:
- 1. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
  - 2. Characteristics: Nonshrink; recommended for interior and exterior applications.
  - 3. Design Mix: 5000 psi, 28-day compressive strength.
  - 4. Packaging: Premixed and factory packaged.
- 2.5 COMMERCIAL URINALS
- A. Urinals, Wall Hung:
- 1. Urinals, Wall Hung - Back Outlet, Washout:
    - a. Fixture:
      - 1) Standards:
        - a) ASME A112.19.2/CSA B45.1.
        - b) ASME A112.19.5/CSA B45.15.
      - 2) Material: Vitreous china.
      - 3) Type: Washout with extended shields.
      - 4) Strainer or Trapway: Manufacturer's standard strainer with integral trap.
      - 5) Water Consumption: 0.5 gpf.
      - 6) Spud Size and Location: NPS 3/4, top.
      - 7) Outlet Size and Location: NPS 2, back.
      - 8) Color: White.
    - b. Flushometer Valve:
    - c. Waste Fitting:
      - 1) Standard: ASME A112.18.2/CSA B125.2 for coupling.
      - 2) Size: NPS 2.
    - d. Support: Urinal carrier, floor affixed with steel uprights with fixture support plates and coupling with seal and fixture bolts and hardware matching fixture.
    - e. Urinal Mounting Height: Standard and Accessible in accordance with ICC A117.1.

2.6 COMMERCIAL WATER CLOSETS

- A. Water Closets, Floor Mounted:
- B. Water Closets, Wall Mounted:
  - 1. Water Closets, Wall Mounted - Top Spud:
    - a. Source Limitations: Obtain water closets from single source from single manufacturer.
    - b. Standard: ASME A112.19.2/CSA B45.1.
    - c. Bowl:
      - 1) Material: Vitreous china.
      - 2) Type: Siphon jet.
      - 3) Style: Flushometer valve.
      - 4) Mounting Height: Standard Accessible in accordance with ICC A117.1.
      - 5) Rim Contour: Elongated.
      - 6) Water Consumption: 1.28 gal. per flush.
      - 7) Spud Size and Location: NPS 1-1/2; top.
      - 8) Color: White.
    - d. Support: Water-closet carrier, floor affixed.

2.7 FLUSHOMETER VALVES

- A. Flushometer Valves, Sensor Operated:
  - 1. Flushometer Valves, Sensor Operated - Diaphragm:
    - a. Source Limitations: Obtain flushometer valve from single source from single manufacturer.
    - b. Standard: ASSE 1037/ASME 112.1037/CSA B125.37.
    - c. Minimum Pressure Rating: 125 psig.
    - d. Features: Include integral check stop and backflow-prevention device.
    - e. Material: Brass body with corrosion-resistant components.
    - f. Style: Exposed.
    - g. Exposed Flushometer-Valve Finish: Chrome-plated.
    - h. Actuator: Side or top mounted; listed and labeled as defined in NFPA 70, by qualified testing agency, and marked for intended location and application.
    - i. Trip Mechanism: Hardwired, control-voltage electronic sensor; listed and labeled as defined in NFPA 70, by qualified testing agency, and marked for intended location and application.

2.8 TOILET SEATS

- A. Toilet Seats:
  - 1. Source Limitations: Obtain toilet seat from single source from single manufacturer.
  - 2. Standard: IAPMO/ANSI Z124.5.
  - 3. Material: Plastic.
  - 4. Type: Commercial (Heavy duty).
  - 5. Shape: Elongated rim, open front.
  - 6. Hinge: Self-sustaining, check.
  - 7. Hinge Material: Noncorroding metal.
  - 8. Seat Cover: Not required.
  - 9. Color: White.
  - 10. Surface Treatment: Antimicrobial.

2.9 FIXTURE CARRIERS

- A. Fixture Carriers - Lavatory:
  - 1. Source Limitations: Obtain lavatory carriers from single source from single manufacturer.
  - 2. Standards:
    - a. ASME A112.6.1M.
    - b. ASME A112.6.2.
- B. Fixture Carriers - Sink:
  - 1. Source Limitations: Obtain sink carriers from single source from single manufacturer.
  - 2. Standards:
    - a. ASME A112.6.1M.
    - b. ASME A112.6.2.
- C. Fixture Carriers - Urinal:
  - 1. Source Limitations: Obtain urinal carriers from single source from single manufacturer.
  - 2. Standard: ASME A112.6.1M.

3. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings, gaskets, and feet; bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.
- D. Fixture Carriers - Water Closet:
1. Source Limitations: Obtain water closet carriers from single source from single manufacturer.
  2. Standard: ASME A112.6.1M.
  3. Description: Waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings, gaskets, and feet; bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine roughing-in of water-supply piping and sanitary drainage and vent piping systems to verify actual locations of piping connections before plumbing fixture installation.
- B. Examine walls and floors for suitable conditions where plumbing fixtures will be installed.
- C. Examine counters for suitable conditions where lavatories and sinks will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION OF COMMERCIAL PLUMBING FIXTURES**

- A. Lavatory Installation:
1. Install lavatories level and plumb in accordance with roughing-in drawings.
  2. Install supports, affixed to building substrate, for wall-mounted lavatories.
  3. Install accessible, wall-mounted lavatories at mounting height in accordance with ICC A117.1.
  4. Install water-supply piping with stop on each supply to each lavatory faucet. Install stops in locations that are accessible for ease of operation.
  5. Install trap and waste piping on each drain outlet of each lavatory to be connected to sanitary drainage system.
  6. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 00 "Common Work Results for Plumbing."
  7. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 07 92 00 "Joint Sealants."
  8. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."
- B. Shower Installation:
1. Assemble shower components in accordance with manufacturers' written instructions.
  2. Install showers level and plumb in accordance with roughing-in drawings.
  3. Install ball valves in water-supply piping to the shower if supply stops are specified with the shower valve. Comply with ball valve requirements specified in Section 22 05 23 "General Duty Valves for Plumbing Piping." Install valves in locations that are accessible for ease of operation.
  4. Install shower flow-control fittings with specified maximum flow rates in shower arms.
  5. Set shower receptors in leveling bed of cement grout.
  6. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 00 "Common Work Results for Plumbing."
  7. Seal joints between showers, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 07 92 00 "Joint Sealants."
- C. Sink Installation:
1. Install sinks level and plumb in accordance with roughing-in drawings.
  2. Install supports, affixed to building substrate, for wall-mounted sinks.
  3. Install accessible, wall-mounted sinks at mounting height in accordance with ICC A117.1.
  4. Set floor-mounted sinks in leveling bed of cement grout.

5. Install water-supply piping with stop on each supply to each sink faucet.
    - a. Exception: Use ball or gate valves if supply stops are not specified with sink. Comply with valve requirements specified in Section 22 05 23 "General Duty Valves for Plumbing Piping."
    - b. Install stops/valves in locations that are accessible for ease of operation.
  6. Install trap and waste piping on each drain outlet of each sink to be connected to sanitary drainage system.
  7. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 00 "Common Work Results for Plumbing."
  8. Seal joints between sinks, counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 07 92 00 "Joint Sealants."
  9. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."
- D. Urinal Installation:
1. Install urinals level and plumb in accordance with roughing-in drawings.
  2. Install wall-hung, back-outlet urinals onto waste-fitting seals and attached to supports.
  3. Install wall-hung, bottom-outlet urinals with tubular waste piping attached to supports.
  4. Install accessible, wall-mounted urinals at mounting height in accordance with ICC A117.1.
  5. Install trap-seal liquid in waterless urinals.
  6. Install supports, affixed to building substrate, for wall-hung urinals.
  7. Use off-floor carriers with waste fitting and seal for back-outlet urinals.
  8. Use carriers without waste fitting for urinals with tubular waste piping.
  9. Use chair-type carrier supports with rectangular steel uprights for accessible urinals.
  10. Measure support height installation from finished floor, not structural floor.
  11. Install flushometer-valve, water-supply fitting on each supply to each urinal.
  12. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
  13. Install lever-handle flushometer valves for accessible urinals with handle mounted on open side of compartment.
  14. Install actuators in locations easily reachable for people with disabilities.
  15. Install new batteries in battery-powered, electronic-sensor mechanisms.
  16. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Install deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 00 "Common Work Results for Plumbing."
  17. Seal joints between urinals, walls, and floors using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to urinal color. Comply with sealant requirements specified in Section 07 92 00 "Joint Sealants."
- E. Water Closet Installation:
1. Install water closets level and plumb in accordance with roughing-in drawings.
  2. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate.
  3. Install accessible, wall-mounted water closets at mounting height in accordance with ICC A117.1.
  4. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
  5. Use carrier supports with waste-fitting assembly and seal.
  6. Install floor-mounted, back-outlet water closets, attached to building floor substrate, onto waste-fitting seals; and attach to support.
  7. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals, and affix to building substrate.
  8. Measure support height installation from finished floor, not structural floor.
  9. Install flushometer-valve, water-supply fitting on each supply to each water closet.
  10. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
  11. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
  12. Install actuators in locations easily reachable for people with disabilities.
  13. Install new batteries in battery-powered, electronic-sensor mechanisms.
  14. Install toilet seats on water closets.
  15. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Install deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 00 "Common Work Results for Plumbing."

16. Seal joints between water closets, walls, and floors using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to water-closet color. Comply with sealant requirements specified in Section 07 92 00 "Joint Sealants."

### 3.3 INSTALLATION OF PIPING CONNECTIONS

- A. Connect plumbing fixtures with water supplies and soil, waste, and vent piping. Use size fittings required to match plumbing fixtures.
- B. Comply with water piping requirements specified in Section 22 11 16 "Domestic Water Piping."
- C. Comply with soil, waste, and vent piping requirements specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- D. Install protective-shielding pipe covers and enclosures on exposed supplies and waste piping of accessible plumbing fixtures. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."
- E. Where installing piping adjacent to water closets and urinals, allow space for service and maintenance.

### 3.4 INSTALLATION OF ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
  1. Nameplate to be laminated acrylic or melamine plastic signs, as specified in Section 26 05 53 "Identification for Electrical Systems."
  2. Nameplate to be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

### 3.5 INSTALLATION OF CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.

### 3.6 ADJUSTING

- A. Operate and adjust plumbing fixtures and controls. Replace damaged and malfunctioning plumbing fixtures, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Adjust water pressure at shower valves to produce proper flow.
- D. Adjust water pressure at flushometer valves to produce proper flow.
- E. Install new batteries in battery-powered, electronic-sensor mechanisms.

### 3.7 CLEANING AND PROTECTION

- A. After completing installation of plumbing fixtures, inspect and repair damages finishes. Replace any fixtures unable to be repaired to the satisfaction of the Architect and Owner.
- B. Clean plumbing fixtures and associated faucets, valves, flushometer valves, and fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed plumbing fixtures and associated faucets, valves, flushometer valves, and fittings.
- D. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 22 42 00

## SECTION 22 47 13

### DRINKING FOUNTAINS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Bottle filling stations.
  - 2. Supports.

##### 1.2 WORK INCLUDED

- A. Furnish all labor, materials, services, testing, transportation, and equipment necessary for the completion of all plumbing work as indicated on drawings and specified herein. Work materials and equipment not indicated or specified which is necessary for the complete and proper operation of the work of this Section in accordance with the true intent and meaning of the contract documents shall be provided and incorporated at no additional cost to the Owner.

##### 1.3 QUALITY ASSURANCE

- A. Code Requirements: All work covered by this Section shall conform to the latest requirements of the following regulations:
  - 1. 2018 International Plumbing Code.
  - 2. County Health Department.
  - 3. Any other legally constituted body-having jurisdiction thereof.
- B. Nothing in the specifications or drawings shall be construed to permit deviation from the requirements of governing codes unless approval for said deviation has been obtained from the legally constituted authorities having jurisdiction and from the Owner's representative.

##### 1.4 DRAWINGS

- A. Because of the small-scale drawings, it is not possible to indicate all offsets, fittings and accessories which may be required. The Contractor shall carefully investigate the conditions surrounding installation of his work, furnishing the necessary piping, fittings, valves, traps, and other devices which may be required to complete the installation.
- B. The general arrangement indicated on the drawings shall be followed as closely as possible. Coordinate with the Architectural, Structural, Mechanical and Electrical Drawings and the work of other trades prior to installation of piping fixtures and equipment to verify adequate space available for installation of the work shown. In the event a field condition arises which makes it impossible to install the work as indicated, submit, in writing, the proposed departures to the Architect for his approval. Only when Architect's approval is given, in writing, shall Contractor proceed with installation of the work.
- C. Special Note: Should the Contractor make changes in the installation differing from what is indicated on the contract drawings and not necessitated due to field conditions as indicated hereinabove, the Contractor shall be required to re-install the work to comply with what has been indicated on the contract drawings. Should it be impossible to re-install the work and the installation is in accordance with all governing authorities, the architect may permit the installation to remain. However, all costs incurred to revise the contract drawings by the engineer for resubmittal to the building department indicating the as-installed condition shall become the responsibility of the Contractor.
- D. In case of a difference in the specifications or between the specifications and the drawings, the Contractor shall figure the most expensive alternate and after award of contract, shall secure direction from the Architect.

##### 1.5 PERMITS, INSPECTIONS AND LICENSES

- A. All permits, inspections and licenses required by the legally constituted authorities for installation of the work according to the plans and specifications shall be obtained and paid as a part of the work of this section.

1.6 PROTECTION

- A. All work, equipment and materials shall be protected at all times. Contractor shall make good all damage caused either directly or indirectly by his own workmen. Contractor shall also protect his own work from damage. He shall close all pipe openings with caps or plugs during installation. He shall protect all his equipment and materials against dirt, water, chemical and mechanical injury. Upon completion, all work shall be thoroughly cleaned and delivered in a new condition.
- B. Contractor shall be held responsible for all damage to equipment and materials until he has received written notice from the Architect or Engineer that his work has been accepted.

1.7 LOCATIONS

- A. The locations of apparatus, piping and equipment indicated on the drawings are approximate. Piping and equipment shall be installed in such a manner as to avoid all obstruction, preserve headroom, and keep openings and passages clear. The locations of and mounting heights of all fixtures shall be coordinated with the architectural plans and room elevations.
- B. Clearances and Openings: Contractor shall cooperate and coordinate his work with all other trades to avoid conflict and permit for a neat and orderly appearance of the entire installation. The Contractor shall, in advance of the work, furnish instructions to the General Contractor as to his requirements for equipment and material installation of any kind, whether or not specifically mentioned on drawings or in the specifications, and shall include recesses, chases in walls, and all required openings in the structure. Should furnishing this information be neglected, delayed or incorrect and additional cuttings are found to be required, the cost of the same shall be charged to this Contractor.
- C. Contractor shall verify and coordinate pipe routing with location of all electrical rooms, elevator equipment rooms, telecom/data rooms, and other rooms dedicated to the housing of switchgear, panels, or other electrical equipment. In no case shall piping be installed within or above the ceiling of such rooms.

1.8 ACTION SUBMITTALS

- A. Product Data: For each type of drinking fountain and bottle filling station.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
  - 2. Include operating characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
  - 1. Include diagrams for power wiring.

1.9 SUBMITTAL DATA

- A. Submittal Requirements:
  - 1. Furnish, all at one time, prior to any installation, within the time noted below, one (1) digital (PDF) copy of valid submittal data on all fixtures, material, equipment, and devices. Each submitted item shall be indexed and referenced to these specifications (1 pdf submittal for each specification section) and to identification numbers on fixtures and equipment schedules.
  - 2. Manufacturers' submittal literature and shop drawings are required on all items to ensure the latest and most complete manufacturer's data is available for review. Requirements of the submittals and Engineer's submittal notes are a part of the work of this Division except that Engineer's notes may not be used as a means of increasing the scope of work of this Division.
  - 3. Submittals will be checked for general conformance with the design concept of the project, but the review does not guarantee quantities shown and does not supersede requirements of this Division to properly install work.
  - 4. To be valid, all submittals must:
    - a. Be delivered to the Architect's office within thirty-five (35) days of award of the contract. Contractor shall make time allowance for Engineer's review, return of comments, if any, and resubmittal if required. Corrections or changes in submittals returned as inadequate or incomplete shall be accomplished within this time limit.
    - b. Clearly indicate and label as such any items proposed as substitution for that specified or shown on plans.
    - c. Include all pertinent construction, installation, performance, and technical data.
    - d. Have all product data sheets clearly labeled to indicate the individual items being submitted. In addition, all required options and accessories shall be clearly marked.
      - 1) Product data sheets corresponding to items indicated on plans shall be clearly labeled with the corresponding fixture or equipment tag number.

- 2) Product data sheets corresponding to items indicated in specifications shall be clearly labeled with the specification section, page, and item numbers.
  - e. Include, for every item which differs in size, configuration, connections, service, accessibility or any other significant way, a drawing to the same (or larger) scale as to the pertinent portions of the contract drawings. In this drawing show a complete layout of the system except that which is identical to the contract drawings unless the unchanged portions must be shown to indicate such things as clearances. This drawing, together with the contract design drawings must show the complete system as revised to accommodate the proposed alternative.
- B. Substitution Requirements:
1. Any items included in submittals and proposed by the Contractor as substitution for that specified or shown on plans shall be submitted within thirty-five (35) days of award of the contract. After such time, proposed substitutions shall not be accepted for review, and the Contractor shall submit all items as specified or shown on plans.
    - a. For each item proposed as substitution for that specified or shown on plans, copies of product data sheets for the specified item shall be placed side by side with product data sheets for the proposed substitution item within the submittal.
      - 1) In addition to the Submittal Requirements for labeling listed above, product data sheets for the specified item shall be clearly labeled "SPECIFIED ITEM, NOT SUBMITTED". Product data sheets for the corresponding proposed substitution item shall be clearly labeled "PROPOSED SUBSTITUTION".
    - b. Provide calculations and other detailed data justifying how any items proposed as substitution were selected for proposal. Data must be complete enough to permit detailed comparison of every significant characteristic for which the specified item was analyzed during design.
  2. It shall be the Contractor's responsibility to provide sufficient information to allow the Engineer to analyze any proposed alternate. If inadequate information is provided, the proposal will not be approved, and resubmittal will not be allowed.
  3. The Contractor shall provide or perform tests required by Engineer for purpose of judging acceptability of proposed substitutions.
  4. The Contractor assumes full responsibility that alternate items and procedures will meet the job requirements and is responsible for cost of redesign and of modifications to this and other parts of work caused by alternate items furnished under work in this Section. In view of these responsibilities, it is the purpose of these specifications to establish procedures to ensure that the Contractor has considered all the ramifications of proposed alternates before submitting them for review. Submittals which do not comply with the requirements of these specifications, or which indicate proposed alternates that were selected without proper regard to the requirements of the job will not be approved. No more than one proposed alternate will be considered for each item.
  5. Alternate items installed without Engineer's approval will be replaced with specified items at Contractor's expense.
  6. The Architect or his authorized representative shall be the sole judge as to the quality and suitability of proposed alternate equipment, fixtures, or materials. Decisions of the Architect or that of his representative shall be final and conclusive.
- 1.10 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For drinking fountains and bottle filling stations to include in maintenance manuals.
- 1.11 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
    1. Filter Cartridges: Equal to 10 percent of quantity installed for each type and size indicated, but no fewer than 2 of each.
- 1.12 UNINSPECTED WORK
- A. The Contractor shall not allow or cause any of his work to be covered up or closed in until it has been inspected, tested, approved by all authorities have jurisdiction, and until Project Record drawings have been properly annotated.
  - B. Should any of his work be covered up or closed in before such inspection, he shall, at his own expense, uncover the work to the satisfaction of the inspection party. All related repair work cost shall be borne by the Contractor.

1.13 RECORD DRAWINGS

- A. Contractor shall provide and keep up to date a complete "as-built" record set of blue-line prints which shall show every change from the original drawings and the exact "as-built" locations and sizes of the work provided under this Section of the specifications. This set shall include locations, dimensions, depth of buried piping, cleanouts, shut-off valves, sewer invert locations, plugged wyes, tees, etc. On completion of the work, the Contractor shall incorporate all as-built information on a set of reproducible tracings provided by the Architect and this set of reproducible tracings shall be delivered to the Architect.

1.14 GUARANTEES

- A. Contractor shall guarantee the entire plumbing and piping systems unconditionally for a period of one (1) year after final acceptance. If, during this period, any materials, equipment, or any part of the systems fail to function properly, the Contractor shall make good the defects promptly and without any expense to the Owner.
- B. Contractor shall be responsible for all damage to any part of the premises caused by leaks in pipelines or equipment furnished and installed under this Section for a period of one (1) year after date of acceptance of his work.
- C. All equipment and fixtures shall carry manufacturer's warranty against defective parts or poor workmanship for not less than one (1) year. See specific equipment specifications for extended warranty requirements.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Standards:
  - 1. Drinking fountains and bottle filling stations intended to convey or dispense water for human consumption are to comply with the U.S. Safe Drinking Water Act (SDWA), requirements of the Authority Having Jurisdiction (AHJ), and with NSF 61 or NSF 372, or be certified in compliance with NSF 61 or NSF 372 by an ANSI-accredited third-party certification body, that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.
  - 2. Comply with ASME A112.19.3/CSA B45.4 for stainless steel drinking fountains and bottle filling stations.
  - 3. Comply with NSF 42 and NSF 53 for water filters for drinking fountains and bottle filling stations.
  - 4. Comply with ICC A117.1 for accessible drinking fountains and bottle filling stations.

2.2 DRINKING FOUNTAINS

2.3 BOTTLE FILLING STATIONS

- A. Bottle Filling Station - Recessed, Wall-Mounted, Stainless-Steel:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Elkay Manufacturing Co.
    - b. Haws Corporation.
  - 2. Source Limitations: Obtain recessed, wall-mounted, stainless steel, bottle filling stations from single source from single manufacturer.
  - 3. Type: Vandal resistant and freeze resistant.
  - 4. Cabinet: Stainless-steel.
  - 5. Bottle Filler: Sensor Push-button activation.
  - 6. Drain: Grid type with NPS 1-1/4 tailpiece.
  - 7. Supply: NPS 1/2 with shutoff valve.
  - 8. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 brass P-trap.
  - 9. Filter: One or more water filters complying with NSF 42 and NSF 53 and with capacity sized for peak flow rate.
  - 10. Support: Provide manufacturer's frame attached to substrate.
  - 11. Bottle Filling Station Mounting Height: Accessible in accordance with ICC A117.1.
  - 12. Electrical Characteristics:
    - a. Volts: 120 V ac.
    - b. Phase: Single.
    - c. Hertz: 60 Hz.

2.4 SUPPORTS

- A. Drinking Fountain Carrier:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Elkay Manufacturing Co.
    - b. Haws Corporation.
  - 2. Standard: ASME A112.6.1M.

**PART 3 - EXECUTION**

3.1 EXAMINATION

- A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls and floors for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Install recessed, bottle filling stations secured to wood blocking in wall construction.
- C. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ball or gate valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- D. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
- E. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 "Escutcheons for Plumbing Piping."
- F. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 07 92 00 "Joint Sealants."

3.3 PIPING CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 22 11 16 "Domestic Water Piping."
- C. Install ball or gate shutoff valve on water supply to each fixture. Install valve upstream from filter for drinking fountain. Comply with valve requirements specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- D. Comply with soil and waste piping requirements specified in Section 22 13 16 "Sanitary Waste and Vent Piping."

3.4 ELECTRICAL CONNECTIONS

- A. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- B. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
- C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
  - 1. Nameplates to be laminated acrylic or melamine plastic signs, as specified in Section 26 05 53 "Identification for Electrical Systems."
  - 2. Nameplates to be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.5 ADJUSTING

- A. Adjust fixture flow regulators for proper flow and stream height.

3.6 CLEANING

- A. After installing fixtures, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
- C. Provide protective covering for installed fixtures.
- D. Do not allow use of fixtures for temporary facilities unless approved in writing by Owner.

END OF SECTION 22 47 13

## SECTION 230500

### COMMON WORK RESULTS FOR HVAC

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Motors.
  - 2. Packed expansion joints.
  - 3. Packless expansion joints.
  - 4. Grooved-joint expansion joints.
  - 5. Alignment guides and anchors.
  - 6. Sleeves without waterstop.
  - 7. Sleeves with waterstop.
  - 8. Stack-sleeve fittings.
  - 9. Sleeve-seal systems.
  - 10. Grout.
  - 11. Silicone sealants.
  - 12. Escutcheons.
  - 13. Thermometers, bimetallic actuated.
  - 14. Thermometers, filled system.
  - 15. Thermometers, liquid in glass.
  - 16. Thermometers, light activated.
  - 17. Duct-thermometer mounting brackets.
  - 18. Thermowells.
  - 19. Pressure gauges, dial type.
  - 20. Gauge attachments.
  - 21. Test plugs.
  - 22. Test-plug kits.
  - 23. Sight flow indicators.
  - 24. Flowmeters.
  - 25. Thermal-energy meters.

##### 1.2 DEFINITIONS

- A. Existing Piping To Remain: Existing piping that is not to be removed and that is not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

##### 1.3 ACTION SUBMITTALS

- A. Product Data:
  - 1. For each type of product, excluding motors which are included in Part 1 of HVAC equipment Sections.
    - a. Include construction details, material descriptions, and dimensions of individual components, and finishes.
    - b. Include operating characteristics and furnished accessories.
- B. Delegated Design Submittals: For each anchor and alignment guide, including analysis data, signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
  - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
  - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
  - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of meter.

- B. Welding certificates.
  - C. Field quality-control reports.
- 1.5 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For each type of expansion joint, meter, and gauge to include in operation and maintenance manuals.
- 1.6 QUALITY ASSURANCE
- A. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M.
  - B. Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with 2021 ASME Boiler and Pressure Vessel Code, Section IX.
- 1.7 COORDINATION
- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
    - 1. Motor controllers.
    - 2. Torque, speed, and horsepower requirements of the load.
    - 3. Ratings and characteristics of supply circuit and required control sequence.
    - 4. Ambient and environmental conditions of installation location.

## **PART 2 - PRODUCTS**

### **2.1 MOTORS**

- A. Motor Requirements, General:
  - 1. Content includes motors for use on alternating-current power systems of up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.
  - 2. Comply with requirements in this Section except when stricter requirements are specified in equipment schedules or Sections.
  - 3. Comply with NEMA MG 1 unless otherwise indicated.
  - 4. Comply with IEEE 841 for severe-duty motors.
- B. Motor Characteristics:
  - 1. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 ft. above sea level.
  - 2. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.
- C. Polyphase Motors:
  - 1. Description: NEMA MG 1, Design B, medium induction motor.
  - 2. Efficiency: Premium Efficient, as defined in NEMA MG 1.
  - 3. Service Factor: 1.15.
  - 4. Multispeed Motors: Variable torque.
    - a. For motors with 2:1 speed ratio, consequent pole, single winding.
    - b. For motors with other than 2:1 speed ratio, separate winding for each speed.
  - 5. Multispeed Motors, Two Winding: Separate winding for each speed.
  - 6. Rotor: Random-wound, squirrel cage.
  - 7. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
  - 8. Temperature Rise: Match insulation rating.
  - 9. Insulation: Class F.
  - 10. Code Letter Designation:
    - a. Motors 15 Hp and Larger: NEMA starting Code F or Code G.
    - b. Motors Smaller Than 15 Hp: Manufacturer's standard starting characteristic.
  - 11. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.
- D. Additional Requirements for Polyphase Motors:
  - 1. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

2. Motors Used with Variable-Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
    - a. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time-rise pulses produced by pulse-width-modulated inverters.
    - b. Premium-Efficient Motors: Class B temperature rise; Class F insulation.
    - c. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
    - d. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
  3. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.
- E. Single-Phase Motors:
1. Motors larger than 1/20 hp must be one of the following, to suit starting torque and requirements of specific motor application:
    - a. Permanent-split capacitor.
    - b. Split phase.
    - c. Capacitor start, inductor run.
    - d. Capacitor start, capacitor run.
  2. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
  3. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
  4. Motors 1/20 hp and Smaller: Shaded-pole type.
  5. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device will automatically reset when motor temperature returns to normal range.
- F. Electronically Commutated Motors:
1. Microprocessor-Based Electronic Control Module: Converts 120 V or 240 V single-phase AC power to three-phase DC power to operate the brushless DC motor.
  2. Three-phase power motor module with permanent magnet rotor.
  3. Circuit board or digital speed controller/LED display.
  4. Building Automation System Interface: Via AC voltage signal DC voltage signal or Digital Serial Interface (DSI).
- ## 2.2 EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING
- A. Performance Requirements:
1. Compatibility: Provide products suitable for piping service fluids, materials, working pressures, and temperatures.
  2. Capability: Provide products and installations that will accommodate maximum axial movement as scheduled or indicated on Drawings.
- B. Packed Expansion Joints:
1. Flexible, Ball-Joint Packed Expansion Joints: FBJ-01.
    - a. Source Limitations: Obtain rubber union connector expansion joints from single manufacturer.
    - b. Standards: 2021 ASME Boiler and Pressure Vessel Code: Section II, "Materials"; ASME B31.9 for materials and design of pressure-containing parts and bolting.
    - c. Material: Carbon-steel assembly with asbestos-free composition packing.
    - d. Design: Provide 360-degree rotation and angular deflection.
    - e. Minimum Pressure Rating: 250 psig at 400 deg F.
    - f. Angular Deflection for NPS 6 (DN 150) and Smaller: 30 degrees minimum.
    - g. Angular Deflection for NPS 8 (DN 200) and Larger: 15 degrees minimum.
    - h. Seal Type: Two carbon-steel and graphite seals suitable for continuous operation at temperature up to 650 deg F.
    - i. Internal Ball: Plated with minimum 1-mil chrome cover.
    - j. Ball Socket: One- or two-piece design with integral socket/retainer.
      - 1) Stuffing Box: Incorporates containment seals and compression seals for containment of injectable packing.
      - 2) Packing Cylinders: Provides packing under full line pressure with check valves to prevent blowback.
    - k. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
    - l. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.

2. Slip-Joint Packed Expansion Joints: SJ-01.
  - a. Source Limitations: Obtain slip-joint packed expansion joints from single manufacturer.
  - b. Standard: ASTM F1007.
  - c. Material: Carbon steel with asbestos-free PTFE packing.
  - d. Design: With internal guide and injection ports for repacking under full system pressure. Housing is to be furnished with drain ports and lifting ring. Include drip connection if used for steam piping.
  - e. Configuration: Single joint single joint with base and double joint with base class(es) unless otherwise indicated.
  - f. Slip Tube for Sizes NPS 1-1/2 (DN 40) through NPS 16 (DN 400): Schedule 80.
  - g. Slip Tube for Sizes NPS 18 (DN 450) through NPS 24 (DN 600): Schedule 60.
  - h. Sliding Surface: 2-mil-thick chrome finish.
  - i. End Connections: Flanged or welded ends to match piping system.
- C. Packless Expansion Joints:
  1. Metal, Compensator Packless Expansion Joints: MCEJ-01.
    - a. Source Limitations: Obtain metal compensator packless expansion joints from single manufacturer.
    - b. Minimum Pressure Rating: 150 psig unless otherwise indicated.
    - c. Description: Totally enclosed, externally pressurized, multi-ply bellows isolated from fluid flow by an internal pipe sleeve and external housing.
    - d. Joint Axial Movement: 2 inches of compression and 1/2 inch of extension.
    - e. Configuration for Copper Tubing: Multi-ply, phosphor-bronze bellows with copper pipe ends.
      - 1) End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint or threaded.
      - 2) End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Threaded.
    - f. Configuration for Steel Piping: Multi-ply, stainless steel bellows; steel-pipe end connections; and carbon-steel shroud.
      - 1) End Connections for Steel Pipe NPS 2 (DN 50) and Smaller: Threaded.
      - 2) End Connections for Steel Pipe NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged Threaded Welded.
  2. Rubber Union Connector Expansion Joints: RUEJ-01.
    - a. Source Limitations: Obtain rubber union connector expansion joints from single manufacturer.
    - b. Material: Twin reinforced-rubber spheres with external restraining cables.
    - c. Minimum Pressure Rating: 150 psig at 170 deg F unless otherwise indicated.
    - d. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
    - e. End Connections for Greater than NPS 2 (DN 50): Flanged.
  3. Flexible-Hose Packless Expansion Joints: FHEJ-01.
    - a. Source Limitations: Obtain flexible-hose packless expansion joints from single manufacturer.
    - b. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
    - c. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
    - d. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with solder-joint end connections.
      - 1) Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F and 340 psig at 450 deg F ratings.
      - 2) Bronze hoses and double-braid bronze sheaths with 700 psig at 70 deg F and 500 psig at 450 deg F ratings.
    - e. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Copper-alloy fittings with threaded end connections.
      - 1) Stainless steel hoses and single-braid, stainless steel sheaths with 300 psig at 70 deg F and 225 psig at 450 deg F ratings.
      - 2) Stainless steel hoses and double-braid, stainless steel sheaths with 420 psig at 70 deg F and 315 psig at 450 deg F ratings.

- f. Expansion Joints for Steel Piping NPS 2 (DN 50) and Smaller: Carbon-steel fittings with threaded end connections.
  - 1) Retain one of first two subparagraphs below, or both, to suit pressure and temperature requirements of systems in which these devices are installed. If retaining both, indicate location of each on Drawings.
  - 2) Stainless steel hoses and single-braid, stainless steel sheaths with 450 psig at 70 deg F and 325 psig at 600 deg F ratings.
  - 3) Stainless steel hoses and double-braid, stainless steel sheaths with 700 psig at 70 deg F and 515 psig at 600 deg F ratings.
- g. Expansion Joints for Steel Piping NPS 2-1/2 to NPS 6 (DN 65 to DN 150): Carbon-steel fittings with flanged end connections.
  - 1) Retain one of first two subparagraphs below, or both, to suit pressure and temperature requirements of systems in which these devices are installed. If retaining both, indicate location of each on Drawings.
  - 2) Stainless steel hoses and single-braid, stainless steel sheaths with 200 psig at 70 deg F and 145 psig at 600 deg F ratings.
  - 3) Stainless steel hoses and double-braid, stainless steel sheaths with 275 psig at 70 deg F and 200 psig at 600 deg F ratings.
- h. Expansion Joints for Steel Piping NPS 8 to NPS 12 (DN 200 to DN 300): Carbon steel fittings with flanged end connections.
  - 1) Retain one of first two subparagraphs below, or both, to suit pressure and temperature requirements of systems in which these devices are installed. If retaining both, indicate location of each on Drawings.
  - 2) Stainless steel hoses and single-braid, stainless steel sheaths with 125 psig at 70 deg F and 90 psig at 600 deg F ratings.
  - 3) Stainless steel hoses and double-braid, stainless steel sheaths with 165 psig at 70 deg F and 120 psig at 600 deg F ratings.
- i. Expansion Joints for Steel Piping NPS 14 (DN 350) and Larger: Carbon-steel fittings with flanged end connections.
  - 1) Stainless steel hoses and double-braid, stainless steel sheaths with 165 psig at 70 deg F and 120 psig at 600 deg F ratings.
- 4. Metal-Bellows Packless Expansion Joints: MBEJ-01.
  - a. Source Limitations: Obtain metal-bellows packless expansion joints from single manufacturer.
  - b. Standards: ASTM F1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
  - c. Type: Circular, corrugated bellows with external tie rods.
  - d. Minimum Pressure Rating: 150 psig unless otherwise indicated.
  - e. Configuration: Single joint Single joint with base and double joint with base class(es), unless otherwise indicated.
  - f. Expansion Joints for Copper Tubing: Single- or multi-ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
    - 1) End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint or threaded.
    - 2) End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Solder joint or threaded.
    - 3) End Connections for Copper Tubing NPS 5 (DN 125) and Larger: Flanged.
  - g. Expansion Joints for Steel Piping: Single- or multi-ply stainless steel bellows, steel pipe ends, and carbon steel shroud.
    - 1) End Connections for Steel Pipe NPS 2 (DN 50) and Smaller: Threaded.
    - 2) End Connections for Steel Pipe NPS 2-1/2 (DN 65) and Larger: Flanged.
- 5. Externally Pressurized Metal-Bellows Packless Expansion Joints: EPEJ-01.
  - a. Source Limitations: Obtain externally pressurized metal-bellows packless expansion joints from single manufacturer.
  - b. Minimum Pressure Rating: 150 psig unless otherwise indicated.
  - c. Description:
    - 1) Totally enclosed, externally pressurized, multi-ply, stainless steel bellows isolated from fluid flow by an internal pipe sleeve.
    - 2) Carbon-steel housing.
    - 3) Drain plugs and lifting lug for NPS 3 and larger.

- 4) Bellows: With operating clearance between internal pipe sleeves and external shrouds.
- 5) Joints: Supplied with a built-in scale to confirm the starting position and operating movement.
- 6) Joint Axial Movement: 4 inches of compression and 3/4 inch of extension.
- d. Permanent Locking Bolts: Set locking bolts to maintain joint lengths during installation. Temporary welding tabs that are removed after installation in lieu of locking bolts are unacceptable.
- e. End Connection Configuration: Flanged; one raised, fixed and one floating flange.
6. Rubber Packless Expansion Joints: REJ-01.
  - a. Source Limitations: Obtain rubber packless expansion joints from single manufacturer.
  - b. Standards: ASTM F1123 and FSA's "Expansion Joints - Piping Technical Handbook."
  - c. Material: Fabric-reinforced rubber complying with FSA-PSJ-703.
  - d. Arch Type: Single or multiple arches with external control rods.
  - e. Spherical Type: Single or multiple spheres with external control rods.
  - f. Minimum Pressure Rating for NPS 1-1/2 to NPS 12 (DN 40 to DN 300): 225 psig at 170 deg F.
  - g. Material for Fluids Containing Acids, Alkalis, or Chemicals: Butyl rubber Chlorosulfonyl-polyethylene rubber EPDM rubber.
  - h. Material for Fluids Containing Gas, Hydrocarbons, or Oil: Buna-N Chlorosulfonated polyethylene synthetic rubber.
  - i. Material for Water: Butyl rubber Buna-N Chlorosulfonated polyethylene synthetic rubber Chlorosulfonyl-polyethylene rubber EPDM rubber Natural rubber.
  - j. End Connections: Full-faced, integral steel flanges with steel retaining rings.
- D. Grooved-Joint Expansion Joints:
  1. Source Limitations: Obtain grooved-joint expansion joints from single manufacturer.
  2. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.
  3. Standard: AWWA C606, for grooved joints.
  4. Materials: Galvanized, ASTM A53/A53M, Schedule 40, Type E or S, steel pipe with grooved ends.
  5. Couplings: Five, flexible type for steel-pipe dimensions. Include ferrous housing sections, Buna-N gasket, , EPDM rubber gasket, and bolts and nuts.
- E. Alignment Guides and Anchors:
  1. Alignment Guides: AG-01.
    - a. Source Limitations: Obtain alignment guides from single manufacturer.
    - b. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe. Provide dielectric spacer for use with copper tubing/piping.
  2. Anchor Materials:
    - a. Steel Shapes and Plates: ASTM A36/A36M.
    - b. Bolts and Nuts: ASME B18.10 or ASTM A183, steel hex head.
    - c. Washers: ASTM F844, steel, plain, flat washers.
    - d. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
      - 1) Stud: Threaded, zinc-coated carbon stainless steel.
      - 2) Expansion Plug: Zinc-coated carbon Stainless steel.
      - 3) Washer and Nut: Zinc-coated carbon Stainless steel.
    - e. Chemical Fasteners: Insert-type stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
      - 1) Bonding Material: ASTM C881/C881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
      - 2) Stud: ASTM A307, zinc-coated carbon stainless steel with continuous thread on stud, unless otherwise indicated.
      - 3) Washer and Nut: Zinc-coated carbon Stainless steel.

## 2.3 SLEEVES AND SLEEVE SEALS

- A. Sleeves without Waterstop:
1. Cast-Iron Pipe Sleeves: Cast or fabricated of cast or ductile iron, with plain ends.
  2. Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, hot-dip galvanized, with plain ends.
  3. Steel Sheet Sleeves: ASTM A653/A653M, 24 gauge minimum thickness; hot-dip galvanized, round tube closed with welded longitudinal joint.
  4. PVC Pipe Sleeves: ASTM D1785, Schedule 40.
  5. Molded-PVC Sleeves: With nailing flange.
  6. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange.
- B. Sleeves with Waterstop:
1. Description: Manufactured PVC/HDPE steel stainless steel galvanized-steel, sleeve-type, waterstop assembly, made for imbedding in concrete slab or wall.
- C. Stack-Sleeve Fittings:
1. Description: Manufactured, Dura-coated or Duco-coated galvanized cast-iron sleeve with integral cast flashing flange for use in waterproof floors and roofs. Include clamping ring, bolts, and nuts for membrane flashing.
    - a. Underdeck Clamp: Clamping ring with setscrews.
- D. Sleeve-Seal Systems:
1. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
    - a. Hydrostatic seal: 20 psig.
    - b. Sealing Elements: EPDM-rubber High-temperature-silicone Nitrile (Buna-N) interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size.
    - c. Pressure Plates: Carbon steel Composite plastic Stainless steel Stainless steel, Type 316.
    - d. Connecting Bolts and Nuts: Carbon steel, with zinc coating. ASTM B633 Stainless steel Stainless steel, Type 316, of length required to secure pressure plates to sealing elements.
- E. Grout:
1. Description: Nonshrink, for interior and exterior sealing openings in non-fire-rated walls or floors.
  2. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
  3. Design Mix: 5000 psi, 28-day compressive strength.
  4. Packaging: Premixed and factory packaged.
- F. Silicone Sealants:
1. Silicone Sealant, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant.
    - a. Standard: ASTM C920, Type S, Grade NS, Class 25, Use NT.
  2. Silicone Sealant, S, P, T, NT: Single-component, 25, pourable, movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant.
    - a. Standard: ASTM C920, Type S, Grade P, Class 25, Uses T and NT.
  3. Silicone Foam Sealant: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

## 2.4 ESCUTCHEONS

- A. Escutcheon Types:
1. One-Piece, Steel Type: With polished, chrome-plated polished brass finish and setscrew fastener.
  2. One-Piece, Stainless Steel Type: With polished stainless steel finish.
  3. One-Piece, Cast-Brass Type: With polished, chrome-plated polished brass finish and setscrew fastener.
  4. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped steel brass with polished, chrome-plated finish and spring-clip fasteners.
  5. One-Piece, Stamped-Steel Type: With polished, chrome-plated finish and spring-clip fasteners.
  6. Split-Plate, Stamped-Steel Type: With polished, chrome-plated finish; concealed and exposed-rivet hinge; and spring-clip fasteners.
- B. Floor Plates:
1. Split Floor Plates: Steel with concealed hinge.

2.5 METERS AND GAUGES FOR HVAC PIPING

A. Thermometers, Bimetallic Actuated:

1. Source Limitations: Provide bimetallic-actuated thermometers from a single manufacturer.
2. Standard: ASME B40.200.
3. Case: Liquid-filled and sealed type(s); stainless steel with 3-inch nominal diameter.
4. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.
5. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.
6. Connector Size: 1/2 inch, with ASME B1.1 screw threads.
7. Stem: 0.25 or 0.375 inch in diameter; stainless steel.
8. Window: Plain glass or plastic.
9. Ring: Stainless steel.
10. Element: Bimetal coil.
11. Pointer: Dark-colored metal.
12. Accuracy: Plus or minus 1 percent of scale range.

B. Thermometers, Filled System - Direct-Mounted, Metal-Case, Vapor-Actuated:

1. Source Limitations: Provide filled-system, direct-mounted, metal-case, vapor-actuated thermometers from a single manufacturer.
2. Standard: ASME B40.200.
3. Case: Sealed type, cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, dampening type, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Pointer: Dark-colored metal.
8. Window: Glass or plastic.
9. Ring: Metal.
10. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device; with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
12. Accuracy: Plus or minus 1 percent of scale range.

C. Thermometers, Filled System - Direct-Mounted, Plastic-Case, Vapor-Actuated:

1. Source Limitations: Provide filled-system, direct-mounted, plastic-case, vapor-actuated thermometers from single manufacturer.
2. Standard: ASME B40.200.
3. Case: Sealed type, plastic; 4-1/2-inch nominal diameter.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Pointer: Dark-colored metal.
8. Window: Glass or plastic.
9. Ring: Metal or plastic.
10. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device; with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
12. Accuracy: Plus or minus 1 percent of scale range.

D. Thermometers, Filled-System - Remote-Mounted, Metal-Case, Vapor-Actuated:

1. Source Limitations: Provide filled-system, remote-mounted, metal-case, vapor-actuated thermometers from a single manufacturer.
2. Standard: ASME B40.200.
3. Case: Sealed type, cast aluminum or drawn steel; 4-1/2-inch nominal diameter with back flange and holes for panel mounting.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, with link to pressure element and connection to pointer.

6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
  7. Pointer: Dark-colored metal.
  8. Window: Glass or plastic.
  9. Ring: Metal.
  10. Connector Type(s): Union joint, back; with ASME B1.1 screw threads.
  11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  12. Accuracy: Plus or minus 1 percent of scale range.
- E. Thermometers, Filled System - Remote-Mounted, Plastic-Case, Vapor-Actuated:
1. Source Limitations: Provide filled-system, remote-mounted, plastic-case, vapor-actuated thermometers from a single manufacturer.
  2. Standard: ASME B40.200.
  3. Case: Sealed type, plastic; 4-1/2-inch nominal diameter with back flange and holes for panel mounting.
  4. Element: Bourdon tube or other type of pressure element.
  5. Movement: Mechanical, with link to pressure element and connection to pointer.
  6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
  7. Pointer: Dark-colored metal.
  8. Window: Glass or plastic.
  9. Ring: Metal or plastic.
  10. Connector Type(s): Union joint, threaded, back; with ASME B1.1 screw threads.
  11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  12. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.
- F. Thermometers, Liquid-in-Glass - Metal Case, Compact Style:
1. Source Limitations: Provide liquid-in-glass, metal-case, compact-style thermometers by single manufacturer.
  2. Standard: ASME B40.200.
  3. Case: Cast aluminum; 6-inch nominal size.
  4. Case Form: Back angle unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue organic liquid.
  6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
  7. Window: Glass or plastic.
  8. Stem: Aluminum or brass and of length to suit installation.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  9. Connector: 3/4 inch, with ASME B1.1 screw threads.
  10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.
- G. Thermometers, Liquid in Glass - Plastic Case, Compact Style:
- Source Limitations: Provide liquid-in-glass, plastic-case, compact-style thermometers from single manufacturer.
1. Standard: ASME B40.200.
  2. Case: Plastic; 6-inch nominal size.
  3. Case Form: Back angle unless otherwise indicated.
  4. Tube: Glass with magnifying lens and blue organic liquid.
  5. Tube Background: Nonreflective with permanently etched scale markings graduated in deg F.
  6. Window: Glass or plastic.
  7. Stem: Aluminum or brass and of length to suit installation.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  8. Connector: 3/4 inch, with ASME B1.1 screw threads.

9. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.
- H. Thermometers, Liquid in Glass - Metal Case, Industrial Style:
1. Source Limitations: Provide liquid-in-glass, metal-case, industrial-style thermometers from single manufacturer.
  2. Standard: ASME B40.200.
  3. Case: Cast aluminum; 7-inch nominal size unless otherwise indicated.
  4. Case Form: Adjustable angle unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue organic liquid.
  6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
  7. Window: Glass or plastic.
  8. Stem: Aluminum and of length to suit installation.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
  10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.
- I. Thermometers, Liquid in Glass - Plastic Case, Industrial Style:
1. Source Limitations: Provide liquid-in-glass, plastic-case, industrial-style thermometers from single manufacturer.
  2. Standard: ASME B40.200.
  3. Case: Plastic; 7-inch nominal size unless otherwise indicated.
  4. Case Form: Adjustable angle unless otherwise indicated.
  5. Tube: Glass with magnifying lens and blue or red organic liquid.
  6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
  7. Window: Glass or plastic.
  8. Stem: Aluminum, brass, or stainless steel and of length to suit installation.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
  10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.
- J. Thermometers, Light Activated - Direct Mounted:
1. Source Limitations: Provide light-activated, direct-mounted thermometers from single manufacturer.
  2. Case: Plastic; 7-inch nominal size unless otherwise indicated.
  3. Scale(s): Deg F.
  4. Case Form: Adjustable angle.
  5. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
  6. Stem: Aluminum and of length to suit installation.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  7. Display: Digital.
  8. Accuracy: Plus or minus 2 deg F.
- K. Thermometers, Light Activated - Remoted Mounted:
1. Source Limitations: Provide light-activated, remote-mounted thermometers from single manufacturer.
  2. Case: Plastic, for wall mounting.
  3. Scale(s): Deg F.
  4. Sensor: Bulb and thermister wire.
    - a. Design for Air-Duct Installation: With ventilated shroud.
    - b. Design for Thermowell Installation: Bare stem.
  5. Display: Digital.
  6. Accuracy: Plus or minus 2 deg F.
- L. Duct-Thermometer Mounting Brackets:
1. Description: Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.

- M. Thermowells:
1. Standard: ASME B40.200.
  2. Description: Pressure-tight, socket-type fitting made for insertion in piping tee fitting.
  3. Material for Use with Copper Tubing: CNR or CUNI.
  4. Material for Use with Steel Piping: CRES CSA.
  5. Type: Stepped shank unless straight or tapered shank is indicated.
  6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
  7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
  8. Bore: Diameter required to match thermometer bulb or stem.
  9. Insertion Length: Length required to match thermometer bulb or stem.
  10. Lagging Extension: Include on thermowells for insulated piping and tubing.
  11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.
  12. Heat-Transfer Medium: Mixture of graphite and glycerin.
- N. Pressure Gauges, Dial Type - Direct Mounted, Metal Case:
1. Source Limitations: Provide dial-type, direct-mounted, metal-case pressure gauges from single manufacturer.
  2. Standard: ASME B40.100.
  3. Case: Liquid-filled type(s); cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
  4. Pressure-Element Assembly: Bourdon tube.
  5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  6. Movement: Mechanical, with link to pressure element and connection to pointer.
  7. Dial: Nonreflective aluminum with permanent scale markings graduated in psi.
  8. Pointer: Dark-colored metal.
  9. Window: Glass Safety glass or acrylic plastic.
  10. Ring: Metal.
  11. Accuracy: Grade A, plus or minus 1 percent of middle half of span.
- O. Pressure Gauges, Dial Type - Direct Mounted, Plastic Case:
1. Source Limitations: Provide dial-type, direct-mounted, plastic-case pressure gauges from a single manufacturer.
  2. Standard: ASME B40.100.
  3. Case: Sealed type; plastic; 4-1/2-inch nominal diameter.
  4. Pressure-Element Assembly: Bourdon tube.
  5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  6. Movement: Mechanical, with link to pressure element and connection to pointer.
  7. Dial: Nonreflective aluminum with permanent scale markings graduated in psi.
  8. Pointer: Dark-colored metal.
  9. Window: Glass Safety glass or acrylic plastic.
  10. Accuracy: Grade A, plus or minus 1 percent of middle half of span.
- P. Pressure Gauges, Dial Type - Remote Mounted, Metal Case:
1. Source Limitations: Provide dial-type, remote-mounted, metal-case pressure gauges from a single manufacturer.
  2. Standard: ASME B40.100.
  3. Case: Liquid-filled type; cast aluminum or drawn steel; 3-1/2-inch nominal diameter with back flange and holes for panel mounting.
  4. Pressure-Element Assembly: Bourdon tube.
  5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  6. Movement: Mechanical, with link to pressure element and connection to pointer.
  7. Dial: Nonreflective aluminum with permanent scale markings graduated in psi.
  8. Pointer: Dark-colored metal.
  9. Window: Glass Safety glass or acrylic plastic.
  10. Ring: Metal.
  11. Accuracy: Grade A, plus or minus 1 percent of middle half of span.
- Q. Pressure Gauges, Dial Type - Remote Mounted, Plastic Case:
1. Source Limitations: Provide dial-type, remote-mounted, plastic-case pressure gauges from single manufacturer.

2. Standard: ASME B40.100.
  3. Case: Sealed type; plastic; 3-1/2-inch nominal diameter with back flange and holes for panel mounting.
  4. Pressure-Element Assembly: Bourdon tube.
  5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
  6. Movement: Mechanical, with link to pressure element and connection to pointer.
  7. Dial: Nonreflective aluminum with permanent scale markings graduated in psi.
  8. Pointer: Dark-colored metal.
  9. Window: Glass Safety glass or acrylic plastic.
  10. Accuracy: Grade A, plus or minus 1 percent of middle half of span.
- R. Gauge Attachments:
1. Snubbers: ASME B40.100, brass; with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and piston porous-metal-type surge-dampening device. Include extension for use on insulated piping.
  2. Siphons: Loop-shaped section of brass pipe with NPS 1/4 or NPS 1/2 pipe threads.
  3. Valves: Brass ball Brass or stainless steel needle, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads.
- S. Test Plugs:
1. Source Limitations: Provide test plugs from single manufacturer.
  2. Description: Test-station fitting made for insertion in piping tee fitting.
  3. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
  4. Thread Size: NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe thread.
  5. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.
  6. Core Inserts: Chlorosulfonated polyethylene synthetic EPDM self-sealing rubber.
- T. Test-Plug Kits:
1. Source Limitations: Provide test-plug kits from single manufacturer.
  2. Furnish one test-plug kit(s) containing one thermometer(s), one pressure gauge and adapter, and carrying case. Thermometer sensing elements, pressure gauge, and adapter probes are to be of diameter to fit test plugs and of length to project into piping.
  3. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- diameter dial and tapered-end sensing element. Dial range is to be at least 25 to 125 deg F.
  4. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- diameter dial and tapered-end sensing element. Dial range is to be at least 0 to 220 deg F.
  5. Pressure Gauge: Small, Bourdon-tube insertion type with 2- to 3-inch- diameter dial and probe. Dial range shall be at least 0 to 200 psig.
  6. Carrying Case: Metal or plastic, with formed instrument padding.
- U. Sight Flow Indicators:
1. Source Limitations: Provide sight flow indicators from single manufacturer.
  2. Description: Piping inline-installation device for visual verification of flow.
  3. Construction: Bronze or stainless steel body, with sight glass and ball, flapper, or paddle wheel indicator, and threaded or flanged ends.
  4. Minimum Pressure Rating: 125 psig.
  5. Minimum Temperature Rating: 200 deg F.
  6. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
  7. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.
- V. Flowmeters:
1. Performance Requirements: Manufacturer is to certify that each flowmeter complies with specified performance requirements and characteristics.
  2. Flowmeters - Orifice:
    - a. Source Limitations: Provide orifice flowmeters from single manufacturer.
    - b. Description: Flowmeter with orifice plate and flanges, differential pressure sensor, hoses or tubing, fittings, valves, indicator, and conversion chart.
    - c. Flow Range: Sensor and indicator are to cover operating range of equipment or system served.
    - d. Orifice Plate: Wafer-orifice-type, calibrated, flow-measuring element; for installation between orifice plate pipe flanges.
      - 1) Design: Differential-pressure-type measurement for water.

- 2) Construction: Cast-iron body, brass valves with integral check valves and caps, and calibrated nameplate.
      - 3) Minimum Pressure Rating: 300 psig.
      - 4) Minimum Temperature Rating: 250 deg F.
    - e. Permanent Indicators: Meter suitable for wall or bracket mounting, calibrated for connected sensor, and has 6-inch-diameter, or equivalent, dial with fittings and copper tubing for connecting to sensor.
      - 1) Scale Divisions: gpm.
      - 2) Accuracy: Plus or minus 1 percent between 20 and 80 percent of scale range.
    - f. Portable Indicators: Handheld, differential-pressure type, calibrated for connected sensor and having two 12 ft. hoses, with carrying case.
      - 1) Scale Divisions: gpm.
      - 2) Accuracy: Plus or minus 2 percent between 20 and 80 percent of scale range.
    - g. Display: Shows rate of flow, with register to indicate total volume in gallons.
    - h. Conversion Chart: Flow rate data compatible with sensor and indicator.
    - i. Operating Instructions: Include complete instructions with each flowmeter.
  3. Flowmeters - Pitot Tube:
    - a. Source Limitations: Provide pitot-tube flowmeters from single manufacturer.
    - b. Description: Flowmeter with sensor and indicator.
    - c. Flow Range: Sensor and indicator are to cover operating range of equipment or system served.
    - d. Sensor: Insertion type; for inserting probe in piping and measuring flow directly in gpm.
      - 1) Design: Differential-pressure-type measurement for oil water.
      - 2) Construction: Stainless steel probe of length to span inside of pipe, with integral transmitter and direct-reading scale.
      - 3) Fitting for mounting probe in pipe, with weld or threaded connection for attachment to pipe. Provide way to permit removal of probe for service.
      - 4) Minimum Pressure Rating: 150 psig.
      - 5) Minimum Temperature Rating: 250 deg F.
    - e. Indicator: Handheld meter; either an integral part of sensor or a separate meter.
    - f. Integral Transformer: For low-voltage power connection.
    - g. Accuracy: Plus or minus 3 percent.
    - h. Display: Shows rate of flow, with register to indicate total volume in gallons.
    - i. Operating Instructions: Include complete instructions with each flowmeter.
  4. Flowmeters - Turbine:
    - a. Source Limitations: Provide turbine flowmeters from single manufacturer.
    - b. Description: Flowmeter with sensor and indicator.
    - c. Flow Range: Sensor and indicator are to cover operating range of equipment or system served.
    - d. Sensor: Impeller turbine; for inserting in pipe fitting or for installing in piping and measuring flow directly in gpm.
      - 1) Design: Device or pipe fitting with inline turbine and integral direct-reading scale for gas oil steam water.
      - 2) Construction: Bronze or stainless steel body, with plastic turbine or impeller.
      - 3) Fitting for mounting probe in pipe, with weld or threaded connection for attachment to pipe. Provide way to permit removal of probe for service.
      - 4) Minimum Pressure Rating: 150 psig.
      - 5) Minimum Temperature Rating: 180 deg F.
    - e. Indicator: Handheld meter; either an integral part of sensor or a separate meter.
    - f. Accuracy: Plus or minus 1-1/2 percent.
    - g. Display: Shows rate of flow, with register to indicate total volume in gallons.
    - h. Operating Instructions: Include complete instructions with each flowmeter.
  5. Flowmeters - Venturi:
    - a. Source Limitations: Provide venture flowmeters from single manufacturer.
    - b. Description: Flowmeter with calibrated flow-measuring element, hoses or tubing, fittings, valves, indicator, and conversion chart.
    - c. Flow Range: Sensor and indicator are to cover operating range of equipment or system served.
    - d. Flow-Measuring Element:
      - 1) Design: Differential-pressure-type measurement for gas oil steam water.
      - 2) Venturi type with in-line or insertion element.

- 3) Construction: Bronze, brass, or factory-primed steel, with brass fittings and attached tag with flow conversion data.
  - 4) Minimum Pressure Rating: 250 psig.
  - 5) Minimum Temperature Rating: 250 deg F.
  - 6) End Connections for NPS 2 (DN 50) and Smaller: Threaded.
  - 7) End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged or welded.
  - 8) Flow Range: Flow-measuring element and flowmeter are to cover operating range of equipment or system served.
  - e. Permanent Indicators: Meter suitable for wall or bracket mounting, calibrated for connected flowmeter element, and has 6-inch-diameter, or equivalent, dial with fittings and copper tubing for connecting to flowmeter element.
    - 1) Scale: gpm.
    - 2) Accuracy: Plus or minus 1 percent between 20 and 80 percent of scale range.
  - f. Portable Indicators: Handheld, differential-pressure type, calibrated for connected flowmeter element and has two 12 ft. hoses, with carrying case.
    - 1) Scale: gpm.
    - 2) Accuracy: Plus or minus 2 percent between 20 and 80 percent of scale range.
  - g. Display: Shows rate of flow, with register to indicate total volume in gallons.
  - h. Conversion Chart: Flow rate data compatible with sensor.
  - i. Operating Instructions: Include complete instructions with each flowmeter.
6. Flowmeters - Vortex Shedding:
- a. Source Limitations: Provide vortex-shedding flowmeters from single manufacturer.
  - b. Description: Flowmeter with sensor and indicator.
  - c. Flow Range: Sensor and indicator are to cover operating range of equipment or system served.
  - d. Sensor: Inline type; for installing between pipe flanges and measuring flow directly in gpm.
    - 1) Design: Flow-obstruction device, vortex-measurement type for gas steam and liquids.
    - 2) Construction: Stainless steel body, with integral transmitter and direct-reading scale.
    - 3) Minimum Pressure Rating: 1000 psig.
    - 4) Minimum Temperature Rating: 500 deg F.
    - 5) Integral Transformer: For low-voltage power operation.
  - e. Indicator: Handheld meter; either an integral part of sensor or a separate meter.
  - f. Accuracy: Plus or minus 0.25 percent for liquids and 0.75 percent for gases.
  - g. Display: Shows rate of flow, with register to indicate total volume in gallons.
  - h. Operating Instructions: Include complete instructions with each flowmeter.
7. Thermal-Energy Meters - Turbine:
- a. Source Limitations: Provide turbine thermal-energy meters from single manufacturer.
  - b. Performance Requirements: Manufacturer is to certify that each flowmeter complies with specified performance requirements and characteristics.
  - c. Description: System with strainer, flow sensor, two temperature sensors, transmitter, indicator, and connecting wiring.
  - d. Flow Sensor: Turbine type; for inserting in pipe fitting or for installing in piping and measuring flow directly in gpm.
    - 1) Design: Device or pipe fitting with inline turbine and integral direct-reading scale for gas oil steam water.
    - 2) Construction: Bronze or stainless steel body, with plastic turbine or impeller.
    - 3) Fitting for mounting probe in pipe, with weld or threaded connection for attachment to pipe. Provision to remove probe for service.
    - 4) Minimum Pressure Rating: 150 psig.
    - 5) Minimum Temperature Rating: 180 deg F.
  - e. Temperature Sensors: Insertion-type sensor-transducer.
  - f. Indicator: Solid-state, integrating-type meter with integral battery pack; for wall mounting.
    - 1) Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or British thermal units.
    - 2) Battery Pack: Five-year lithium battery.
  - g. Accuracy: Plus or minus 1 percent.
  - h. Display: Visually indicates total fluid volume in gallons and thermal-energy flow in kilowatts per hour or British thermal units.

- i. Strainer: Full size of main line piping.
- j. Operating Instructions: Include complete instructions with each thermal-energy meter system.
- 8. Thermal-Energy Meters - Ultrasonic:
  - a. Source Limitations: Provide ultrasonic thermal-energy meters from single manufacturer.
  - b. Performance Requirements: Manufacturer is to certify that each flowmeter complies with specified performance requirements and characteristics.
  - c. Description: Meter with flow sensor, two temperature sensors, transmitter, indicator, and connecting wiring.
  - d. Flow Sensor: Transit-time ultrasonic type with transmitter.
  - e. Temperature Sensors: Insertion-type or strap-on transducer.
  - f. Indicator: Solid-state, integrating-type meter with integral battery pack.
    - 1) Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or British thermal units.
    - 2) Battery Pack: Five-year lithium battery.
  - g. Accuracy: Plus or minus 1 percent.
  - h. Display: Visually indicates total fluid volume in gallons and thermal-energy flow in kilowatts per hour or British thermal units.
  - i. Operating Instructions: Include complete instructions with each thermal-energy meter system.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION OF EXPANSION JOINTS - GENERAL**

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.

#### **3.2 INSTALLATION OF PACKED EXPANSION JOINTS**

- A. Install packed expansion joints with packing suitable for fluid service.

#### **3.3 INSTALLATION OF PACKLESS EXPANSION JOINTS**

- A. Install metal-bellows packless expansion joints in accordance with EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- B. Install rubber packless expansion joints in accordance with FSA-PSJ-703.

#### **3.4 INSTALLATION OF GROOVED-JOINT EXPANSION JOINTS**

- A. Install grooved-joint expansion joints to grooved-end steel piping.

#### **3.5 INSTALLATION OF ALIGNMENT GUIDES AND ANCHORS**

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
  - 1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9.
  - 2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-58, Type 24; U bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
  - 1. Anchor Attachment to Steel Structural Members: Attach by welding.
  - 2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
  - 3. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

3.6 INSTALLATION OF PIPE LOOPS AND SWING CONNECTIONS

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.
- C. Connect risers and branch connections to terminal units with at least four pipe fittings, including tee in riser.
- D. Connect mains and branch connections to terminal units with at least four pipe fittings, including tee in main.

3.7 INSTALLATION OF SLEEVES - GENERAL

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
  - 1. Retain subparagraph below if applicable.
  - 2. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
  - 1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
  - 2. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
  - 3. Using grout or silicone sealant, seal space outside of sleeves in floors/slabs/walls without sleeve-seal system. Select to maintain fire resistance of floor/slab/wall.
- D. Install sleeves for pipes passing through interior partitions.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
  - 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
  - 3. Seal annular space between sleeve and piping or piping insulation; use joint sealants that joint sealant manufacturer's literature indicates is appropriate for size, depth, and location of joint.
- E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke-Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 078413 "Penetration Firestopping."

3.8 INSTALLATION OF SLEEVES WITH WATERSTOP

- A. Install sleeve with waterstop as new walls and slabs are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange centered across width of concrete slab or wall.
- C. Secure nailing flanges to wooden concrete forms.
- D. Using grout or silicone sealant, seal space around outside of sleeves.

3.9 INSTALLATION OF STACK-SLEEVE FITTINGS

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
  - 1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
  - 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 076200 "Sheet Metal Flashing and Trim."
  - 3. Install section of cast-iron soil pipe to extend sleeve to 3 inches above finished floor level.
  - 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  - 5. Using silicone sealant, seal space between top hub of stack-sleeve fitting and pipe.

- B. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

### 3.10 INSTALLATION OF SLEEVE-SEAL SYSTEMS

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building, and passing through exterior walls.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.11 INSTALLATION OF ESCUTCHEONS

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.

### 3.12 INSTALLATION OF METERS AND GAUGES

- A. Install thermowells with socket extending a minimum of 2 inches into fluid and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing, and support tubing to prevent kinks. Use minimum tubing length.
- G. Install pipe-mounted thermal-energy temperature sensors in thermowells and extend wiring to indicator.
- H. Install duct-thermometer-mounting brackets in walls of ducts. Attach to duct with screws.
- I. Install direct-mounted pressure gauges in piping tees with pressure gauge located on pipe at the most readable position.
- J. Install remote-mounted pressure gauges on panel.
- K. Install valve and snubber in piping for each pressure gauge for fluids (except steam).
- L. Install valve and syphon fitting in piping for each pressure gauge for steam.
- M. Install test plugs in piping tees.
- N. Install flow indicators in piping systems in accessible positions for easy viewing.
- O. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.
- P. Install flowmeter elements in accessible positions in piping systems.
- Q. Install wafer-orifice flowmeter elements between orifice-type pipe flanges.
- R. Install all flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.
- S. Install permanent indicators on walls or brackets in accessible and readable positions.
- T. Install connection fittings in accessible locations for attachment to portable indicators.
- U. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.
- V. Install thermometers in the following locations:
  1. Inlet and outlet of each hydronic zone.
  2. Inlet and outlet of each hydronic boiler.
  3. Two inlets and two outlets of each chiller.
  4. Inlet and outlet of each hydronic coil in air-handling units.

5. Two inlets and two outlets of each hydronic heat exchanger.
6. Inlet and outlet of each thermal-storage tank.
7. Outside-, return-, supply-, and mixed-air ducts.

- W. Install pressure gauges in the following locations:
1. Discharge of each pressure-reducing valve.
  2. Inlet and outlet of each chiller chilled-water and condenser-water connection.
  3. Suction and discharge of each pump.

### 3.13 CONNECTIONS

- A. Install meters and gauges adjacent to machines and equipment to allow space for service and maintenance of meters, gauges, machines, and equipment.
- B. Connect flowmeter-system elements to meters.
- C. Connect flowmeter transmitters to meters.
- D. Connect thermal-energy meter transmitters to meters.

### 3.14 ADJUSTING

- A. After installation, calibrate meters according to manufacturer's written instructions.
- B. Adjust faces of meters and gauges to proper angle for best visibility.

### 3.15 FIELD QUALITY CONTROL

- A. Sleeves and Sleeve Seals:
  1. Perform the following tests and inspections:
    - a. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.
    - b. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.
  2. Prepare test and inspection reports.
- B. Escutcheons:
  1. Using new materials, replace broken and damaged escutcheons and floor plates.

### 3.16 SLEEVES APPLICATION

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  1. Exterior Concrete Walls above and below Grade:
    - a. Sleeves with waterstops.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  2. Concrete Slabs-on-Grade:
    - a. Sleeves with waterstops.
      - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
  3. Concrete Slabs above Grade:
    - a. Sleeves with waterstops or stack-sleeve fittings.
  4. Interior Walls and Partitions:
    - a. Sleeves without waterstops.

### 3.17 ESCUTCHEONS APPLICATION

- A. Escutcheons for New Piping and Relocated Existing Piping:
  1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
  2. Chrome-Plated Piping: One piece, steel cast brass or split-plate steel with polished, chrome-plated finish.
  3. Insulated Piping:
    - a. One piece, steel with polished, chrome-plated polished brass finish.
    - b. One piece, stainless steel with polished stainless steel finish.
    - c. One piece, cast brass with polished, chrome-plated polished brass finish.
    - d. One piece, stamped steel or split plate, stamped steel with concealed hinge or split plate, stamped steel with exposed-ribose hinge with polished, chrome-plated finish.

4. Bare Piping at Wall and Floor Penetrations in Finished Spaces:
    - a. One piece, steel with polished, chrome-plated polished brass finish.
    - b. One piece, stainless steel with polished stainless steel finish.
    - c. One piece, cast brass with polished, chrome-plated polished brass finish.
    - d. One piece, stamped steel or split plate, stamped steel with concealed hinge or split plate, stamped steel with exposed-riquet hinge with polished, chrome-plated finish.
  5. Bare Piping at Ceiling Penetrations in Finished Spaces:
    - a. One piece, steel with polished, chrome-plated polished brass finish.
    - b. One piece, stainless steel with polished stainless steel finish.
    - c. One piece, cast brass with polished, chrome-plated polished brass finish.
    - d. One piece, stamped steel or split plate, stamped steel with concealed hinge or split plate, stamped steel with exposed-riquet hinge with polished, chrome-plated finish.
  6. Bare Piping in Unfinished Service Spaces:
    - a. One piece, steel with polished, chrome-plated finish.
    - b. One piece, cast brass with polished, chrome-plated rough-brass finish.
    - c. One piece, stamped steel or split plate, stamped steel with concealed hinge or split plate, stamped steel with exposed-riquet hinge with polished, chrome-plated finish.
  7. Bare Piping in Equipment Rooms:
    - a. One piece, steel with polished, chrome-plated finish.
    - b. One piece, cast brass with polished, chrome-plated rough-brass finish.
    - c. One piece, stamped steel or split plate, stamped steel with concealed hinge or split plate, stamped steel with exposed-riquet hinge with polished, chrome-plated finish.
- B. Escutcheons for Existing Piping to Remain:
1. Chrome-Plated Piping: Split plate, stamped steel with concealed or exposed-riquet hinge with polished, chrome-plated finish.
  2. Insulated Piping: Split plate, stamped steel with concealed or exposed-riquet hinge with polished, chrome-plated finish.
  3. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split plate, stamped steel with concealed or exposed-riquet hinge with polished, chrome-plated finish.
  4. Bare Piping at Ceiling Penetrations in Finished Spaces: Split plate, stamped steel with concealed or exposed-riquet hinge with polished, chrome-plated finish.
  5. Bare Piping in Unfinished Service Spaces: Split plate, stamped steel with concealed or exposed-riquet hinge with polished, chrome-plated finish.
  6. Bare Piping in Equipment Rooms: Split plate, stamped steel with concealed or exposed-riquet hinge with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
1. New Piping and Relocated Existing Piping: Split floor plate.
  2. Existing Piping to Remain: Split floor plate.
- 3.18 THERMOMETER APPLICATION
- A. Thermometers at inlet and outlet of each hydronic zone are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Compact-style, liquid-in-glass type.
  4. Direct-mounted, light-activated type.
  5. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- B. Thermometers at inlet and outlet of each hydronic boiler are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Industrial-style, liquid-in-glass type.
  4. Direct-mounted, light-activated type.
  5. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- C. Thermometers at inlets and outlets of each chiller are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Industrial-style, liquid-in-glass type.

4. Direct-mounted, light-activated type.
  5. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- D. Thermometers at inlet and outlet of each hydronic coil in air-handling units and built-up central systems are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Industrial-style, liquid-in-glass type.
  4. Direct-mounted, light-activated type.
  5. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- E. Thermometers at inlets and outlets of each hydronic heat exchanger are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Industrial-style, liquid-in-glass type.
  4. Direct-mounted, light-activated type.
  5. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- F. Thermometers at inlet and outlet of each hydronic heat-recovery unit are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Industrial-style, liquid-in-glass type.
  4. Direct-mounted, light-activated type.
  5. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- G. Thermometers at inlet and outlet of each thermal-storage tank are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Industrial-style, liquid-in-glass type.
  4. Direct-mounted, light-activated type.
  5. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- H. Thermometers at outside-, return-, supply-, and mixed-air ducts are to be the following:
1. Liquid-filled, bimetallic-actuated type.
  2. Direct-mounted, metal-case, vapor-actuated type.
  3. Industrial-style, liquid-in-glass type.
  4. Direct-mounted, light-activated type.
- I. Thermometer stems are to be of length to match thermowell insertion length.

### 3.19 THERMOMETER SCALE-RANGE APPLICATION

- A. Scale Range for Chilled-Water Piping:
1. Minus 40 to plus 160 deg F.
- B. Scale Range for Condenser-Water Piping:
1. 0 to 150 deg F.
- C. Scale Range for Heating, Hot-Water Piping:
1. 0 to 250 deg F.
- D. Scale Range for Steam and Steam-Condensate Piping:
1. 0 to 250 deg F.
- E. Scale Range for Air Ducts:
1. Minus 40 to plus 110 deg F.

### 3.20 PRESSURE-GAUGE APPLICATION

- A. Pressure gauges at discharge of each pressure-reducing valve are to be the following:
1. Liquid filled, direct mounted, metal case.
  2. Sealed, direct mounted, plastic case.
  3. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.
- B. Pressure gauges at inlet and outlet of each chiller chilled-water and condenser-water connection are to be the following:
1. Liquid filled, direct mounted, metal case.
  2. Sealed, direct mounted, plastic case.
  3. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.

- C. Pressure gauges at suction and discharge of each pump are to be the following:
  - 1. Liquid-filled, direct mounted, metal case.
  - 2. Sealed, direct mounted, plastic case.
  - 3. Test plug with chlorosulfonated polyethylene synthetic EPDM self-sealing rubber inserts.

### 3.21 PRESSURE-GAUGE SCALE-RANGE APPLICATION

- A. Scale Range for Chilled-Water Piping:
  - 1. 30 in. Hg to 15 psi.
- B. Scale Range for Condenser-Water Piping:
  - 1. 30 in. Hg to 15 psi.
- C. Scale Range for Heating, Hot-Water Piping:
  - 1. 30 in. Hg to 15 psi.
- D. Scale Range for Steam Piping:
  - 1. 30 in. Hg to 15 psi.

### 3.22 FLOWMETER APPLICATION

- A. Flowmeters for Chilled-Water Piping: Orifice Pitot-tube Turbine Venturi Vortex-shedding type.
- B. Flowmeters for Condenser-Water Piping: Orifice Pitot-tube Turbine Venturi Vortex-shedding type.
- C. Flowmeters for Heating, Hot-Water Piping: Orifice Pitot-tube Turbine Venturi Vortex-shedding type.
- D. Flowmeters for Steam and Steam-Condensate Piping: Orifice Turbine Venturi Vortex-shedding type.

### 3.23 THERMAL-ENERGY METER APPLICATION

- A. Thermal-Energy Meters for Chilled-Water Piping: Turbine Ultrasonic type.
- B. Thermal-Energy Meters for Condenser-Water Piping: Turbine Ultrasonic type.
- C. Thermal-Energy Meters for Heating, Hot-Water Piping: Turbine Ultrasonic type.
- D. Thermal-Energy Meters for Steam and Steam-Condensate Piping: Turbine Ultrasonic type.

END OF SECTION 23 05 00

## SECTION 23 05 29

### HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Pipe hangers and supports - metal.
  - 2. Pipe hangers - metal, trapeze type.
  - 3. Pipe hangers - FRP.
  - 4. Strut support systems - metal, rod type.
  - 5. Strut support systems - FRP.
  - 6. Strut support systems - rooftop mounted.
  - 7. Thermal-hanger shield inserts.
  - 8. Fastener systems.
  - 9. Equipment supports.
  - 10. Equipment stands - outdoor type.

##### 1.2 ACTION SUBMITTALS

- A. Product Data:
  - 1. For each type of product.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following:
  - 1. Trapeze pipe hangers.
  - 2. Metal strut support systems.
  - 3. Rooftop-mounted strut support systems.
  - 4. FRP strut support systems.
  - 5. Pipe stands.
  - 6. Equipment supports.
- C. Delegated Design Submittals: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Detail fabrication/assembly and design calculations for trapeze hangers.
  - 2. Detail fabrication/assembly and design calculations for each type of strut support system, by the manufacturer's technical representative.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

##### 1.4 QUALITY ASSURANCE

- A. Structural-Steel Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators in accordance with 2021 ASME Boiler and Pressure Vessel Code, Section IX.

#### PART 2 - PRODUCTS

##### 2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design trapeze pipe hangers and equipment supports.

- B. Structural Performance: Hangers and supports for HVAC piping and equipment are to withstand the effects of gravity loads and stresses within limits and under conditions indicated in accordance with ASCE/SEI 7.
  - 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
  - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
  - 3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from authorities having jurisdiction.

## 2.2 PIPE HANGERS AND SUPPORTS - METAL

- A. Pipe Hangers and Supports - Carbon Steel:
  - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  - 2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
  - 3. Nonmetallic Coatings: Plastic coated, or epoxy powder coated.
  - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  - 5. Hanger Rods: Continuous-thread rod, nuts, and washers made of carbon steel.
- B. Pipe Hangers and Supports - Stainless Steel:
  - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  - 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.
- C. Pipe/Tube Hangers and Supports - Copper:
  - 1. Description: MSS SP-58, Types 1 through 58, copper-plated steel, factory-fabricated components.
  - 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-plated steel.

## 2.3 PIPE HANGERS - METAL, TRAPEZE TYPE

- A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

## 2.4 PIPE HANGERS - FRP

- A. Pipe Hangers - FRP, Clevis Type:
  - 1. Description: Similar to MSS SP-58, Type 1, factory-fabricated steel pipe hanger except hanger is made of fiberglass-reinforced plastic resin.
  - 2. Hanger Rods: Continuous-thread stainless steel rod, washer, and nuts made of FRP polyurethane or stainless steel.
  - 3. Flammability: ASTM D635, ASTM E84, and UL 94.
- B. Pipe Hangers - FRP, Strap Type:
  - 1. Description: Similar to MSS SP-58, Type 9 or Type 10 steel pipe hanger except hanger is made of fiberglass-reinforced plastic resin.
    - a. Flammability: ASTM D635, ASTM E84, and UL 94.
  - 2. Hanger Rod and Fittings: Continuous-thread rod, washer, and nuts made of stainless steel.

## 2.5 STRUT SUPPORT SYSTEMS - METAL, ROD TYPE

- A. Description: Factory-fabricated pipe-support assembly made of steel channels, vertical metal support rods, accessories, fittings, and other components for supporting multiple parallel pipes.
- B. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
- C. Struts: Continuous slotted carbon-steel stainless steel, Type 304 stainless steel, Type 316 extruded-aluminum channel with inturred lips or angle.
- D. Strut Width: Selected for applicable load criteria.
- E. Strut Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
- F. Hanger Rods: Continuous-thread rod, nuts, and washer made of galvanized steel.
- G. Metallic Coating: Hot-dip galvanized.
- H. Paint Coating: Green epoxy, acrylic, or urethane.

- I. Plastic Coating: PVC.
- 2.6 STRUT SUPPORT SYSTEMS - FRP
- A. Description: Structural-grade, factory-formed, glass-fiber-resin channels and angles for supporting multiple parallel pipes.
    - 1. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
    - 2. Struts: Continuous slotted fiberglass-reinforced plastic channel with inturned lips.
    - 3. Strut Width: Selected for applicable load criteria.
    - 4. Fittings and Accessories: Products provided by channel and angle manufacturer and designed for use with those items.
    - 5. Fitting and Accessory Materials: Same as those for channels and angles, except metal items may be stainless steel.
    - 6. Rated Strength: Selected to suit applicable load criteria.
    - 7. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- 2.7 STRUT SUPPORT SYSTEMS - ROOFTOP MOUNTED
- A. General Requirements: Shop-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
  - B. Pipe Stand - Compact:
    - 1. Description: Single base unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
    - 2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
    - 3. Hardware: Galvanized steel or polycarbonate.
    - 4. Accessories: Protection pads.
  - C. Pipe Stand - Single Base, Single Pipe, Low Profile:
    - 1. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
    - 2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
    - 3. Vertical Members: Two, stainless steel, continuous-thread 1/2-inch rods.
    - 4. Horizontal Member: Adjustable-height, stainless steel pipe support channels.
    - 5. Pipe Supports: Roller Strut clamps Clevis hanger Swivel hanger.
    - 6. Hardware: Stainless steel.
    - 7. Accessories: Protection pads.
    - 8. Height: 12 inches above roof.
  - D. Pipe Stand - Single Base, Single Pipe, High Profile:
    - 1. Description: Single base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
    - 2. Base: Single vulcanized rubber or molded polypropylene.
    - 3. Vertical Members: Two, stainless steel, continuous-thread 1/2-inch rods.
    - 4. Horizontal Member: One, adjustable-height, galvanized-steel or stainless steel pipe support slotted channel or plate.
    - 5. Pipe Supports: Roller Clevis hanger Swivel hanger.
    - 6. Hardware: Stainless steel.
    - 7. Accessories: Protection pads, 1/2-inch continuous-thread stainless steel rod.
    - 8. Height: 36 inches above roof.
  - E. Pipe Stand - Multiple Pipe, High Profile:
    - 1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
    - 2. Bases: Two or more; vulcanized rubber molded polypropylene.
    - 3. Vertical Members: Two or more, stainless steel channels.
    - 4. Horizontal Members: One or more, adjustable-height, stainless steel pipe support.
    - 5. Pipe Supports: Roller Strut clamps Clevis hanger Swivel hanger.
    - 6. Hardware: Stainless steel.
    - 7. Accessories: Protection pads, 1/2-inch continuous-thread rod.
    - 8. Height: 36 inches above roof.
  - F. Pipe Stand - Curb-Mounted Type: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.8 THERMAL-HANGER SHIELD INSERTS

- A. Insulation-Insert Material for Cold Piping: ASTM C552, Type II cellular glass with 100 psi or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125 psi minimum compressive strength and vapor barrier.
- B. Insulation-Insert Material for Hot Piping: Water-repellent-treated, ASTM C533, Type I calcium silicate with 100 psi ASTM C552, Type II cellular glass with 100 psi or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125 psi minimum compressive strength.
- C. For Trapeze or Clamped Systems: Insert and shield are to cover entire circumference of pipe.
- D. For Clevis or Band Hangers: Insert and shield are to cover bottom 180 degrees of pipe.
- E. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.9 FASTENER SYSTEMS

- A. Fastener System - Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities required for supported loads and building materials where used.
- B. Fastener System - Mechanical-Expansion Anchors: Insert-wedge-type anchors for use in hardened portland cement concrete; with pull-out, tension, and shear capacities required for supported loads and building materials where used.
  - 1. Indoor Applications: Zinc-plated or stainless steel.
  - 2. Outdoor Applications: Stainless steel.

2.10 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.11 EQUIPMENT STANDS, OUTDOOR TYPE

- A. Description: Individual foot supports with elevated adjustable channel cross bars and clamps/fasteners/bolts for ground- or roof-supported outdoor equipment components, without roof membrane penetration, in a prefabricated system that can be modularly-assembled on site.
- B. Foot Material: Rubber or polypropylene.
- C. Rails Material: Hot dip galvanized carbon steel.
- D. Wind/Sliding Load Resistance: Up to 100 mph minimum.

2.12 MATERIALS

- A. Aluminum: ASTM B221.
- B. Carbon Steel: ASTM A1011/A1011M.
- C. Structural Steel: ASTM A36/A36M, carbon-steel plates, shapes, and bars; galvanized.
- D. Stainless Steel: ASTM A240/A240M.
- E. Threaded Rods: Continuously threaded. Zinc-plated or galvanized steel for indoor applications and stainless steel for outdoor applications. Mating nuts and washers of similar materials as rods.
- F. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
  - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
  - 2. Design Mix: 5000 psi, 28-day compressive strength.

**PART 3 - EXECUTION**

3.1 APPLICATION

- A. Comply with requirements in Section 07 84 13 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- B. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry static loads within specified loading limits. Minimum static design load used for strength determination is to include weight of supported components plus 200 lb.

### 3.2 INSTALLATION OF HANGERS AND SUPPORTS

- A. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- B. Install lateral bracing with pipe hangers and supports to prevent swaying.
- C. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Coordinate location of concrete inserts before concrete is placed.
- D. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- E. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- F. Insulated Piping:
  - 1. Attach clamps and spacers to piping.
    - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
  - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    - a. Thermal-hanger shield inserts may be used as an option. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
  - 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields are to span an arc of 180 degrees.
    - a. Thermal-hanger shield inserts may be used as an option. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
  - 4. Shield Dimensions for Pipe: Not less than the following:
    - a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches long and 0.048 inch thick.
    - b. NPS 4 (DN 100): 12 inches long and 0.06 inch thick.
    - c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches long and 0.06 inch thick.
    - d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches long and 0.075 inch thick.
    - e. NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches long and 0.105 inch thick.
  - 5. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
- G. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- H. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
  - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size, or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
  - 2. Field fabricate in accordance with ASTM A36/A36M, carbon-steel shapes selected for loads being supported. Weld steel in accordance with AWS D1.1/D1.1M.
- I. FRP Pipe-Hanger Installation: Comply with applicable portions of MSS SP-58. Install hangers and attachments as required to properly support piping from building structure.
- J. Strut System Installation: FRP. Arrange for grouping of parallel runs of piping, and support together on field-assembled strut systems.
- K. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- L. Fastener System Installation:
  - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick after concrete is placed and cured. Use installers that are licensed by powder-actuated tool manufacturer.
  - 2. Install mechanical-expansion anchors after concrete is placed and completely cured.
  - 3. Install fasteners in accordance with manufacturer's written instructions.
  - 4. Install lag screw wood fasteners in accordance with manufacturer's written instructions.
- M. Pipe Stand Installation:
  - 1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.

2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 07 72 00 "Roof Accessories" for curbs.
  - N. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
  - O. Equipment Support Installation:
    1. Fabricate from welded-structural-steel shapes.
    2. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
    3. Grouting: Place grout under supports for floor-mounted equipment, and make bearing surface smooth.
    4. Provide lateral bracing, to prevent swaying.
- 3.3 METAL FABRICATIONS
- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
  - B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded.
  - C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
    1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
    2. Obtain fusion without undercut or overlap.
    3. Remove welding flux immediately.
    4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.
- 3.4 ADJUSTING
- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
  - B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.
- 3.5 PAINTING
- A. Touchup:
    1. Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
      - a. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
    2. Comply with requirements in Section 09 91 13 "Exterior Painting" Section 09 91 23 "Interior Painting" and Section 09 96 00 "High-Performance Coatings" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
    3. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780/A780M.
- 3.6 HANGER AND SUPPORT SCHEDULE
- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
  - B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.
  - C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
  - D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
  - E. Use carbon-steel pipe hangers and supports metal trapeze pipe hangers and metal framing systems and attachments for general service applications.
  - F. Use stainless steel pipe hangers FRP pipe hangers and FRP strut systems and stainless steel or corrosion-resistant attachments for hostile environment applications.
  - G. Use copper-plated pipe hangers and copper or stainless steel attachments for copper piping and tubing.
  - H. Use padded hangers for piping that is subject to scratching.

- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
  - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
  - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
  - 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
  - 5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
  - 6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8.
  - 7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  - 8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  - 9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  - 10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.
  - 11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
  - 12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
  - 13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
  - 14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  - 15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  - 16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
  - 17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
  - 18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
  - 19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is unnecessary.
  - 20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is unnecessary.
  - 21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
  - 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
  - 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
  - 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
  - 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.

5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction, to attach to top flange of structural shape.
  3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
  4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
  5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
  6. C-Clamps (MSS Type 23): For structural shapes.
  7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
  8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
  9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
  10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
  11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
  12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    - a. Light (MSS Type 31): 750 lb.
    - b. Medium (MSS Type 32): 1500 lb.
    - c. Heavy (MSS Type 33): 3000 lb.
  13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
  14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
  15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
  2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
  3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
  4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
  5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
  6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
  7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
  8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
    - a. Horizontal (MSS Type 54): Mounted horizontally.
    - b. Vertical (MSS Type 55): Mounted vertically.
    - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- P. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

- Q. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

END OF SECTION 23 05 29

## SECTION 23 05 53

### IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Warning tape.
  - 4. Pipe labels.
  - 5. Duct labels.
  - 6. Stencils.
  - 7. Valve tags.
  - 8. Warning tags.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment-Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve-numbering scheme.
- E. Valve Schedules: Provide for each piping system. Include in operation and maintenance manuals.

#### PART 2 - PRODUCTS

##### 2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
  - 1. Material and Thickness: Brass, 0.032-inch stainless steel, 0.025-inch aluminum, 0.032-inch anodized aluminum, 0.032-inch minimum thickness, with predrilled or stamped holes for attachment hardware.
  - 2. Letter and Background Color: As indicated for specific application under Part 3.
  - 3. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - 4. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  - 5. Fasteners: Stainless steel rivets or self-tapping screws.
  - 6. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Plastic Labels for Equipment:
  - 1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
  - 2. Letter and Background Color: As indicated for specific application under Part 3.
  - 3. Maximum Temperature: Able to withstand temperatures of up to 160 deg F.
  - 4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - 5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  - 6. Fasteners: Stainless steel rivets or self-tapping screws.
  - 7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.

## 2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Maximum Temperature: Able to withstand temperatures of up to 160 deg F.
- D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- F. Fasteners: Stainless steel rivets or self-taping screws.
- G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- H. Arc-Flash Warning Signs: Provide arc-flash warning signs in locations and with content in accordance with requirements of OSHA and NFPA70E and other applicable codes and standards.
- I. Label Content: Include caution and warning information plus emergency notification instructions.

## 2.3 WARNING TAPE

- A. Material: Vinyl.
- B. Minimum Thickness: 0.005 inch.
- C. Letter, Pattern, and Background Color: As indicated for specific application under Part 3.
- D. Waterproof Adhesive Backing: Suitable for indoor or outdoor use.
- E. Maximum Temperature: 160 deg F.
- F. Minimum Width: 2 inches.

## 2.4 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color coded, with lettering indicating service and showing flow direction in accordance with ASME A13.1.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- D. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- E. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings. Also include:
  - 1. Pipe size.
  - 2. Flow-Direction Arrows: Include flow-direction arrows on main distribution piping. Arrows may be either integral with label or applied separately.
  - 3. Lettering Size: Size letters in accordance with ASME A13.1 for piping.

## 2.5 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- F. Fasteners: Stainless steel rivets or self-tapping screws.

- G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- H. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings. Also include the following:
  - 1. Duct size.
  - 2. Flow-Direction Arrows: Include flow-direction arrows on main distribution ducts. Arrows may be either integral with label or may be applied separately.
  - 3. Lettering Size: Size letters in accordance with ASME A13.1 for piping.

## 2.6 STENCILS

- A. Stencils for Piping:
  - 1. Lettering Size: Size letters in accordance with ASME A13.1 for piping.
  - 2. Stencil Material: Aluminum, brass, or fiberboard.
  - 3. Stencil Paint: Exterior, gloss, acrylic enamel in colors complying with recommendations in ASME A13.1 unless otherwise indicated. Paint may be in pressurized spray-can form.
  - 4. Identification Paint: Exterior, alkyd enamel acrylic enamel. Paint may be in pressurized spray-can form.
  - 5. Letter and Background Color: As indicated for specific application under Part 3.
- B. Stencils for Ducts:
  - 1. Lettering Size: Minimum letter height of 1-1/4 inches for viewing distances of up to 15 ft. and proportionately larger lettering for greater viewing distances.
  - 2. Stencil Material: Fiberboard or metal.
  - 3. Stencil Paint: Exterior, gloss, alkyd enamel acrylic enamel. Paint may be in pressurized spray-can form.
  - 4. Identification Paint: Exterior, alkyd enamel acrylic enamel. Paint may be in pressurized spray-can form.
  - 5. Letter and Background Color: Color as indicated for specific application under Part 3.
- C. Stencils for Access Panels and Door Labels, Equipment Labels, and Similar Operational Instructions:
  - 1. Lettering Size: Minimum letter height of 1/2 inch for viewing distances of up to 72 inches and proportionately larger lettering for greater viewing distances.
  - 2. Stencil Material: Fiberboard or metal.
  - 3. Stencil Paint: Exterior, gloss, alkyd enamel acrylic enamel. Paint may be in pressurized spray-can form.
  - 4. Identification Paint: Exterior, alkyd enamel acrylic enamel. Paint may be in pressurized spray-can form.
  - 5. Letter and Background Color: As indicated for specific application under Part 3.

## 2.7 VALVE TAGS

- A. Description: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
  - 1. Tag Material: Brass, 0.04-inch stainless steel, 0.024-inch aluminum, 0.031-inch oranodized aluminum, 0.031-inch minimum thickness, with predrilled or stamped holes for attachment hardware.
  - 2. Fasteners: Brass wirelink chain orbeaded chain or S-hook.
- B. Letter and Background Color: As indicated for specific application under Part 3.
- C. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  - 1. Include valve-tag schedule in operation and maintenance data.

## 2.8 WARNING TAGS

- A. Description: Preprinted or partially preprinted accident-prevention tags of plasticized card stock with matte finish suitable for writing.
  - 1. Size: 3 by 5-1/4 inches minimum.
  - 2. Fasteners: Brass grommet and wire.
  - 3. Nomenclature: Large-size primary caption, such as "DANGER," "CAUTION," or "DO NOT OPERATE."
  - 4. Letter and Background Color: As indicated for specific application under Part 3.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

#### **3.2 INSTALLATION, GENERAL REQUIREMENTS**

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.
- D. Locate identifying devices so that they are readily visible from the point of normal approach.

#### **3.3 INSTALLATION OF EQUIPMENT LABELS, WARNING SIGNS, AND LABELS**

- A. Permanently fasten labels on each item of mechanical equipment.
- B. Sign and Label Colors:
  - 1. White letters on an ANSI Z535.1 safety-blue background.
- C. Locate equipment labels where accessible and visible.
- D. Arc-Flash Warning Signs: Provide arc-flash warning signs on electrical disconnects and other equipment where arc-flash hazard exists, as indicated on Drawings, and in accordance with requirements of OSHA and NFPA 70E, and other applicable codes and standards.

#### **3.4 INSTALLATION OF WARNING TAPE**

- A. Warning Tape Color and Pattern: Yellow background with black diagonal stripes.
- B. Install warning tape on pipes and ducts, with cross-designated walkways providing less than 6 ft. of clearance.
- C. Locate tape so as to be readily visible from the point of normal approach.

#### **3.5 INSTALLATION OF PIPE LABELS**

- A. Piping Color Coding: Painting of piping is specified in Section 09 91 23 "Interior Painting." Section 09 96 00 "High-Performance Coatings."
- B. Install pipe labels showing service and flow direction with permanent adhesive on pipes.
- C. Stenciled Pipe Label Option: Stenciled labels showing service and flow direction may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels, complying with ASME A13.1, with painted, color-coded bands or rectangles on each piping system.
  - 1. Identification Paint: Use for contrasting background.
  - 2. Stencil Paint: Use for pipe marking.
- D. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Within 3 ft. of each valve and control device.
  - 2. At access doors, manholes, and similar access points that permit view of concealed piping.
  - 3. Within 3 ft. of equipment items and other points of origination and termination.
  - 4. Spaced at maximum intervals of 25 ft. along each run. Reduce intervals to 10 ft. in areas of congested piping, ductwork, and equipment.
- E. Do not apply plastic pipe labels or plastic tapes directly to bare pipes conveying fluids at temperatures of 125 deg F or higher. Where these pipes are to remain uninsulated, use a short section of insulation or use stenciled labels.
- F. Flow-Direction Arrows: Use arrows to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
- G. Pipe-Label Color Schedule:
  - 1. Chilled-Water Piping: White letters on an ANSI Z535.1 safety-green background.
  - 2. Condenser-Water Piping: White letters on an ANSI Z535.1 safety-green background.
  - 3. Heating Water Piping: White letters on an ANSI Z535.1 safety-green background.

4. Refrigerant Piping: White letters on an ANSI Z535.1 safety-blue background.
5. Low-Pressure Steam Piping: Black letters on an ANSI Z535.1 safety-yellow background.
6. High-Pressure Steam Piping: Black letters on an ANSI Z535.1 safety-yellow background.
7. Steam Condensate Piping: Black letters on an ANSI Z535.1 safety-yellow background.
8. Toxic and Corrosive Fluids: Black letters on an ANSI Z535.1 safety-orange background.
9. Flammable Fluids: Black letters on an ANSI Z535.1 safety-yellow background.
10. Combustible Fluids: White letters on an ANSI Z535.1 safety-brown background.
11. Potable and Other Water: White letters on an ANSI Z535.1 safety-green background.
12. Compressed Air: White letters on an ANSI Z535.1 safety-blue background.

### 3.6 INSTALLATION OF DUCT LABELS

- A. Install plastic-laminated duct labels showing service and flow direction with permanent adhesive on air ducts.
  1. Provide labels in the following color codes:
    - a. For air supply ducts: White letters on blue background.
    - b. For air return ducts: White letters on blue background.
    - c. For exhaust-, outside-, relief-, return-, and mixed-air ducts: White letters on blue background.
    - d.
- B. Stenciled Duct-Label Option: Stenciled labels showing service and flow direction may be provided instead of plastic-laminated duct labels, at Installer's option.
  1. For all air ducts: Black letters on white background.
- C. Locate label near each point where ducts enter into and exit from concealed spaces and at maximum intervals of 20 ft. where exposed or are concealed by removable ceiling system.
- D. Stenciled Access Panels and Door Labels, Equipment Labels, and Similar Operational Instructions:
  1. Black letters on White background.

### 3.7 INSTALLATION OF VALVE TAGS

- A. Install tags on valves and control devices in piping systems, except check valves, valves within factory-fabricated equipment units, shutoff valves, and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule in the operating and maintenance manual.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in "Valve-Tag Size and Shape" Subparagraph below.
  1. Valve-Tag Size and Shape:
    - a. Chilled Water: 1-1/2 inches, round.
    - b. Condenser Water: 1-1/2 inches, round.
    - c. Refrigerant: 1-1/2 inches, round.
    - d. Hot Water: 1-1/2 inches, round.
    - e. Gas: 1-1/2 inches, round.
    - f. Low-Pressure Steam: 1-1/2 inches, round.
    - g. High-Pressure Steam: [1-1/2 inches], round.
    - h. Steam Condensate: 1-1/2 inches, round.
  2. Valve-Tag Colors:
    - a. For each piping system, use the same lettering and background coloring system on valve tags as used for the Pipe Label Schedule text and background.

### 3.8 INSTALLATION OF WARNING TAGS

- A. Warning Tag Color: Black letters on an ANSI Z535.1 safety-yellow background.
- B. Attach warning tags, with proper message, to equipment and other items where scheduled.

END OF SECTION 23 05 53

## SECTION 23 05 93

### TESTING, ADJUSTING, AND BALANCING FOR HVAC

#### PART 1 - GENERAL

##### 1.1 SUMMARY

###### A. Section Includes:

1. Testing, Adjusting, and Balancing of Air Systems:
  - a. Constant-volume air systems.
  - b. Dual-duct systems.
  - c. Variable-air-volume systems.
  - d. Multizone systems.
  - e. Induction-unit systems.
2. Testing, Adjusting, and Balancing of Hydronic Piping Systems:
  - a. Constant-flow hydronic systems.
  - b. Variable-flow hydronic systems.
  - c. Primary-secondary hydronic systems.
3. Testing, adjusting, and balancing of fuel oil systems for HVAC.
4. Testing, adjusting, and balancing of steam and condensate piping systems.
5. Testing, adjusting, and balancing of equipment.
6. Testing, adjusting, and balancing of existing HVAC systems and equipment.
7. Procedures for exhaust hoods.
8. Sound tests.
9. Vibration tests.
10. Duct leakage tests verification.
11. Pipe leakage tests verification.
12. UFAD plenum leakage tests verification.
13. HVAC-control system verification.
14. Smoke-control system tests.
15. Stair-pressurization system tests.
16. Elevator-pressurization system tests.

##### 1.2 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. NEBB: National Environmental Balancing Bureau.
- C. TAB: Testing, adjusting, and balancing.
- D. TABB: Testing, Adjusting, and Balancing Bureau.
- E. TAB Specialist: An independent entity meeting qualifications to perform TAB work.
- F. TDH: Total dynamic head.
- G. UFAD: Underfloor air distribution.

##### 1.3 PREINSTALLATION MEETINGS

- A. TAB Conference: Conduct a TAB conference at Project site after approval of the TAB strategies and procedures plan, to develop a mutual understanding of the details. Provide a minimum of 14 days' advance notice of scheduled meeting time and location.
  1. Minimum Agenda Items:
    - a. The Contract Documents examination report.
    - b. The TAB plan.
    - c. Needs for coordination and cooperation of trades and subcontractors.
    - d. Proposed procedures for documentation and communication flow.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: Within 30 days of Contractor's Notice to Proceed, submit documentation that the TAB specialist and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Contract Documents Examination Report: Within 30 days of Contractor's Notice to Proceed, submit the Contract Documents review report, as specified in Part 3.
- C. Strategies and Procedures Plan: Within 30 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures, as specified in "Preparation" Article.
- D. System Readiness Checklists: Within 30 days of Contractor's Notice to Proceed, submit system readiness checklists, as specified in "Preparation" Article.
- E. Examination Report: Submit a summary report of the examination review required in "Examination" Article.
- F. Certified TAB reports.
- G. Sample report forms.
- H. Instrument calibration reports, to include the following:
  - 1. Instrument type and make.
  - 2. Serial number.
  - 3. Application.
  - 4. Dates of use.
  - 5. Dates of calibration.

1.5 QUALITY ASSURANCE

- A. TAB Specialists Qualifications, Certified by AABC:
  - 1. TAB Field Supervisor: Employee of the TAB specialist and certified by AABC.
  - 2. TAB Technician: Employee of the TAB specialist and certified by AABC.
- B. TAB Specialists Qualifications, Certified by NEBB or TABB:
  - 1. TAB Field Supervisor: Employee of the TAB specialist and certified by NEBB or TABB.
  - 2. TAB Technician: Employee of the TAB specialist and certified by NEBB or TABB.
- C. Instrumentation Type, Quantity, Accuracy, and Calibration: Comply with requirements in ASHRAE 111, Section 4, "Instrumentation."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6.7.2.3 - "System Balancing."
- E. Code and AHJ Compliance: TAB is required to comply with governing codes and requirements of authorities having jurisdiction.

1.6 FIELD CONDITIONS

- A. Full Owner Occupancy: Owner will occupy the site and existing building during entire TAB period. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.
- B. Partial Owner Occupancy: Owner may occupy completed areas of building before Substantial Completion. Cooperate with Owner during TAB operations to minimize conflicts with Owner's operations.

**PART 2 - PRODUCTS (Not Applicable)**

**PART 3 - EXECUTION**

3.1 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.
- B. Examine installed systems for balancing devices, such as test ports, gauge cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.

- D. Examine design data, including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine ceiling plenums and underfloor air plenums used for HVAC to verify that they are properly separated from adjacent areas and sealed.
- F. Examine equipment performance data, including fan and pump curves.
  - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
  - 2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
- G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
- H. Examine test reports specified in individual system and equipment Sections.
- I. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.
- J. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.
- K. Examine temporary and permanent strainers. Verify that temporary strainer screens used during system cleaning and flushing have been removed and permanent strainer baskets are installed and clean.
- L. Examine control valves for proper installation for their intended function of isolating, throttling, diverting, or mixing fluid flows.
- M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
- N. Examine system pumps to ensure absence of entrained air in the suction piping.
- O. Examine operating safety interlocks and controls on HVAC equipment.
- P. Examine control dampers for proper installation for their intended function of isolating, throttling, diverting, or mixing air flows.
- Q. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

### 3.2 PREPARATION

- A. Prepare a TAB plan that includes the following:
  - 1. Equipment and systems to be tested.
  - 2. Strategies and step-by-step procedures for balancing the systems.
  - 3. Instrumentation to be used.
  - 4. Sample forms with specific identification for all equipment.
- B. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:
  - 1. Airside:
    - a. Verify that leakage and pressure tests on air distribution systems have been satisfactorily completed.
    - b. Duct systems are complete with terminals installed.
    - c. Volume, smoke, and fire dampers are open and functional.
    - d. Clean filters are installed.
    - e. Fans are operating, free of vibration, and rotating in correct direction.
    - f. Variable-frequency controllers' startup is complete and safeties are verified.
    - g. Automatic temperature-control systems are operational.
    - h. Ceilings are installed.
    - i. Windows and doors are installed.
    - j. Suitable access to balancing devices and equipment is provided.
  - 2. Hydronics:
    - a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
    - b. Piping is complete with terminals installed.

- c. Water treatment is complete.
- d. Systems are flushed, filled, and air purged.
- e. Strainers are pulled and cleaned.
- f. Control valves are functioning in accordance with the sequence of operation.
- g. Shutoff and balance valves have been verified to be 100 percent open.
- h. Pumps are started and proper rotation is verified.
- i. Pump gauge connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
- j. Variable-frequency controllers' startup is complete and safeties are verified.
- k. Suitable access to balancing devices and equipment is provided.

### 3.3 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system in accordance with the procedures contained in AABC's "National Standards for Total System Balance" ASHRAE 111 NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" and in this Section.
- B. Cut insulation, ducts, pipes, and equipment casings for installation of test probes to the minimum extent necessary for TAB procedures.
  1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
  2. After testing and balancing, install test ports and duct access doors that comply with requirements in Section 23 33 00 "Air Duct Accessories."
  3. Where holes for probes are required in piping or hydronic equipment, install pressure and temperature test plugs to seal systems.
  4. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish in accordance with Section 23 07 13 "Duct Insulation," Section 23 07 16 "HVAC Equipment Insulation," and Section 23 07 19 "HVAC Piping Insulation."
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) units.

### 3.4 TESTING, ADJUSTING, AND BALANCING OF HVAC EQUIPMENT

- A. Test, adjust, and balance HVAC equipment indicated on Drawings, including, but not limited to, the following:
  1. Motors.
  2. Pumps.
  3. Fans and ventilators.
  4. Air curtains.
  5. Terminal units.
  6. Commercial kitchen hoods.
  7. Boilers.
  8. Deaerators.
  9. Furnaces.
  10. Radiant heaters.
  11. Unit heaters.
  12. Solar collectors.
  13. Heat exchangers.
  14. Condensing units.
  15. Condensers.
  16. Water chillers.
  17. Cooling towers.
  18. Energy-recovery units.
  19. Air-handling units.
  20. Heating and ventilating units.
  21. Rooftop air-conditioning units.
  22. Heating-only makeup air units.
  23. Dedicated outdoor-air units.
  24. Packaged air conditioners.
  25. Self-contained air conditioners.
  26. Computer-room air conditioners.

27. Split-system air conditioners.
28. Variable-refrigerant-flow systems.
29. Heat pumps.
30. Valance heating and cooling units.
31. Chilled beams.
32. Coils.
33. Fan coil units.
34. Unit ventilators.
35. Radiators.
36. Convectors.
37. Finned-tube radiation heaters.
38. Radiant-heating cables piping and panels.
39. Humidifiers.
40. Dehumidification units.

### 3.5 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' Record drawings duct layouts.
- C. For variable-air-volume systems, develop a plan to simulate diversity.
- D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- G. Verify that motor starters are equipped with properly sized thermal protection.
- H. Check dampers for proper position to achieve desired airflow path.
- I. Check for airflow blockages.
- J. Check condensate drains for proper connections and functioning.
- K. Check for proper sealing of air-handling-unit components.

### 3.6 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
  1. Measure total airflow.
    - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
    - b. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
    - c. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
  2. Measure fan static pressures as follows:
    - a. Measure static pressure directly at the fan outlet or through the flexible connection.
    - b. Measure static pressure directly at the fan inlet or through the flexible connection.
    - c. Measure static pressure across each component that makes up the air-handling system.
    - d. Report artificial loading of filters at the time static pressures are measured.
  3. Review Contractor-prepared shop drawings and Record drawings to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
  4. Obtain approval from Construction Manager for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
  5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

- B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
  - 1. Measure airflow of submain and branch ducts.
  - 2. Adjust submain and branch duct volume dampers for specified airflow.
  - 3. Re-measure each submain and branch duct after all have been adjusted.
- C. Adjust air inlets and outlets for each space to indicated airflows.
  - 1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
  - 2. Measure inlets and outlets airflow.
  - 3. Adjust each inlet and outlet for specified airflow.
  - 4. Re-measure each inlet and outlet after they have been adjusted.
- D. Verify final system conditions.
  - 1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to design if necessary.
  - 2. Re-measure and confirm that total airflow is within design.
  - 3. Re-measure all final fan operating data, speed, volts, amps, and static profile.
  - 4. Mark all final settings.
  - 5. Test system in economizer mode. Verify proper operation and adjust if necessary.
  - 6. Measure and record all operating data.
  - 7. Record final fan-performance data.

### 3.7 PROCEDURES FOR DUAL-DUCT SYSTEMS

- A. Adjust the dual-duct systems as follows:
  - 1. Verify that the system static pressure sensor is located two-thirds of the distance down the duct from the fan discharge. On systems with separate hot-deck and cold-deck fans, verify the location of the sensor on each deck.
  - 2. Verify that the system is under static pressure control.
  - 3. Select the terminal unit that is most critical to the supply-fan airflow. Measure inlet static pressure, and adjust system static pressure control set point, so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
  - 4. Calibrate and balance each terminal unit's hot deck and cold deck for maximum and minimum design airflow as follows:
    - a. Adjust controls so that terminal is calling for full cooling. Some controllers require starting with minimum set point. Verify calibration procedure for specific project.
    - b. Measure airflow and adjust calibration factors as required for design cold-deck maximum airflow and hot-deck minimum airflow. Record calibration factors.
    - c. When maximum airflow is correct, balance the air outlets downstream from terminal units.
    - d. Adjust controls so that terminal is calling for full heating.
    - e. Measure airflow and adjust calibration factors as required for design cold-deck minimum airflow and hot-deck maximum airflow. Record calibration factors. If no minimum calibration is available, note any deviation from design airflow.
  - 5. After terminals have been calibrated and balanced, test and adjust system for total airflow. Adjust fans to deliver total design airflows within the maximum allowable fan speed listed by fan manufacturer.
    - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
    - b. Set terminals for maximum airflow. If system design includes diversity (cooling coil or fan), adjust terminals for maximum and minimum airflow so that connected total matches cooling coil or fan selection and simulates actual load in the building. In systems with separate hot-deck and cold-deck fans, diversity consideration applies to each individual fan.
    - c. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
    - d. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
  - 6. Measure the fan(s) static pressures as follows:
    - a. Measure static pressure directly at the fan outlet or through the flexible connection.
    - b. Measure static pressure directly at the fan inlet or through the flexible connection.
    - c. Measure static pressure across each component that makes up the air-handling system.
    - d. Report any artificial loading of filters at the time static pressures are measured.

7. Set final return and outside airflow to the fan(s) while operating at maximum return airflow and minimum outdoor airflow.
  - a. Balance the return-air ducts and inlets.
  - b. Verify that all terminal units are meeting design airflow under system maximum flow.
8. Re-measure the inlet static pressure at the most critical terminal unit, and adjust the system static pressure set point to the most energy-efficient set point to maintain the optimum system static pressure. Record set point and give to controls Contractor.
9. Verify final system conditions as follows:
  - a. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
  - b. Re-measure and confirm that total airflow is within design.
  - c. Re-measure final fan operating data, speed, volts, amps, and static profile.
  - d. Mark final settings.
  - e. Test system in economizer mode. Verify proper operation and adjust if necessary. Measure and record all operating data.
  - f. Verify tracking between supply and return fans.
10. Record final fan-performance data.

### 3.8 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. Adjust the variable-air-volume systems as follows:
1. Verify that the system static pressure sensor is located two-thirds of the distance down the duct from the fan discharge.
  2. Verify that the system is under static pressure control.
  3. Select the terminal unit that is most critical to the supply-fan airflow. Measure inlet static pressure, and adjust system static pressure control set point so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
  4. Calibrate and balance each terminal unit for maximum and minimum design airflow as follows:
    - a. Adjust controls so that terminal is calling for maximum airflow. Some controllers require starting with minimum airflow. Verify calibration procedure for specific project.
    - b. Measure airflow and adjust calibration factor as required for design maximum airflow. Record calibration factor.
    - c. When maximum airflow is correct, balance the air outlets downstream from terminal units.
    - d. Adjust controls so that terminal is calling for minimum airflow.
    - e. Measure airflow and adjust calibration factor as required for design minimum airflow. Record calibration factor. If no minimum calibration is available, note any deviation from design airflow.
    - f. On constant volume terminals, in critical areas where room pressure is to be maintained, verify that the airflow remains constant over the full range of full cooling to full heating. Note any deviation from design airflow or room pressure.
  5. After terminals have been calibrated and balanced, test and adjust system for total airflow. Adjust fans to deliver total design airflows within the maximum allowable fan speed listed by fan manufacturer.
    - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
    - b. Set terminals for maximum airflow. If system design includes diversity, adjust terminals for maximum and minimum airflow, so that connected total matches fan selection and simulates actual load in the building.
    - c. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
    - d. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
  6. Measure fan static pressures as follows:
    - a. Measure static pressure directly at the fan outlet or through the flexible connection.
    - b. Measure static pressure directly at the fan inlet or through the flexible connection.
    - c. Measure static pressure across each component that makes up the air-handling system.
    - d. Report any artificial loading of filters at the time static pressures are measured.

7. Set final return and outside airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
  - a. Balance the return-air ducts and inlets.
  - b. Verify that terminal units are meeting design airflow under system maximum flow.
8. Re-measure the inlet static pressure at the most critical terminal unit, and adjust the system static pressure set point to the most energy-efficient set point to maintain the optimum system static pressure. Record set point and give to controls Contractor.
9. Verify final system conditions as follows:
  - a. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
  - b. Re-measure and confirm that total airflow is within design.
  - c. Re-measure final fan operating data, speed, volts, amps, and static profile.
  - d. Mark final settings.
  - e. Test system in economizer mode. Verify proper operation and adjust if necessary. Measure and record all operating data.
  - f. Verify tracking between supply and return fans.

### 3.9 PROCEDURES FOR MULTIZONE SYSTEMS

- A. Position the unit's automatic zone dampers for maximum flow through the cooling coil.
- B. The procedures for multizone systems will utilize the zone balancing dampers to achieve the indicated airflow within the zone.
- C. After balancing, place the unit's automatic zone dampers for maximum heating flow. Retest zone airflows and record any variances.
- D. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
  1. Measure total airflow.
    - a. Set outside-air, return-air and relief-air dampers for proper position that simulates minimum outdoor air conditions.
    - b. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
    - c. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
  2. Measure fan static pressures as follows:
    - a. Measure static pressure directly at the fan outlet or through the flexible connection.
    - b. Measure static pressure directly at the fan inlet or through the flexible connection.
    - c. Measure static pressure across each component that makes up the air-handling system.
    - d. Report artificial loading of filters at the time static pressures are measured.
  3. Review Record drawings to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
  4. Obtain approval from Construction Manager for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
  5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- E. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
  1. Measure airflow of submain and branch ducts.
  2. Adjust submain and branch duct volume dampers for specified airflow.
  3. Re-measure each submain and branch duct after all have been adjusted.
- F. Adjust air inlets and outlets for each space to indicated airflows.
  1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
  2. Measure inlet and outlet airflow.
  3. Adjust each inlet and outlet for specified airflow.
  4. Re-measure each inlet and outlet after they have been adjusted.

- G. Verify final system conditions.
  - 1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
  - 2. Re-measure and confirm that total airflow is within design.
  - 3. Re-measure all final fan operating data, speed, volts, amps, and static profile.
  - 4. Mark all final settings.
  - 5. Test system in economizer mode. Verify proper operation and adjust if necessary.
  - 6. Measure and record all operating data.
  - 7. Record final fan-performance data.

### 3.10 PROCEDURES FOR INDUCTION-UNIT SYSTEMS

- A. Balance primary-air risers by measuring static pressure at the nozzles of the top and bottom units of each riser, to determine which risers must be throttled. Adjust risers to indicated airflow within specified tolerances.
- B. Adjust each induction unit.
- C. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
  - 1. Measure total airflow.
    - a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
    - b. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
    - c. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
  - 2. Measure fan static pressures as follows:
    - a. Measure static pressure directly at the fan outlet or through the flexible connection.
    - b. Measure static pressure directly at the fan inlet or through the flexible connection.
    - c. Measure static pressure across each component that makes up the air-handling system.
    - d. Report artificial loading of filters at the time static pressures are measured.
  - 3. Review Record drawings to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
  - 4. Obtain approval from Construction Manager for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
  - 5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- D. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
  - 1. Measure airflow of submain and branch ducts.
  - 2. Adjust submain and branch duct volume dampers for specified airflow.
  - 3. Re-measure each submain and branch duct after all have been adjusted.
- E. Balance airflow to each induction unit by measuring the nozzle pressure and comparing it to the manufacturer's published data for nozzle pressure versus cfm. Adjust the unit's inlet damper to achieve the required nozzle pressure for design cfm.
- F. Verify final system conditions.
  - 1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to match design if necessary.
  - 2. Re-measure and confirm that total airflow is within design.
  - 3. Re-measure all final fan operating data, speeds, volts, amps, and static profile.
  - 4. Mark all final settings.
  - 5. Test system in economizer mode. Verify proper operation and adjust if necessary.
  - 6. Measure and record all operating data.
  - 7. Record final fan-performance data.

3.11 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports for pumps, coils, and other equipment. Obtain approved submittals and manufacturer-recommended testing procedures. Crosscheck the summation of required coil and equipment flow rates with pump design flow rate.
- B. Prepare schematic diagrams of systems' Record drawings piping layouts.
- C. In addition to requirements in "Preparation" Article, prepare hydronic systems for testing and balancing as follows:
  - 1. Check expansion tank for proper setting.
  - 2. Check highest vent for adequate pressure.
  - 3. Check flow-control valves for proper position.
  - 4. Locate start-stop and disconnect switches, electrical interlocks, and motor controllers.
  - 5. Verify that motor controllers are equipped with properly sized thermal protection.
  - 6. Check that air has been purged from the system.
- D. Measure and record upstream and downstream pressure of each piece of equipment.
- E. Measure and record upstream and downstream pressure of pressure-reducing valves.
- F. Check settings and operation of automatic temperature-control valves, self-contained control valves, and pressure-reducing valves. Record final settings.
  - 1. Check settings and operation of each safety valve. Record settings.

3.12 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

- A. Adjust pumps to deliver total design flow.
  - 1. Measure total water flow.
    - a. Position valves for full flow through coils.
    - b. Measure flow by main flow meter, if installed.
    - c. If main flow meter is not installed, determine flow by pump TDH or known equipment pressure drop.
  - 2. Measure pump TDH as follows:
    - a. Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
    - b. Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
    - c. Convert pressure to head and correct for differences in gauge heights.
    - d. Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow, and verify that the pump has the intended impeller size.
    - e. With valves open, read pump TDH. Adjust pump discharge valve until design water flow is achieved. If excessive throttling is required to achieve desired flow, recommend pump impellers be trimmed to reduce excess throttling.
  - 3. Monitor motor performance during procedures, and do not operate motor in an overloaded condition.
- B. Adjust flow-measuring devices installed in mains and branches to design water flows.
  - 1. Measure flow in main and branch pipes.
  - 2. Adjust main and branch balance valves for design flow.
  - 3. Re-measure each main and branch after all have been adjusted.
- C. Adjust flow-measuring devices installed at terminals for each space to design water flows.
  - 1. Measure flow at terminals.
  - 2. Adjust each terminal to design flow.
  - 3. Re-measure each terminal after it is adjusted.
  - 4. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
  - 5. Perform temperature tests after flows have been balanced.
- D. For systems with pressure-independent valves at terminals:
  - 1. Measure differential pressure and verify that it is within manufacturer's specified range.
  - 2. Perform temperature tests after flows have been verified.
- E. For systems without pressure-independent valves or flow-measuring devices at terminals:
  - 1. Measure and balance coils by either coil pressure drop or temperature method.
  - 2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.

- F. Verify final system conditions as follows:
  - 1. Re-measure and confirm that total water flow is within design.
  - 2. Re-measure final pumps' operating data, TDH, volts, amps, and static profile.
  - 3. Mark final settings.
- G. Verify that memory stops have been set.

### 3.13 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

- A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals, and proceed as specified above for hydronic systems.
- B. Adjust the variable-flow hydronic system as follows:
  - 1. Verify that the pressure-differential sensor(s) is located as indicated.
  - 2. Determine whether there is diversity in the system.
- C. For systems with no flow diversity:
  - 1. Adjust pumps to deliver total design flow.
    - a. Measure total water flow.
      - 1) Position valves for full flow through coils.
      - 2) Measure flow by main flow meter, if installed.
      - 3) If main flow meter is not installed, determine flow by pump TDH or known equipment pressure drop.
    - b. Measure pump TDH as follows:
      - 1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
      - 2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
      - 3) Convert pressure to head and correct for differences in gauge heights.
      - 4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow, and verify that the pump has the intended impeller size.
      - 5) With valves open, read pump TDH. Adjust pump discharge valve or speed until design water flow is achieved. If excessive throttling is required to achieve desired flow, recommend pump impellers be trimmed to reduce excess throttling.
    - c. Monitor motor performance during procedures, and do not operate motor in an overloaded condition.
  - 2. Adjust flow-measuring devices installed in mains and branches to design water flows.
    - a. Measure flow in main and branch pipes.
    - b. Adjust main and branch balance valves for design flow.
    - c. Re-measure each main and branch after all have been adjusted.
  - 3. Adjust flow-measuring devices installed at terminals for each space to design water flows.
    - a. Measure flow at terminals.
    - b. Adjust each terminal to design flow.
    - c. Re-measure each terminal after it is adjusted.
    - d. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
    - e. Perform temperature tests after flows have been balanced.
  - 4. For systems with pressure-independent valves at terminals:
    - a. Measure differential pressure and verify that it is within manufacturer's specified range.
    - b. Perform temperature tests after flows have been verified.
  - 5. For systems without pressure-independent valves or flow-measuring devices at terminals:
    - a. Measure and balance coils by either coil pressure drop or temperature method.
    - b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
  - 6. Prior to verifying final system conditions, determine the system pressure-differential set point(s).
  - 7. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion, open discharge valve 100 percent, and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
  - 8. Mark final settings and verify that all memory stops have been set.
  - 9. Verify final system conditions as follows:
    - a. Re-measure and confirm that total flow is within design.
    - b. Re-measure final pumps' operating data, TDH, volts, amps, speed, and static profile.
    - c. Mark final settings.

- D. For systems with flow diversity:
1. Determine diversity factor.
  2. Simulate system diversity by closing required number of control valves, as approved by Architect.
  3. Adjust pumps to deliver total design flow.
    - a. Measure total water flow.
      - 1) Position valves for full flow through coils.
      - 2) Measure flow by main flow meter, if installed.
      - 3) If main flow meter is not installed, determine flow by pump TDH or known equipment pressure drop.
    - b. Measure pump TDH as follows:
      - 1) Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
      - 2) Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
      - 3) Convert pressure to head and correct for differences in gauge heights.
      - 4) Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow, and verify that the pump has the intended impeller size.
      - 5) With valves open, read pump TDH. Adjust pump discharge valve or speed until design water flow is achieved. If excessive throttling is required to achieve desired flow, recommend pump impellers be trimmed to reduce excess throttling.
    - c. Monitor motor performance during procedures, and do not operate motor in an overloaded condition.
  4. Adjust flow-measuring devices installed in mains and branches to design water flows.
    - a. Measure flow in main and branch pipes.
    - b. Adjust main and branch balance valves for design flow.
    - c. Re-measure each main and branch after all have been adjusted.
  5. Adjust flow-measuring devices installed at terminals for each space to design water flows.
    - a. Measure flow at terminals.
    - b. Adjust each terminal to design flow.
    - c. Re-measure each terminal after it is adjusted.
    - d. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
    - e. Perform temperature tests after flows have been balanced.
  6. For systems with pressure-independent valves at terminals:
    - a. Measure differential pressure, and verify that it is within manufacturer's specified range.
    - b. Perform temperature tests after flows have been verified.
  7. For systems without pressure-independent valves or flow-measuring devices at terminals:
    - a. Measure and balance coils by either coil pressure drop or temperature method.
    - b. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
  8. Open control valves that were shut. Close a sufficient number of control valves that were previously open to maintain diversity, and balance terminals that were just opened.
  9. Prior to verifying final system conditions, determine system pressure-differential set point(s).
  10. If the pump discharge valve was used to set total system flow with variable-frequency controller at 60 Hz, at completion, open discharge valve 100 percent, and allow variable-frequency controller to control system differential-pressure set point. Record pump data under both conditions.
  11. Mark final settings and verify that memory stops have been set.
  12. Verify final system conditions as follows:
    - a. Re-measure and confirm that total water flow is within design.
    - b. Re-measure final pumps' operating data, TDH, volts, amps, speed, and static profile.
    - c. Mark final settings.
- 3.14 PROCEDURES FOR PRIMARY-SECONDARY HYDRONIC SYSTEMS
- A. Balance the primary circuit flow first.
  - B. Balance the secondary circuits after the primary circuits are complete.
  - C. Adjust pumps to deliver total design flow.
    1. Measure total water flow.
      - a. Position valves for full flow through coils.
      - b. Measure flow by main flow meter, if installed.

- c. If main flow meter is not installed, determine flow by pump TDH or known equipment pressure drop.
    2. Measure pump TDH as follows:
      - a. Measure discharge pressure directly at the pump outlet flange or in discharge pipe prior to any valves.
      - b. Measure inlet pressure directly at the pump inlet flange or in suction pipe prior to any valves or strainers.
      - c. Convert pressure to head and correct for differences in gauge heights.
      - d. Verify pump impeller size by measuring the TDH with the discharge valve closed. Note the point on manufacturer's pump curve at zero flow, and verify that the pump has the intended impeller size.
      - e. With valves open, read pump TDH. Adjust pump discharge valve or speed until design water flow is achieved. If excessive throttling is required to achieve desired flow, recommend pump impellers be trimmed to reduce excess throttling.
    3. Monitor motor performance during procedures, and do not operate motor in an overloaded condition.
  - D. Adjust flow-measuring devices installed in mains and branches to design water flows.
    1. Measure flow in main and branch pipes.
    2. Adjust main and branch balance valves for design flow.
    3. Re-measure each main and branch after all have been adjusted.
  - E. Adjust flow-measuring devices installed at terminals for each space to design water flows.
    1. Measure flow at terminals.
    2. Adjust each terminal to design flow.
    3. Re-measure each terminal after it is adjusted.
    4. Position control valves to bypass the coil, and adjust the bypass valve to maintain design flow.
    5. Perform temperature tests after flows have been balanced.
  - F. For systems with pressure-independent valves at terminals:
    1. Measure differential pressure and verify that it is within manufacturer's specified range.
    2. Perform temperature tests after flows have been verified.
  - G. For systems without pressure-independent valves or flow-measuring devices at terminals:
    1. Measure and balance coils by either coil pressure drop or temperature method.
    2. If balanced by coil pressure drop, perform temperature tests after flows have been verified.
  - H. Verify final system conditions as follows:
    1. Re-measure and confirm that total water flow is within design.
    2. Re-measure final pumps' operating data, TDH, volts, amps, speed, and static profile.
    3. Mark final settings.
  - I. Verify that memory stops have been set.
- 3.15 PROCEDURES FOR STEAM AND CONDENSATE SYSTEMS
  - A. Measure and record upstream and downstream pressure of each piece of equipment.
  - B. Measure and record upstream and downstream steam pressure of pressure-reducing valves.
  - C. Check settings and operation of automatic temperature-control valves, self-contained control valves, and pressure-reducing valves. Record final settings.
  - D. Check settings and operation of each safety valve. Record settings.
  - E. Verify the operation of each steam trap.
- 3.16 PROCEDURES FOR STEAM-TO-WATER HEAT EXCHANGERS
  - A. Adjust and record water flow to within specified tolerances.
  - B. Measure and record inlet and outlet water temperatures.
  - C. Measure and record inlet steam pressure and condensate outlet pressure.
  - D. Check and record settings and operation of safety and relief valves.
- 3.17 PROCEDURES FOR WATER-TO-WATER HEAT EXCHANGERS
  - A. Adjust and record water flow to within specified tolerances.
  - B. Measure and record inlet and outlet water temperatures.

- C. Measure and record pressure drop.
- D. Check and record settings and operation of safety and relief valves.

### 3.18 PROCEDURES FOR MOTORS

- A. Motors 1/2 HP and Larger: Test at final balanced conditions and record the following data:
  - 1. Manufacturer's name, model number, and serial number.
  - 2. Motor horsepower rating.
  - 3. Motor rpm.
  - 4. Phase and hertz.
  - 5. Nameplate and measured voltage, each phase.
  - 6. Nameplate and measured amperage, each phase.
  - 7. Starter size and thermal-protection-element rating.
  - 8. Service factor and frame size.
- B. Motors Driven by Variable-Frequency Controllers: Test manual bypass of controller to prove proper operation.

### 3.19 PROCEDURES FOR WATER CHILLERS

- A. Air-Cooled Chillers: Balance water flow through each evaporator to within specified tolerances of indicated flow, with all pumps operating. With only one chiller operating in a multiple-chiller installation, do not exceed the flow for the maximum tube velocity recommended by the chiller manufacturer. Measure and record the following data with each chiller operating at design conditions:
  - 1. Evaporator-water entering and leaving temperatures, pressure drop, and water flow.
  - 2. Evaporator and condenser refrigerant temperatures and pressures, using instruments furnished by chiller manufacturer.
  - 3. Power factor if factory-installed instrumentation is furnished for measuring kilowatts.
  - 4. Kilowatt input if factory-installed instrumentation is furnished for measuring kilowatts.
  - 5. Capacity: Calculate in tons of cooling.
  - 6. Efficiency: Calculate operating efficiency for comparison to submitted equipment.
  - 7. Verify condenser-fan rotation and record fan and motor data, including number of fans and entering- and leaving-air temperatures.
- B. Water-Cooled Chillers: Balance water flow through each evaporator and condenser to within specified tolerances of indicated flow, with all pumps operating. With only one chiller operating in a multiple-chiller installation, do not exceed the flow for the maximum tube velocity recommended by the chiller manufacturer. Measure and record the following data with each chiller operating at design conditions:
  - 1. Evaporator-water entering and leaving temperatures, pressure drop, and water flow.
  - 2. Condenser-water entering and leaving temperatures, pressure drop, and water flow.
  - 3. Evaporator and condenser refrigerant temperatures and pressures, using instruments furnished by chiller manufacturer.
  - 4. Power factor if factory-installed instrumentation is furnished for measuring kilowatts.
  - 5. Kilowatt input if factory-installed instrumentation is furnished for measuring kilowatts.
  - 6. Capacity: Calculate in tons of cooling.
  - 7. Efficiency: Calculate operating efficiency for comparison to submitted equipment.

### 3.20 PROCEDURES FOR AIR-COOLED CONDENSING UNITS

- A. Verify proper rotation of fan(s).
- B. Measure and record entering- and leaving-air temperatures.
- C. Measure and record entering and leaving refrigerant pressures.
- D. Measure and record operating data of compressor(s), fan(s), and motors.

### 3.21 PROCEDURES FOR AIR-COOLED CONDENSERS

- A. Verify proper rotation of fan(s).
- B. Measure and record entering- and leaving-air temperatures.
- C. Measure and record entering and leaving refrigerant pressures.
- D. Measure and record operating data of fan(s) and motor(s).

### 3.22 PROCEDURES FOR BOILERS

- A. Hydronic Boilers:
  - 1. Measure and record entering- and leaving-water temperatures.
  - 2. Measure and record water flow.
  - 3. Measure and record pressure drop.
  - 4. Measure and Record relief valve(s) pressure setting.
  - 5. Capacity: Calculate in Btu/h of heating output.
  - 6. Fuel Consumption: If boiler fuel supply is equipped with flow meter, measure and record consumption.
  - 7. Efficiency: Calculate operating efficiency for comparison to submitted equipment.
  - 8. Fan, motor, and motor controller operating data.
- B. Steam Boilers:
  - 1. Measure and record entering-water temperature.
  - 2. Measure and record feedwater flow.
  - 3. Measure and record leaving-steam pressure and temperature.
  - 4. Measure and Record relief valve(s) pressure setting.
  - 5. Capacity: Calculate in Btu/h of heating output.
  - 6. Efficiency: Calculate operating efficiency for comparison to submitted equipment.
  - 7. Fan, motor, and motor controller operating data.
- C. Boilers with Flue Gas Economizers:
  - 1. Measure and record entering- and leaving-water temperature.
  - 2. Measure and record water flow rate.
  - 3. Measure and record water pressure drop.
  - 4. Heat Recovered: Calculate in Btu/h of waste heat recovered.

### 3.23 PROCEDURES FOR HEAT-TRANSFER COILS

- A. Measure, adjust, and record the following data for each hydronic coil:
  - 1. Entering- and leaving-water temperature.
  - 2. Water flow rate.
  - 3. Water pressure drop.
  - 4. Dry-bulb temperature of entering and leaving air.
  - 5. Wet-bulb temperature of entering and leaving air for cooling coils.
  - 6. Airflow.
  - 7. Air pressure drop.
- B. Measure, adjust, and record the following data for each electric heating coil:
  - 1. Nameplate data.
  - 2. Airflow.
  - 3. Entering- and leaving-air temperature at full load.
  - 4. Air pressure drop.
  - 5. Voltage and amperage input of each phase at full load.
  - 6. Calculated kilowatt at full load.
  - 7. Fuse or circuit-breaker rating for overload protection.
- C. Measure, adjust, and record the following data for each steam coil:
  - 1. Dry-bulb temperature of entering and leaving air.
  - 2. Airflow.
  - 3. Inlet steam pressure.
- D. Measure, adjust, and record the following data for each refrigerant coil:
  - 1. Dry-bulb temperature of entering and leaving air.
  - 2. Wet-bulb temperature of entering and leaving air.
  - 3. Airflow.
  - 4. Air pressure drop.
  - 5. Entering and leaving refrigerant pressure and temperatures.

### 3.24 PROCEDURES FOR EXHAUST HOODS

- A. Room Pressure: Measure and record room pressure with respect to atmosphere and adjacent space with hoods in room initially not operating and then with hoods operating.

- B. Makeup Air: Systems supplying source of makeup air to hoods shall be in operation during testing and balancing of exhaust hoods.
    - 1. Measure and record temperature of makeup air entering hood. If hood makeup air is from multiple sources having different temperatures, measure and record the airflow and temperatures of each source and calculate the weighted average temperature.
    - 2. Use simulated smoke to observe supply air-distribution air patterns in vicinity of hoods. Consult with hood manufacturer and report conditions that have a detrimental effect on intended capture, containment, and other attributes effecting proper operation.
  - C. Rooms with Multiple Hoods: Test each hood separately, one at a time, and repeat tests with all hoods intended to operate simultaneously by design.
  - D. Canopy Hoods: Measure and record the following:
    - 1. Pressure drop across hood.
    - 2. Airflow by duct traverse where duct distribution will allow accurate measurement, and calculate hood average face velocity.
    - 3. Measure velocity across hood face and calculate hood airflow.
      - a. Clearly indicate the direction of flow at each point of measurement.
      - b. Measure velocity across opening on not less than 12-inch centers. Record velocity at each measurement, and calculate average velocity.
    - 4. Capture and Containment: Check each hood for proper capture and containment using a smoke-emitting device. Observe and report performance. Make adjustments to achieve optimum results.
  - E. Laboratory Fume Hoods: Measure and record the following:
    - 1. Pressure drop across hood.
    - 2. Airflow by duct traverse where duct distribution will allow accurate measurement, and calculate hood average face velocity. If hood is connected to exhaust duct distribution through an exhaust device with integral airflow measurement, that reading may be used in lieu of a duct traverse.
    - 3. Face velocity across open hood face and calculate hood airflow.
      - a. Clearly indicate the direction of flow at each point of measurement.
      - b. Measure velocity across opening on not less than 6-inch centers. Record velocity at each measurement, and calculate average velocity.
    - 4. Capture and Containment: Check each hood for proper capture and containment using a smoke-emitting device. Observe and report performance. Make adjustments to achieve optimum results.
    - 5. ASHRAE 110 Testing: With room and laboratory fume hood operating at design conditions, perform an "as-installed" performance test of the laboratory fume hood in accordance with ASHRAE 110. Test each laboratory fume hood and document the test results.
  - F. Kitchen Hoods:
    - 1. Type 1: Measure and record pressure drop and face velocity of hood filters and slots in accordance with hood manufacturer's instructions. Consult hood manufacturer to determine hood airflow using recorded information.
    - 2. Type 2: Measure and record airflow by duct traverse.
    - 3. Capture and Containment: Check each hood for proper capture and containment using a smoke-emitting device. Observe and report performance. Make adjustments to achieve optimum results.
  - G. AHJ Tests: Conduct additional tests required by authorities having jurisdiction.
- 3.25 SOUND TESTS
- A. After systems are balanced and Substantial Completion, measure and record sound levels at five locations as designated by the Architect.
  - B. Instrumentation:
    - 1. The sound-testing meter shall be a portable, general-purpose testing meter consisting of a microphone, processing unit, and readout.
    - 2. The sound-testing meter shall be capable of showing fluctuations at minimum and maximum levels, and measuring the equivalent continuous sound pressure level ( $L_{eq}$ ).
    - 3. The sound-testing meter must be capable of using one-third octave band filters to measure mid-frequencies from 31.5 Hz to 8000 Hz.
    - 4. The accuracy of the sound-testing meter shall be plus or minus one decibel.
  - C. Test Procedures:
    - 1. Perform test at quietest background noise period. Note cause of unpreventable sound that affects test outcome.
    - 2. Equipment should be operating at design values.
    - 3. Calibrate the sound-testing meter prior to taking measurements.

4. Use a microphone suitable for the type of noise levels measured that is compatible with meter. Provide a windshield for outside or in-duct measurements.
5. Record a set of background measurements in dBA and sound pressure levels in the eight unweighted octave bands 63 Hz to 8000 Hz (NC) with the equipment off.
6. Take sound readings in dBA and sound pressure levels in the eight unweighted octave bands 63 Hz to 8000 Hz (NC) with the equipment operating.
7. Take readings no closer than 36 inches from a wall or from the operating equipment and approximately 60 inches from the floor, with the meter held or mounted on a tripod.
8. For outdoor measurements, move sound-testing meter slowly and scan area that has the most exposure to noise source being tested. Use A-weighted scale for this type of reading.

D. Reporting:

1. Report shall record the following:
  - a. Location.
  - b. System tested.
  - c. dBA reading.
  - d. Sound pressure level in each octave band with equipment on and off.
2. Plot sound pressure levels on Noise Criteria (NC) worksheet with equipment on and off.

3.26 VIBRATION TESTS

- A. After systems are balanced and Substantially Completion, measure and record vibration levels on equipment having motor horsepower equal to or greater than 10.

B. Instrumentation:

1. Use portable, battery-operated, and microprocessor-controlled vibration meter with or without a built-in printer.
2. The meter shall automatically identify engineering units, filter bandwidth, amplitude, and frequency scale values.
3. The meter shall be able to measure machine vibration displacement in mils of deflection, velocity in inches per second, and acceleration in inches per second squared.
4. Verify calibration date is current for vibration meter before taking readings.

C. Test Procedures:

1. To ensure accurate readings, verify that accelerometer has a clean, flat surface and is mounted properly.
2. With the unit running, set up vibration meter in a safe, secure location. Connect transducer to meter with proper cables. Hold magnetic tip of transducer on top of the bearing, and measure unit in mils of deflection. Record measurement, then move transducer to the side of the bearing and record in mils of deflection. Record an axial reading in mils of deflection by holding nonmagnetic, pointed transducer tip on end of shaft.
3. Change vibration meter to velocity (inches per second) measurements. Repeat and record above measurements.
4. Record CPM or rpm.
5. Read each bearing on motor, fan, and pump as required. Track and record vibration levels from rotating component through casing to base.

D. Reporting:

1. Report shall record location and the system tested.
2. Include horizontal-vertical-axial measurements for tests.
3. Verify that vibration limits follow Specifications, or, if not specified, follow the General Machinery Vibration Severity Chart or Vibration Acceleration General Severity Chart from AABC's "National Standards for Total System Balance." Acceptable levels of vibration are normally "smooth" to "good."
4. Include in General Machinery Vibration Severity Chart, with conditions plotted.

3.27 DUCT LEAKAGE TESTS

- A. Witness the duct leakage testing performed by Installer.
- B. Verify that proper test methods are used and that leakage rates are within specified limits.
- C. Report deficiencies observed.

3.28 PIPE LEAKAGE TESTS

- A. Witness the pipe pressure testing performed by Installer.

- B. Verify that proper test methods are used and that leakage rates are within specified limits.
- C. Report deficiencies observed.

### 3.29 UFAD PLENUM LEAKAGE TESTS

- A. Witness the UFAD plenum pressure testing performed by Installer.
- B. Verify that proper test methods are used and that leakage rates are within specified limits.
- C. Report deficiencies observed.

### 3.30 HVAC CONTROLS VERIFICATION

- A. In conjunction with system balancing, perform the following:
  - 1. Verify HVAC control system is operating within the design limitations.
  - 2. Confirm that the sequences of operation are in compliance with Contract Documents.
  - 3. Verify that controllers are calibrated and function as intended.
  - 4. Verify that controller set points are as indicated.
  - 5. Verify the operation of lockout or interlock systems.
  - 6. Verify the operation of valve and damper actuators.
  - 7. Verify that controlled devices are properly installed and connected to correct controller.
  - 8. Verify that controlled devices travel freely and are in position indicated by controller: open, closed, or modulating.
  - 9. Verify location and installation of sensors to ensure that they sense only intended temperature, humidity, or pressure.
- B. Reporting: Include a summary of verifications performed, remaining deficiencies, and variations from indicated conditions.

### 3.31 PROCEDURES FOR STAIR-PRESSURIZATION SYSTEMS

- A. Before testing, observe each pressurized stair enclosure to verify construction is complete. Verify the following:
  - 1. Walls and ceiling are free of unintended openings and are capable of achieving a pressure boundary.
  - 2. Firestopping and sealants are installed.
  - 3. Doors, door closers, and door gaskets are installed and adjusted.
  - 4. If applicable, window installation is complete.
  - 5. Stair-pressurization fans and associated controls are installed and functioning properly.
  - 6. Stair-pressurization duct distribution and air outlets are installed.
  - 7. Life-safety dampers (smoke or combination fire and smoke) are installed and functioning properly.
- B. Measure and record barometric pressure, wind speed and direction, outdoor-air temperature, and relative humidity on each test day.
- C. Test each stair enclosure as a single system. If multiple fans serve a single stair enclosure, operate fans as intended by the design.
- D. Initial Air Balance:
  - 1. Open doors to floors where indicated by design and measure, adjust, and record the airflow of each:
    - a. Stair-pressurization fan. For ducted systems, measure fan airflow by duct Pitot-tube traverse unless duct distribution does not permit accurate readings.
    - b. Air outlet supplying stair enclosure.
    - c. Adjust enclosure total airflow to achieve design pressurization.
    - d. Adjust method of stair enclosure pressure relief to prevent overpressurization.
- E. Pressurization Test and Adjustments:
  - 1. After air balancing is complete, perform stair enclosure pressurization tests.
  - 2. Establish a consistent procedure for recording data throughout entire test.
  - 3. Use stair side of doors as pressure reference point.
    - a. Positive Pressure: Floor side of door higher than stair side.
    - b. Negative Pressure: Floor side of door lower than stair side.
  - 4. With HVAC systems and stair-pressurization systems off, measure and record the following:
    - a. Pressure difference across each stair enclosure door, with all doors in the stair enclosure closed.
    - b. Force necessary to open each door, using a spring-type scale.

- c. Adjustment needed to achieve design pressurization of enclosure total airflow.
    - d. Adjustment needed to method of stair enclosure pressure relief, to prevent overpressurization.
  5. With HVAC systems operating in normal mode and stair-pressurization systems off, measure and record the following:
    - a. Pressure difference across each stair enclosure door, with all doors in the stair enclosure closed.
    - b. Force necessary to open each door, using a spring-type scale.
    - c. Adjustment needed to achieve design pressurization of enclosure total airflow.
    - d. Adjustment needed to method of stair enclosure pressure relief, to prevent overpressurization.
  6. With HVAC systems and stair-pressurization system operating simultaneously, perform the following:
    - a. Place HVAC systems in normal operating mode, including equipment not used to implement smoke control, such as air-handling units, exhaust fans, and similar equipment.
    - b. Measure and record pressure difference across each stair enclosure door, with all doors in stair enclosure closed.
    - c. Use a spring scale to measure and record the force needed to open all stair enclosure doors.
    - d. Adjust enclosure total airflow to achieve design pressurization.
    - e. Adjust method of stair enclosure pressure relief to prevent overpressurization.
    - f. Additional Tests for Designs with Open Doors:
      - 1) With exit door to outdoors in open position, measure and record pressure difference across each of the remaining closed stair enclosure doors.
      - 2) Open additional doors (up to the number indicated by design) one at a time, and measure and record pressure difference across each remaining closed stair enclosure door after the opening of each additional door.
      - 3) For each different test condition, measure and record the direction and velocity through each of the open doors by a traverse of every 1 sq. ft. grid of door opening.
      - 4) For each different test condition, calculate average of door velocity measurements. Compare average velocity to design and governing code requirements.
      - 5) Adjust enclosure total airflow to achieve design pressurization.
      - 6) Adjust method of stair enclosure pressure relief to prevent overpressurization.
  7. Repeat pressurization tests with the smoke-control systems and HVAC systems operating.
  8. Criteria for Acceptance:
    - a. Compliance with design requirements.
    - b. Compliance with code requirements.
    - c. Compliance with additional requirements required by authorities having jurisdiction.
- F. Operational Tests:
  1. Check proper activation of stair-pressurization system(s) in response to all means of activation, both automatic and manual.
  2. Verify that each initiating occurrence produces the proper system response under each of the following modes of operation:
    - a. Normal.
    - b. Alarm.
    - c. Manual override.
    - d. Return to normal.
  3. Verify smoke detector at pressurization fan de-energizes fan and closes isolation damper when smoke detector is activated and in alarm.
  4. If standby power is provided for pressurization systems, test to verify pressurization systems operate while on both normal and standby power.
  5. Check operation in accordance with design indicated.
- G. AHJ Tests: Conduct additional tests required by authorities having jurisdiction.
- H. Report: Prepare and submit a complete report of observations, measurements, and deficiencies. Include names and contact information of individuals conducting tests and of individuals witnessing tests.

3.32 PROCEDURES FOR ELEVATOR-PRESSURIZATION SYSTEMS

- A. Before testing, observe each pressurized elevator enclosure to verify construction is complete. Verify the following:
  - 1. Walls and ceiling are free of unintended openings and are capable of achieving a pressure boundary.
  - 2. Firestopping and sealants are installed.
  - 3. Doors are installed and adjusted. Elevator car doors are recalled to the default recall floor, and elevator car doors on recall floor are open.
  - 4. If applicable, window installation is complete.
  - 5. Pressurization fans and associated controls are installed and functioning properly.
  - 6. Pressurization duct distribution and air outlets are installed.
  - 7. Life-safety dampers (smoke or combination fire and smoke) are installed and functioning properly.
- B. Measure and record barometric pressure, wind speed and direction, outdoor-air temperature, and relative humidity on each test day.
- C. Test each elevator enclosure as a single system. If multiple fans serve a single elevator enclosure, operate fans as intended by the design.
- D. Initial Air Balance:
  - 1. Open elevator car doors to recall floor indicated by design, and measure, adjust, and record the airflow of each:
    - a. Pressurization fan. For ducted systems, measure fan airflow by duct pitot-tube traverse unless duct distribution does not permit accurate readings.
    - b. Air outlet supplying elevator enclosure.
    - c. Adjustment needed to achieve design pressurization of enclosure total airflow.
    - d. Adjustment to method of elevator enclosure pressure relief, to prevent overpressurization.
- E. Pressurization Tests and Adjustments:
  - 1. After air balancing is complete, perform elevator enclosure pressurization tests.
  - 2. Establish a consistent procedure for recording data throughout entire test.
  - 3. Use elevator car side of doors as pressure reference point.
    - a. Positive Pressure: Floor side of door higher than elevator car side.
    - b. Negative Pressure: Floor side of door lower than elevator car side.
  - 4. With HVAC systems and elevator-pressurization systems off, measure and record the following:
    - a. Pressure difference across each elevator enclosure door with all doors in the elevator enclosure closed.
    - b. Adjustment needed to achieve design pressurization of enclosure total airflow.
    - c. Adjustment needed to method of stair enclosure pressure relief, to prevent overpressurization.
  - 5. With HVAC systems operating in normal mode and elevator pressurization systems off, measure and record the following:
    - a. Pressure difference across each elevator enclosure door with all doors in the elevator enclosure closed.
    - b. Adjustment needed to achieve design pressurization of enclosure total airflow.
    - c. Adjustment needed to method of stair enclosure pressure relief, to prevent overpressurization.
  - 6. With HVAC systems and elevator pressurization system operating simultaneously, perform the following:
    - a. Place HVAC systems in normal operating mode, including equipment not used to implement smoke control, such as air-handling units, exhaust fans, and similar equipment.
    - b. Measure and record pressure difference across each stair enclosure door, with all doors in stair enclosure closed.
    - c. Adjust enclosure total airflow to achieve design pressurization.
    - d. Adjust method of elevator enclosure pressure relief to prevent overpressurization.
  - 7. Repeat pressurization tests with smoke-control systems and HVAC systems operating.
  - 8. Criteria for Acceptance:
    - a. Compliance with design requirements.
    - b. Compliance with code requirements.
    - c. Compliance with additional requirements of authorities having jurisdiction.
- F. Operational Tests:
  - 1. Check proper activation of elevator-pressurization system(s) in response to all means of activation, both automatic and manual.

2. Verify that each initiating occurrence produces the proper system response under each of the following modes of operation:
    - a. Normal.
    - b. Alarm.
    - c. Manual override.
    - d. Return to normal.
  3. Verify smoke detector at pressurization fan de-energizes fan and closes isolation damper when smoke detector is activated and in alarm.
  4. If standby power is provided for pressurization systems, test to verify pressurization systems operate while on both normal and standby power.
  5. Check operation according to design indicated.
- G. AHJ Tests: Conduct additional tests required by authorities having jurisdiction.
- H. Report: Prepare and submit a complete report of observations, measurements, and deficiencies. Include names and contact information of individuals conducting tests and of individuals witnessing tests.
- 3.33 PROCEDURES FOR SMOKE-CONTROL SYSTEM TESTING
- A. Before testing smoke-control systems, review design documents to understand operating requirements and design intent:
1. Review boundaries of each smoke zone.
  2. Review location, size, and operating characteristics of equipment, such as smoke and fire smoke dampers.
  3. Review sequence of operation, operating status of equipment, and position of smoke and fire dampers for each smoke zone alarm condition.
  4. Review location and type of alarm detection used to initiate smoke control for each smoke zone.
  5. Review other smoke-control system attributes not listed but required for code compliance and acceptance by authorities having jurisdiction.
- B. Before testing smoke-control systems, verify that construction is complete and verify the integrity of each smoke-control zone boundary.
1. Verify that windows, doors, walls, ceilings, and floors (six-sided boundary) are closed and that applicable safing, gasket, and firestops and sealants are installed.
  2. Report deficiencies and postpone testing until after the reported deficiencies are corrected.
- C. Measure and record barometric pressure, wind speed and direction, outdoor-air temperature, and relative humidity on each test day.
- D. Measure, adjust, and record airflow of each smoke-control system, with all fans that are a part of system operating as intended by the design.
1. Measure, adjust, and record the airflow of each fan. For ducted systems, measure fan airflow by duct Pitot-tube traverse.
  2. Measure, adjust, and record the airflow of each exhaust inlet and supply outlet.
  3. Measure, adjust, and record airflow in main and branch ducts.
- E. Smoke Control by Pressurization: After air balancing is complete, perform the following pressurization testing for each smoke-control zone in the system designed for isolation by using pressurization boundaries:
1. Verify the boundaries of each smoke-control zone.
  2. With the HVAC systems in their normal mode of operation and smoke control not operating, measure and record the pressure difference across each smoke-control zone. Make measurements after closing doors that separate the zones. Make one measurement across each door. Clearly indicate the high- and low-pressure side of each door.
  3. With the system operating in the smoke-control mode and with each separate zone in the smoke-control system activated, perform the following:
    - a. Measure and record the pressure difference across each door that separates the smoke zone from adjacent zones.
      - 1) Make measurements with doors that separate the smoke zone from the other zones closed.
      - 2) Clearly indicate the high- and low-pressure side of the door.
      - 3) Doors that have a tendency to open slightly due to the pressure difference should have one pressure measurement made while held closed and another measurement made with the door open.
    - b. Continue to activate each separate smoke zone within each smoke-control system, and make pressure-difference measurements.

- c. After testing a smoke zone's smoke-control system, deactivate the HVAC systems involved and return them to their normal operating mode before activating another zone's smoke-control system.
        - d. Verify that controls necessary to prevent excessive pressure differences are functional and operating within design set points and limits.
  - F. Smoke-Control Systems for Atriums and Other Large-Volume Spaces: After air balancing is complete, perform the following testing for each smoke-control system serving atriums and other large-volume spaces:
    1. Verify and document the boundaries served by each smoke-control system.
    2. Identify and document closed doors, open doors, and other boundary openings to be left open to adjacent areas and that are to be protected by airflow alone.
    3. With the HVAC systems in their normal mode of operation and smoke-control systems not operating, measure and record the following:
      - a. Pressure difference across each door that separates the smoke-zone from adjacent zones.
      - b. Velocity for each point in traverse across each boundary opening:
        - 1) Clearly indicate the direction of flow.
        - 2) Measure velocity across opening on 12-inch centers using a vane anemometer.
        - 3) Calculate and report airflow.
    4. With system operating in the smoke-control mode, measure and record the following:
      - a. Pressure difference across each door that separates the smoke-zone from adjacent zones.
      - b. Velocity for each point in traverse across each opening:
        - 1) Clearly indicate the direction of flow.
        - 2) Measure velocity across opening on 12-inch centers using a vane anemometer.
        - 3) Calculate and report airflow.
    5. Verify system operation and make adjustments to achieve design pressure differences and air velocities within design set points and upper operating limits.
  - G. Operational Tests:
    1. Check the proper activation of each zone of each smoke-control system in response to all means of activation, both automatic and manual.
    2. Check automatic activation in response to fire alarm signals received from the building's fire alarm system. Initiate a separate alarm for each means of activation to ensure that the proper operation of the correct zone of each smoke-control system occurs.
    3. Check and record proper operation of fans, dampers, and related equipment for each separate zone of each smoke-control system:
      - a. Zone in which a smoke-control system automatically activates.
      - b. Type of signal that activates smoke-control system, such as sprinkler flow or smoke detector.
      - c. Smoke zone(s) where maximum mechanical exhaust to the outside is implemented and no supply air is provided.
      - d. Positive-pressure smoke-control zone(s) where maximum air supply is implemented and no exhaust to the outside is provided.
      - e. Fan(s) "ON" as required to implement the smoke-control system. Multiple- or variable-speed fans should be further noted to verify that the intended control configuration is achieved.
      - f. Fan(s) "OFF" as required to implement the smoke-control system.
      - g. Damper(s) "OPEN" or at an adjustable position where maximum airflow must be achieved.
      - h. Damper(s) "CLOSED" where no airflow should take place.
      - i. Auxiliary functions to achieve the smoke-control system configuration, such as changes or override of normal operating pressure and temperature-control set points.
      - j. If standby power is provided for the smoke-control system, test to verify that the system functions while operating under both normal and standby power.
      - k. Check operation in accordance with design indicated.
  - H. AHJ Tests: Conduct additional tests required by authorities having jurisdiction. Unless required by authorities having jurisdiction, perform testing without the use of smoke or products that simulate smoke.
  - I. Report: Prepare and submit a complete report of observations, measurements, and deficiencies. Include names and contact information of individuals conducting tests and of individuals witnessing tests.
- 3.34 PROCEDURES FOR TESTING, ADJUSTING, AND BALANCING EXISTING SYSTEMS
- A. Perform a preconstruction inspection of existing equipment that is to remain and be reused.
    1. Measure and record the operating speed, airflow, and static pressure of each fan and equipment with fan(s).

2. Measure and record flows, temperatures, and pressures of each piece of equipment in each hydronic system. Compare the values to design or nameplate information, where information is available.
  3. Measure motor voltage and amperage. Compare the values to motor nameplate information.
  4. Check the refrigerant charge.
  5. Check the condition of filters.
  6. Check the condition of coils.
  7. Check the operation of the drain pan and condensate-drain trap.
  8. Check bearings and other lubricated parts for proper lubrication.
  9. Report on the operating condition of the equipment and the results of the measurements taken. Report deficiencies.
- B. TAB After Construction: Before performing testing and balancing of renovated existing systems, inspect existing equipment that is to remain and be reused to verify that existing equipment has been cleaned and refurbished in accordance with renovation scope indicated by Contract Documents. Verify the following:
1. New filters are installed.
  2. Coils are clean and fins combed.
  3. Drain pans are clean.
  4. Fans are clean.
  5. Bearings and other parts are properly lubricated.
  6. Deficiencies noted in the preconstruction report are corrected.
- C. Perform testing and balancing of existing systems to the extent that existing systems are affected by the renovation work.
1. Compare the indicated airflow of the renovated work to the measured fan airflows, and determine the new fan speed and the face velocity of filters and coils.
  2. Verify that the indicated airflows of the renovated work result in filter and coil face velocities and fan speeds that are within the acceptable limits defined by equipment manufacturer.
  3. If calculations increase or decrease the airflow rates and water flow rates by more than 5 percent, make equipment adjustments to achieve the calculated rates. If increase or decrease is 5 percent or less, equipment adjustments are not required.
  4. Balance each air outlet.
- 3.35 TOLERANCES
- A. Set HVAC system's airflow rates and water flow rates within the following tolerances:
1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 10 percent. If design value is less than 100 cfm, within 10 cfm.
  2. Air Outlets and Inlets: Plus or minus 10 percent. If design value is less than 100 cfm, within 10 cfm.
  3. Heating-Water Flow Rate: Plus or minus 5 percent. If design value is less than 10 gpm, within 10 percent.
  4. Chilled-Water Flow Rate: Plus or minus 5 percent. If design value is less than 10 gpm, within 10 percent.
  5. Condenser-Water Flow Rate: Plus or minus 5 percent.
- B. Maintaining pressure relationships as designed shall have priority over the tolerances specified above.
- 3.36 PROGRESS REPORTING
- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for system-balancing devices. Recommend changes and additions to system-balancing devices, to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance-measuring and -balancing devices.
- B. Status Reports: Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.
- 3.37 FINAL REPORT
- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.

2. Include a list of instruments used for procedures, along with proof of calibration.
  3. Certify validity and accuracy of field data.
- B. Final Report Contents: In addition to certified field-report data, include the following:
1. Pump curves.
  2. Fan curves.
  3. Manufacturers' test data.
  4. Field test reports prepared by system and equipment installers.
  5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.
- C. General Report Data: In addition to form titles and entries, include the following data:
1. Title page.
  2. Name and address of the TAB specialist.
  3. Project name.
  4. Project location.
  5. Architect's name and address.
  6. Engineer's name and address.
  7. Contractor's name and address.
  8. Report date.
  9. Signature of TAB supervisor who certifies the report.
  10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
  11. Summary of contents, including the following:
    - a. Indicated versus final performance.
    - b. Notable characteristics of systems.
    - c. Description of system operation sequence if it varies from the Contract Documents.
  12. Nomenclature sheets for each item of equipment.
  13. Data for terminal units, including manufacturer's name, type, size, and fittings.
  14. Notes to explain why certain final data in the body of reports vary from indicated values.
  15. Test conditions for fans performance forms, including the following:
    - a. Settings for outdoor-, return-, and exhaust-air dampers.
    - b. Conditions of filters.
    - c. Cooling coil, wet- and dry-bulb conditions.
    - d. Heating coil, dry-bulb conditions.
    - e. Face and bypass damper settings at coils.
    - f. Fan drive settings, including settings and percentage of maximum pitch diameter.
    - g. Variable-frequency controller settings for variable-air-volume systems.
    - h. Settings for pressure controller(s).
    - i. Other system operating conditions that affect performance.
  16. Test conditions for pump performance forms, including the following:
    - a. Variable-frequency controller settings for variable-flow hydronic systems.
    - b. Settings for pressure controller(s).
    - c. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
  2. Water and steam flow rates.
  3. Duct, outlet, and inlet sizes.
  4. Pipe and valve sizes and locations.
  5. Terminal units.
  6. Balancing stations.
  7. Position of balancing devices.
- E. Air-Handling-Unit Test Reports: For air-handling units, include the following:
1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and unit size.
    - e. Manufacturer's serial number.
    - f. Unit arrangement and class.
    - g. Discharge arrangement.

- h. Sheave make, size in inches, and bore.
      - i. Center-to-center dimensions of sheave and amount of adjustments in inches.
      - j. Number, make, and size of belts.
      - k. Number, type, and size of filters.
    - 2. Motor Data:
      - a. Motor make, and frame type and size.
      - b. Horsepower and speed.
      - c. Volts, phase, and hertz.
      - d. Full-load amperage and service factor.
      - e. Sheave make, size in inches, and bore.
      - f. Center-to-center dimensions of sheave and amount of adjustments in inches.
    - 3. Test Data (Indicated and Actual Values):
      - a. Total airflow rate in cfm.
      - b. Total system static pressure in inches wg.
      - c. Fan speed.
      - d. Inlet and discharge static pressure in inches wg.
      - e. For each filter bank, filter static-pressure differential in inches wg.
      - f. Preheat-coil static-pressure differential in inches wg.
      - g. Cooling-coil static-pressure differential in inches wg.
      - h. Heating-coil static-pressure differential in inches wg.
      - i. List for each internal component with pressure-drop, static-pressure differential in inches wg.
      - j. Outdoor airflow in cfm.
      - k. Return airflow in cfm.
      - l. Outdoor-air damper position.
      - m. Return-air damper position.
      - n. Vortex damper position.
- F. Apparatus-Coil Test Reports:
  - 1. Coil Data:
    - a. System identification.
    - b. Location.
    - c. Coil type.
    - d. Number of rows.
    - e. Fin spacing in fins per inch o.c.
    - f. Make and model number.
    - g. Face area in sq. ft..
    - h. Tube size in NPS.
    - i. Tube and fin materials.
    - j. Circuiting arrangement.
  - 2. Test Data (Indicated and Actual Values):
    - a. Airflow rate in cfm.
    - b. Average face velocity in fpm.
    - c. Air pressure drop in inches wg.
    - d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
    - e. Return-air, wet- and dry-bulb temperatures in deg F.
    - f. Entering-air, wet- and dry-bulb temperatures in deg F.
    - g. Leaving-air, wet- and dry-bulb temperatures in deg F.
    - h. Water flow rate in gpm.
    - i. Water pressure differential in feet of head or psig.
    - j. Entering-water temperature in deg F.
    - k. Leaving-water temperature in deg F.
    - l. Refrigerant expansion valve and refrigerant types.
    - m. Refrigerant suction pressure in psig.
    - n. Refrigerant suction temperature in deg F.
    - o. Inlet steam pressure in psig.
- G. Gas- and Oil-Fired Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:
  - 1. Unit Data:
    - a. System identification.
    - b. Location.
    - c. Make and type.

- d. Model number and unit size.
  - e. Manufacturer's serial number.
  - f. Fuel type in input data.
  - g. Output capacity in Btu/h.
  - h. Ignition type.
  - i. Burner-control types.
  - j. Motor horsepower and speed.
  - k. Motor volts, phase, and hertz.
  - l. Motor full-load amperage and service factor.
  - m. Sheave make, size in inches, and bore.
  - n. Center-to-center dimensions of sheave and amount of adjustments in inches.
2. Test Data (Indicated and Actual Values):
- a. Total airflow rate in cfm.
  - b. Entering-air temperature in deg F.
  - c. Leaving-air temperature in deg F.
  - d. Air temperature differential in deg F.
  - e. Entering-air static pressure in inches wg.
  - f. Leaving-air static pressure in inches wg.
  - g. Air static-pressure differential in inches wg.
  - h. Low-fire fuel input in Btu/h.
  - i. High-fire fuel input in Btu/h.
  - j. Manifold pressure in psig.
  - k. High-temperature-limit setting in deg F.
  - l. Operating set point in Btu/h.
  - m. Motor voltage at each connection.
  - n. Motor amperage for each phase.
  - o. Heating value of fuel in Btu/h.
- H. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:
1. Unit Data:
- a. System identification.
  - b. Location.
  - c. Coil identification.
  - d. Capacity in Btu/h.
  - e. Number of stages.
  - f. Connected volts, phase, and hertz.
  - g. Rated amperage.
  - h. Airflow rate in cfm.
  - i. Face area in sq. ft..
  - j. Minimum face velocity in fpm.
2. Test Data (Indicated and Actual Values):
- a. Heat output in Btu/h.
  - b. Airflow rate in cfm.
  - c. Air velocity in fpm.
  - d. Entering-air temperature in deg F.
  - e. Leaving-air temperature in deg F.
  - f. Voltage at each connection.
  - g. Amperage for each phase.
- I. Fan Test Reports: For supply, return, and exhaust fans, include the following:
1. Fan Data:
- a. System identification.
  - b. Location.
  - c. Make and type.
  - d. Model number and size.
  - e. Manufacturer's serial number.
  - f. Arrangement and class.
  - g. Sheave make, size in inches, and bore.
  - h. Center-to-center dimensions of sheave and amount of adjustments in inches.
2. Motor Data:
- a. Motor make, and frame type and size.
  - b. Horsepower and speed.

- c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches, and bore.
    - f. Center-to-center dimensions of sheave and amount of adjustments in inches.
    - g. Number, make, and size of belts.
  - 3. Test Data (Indicated and Actual Values):
    - a. Total airflow rate in cfm.
    - b. Total system static pressure in inches wg.
    - c. Fan speed.
    - d. Discharge static pressure in inches wg.
    - e. Suction static pressure in inches wg.
- J. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
  - 1. Report Data:
    - a. System fan and air-handling-unit number.
    - b. Location and zone.
    - c. Traverse air temperature in deg F.
    - d. Duct static pressure in inches wg.
    - e. Duct size in inches.
    - f. Duct area in sq. ft..
    - g. Indicated airflow rate in cfm.
    - h. Indicated velocity in fpm.
    - i. Actual airflow rate in cfm.
    - j. Actual average velocity in fpm.
    - k. Barometric pressure in psig.
- K. Air-Terminal-Device Reports:
  - 1. Unit Data:
    - a. System and air-handling unit identification.
    - b. Location and zone.
    - c. Apparatus used for test.
    - d. Area served.
    - e. Make.
    - f. Number from system diagram.
    - g. Type and model number.
    - h. Size.
    - i. Effective area in sq. ft..
  - 2. Test Data (Indicated and Actual Values):
    - a. Airflow rate in cfm.
    - b. Air velocity in fpm.
    - c. Preliminary airflow rate as needed in cfm.
    - d. Preliminary velocity as needed in fpm.
    - e. Final airflow rate in cfm.
    - f. Final velocity in fpm.
    - g. Space temperature in deg F.
- L. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:
  - 1. Unit Data:
    - a. System and air-handling-unit identification.
    - b. Location and zone.
    - c. Room or riser served.
    - d. Coil make and size.
    - e. Flowmeter type.
  - 2. Test Data (Indicated and Actual Values):
    - a. Airflow rate in cfm.
    - b. Entering-water temperature in deg F.
    - c. Leaving-water temperature in deg F.
    - d. Water pressure drop in feet of head or psig.
    - e. Entering-air temperature in deg F.
    - f. Leaving-air temperature in deg F.

- M. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves, and include the following:
1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Service.
    - d. Make and size.
    - e. Model number and serial number.
    - f. Water flow rate in gpm.
    - g. Water pressure differential in feet of head or psig.
    - h. Required net positive suction head in feet of head or psig.
    - i. Pump speed.
    - j. Impeller diameter in inches.
    - k. Motor make and frame size.
    - l. Motor horsepower and rpm.
    - m. Voltage at each connection.
    - n. Amperage for each phase.
    - o. Full-load amperage and service factor.
    - p. Seal type.
  2. Test Data (Indicated and Actual Values):
    - a. Static head in feet of head or psig.
    - b. Pump shutoff pressure in feet of head or psig.
    - c. Actual impeller size in inches.
    - d. Full-open flow rate in gpm.
    - e. Full-open pressure in feet of head or psig.
    - f. Final discharge pressure in feet of head or psig.
    - g. Final suction pressure in feet of head or psig.
    - h. Final total pressure in feet of head or psig.
    - i. Final water flow rate in gpm.
    - j. Voltage at each connection.
    - k. Amperage for each phase.
- N. Instrument Calibration Reports:
1. Report Data:
    - a. Instrument type and make.
    - b. Serial number.
    - c. Application.
    - d. Dates of use.
    - e. Dates of calibration.

### 3.38 VERIFICATION OF TAB REPORT

- A. The TAB specialist's test and balance engineer shall conduct the inspection in the presence of Architect.
- B. Architect shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to the lesser of either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
- C. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
- D. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the TAB shall be considered incomplete and shall be rejected.
- E. If recheck measurements find the number of failed measurements noncompliant with requirements indicated, proceed as follows:
  1. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection. All changes shall be tracked to show changes made to previous report.
  2. If the second final inspection also fails, Owner may pursue others Contract options to complete TAB work.
- F. Prepare test and inspection reports.

3.39 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION 23 05 93

## SECTION 23 07 13

### DUCT INSULATION

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section includes insulating the following duct services:
  - 1. Indoor, concealed supply and outdoor air.
  - 2. Indoor, exposed supply and outdoor air.
  - 3. Indoor, concealed return located in unconditioned space.
  - 4. Indoor, exposed return located in unconditioned space.
  - 5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
  - 6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
  - 7. Indoor, concealed oven and warewash exhaust.
  - 8. Indoor, exposed oven and warewash exhaust.
  - 9. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
  - 10. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
  - 11. Outdoor, concealed supply and return.
  - 12. Outdoor, exposed supply and return.
- B. Related Requirements:
  - 1. Section 23 07 16 "HVAC Equipment Insulation."
  - 2. Section 23 07 19 "HVAC Piping Insulation."
  - 3. Section 23 31 13 "Metal Ducts" for duct liners.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
  - 2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
  - 3. Detail application of field-applied jackets.
  - 4. Detail application at linkages of control devices.
- C. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
  - 1. Sheet Form Insulation Materials: 12 inches square.
  - 2. Sheet Jacket Materials: 12 inches square.
  - 3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

##### 1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or craft training program, certified by the Department of Labor, Bureau of Apprenticeship and Training.

- B. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Architect. Use materials indicated for the completed Work.
    - 1. Ductwork Mockups:
      - a. One 10-foot section each of rectangular and round straight duct.
      - b. One each of a 90-degree mitered round and rectangular elbow, and one each of a 90-degree radius round and rectangular elbow.
      - c. One rectangular branch takeoff and one round branch takeoff from a rectangular duct. One round tee fitting.
      - d. One rectangular and round transition fitting.
      - e. Four support hangers for round and rectangular ductwork.
      - f. Each type of damper and specialty.
    - 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
    - 3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
    - 4. Obtain Architect's approval of mockups before starting insulation application.
    - 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
    - 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
    - 7. Demolish and remove mockups when directed.
- 1.5 DELIVERY, STORAGE, AND HANDLING
- A. Packaging: Insulation material containers are to be marked with the manufacturer's name, appropriate ASTM standard designation, type and grade, and maximum use temperature.
- 1.6 COORDINATION
- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."
  - B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
  - C. Coordinate installation and testing of heat tracing.
- 1.7 SCHEDULING
- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

## **PART 2 - PRODUCTS**

### **2.1 PERFORMANCE REQUIREMENTS**

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation, jacket materials, adhesive, mastic, tapes, and cement material containers with appropriate markings of applicable testing agency.
  - 1. All Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

### **2.2 INSULATION MATERIALS**

- A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials are to be applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.

- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.
- F. Flexible Elastomeric: Closed-cell or expanded-rubber materials; suitable for maximum use temperature between minus 70 deg F and 220 deg F. Comply with ASTM C534, Type II for sheet materials.
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
    - a. Aeroflex USA.
    - b. Armacell LLC.
    - c. K-Flex USA.
- G. Glass-Fiber Blanket: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 450 deg F in accordance with ASTM C411. Comply with ASTM C553, Type II, and ASTM C1290, Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Manson Insulation Inc.
    - c. Owens Corning.
- H. High-Temperature, Glass-Fiber Blanket: Glass fibers bonded with a thermosetting resin, unfaced; suitable for maximum use temperature up to 1000 deg F. Comply with ASTM C553, Type V.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Manson Insulation Inc.
    - c. Owens Corning.
- I. Mineral Wool Blanket: Basalt volcanic rock-derived fibers bonded with a thermosetting resin, unfaced; suitable for maximum use temperature up to 1200 deg F in accordance with ASTM C447. Comply with ASTM C553.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Owens Corning.
    - c. ROCKWOOL.
- J. Glass-Fiber Board Insulation: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature between 35 deg F and 250 deg F for jacketed and between 35 deg F and 450 deg F for unfaced in accordance with ASTM C411. Comply with ASTM C612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Manson Insulation Inc.
    - c. Owens Corning.
- K. High-Temperature, Glass-Fiber Board: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1000 deg F in accordance with ASTM C411. Comply with ASTM C612, Type III, unfaced.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Manson Insulation Inc.
    - c. Owens Corning.
- L. Mineral Wool Board: Basalt volcanic rock-derived fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1100 deg F in accordance with ASTM C411. Comply with ASTM C612, Type III, unfaced.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Owens Corning.
    - c. ROCKWOOL.
- M. Glass-Fiber, Pipe and Tank: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature between 35 deg F and 850 deg F, in accordance with ASTM C411. Comply with ASTM C1393.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. Manson Insulation Inc.

- c. Owens Corning.
    - 2. Semirigid board material with factory-applied ASJ jacket.
    - 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - N. Mineral Wool, Pipe and Tank: Mineral wool fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 1000 deg F, in accordance with ASTM C411. Comply with ASTM C1393.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Johns Manville; a Berkshire Hathaway company.
      - b. Owens Corning.
      - c. ROCKWOOL.
    - 2. Semirigid board material with factory-applied ASJ jacket.
    - 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
  - O. Polyolefin: Polyethylene thermal plastic insulation. Comply with ASTM C1427, Type I, Grade 1 for tubular materials and Type II, Grade 1 for sheet materials.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Armacell LLC.
      - b. Sekisui Voltek, LLC.
      - c. Thermafact.
- 2.3 FIRE-RATED INSULATION SYSTEMS
- A. Fire-Rated Board: Structural-grade, press-molded, xonolite calcium silicate, fireproofing board suitable for operating temperatures up to 1700 deg F. Comply with ASTM C656, Type II, Grade 6. Tested and certified to provide a 2-hour fire rating by an NRTL acceptable to authorities having jurisdiction.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Johns Manville; a Berkshire Hathaway company.
  - B. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a 2-hour fire rating by an NRTL acceptable to authorities having jurisdiction.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. 3M.
      - b. 3M Building and Construction.
      - c. CertainTeed; SAINT-GOBAIN.
- 2.4 ADHESIVES
- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
  - B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Aeroflex USA.
      - b. Armacell LLC.
      - c. K-Flex USA.
  - C. Glass-Fiber and Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Childers Brand; H. B. Fuller Construction Products.
      - b. Eagle Bridges - Marathon Industries.
      - c. Foster Brand; H. B. Fuller.
  - D. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Childers Brand; H. B. Fuller Construction Products.
      - b. Eagle Bridges - Marathon Industries.
      - c. Foster Brand; H. B. Fuller.
  - E. PVC Jacket Adhesive: Compatible with PVC jacket.
    - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      - a. Dow Consumer Solutions.
      - b. Johns Manville; a Berkshire Hathaway company.
      - c. P.I.C. Plastics, Inc.

## 2.5 MASTICS AND COATINGS

- A. Materials are compatible with insulation materials, jackets, and substrates.
- B. Vapor-Retarder Mastic, Water Based, Interior Use: Suitable for indoor use on below ambient services.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Aeroflex USA.
    - b. Childers Brand; H. B. Fuller Construction Products.
    - c. Foster Brand; H. B. Fuller.
  - 2. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.
  - 3. Service Temperature Range: Minus 20 to plus 180 deg F.
  - 4. Comply with MIL-PRF-19565C, Type II, for permeance requirements, with supplier listing on DOD QPD - Qualified Products Database.
  - 5. Color: Black.
- C. Vapor-Retarder Mastic, Solvent Based, Interior Use: Suitable for indoor use on below ambient services.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller.
  - 2. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.
  - 3. Service Temperature Range: 0 to 180 deg F.
  - 4. Color: Black.
- D. Vapor-Retarder Mastic, Solvent Based, Exterior Use: Suitable for outdoor use on below ambient services.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Aeroflex USA.
    - b. Childers Brand; H. B. Fuller Construction Products.
    - c. Eagle Bridges - Marathon Industries.
  - 2. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.
  - 3. Service Temperature Range: Minus 50 to plus 220 deg F.
  - 4. Color: Black.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller.
  - 2. Water-Vapor Permeance: ASTM E96/E96M, greater than 1.0 perm at manufacturer's recommended dry film thickness.
  - 3. Service Temperature Range: Minus 20 to plus 180 deg F.
  - 4. Color: Black.

## 2.6 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and are compatible with insulation materials, jackets, and substrates.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Foster Brand; H. B. Fuller.
    - c. Vimasco Corporation.
  - 2. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
  - 3. Service Temperature Range: 0 to plus 180 deg F.
  - 4. Color: White.

## 2.7 SEALANTS

- A. FSK and Metal Jacket Flashing Sealants:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H. B. Fuller Construction Products.
    - b. Eagle Bridges - Marathon Industries.
    - c. Foster Brand; H. B. Fuller.

2. Materials are compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.

B. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Childers Brand; H. B. Fuller Construction Products.
  - b. Foster Brand; H. B. Fuller.
2. Materials are compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.

2.8 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C1136, Type II.
5. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested in accordance with ASTM E96/E96M, Procedure A, and complying with NFPA 90A and NFPA 90B.
6. ASJ+: All-service jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with an outer film leaving no paper exposed; complying with ASTM C1136, Types I, II, III, IV, and VII.
7. PSK Jacket: Aluminum foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C1136, Type II.

2.9 FIELD-APPLIED JACKETS

- A. Field-applied jackets comply with ASTM C921, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. P.I.C. Plastics, Inc.
    - c. Proto Corporation.
  2. Adhesive: As recommended by jacket material manufacturer.
  3. Color: Black.
- D. Metal Jacket:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. RPR Products, Inc.
  2. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
    - a. Sheet and roll stock ready for shop or field sizing.
    - b. Finish and thickness are indicated in field-applied jacket schedules.
    - c. Moisture Barrier for Indoor Applications: 1-mil-thick, heat-bonded polyethylene and kraft paper.
    - d. Moisture Barrier for Outdoor Applications: 3-mil-thick, heat-bonded polyethylene and kraft paper.
  3. Stainless Steel Jacket: ASTM A240/A240M.
    - a. Sheet and roll stock ready for shop or field sizing.
    - b. Material, finish, and thickness are indicated in field-applied jacket schedules.

- c. Moisture Barrier for Indoor Applications: 1-mil-thick, heat-bonded polyethylene and kraft paper.
      - d. Moisture Barrier for Outdoor Applications: 3-mil-thick, heat-bonded polyethylene and kraft paper.
    - E. Self-Adhesive Outdoor Jacket (Asphaltic): 60-mil-thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a crosslaminated polyethylene film covered with white aluminum-foil facing.
      - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        - a. Foster Brand; H. B. Fuller.
        - b. MFM Building Products Corp.
        - c. Polyguard Products, Inc.
    - F. Self-Adhesive Indoor/Outdoor Jacket (Non-Asphaltic): Vapor barrier and waterproofing jacket for installation over insulation located aboveground outdoors or indoors. Specialized jacket has five layers of laminated aluminum and polyester film with low-temperature acrylic pressure-sensitive adhesive. Outer aluminum surface is coated with UV-resistant coating for protection from environmental contaminants.
      - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        - a. 3M.
        - b. Foster Brand; H. B. Fuller.
        - c. Ideal Tape Co., Inc., an American Biltrite Company.
      - 2. Permeance: 0.00 perm as tested in accordance with ASTM F1249.
      - 3. Flamespread/Smoke Developed: 25/50 as tested in accordance with ASTM E84.
      - 4. Aluminum Finish: Embossed.
- 2.10 FIELD-APPLIED FABRIC-REINFORCING MESH
- A. Woven Glass-Fiber Mesh: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. in. for covering ducts.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Childers Brand; H. B. Fuller Construction Products.
      - b. Foster Brand; H. B. Fuller.
  - B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in., in a Leno weave, for ducts.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Childers Brand; H. B. Fuller Construction Products.
      - b. Foster Brand; H. B. Fuller.
      - c. Vimasco Corporation.
- 2.11 FIELD-APPLIED CLOTHS
- A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd..
    - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      - a. Alpha Associates, Inc.
- 2.12 TAPES
- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. 3M Industrial Adhesives and Tapes Division.
      - b. Aeroflex USA.
      - c. Avery Dennison Corporation, Specialty Tapes Division.
    - 2. Width: 3 inches.
    - 3. Thickness: 11.5 mils.
    - 4. Adhesion: 90 ounces force/inch in width.
    - 5. Elongation: 2 percent.
    - 6. Tensile Strength: 40 lbf/inch in width.
    - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
  - B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. 3M Industrial Adhesives and Tapes Division.

- b. Avery Dennison Corporation, Specialty Tapes Division.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
  - 2. Width: 3 inches.
  - 3. Thickness: 6.5 mils.
  - 4. Adhesion: 90 ounces force/inch in width.
  - 5. Elongation: 2 percent.
  - 6. Tensile Strength: 40 lbf/inch in width.
  - 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. 3M Industrial Adhesives and Tapes Division.
    - b. Ideal Tape Co., Inc., an American Biltrite Company.
  - 2. Width: 2 inches.
  - 3. Thickness: 6 mils.
  - 4. Adhesion: 64 ounces force/inch in width.
  - 5. Elongation: 500 percent.
  - 6. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. 3M Industrial Adhesives and Tapes Division.
    - b. Avery Dennison Corporation, Specialty Tapes Division.
    - c. Ideal Tape Co., Inc., an American Biltrite Company.
  - 2. Width: 2 inches.
  - 3. Thickness: 3.7 mils.
  - 4. Adhesion: 100 ounces force/inch in width.
  - 5. Elongation: 5 percent.
  - 6. Tensile Strength: 34 lbf/inch in width.

## 2.13 SECUREMENTS

- A. Bands:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Johns Manville; a Berkshire Hathaway company.
    - b. RPR Products, Inc.
  - 2. Stainless Steel: ASTM A240/A240M, Type 304 or Type 316; 0.015 inch thick, 1/2 inch wide with wing seal or closed seal.
  - 3. Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing seal or closed seal.
  - 4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
- B. Insulation Pins and Hangers:
  - 1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) AGM Industries, Inc.
      - 2) Gemco.
      - 3) Midwest Fasteners, Inc.
  - 2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) AGM Industries, Inc.
      - 2) CL WARD & Family Inc.
      - 3) Midwest Fasteners, Inc.

3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) AGM Industries, Inc.
      - 2) Gemco.
      - 3) Midwest Fasteners, Inc.
    - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
    - c. Spindle: Copper- or zinc-coated, low-carbon steel, fully annealed, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
    - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
  4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Gemco.
      - 2) Midwest Fasteners, Inc.
    - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
    - c. Spindle: Nylon, 0.106-inch-diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
    - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
  5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) AGM Industries, Inc.
      - 2) Gemco.
      - 3) Midwest Fasteners, Inc.
    - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
    - c. Spindle: Copper- or zinc-coated, low-carbon steel, fully annealed, 0.106-inch-diameter shank, length to suit depth of insulation indicated.
    - d. Adhesive-backed base with a peel-off protective cover.
  6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) AGM Industries, Inc.
      - 2) Gemco.
      - 3) Midwest Fasteners, Inc.
    - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
  7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Gemco.
      - 2) Midwest Fasteners, Inc.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel or Monel.
- D. Wire: 0.080-inch nickel-copper alloy.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. C & F Wire Products.
    - b. Johns Manville; a Berkshire Hathaway company.

c. RPR Products, Inc.

2.14 CORNER ANGLES

- A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC in accordance with ASTM D1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum in accordance with ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- C. Stainless Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel in accordance with ASTM A240/A240M, Type 304 or Type 316.

**PART 3 - EXECUTION**

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
  - 1. Verify that systems to be insulated have been tested and are free of defects.
  - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with Contract Documents, unless otherwise approved by the engineer-of-record.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  - 1. Install insulation continuously through hangers and around anchor attachments.
  - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
  - 1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
  - 2. Cover circumferential joints with 3-inch-wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.

3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
    - a. For below ambient services, apply vapor-barrier mastic over staples.
  4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
  5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
- L. Cut insulation in a manner to avoid compressing insulation.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- 3.4 PENETRATIONS
- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
  4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
  4. Seal jacket to wall flashing with flashing sealant.
- C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
1. Comply with requirements in Section 07 84 13 "Penetration Firestopping."
- E. Insulation Installation at Floor Penetrations:
1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
  2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 84 13 "Penetration Firestopping."
- 3.5 INSTALLATION OF FLEXIBLE ELASTOMERIC AND POLYOLEFIN INSULATION
- A. Comply with manufacturer's written installation instructions and ASTM C1710.
- B. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Square and Rectangular Ducts and Plenums:
1. Provide 1/4 inch more per side for a tight, compression fit.
  2. Cut sheet insulation with the following dimensions:
    - a. Width of duct plus 1/4 inch, one piece.
    - b. Height of duct plus 1/4 inch, plus thickness of insulation, two pieces.
    - c. Width of duct plus 1/4 inch, plus two times the thickness of insulation, one piece.
  3. Insulate the bottom of the duct with the sheet from (a) above, then the sides with the two sheets from (b) above, and finally the top of the duct with the sheet from (c) above.
  4. Insulation without self-adhering backing:
    - a. Apply 100 percent coverage of manufacturer adhesive on the metal surface, then the insulation, except for the last 1/4 inch where sheets will butt together.

- b. Roll sheet down into position.
      - c. Press two sheets together under compression and apply adhesive at the butt joint to seal the two sheets together.
    5. Insulation with self-adhering backing:
      - a. Peel back release paper in 6- to 8-inch increments and line up sheet.
      - b. Press firmly to activate adhesive.
      - c. Align material and continue to line up correctly, pressing firmly while slowly removing release paper.
      - d. Allow 1/4-inch overlap for compression at butt joints.
      - e. Apply adhesive at the butt joint to seal the two sheets together.
    6. Insulate duct brackets following manufacturer's written installation instructions.
  - D. Circular Ducts:
    1. Determine the circumference of the duct, using a strip of insulation the same thickness as to be used.
    2. Cut the sheet to the required size.
    3. Apply 100 percent coverage of manufacturer adhesive on the metal surface then the insulation.
    4. Apply manufacturer adhesive to the cut surfaces along 100 percent of the longitudinal seam. Press together the seam at the ends and then the middle. Close the entire seam starting from the middle.
- 3.6 INSTALLATION OF GLASS-FIBER AND MINERAL-WOOL INSULATION
  - A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
  - B. Comply with manufacturer's written installation instructions.
    1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
    2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
    3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
      - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
      - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
      - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
      - d. Do not overcompress insulation during installation.
      - e. Impale insulation over pins and attach speed washers.
      - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
    4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
      - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
      - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
    5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
    6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
    7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.
  - C. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
    1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
    2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
  - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
  - b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
  - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
  - d. Do not overcompress insulation during installation.
  - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
  - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
  - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

### 3.7 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
  1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  2. Embed glass cloth between two 0.062-inch-thick coats of lagging adhesive.
  3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
  1. Draw jacket material smooth and tight.
  2. Install lap or joint strips with same material as jacket.
  3. Secure jacket to insulation with manufacturer's recommended adhesive.
  4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
  5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
  1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches o.c. and at end joints.

### 3.8 FIRE-RATED INSULATION SYSTEM INSTALLATION

- A. Comply with manufacturer's written installation instructions.
- B. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.
- C. Insulate duct access panels and doors to achieve same fire rating as duct.
- D. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Section 07 84 13 "Penetration Firestopping."

3.9 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting."
  - 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
    - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless steel jackets.

3.10 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
  - 1. Inspect ductwork, randomly selected by Architect, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.11 DUCT INSULATION SCHEDULE, GENERAL

- A. Plenums and Ducts Requiring Insulation:
  - 1. Indoor, concealed supply and outdoor air.
  - 2. Indoor, exposed supply and outdoor air.
  - 3. Indoor, concealed return located in unconditioned space.
  - 4. Indoor, exposed return located in unconditioned space.
  - 5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
  - 6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
  - 7. Indoor, concealed oven and warewash exhaust.
  - 8. Indoor, exposed oven and warewash exhaust.
  - 9. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
  - 10. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
  - 11. Outdoor, concealed supply and return.
  - 12. Outdoor, exposed supply and return.
- B. Items Not Insulated:
  - 1. Fibrous-glass ducts.
  - 2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
  - 3. Factory-insulated flexible ducts.
  - 4. Factory-insulated plenums and casings.
  - 5. Flexible connectors.
  - 6. Vibration-control devices.
  - 7. Factory-insulated access panels and doors.

3.12 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Concealed, round and flat-oval, supply-air duct insulation is one of the following:
  - 1. Flexible Elastomeric: 1 inch thick.
  - 2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - 4. Polyolefin: 1 inch thick.
- B. Concealed, round and flat-oval, return-air duct insulation is one of the following:
  - 1. Flexible Elastomeric: 1 inch thick.
  - 2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.

4. Polyolefin: 1 inch thick.
- C. Concealed, round and flat-oval, outdoor-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  4. Polyolefin: 1 inch thick.
- D. Concealed, round and flat-oval, exhaust-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  4. Polyolefin: 1 inch thick.
- E. Concealed, rectangular, supply-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- F. Concealed, rectangular, return-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- G. Concealed, rectangular, outdoor-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- H. Concealed, rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- I. Concealed, Type I, Commercial, Kitchen Hood Exhaust Duct and Plenum Insulation: Fire-rated blanket or board; thickness as required to achieve 2-hour fire rating.
- J. Concealed, supply-air plenum insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- K. Concealed, return-air plenum insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- L. Concealed, outdoor-air plenum insulation is one of the following:
1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.

2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
- M. Concealed, exhaust-air plenum insulation is one of the following:
1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
- N. Exposed, round and flat-oval, supply-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- O. Exposed, round and flat-oval, return-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- P. Exposed, round and flat-oval, outdoor-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- Q. Exposed, round and flat-oval, exhaust-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- R. Exposed, rectangular, supply-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- S. Exposed, rectangular, return-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.
- T. Exposed, rectangular, outdoor-air duct insulation is one of the following:
1. Flexible Elastomeric: 1 inch thick.
  2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
  3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
  4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  6. Polyolefin: 1 inch thick.

- U. Exposed, rectangular, exhaust-air duct insulation is one of the following:
    - 1. Flexible Elastomeric: 1 inch thick.
    - 2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 6. Polyolefin: 1 inch thick.
  - V. Exposed, Type I, Commercial, Kitchen Hood Exhaust Duct and Plenum Insulation: Fire-rated blanket or board; thickness as required to achieve 2-hour fire rating.
  - W. Exposed, supply-air plenum insulation is one of the following:
    - 1. Flexible Elastomeric: 1 inch thick.
    - 2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 6. Polyolefin: 1 inch thick.
  - X. Exposed, return-air plenum insulation is one of the following:
    - 1. Flexible Elastomeric: 1 inch thick.
    - 2. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 3. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 4. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 5. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 6. Polyolefin: 1 inch thick.
  - Y. Exposed, outdoor-air plenum insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - Z. Exposed, exhaust-air plenum insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
- 3.13 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE
- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a duct system, selection from materials listed is Contractor's option.
  - B. Concealed, round and flat-oval, supply-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 2 inches and 0.75 lb/cu. ft. nominal density.
    - 2. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - C. Concealed, round and flat-oval, return-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 2 inches and 0.75 lb/cu. ft. nominal density.
    - 2. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - D. Concealed, round and flat-oval, outdoor-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 2 inches and 0.75 lb/cu. ft. nominal density.
    - 2. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - E. Concealed, rectangular, supply-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - F. Concealed, rectangular, return-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.

- G. Concealed, supply-air plenum insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - H. Concealed, return-air plenum insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - I. Exposed, round and flat-oval, supply-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - J. Exposed, round and flat-oval, return-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - K. Exposed, rectangular, supply-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - L. Exposed, rectangular, return-air duct insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - M. Exposed, supply-air plenum insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
  - N. Exposed, return-air plenum insulation is one of the following:
    - 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
    - 2. Glass-Fiber Board: 1-1/2 inches thick and 2 lb/cu. ft. nominal density.
    - 3. Mineral Wool Blanket: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
    - 4. Mineral Wool Board: 1-1/2 inches thick and 4 lb/cu. ft. nominal density.
- 3.14 INDOOR, FIELD-APPLIED JACKET SCHEDULE
- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
  - B. If more than one material is listed, selection from materials listed is Contractor's option.
  - C. Ducts and Plenums, Concealed:
    - 1. None.
    - 2. PVC: 20 mils thick.
    - 3. Aluminum, Corrugated: 0.016 inch thick.
    - 4. Painted Aluminum, Corrugated: 0.016 inch thick.
    - 5. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated: 0.016 inch thick.
    - 6. ASJ.
  - D. Ducts and Plenums, Exposed:
    - 1. None.
    - 2. PVC: 20 mils thick.
    - 3. Aluminum, Corrugated: 0.016 inch thick.
    - 4. Painted Aluminum, Corrugated: 0.016 inch thick.

5. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated: 0.016 inch thick.
6. ASJ.

3.15 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed:
  1. None.
  2. PVC: 20 mils thick.
  3. Aluminum, Corrugated: 0.016 inch thick.
  4. Painted Aluminum, Corrugated: 0.016 inch thick.
  5. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated: 0.016 inch thick.
  6. ASJ.
- D. Ducts and Plenums, Exposed, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:
  1. None.
  2. PVC: 20 mils thick.
  3. Aluminum, Corrugated: 0.016 inch thick.
  4. Painted Aluminum, Corrugated: 0.016 inch thick.
  5. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated: 0.016 inch thick.
  6. ASJ.
- E. Ducts and Plenums, Exposed, Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches:
  1. None.
  2. PVC: 20 mils thick.
  3. Aluminum, Corrugated: 0.016 inch thick.
  4. Painted Aluminum, Corrugated: 0.016 inch thick.
  5. Stainless Steel, Type 304 or Type 316, Smooth 2B Finish Corrugated: 0.016 inch thick.
  6. ASJ.

END OF SECTION 23 07 13

## SECTION 23 09 23

### ENERGY MANAGEMENT CONTROL SYSTEM (BACNET)

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. It is the intent of this specification to describe the basic architecture and performance requirements of the Energy Management Control System (EMCS). The turn-key EMCS shall include Control Units, Distributed Controllers, Unitary Controllers, Local Area Networks (LANs), sensors, modems, wiring, connectors, control devices, actuators, installation and calibration, supervision, adjustments, and fine tuning necessary for a complete and fully operational system.
- B. A distributed logic control system complete with all software and hardware functions shall be provided and installed. System shall be completely based on ANSI/ASHRAE Standard 135-2001, BACnet. This system is to control all mechanical equipment, including all unitary equipment such as VAV boxes, heat pumps, fan-coils, AC units, etc. and all air handlers, boilers, chillers, and any other listed equipment using Native BACnet-compliant components.
- C. All systems shall be complete true stand-alone systems.
- D. LonWorks or proprietary protocol software is not allowed.
- E. Everything shall be reprogrammed through software without change of any hardware. The owner shall have all the tools necessary to reprogram without any additional costs.
- F. EMCS shall have backward and forward compatibility.
- G. Systems shall be furnished and installed complete in all respects, including any and all equipment, controls, wiring, instrumentation, enclosures, labor, engineering, training, commissioning, programming, supervision, calibration, coordination with other trades, etc. No information given in (or omitted from) these specifications shall relieve the contractor of this absolute requirement. Include all associated electrical work except as noted. Work includes furnishing of all labor, superintendence, materials, tools, equipment and sources necessary for the complete installation or modification of the following systems as herein specified. It is the intent of these specifications that the Contractor shall furnish and install the systems complete in every respect and ready to operate. All equipment, miscellaneous items and accessories required for such installation and for the correct and convenient operation of the entire installation whether or not each such item or accessory is shown on the plans or mentioned in these specifications shall be furnished and installed.
- H. Bidders shall take into account that projects require verification of existing conditions that are not described in these specifications. Bids shall include, at Bidder's discretion, costs related to site verifications for renovation projects. No additional costs shall be allowed for such items.
- I. Should discrepancies or ambiguities arise within these specifications, the most stringent condition with regard to cost shall govern the bid. Obtain clarification from the Engineer prior to purchasing equipment and proceeding with the work.
- J. Where drawings are provided as part of or supplement to these specifications, such drawings are inherently schematic only and not intended to convey all controls, wiring, installation, details, etc. It shall be the responsibility of the EMCS contractor to verify that control approaches presented are appropriate for the HVAC systems involved, and that bids include all work described, specified, or otherwise necessary for a complete and functioning system.
- K. Schedule: Contractor acknowledges that submission of bid constitutes agreement with and conformance to the completion dates.
- L. Codes, Permits, and Fees: This contractor shall comply with all local, state and national codes, and shall secure and pay all applicable costs, fees, permits, and licenses. No additional costs shall be allowed for these items.

- M. Other Conditions:
1. Safety: Execute all work with the highest regard to safety. Comply with all laws governing safety, including the "Occupational Safety and Health Standards" and the "Safety and Health Regulations for Construction", State and federal. All applicable power tools used during construction shall have current approval under an approved Equipment Grounding Program, and shall bear the tag relating such. Contractor is solely responsible for all means and methods.
  2. Coordination and Supervision: Each bid shall include the necessary detail and interconnection work to coordinate his work with the work of other trades. Contractor shall keep competent supervisory personnel on the job whenever work is being performed which affects his trade.
  3. Storage of Materials: Each Contractor shall provide temporary storage facilities suitable for equipment stored at the job site. Storage facilities shall be weatherproof and lockable as required.
  4. Protection of Building and Materials: Each Contractor shall take necessary precautions to prevent damage to existing buildings and to work of other trades.
  5. Observations: Site observation by Owner or Engineer is for express purpose of verifying compliance by Contractor with Contract Documents, and shall not be construed as construction supervision nor indication of approval of manner or location in which work is being performed as being safe practice or place.
  6. Contractor is reminded that he shall also comply with all respects to the Invitation to Bid, General Conditions, Supplementary Conditions, Notice of Bidders, Instructions to Bidders, and all other governing parts of these specifications and the contract documents. These sections are included as part of the contract.
  7. Where the term "Contractor" is used within these specifications, it shall be understood to mean an approved controls manufacturer/contractor, and facility management systems contractor.
- N. The entire system shall be approved and listed by Underwriters Laboratories, Inc., under UL 916 for energy management systems and FCC-Part 15 Subparagraph J Class A Emissions Requirements.
- O. Equipment and Software Updates/Upgrades:
1. Equipment: All equipment, components, parts, materials, etc. provided throughout the period of Work (as governed in the Agreement) shall be fully compatible with all other equipment, etc. provided at any other time throughout the period of Work. Should updated versions of equipment be provided which are not fully compatible with earlier equipment provided, Contractor shall replace earlier equipment with the later version at no cost to Owner.
  2. Software: All software upgrades applicable to system and offered by the manufacturer/contractor for this system shall be provided at no cost to the Owner throughout the period of work. This no cost upgrade shall include installation, programming, modifications to field equipment, data base revisions, training, etc. as appropriate.
- P. The Engineer shall reserve all authority regarding approval, conditional approval, or rejection of systems not fully complying with these specifications.
- 1.2 WORK INCLUDED
- A. Existing control system is Alerton controls by Climatec. All new equipment to be connected to the existing EMCS. All programming, software upgrades, controllers, etc. necessary to connect new equipment to existing control system shall be verified and provided by Climatec.
  - B. The EMCS shall be a totally Native BACnet-based system based on a distributed control system in accordance with this specification. The workstation, all building controllers, application controllers, and all input/output devices shall communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135-2001, BACnet. In other words, all workstations and controllers, including unitary controllers, shall be Native BACnet devices. No gateways shall be used for communication to controllers installed under this section. Gateways may be used for communication to existing systems or to systems installed under other sections.
  - C. The installing contractor shall provide the new web-based software and software updates required for this project. Additionally, the installing contractor shall provide all computer related components (BAS Web server) for the new software platform to function in a peer-to-peer environment.
  - D. The owner will provide reserved DHCP addresses and any other network configuration information necessary to each control contractor for the purpose of configuring each building controller and/or server on the owner's network. The controls contractor shall coordinate the IP address for each building controller and/or server. It shall be the responsibility of each control contractor to coordinate with the owner for network connectivity.

- E. The Energy Management and Control System (EMCS) application program shall be written to communicate specifically utilizing BACnet protocols. Software shall include password protection, alarming, logging of historical data, full graphics including animation, full suite of field engineering tools including graphical programming and applications. Systems using operating systems other than that described above are strictly prohibited.
- F. Building controllers shall include complete energy management software, including scheduling building control strategies and logging routines. All energy management software and firmware shall be resident in field hardware and shall not be dependent on the operator's terminal. Operator's terminal software is to be used for access to field-based energy management functions only. Provide zone-by-zone direct digital logic control of space temperature, scheduling, runtime accumulation, equipment alarm reporting, and override timers for after-hours usage.
- G. All application controllers for every terminal unit (VAV, HP, UV, etc.) air handler, all central plant equipment, and any other piece of controlled equipment shall be fully programmable. Application controllers shall be mounted next to controlled equipment and communicate with building controller via BACnet LAN.
- H. Provide all necessary BACnet-compliant hardware and software to meet the system's functional specifications. Provide Protocol Implementation Conformance Statement (PICS) for Windows-based control software and every controller in system, including unitary controllers.
- I. Prepare individual hardware layouts, interconnection drawings, and software configuration from project design data.
- J. Implement the detailed design for all analog and binary objects, system databases, graphic displays, logs, and management reports based on control descriptions, logic drawings, configuration data, and bid documents.
- K. Design, provide, and install all equipment cabinets, panels, data communication network cables needed, and all associated hardware.
- L. Provide and install all interconnecting cables between supplied cabinets, application controllers, and input/output devices.
- M. Provide and install all interconnecting cables between all operator's terminals and peripheral devices (such as printers, etc.) supplied under this section.
- N. Provide complete manufacturer's specifications for all items that are supplied. Include vendor name of every item supplied.
- O. Provide supervisory specialists and technicians at the job site to assist in all phases of system installation, startup, and commissioning.
- P. Provide a comprehensive operator and technician training program as described herein.
- Q. Provide as-built documentation, operator's terminal software, diagrams, and all other associated project operational documentation (such as technical manuals) on approved media, the sum total of which accurately represents the final system.
- R. Provide new sensors, dampers, valves, and install only new electronic actuators. No used components shall be used as any part or piece of installed system.
- S. Unless otherwise specified, all products shall be of single manufacturer where possible with substitutions approved by Engineer/Owner.
- T. Provide all indicating devices, interface equipment, and other apparatus required to operate mechanical system and to perform functions specified and to operate other items specified.
- U. Provide protective devices to prevent damage to the EMCS as a result of lightning.
- V. The Energy Management Control system shall allow full user operation with minimum of training. It shall have an English language display, with both user prompts and a "help" user tutorial. It shall contain management reports for the monitoring of both current and historical energy usage, heating and cooling degree day, building status and after hours occupancy information.
- W. All applications programs shall be pre-engineered and pretested. Program entries shall utilize graphical templates.

- X. Workmanship:
  - 1. Contractor shall use only thoroughly trained and experienced workmen completely familiar with the items required and with the manufacturers recommended methods of installation. In all respects, the workmanship shall be of the highest grade, and all construction shall be done according to the best practice of the trade. Unless otherwise noted, conduit shall be concealed and installed square to the building lines. Any work not meeting these requirements shall be replaced or rebuilt without extra expense to the Owner

1.3 RELATED SECTIONS

- A. Section 23 00 00 - Basic Mechanical Requirements
- B. Section 23 05 93 - Testing, Adjusting, and Balancing for HVAC
- C. Section 26 00 00 - Basic Electrical Requirements

1.4 DEFINITIONS

- A. Energy Management Control System, Facility Management System, and Control System are to be considered the same.

1.5 REFERENCES

- A. The latest edition of the following standards and codes in effect and amended as of supplier's proposal date, and any applicable subsections thereof, shall govern design and selection of equipment and material supplied:
  - 1. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
  - 2. ANSI/ASHRAE - Standard 135-2001, BACnet.
  - 3. Uniform Building Code (UBC), including local amendments.
  - 4. UL 916 - Underwriters Laboratories Standard for Energy Management Equipment. Canada and the US.
  - 5. National Electrical Code (NEC).
  - 6. FCC Part 15, Subpart J, Class A.
  - 7. EMC Directive 89/336/EEC (European CE Mark).
  - 8. City, county, state, and federal regulations and codes in effect as of contract date.
  - 9. Except as otherwise indicated the system supplier shall secure and pay for all permits, inspections, and certifications required for his work and arrange for necessary approvals by the governing authorities.

1.6 SPECIFICATION NOMENCLATURE

EMCS	Energy Management and Control System
WAN	Wide Area Network
RWS	Remote Work Station
HHI	Hand Held Interface
LAN	Local Area Network

1.7 QUALITY ASSURANCE

- A. Responsibility:
  - 1. The supplier of the EMCS shall be responsible for inspection and Quality Assurance (QA) for all materials and workmanship furnished.
- B. Component Testing:
  - 1. Maximum reliability shall be achieved through extensive use of high-quality, pre-tested components. Each and every controller, sensor, and all other DDC components shall be individually tested by the manufacturer prior to shipment.
- C. Tools, Testing and Calibration Equipment:
  - 1. The EMCS supplier shall provide all tools, testing, and calibration equipment necessary to ensure reliability and accuracy of the system.

## 1.8 SUBMITTALS

### A. Drawings

1. The system supplier shall submit detailed complete, engineered drawings, control sequence, and bill of materials for approval.
2. The contractor shall supply one electronic copy of the submittal.
3. The electronic files will either be e-mailed to the architect or posted to a project management and information exchange website, depending on the architect's requirements. The architect and contractor can distribute copies of the files as desired.
4. The engineer will retain an electronic copy of the submittal and all responses.

### B. System Documentation

1. Include the following in submittal package:
  - a. Data sheets for all pieces of equipment.
  - b. System configuration diagrams in simplified block format.
  - c. All input/output object listings and an alarm point summary listing.
  - d. Electrical drawings that show all system internal and external connection points, terminal block layouts, and terminal identification.
  - e. Complete bill of materials, valve schedule, and damper schedule.
  - f. Manufacturer's instructions and drawings for installation, maintenance, and operation of all purchased items.
  - g. Overall system operation and maintenance instructions including preventive maintenance and troubleshooting instructions.

C. For all system elements - operator's workstation(s), building controller(s), application controllers, routers, and repeaters, provide BACnet Protocol Implementation Conformance Statements (PICS) as per ANSI/ASHRAE Standard 135-2001.

D. Provide complete description and documentation of any proprietary (non-BACnet) services and/or objects used in the system.

E. A list of all functions available and a sample of function block programming that shall be part of delivered system.

#### 1. Scheduling

- a. The vendor shall provide a detailed project design and installation schedule with time markings and details for hardware items and software development phases. Schedule shall show all the target dates for transmission of project information and documents and shall indicate timing and dates for system installation, debugging, and commissioning.

#### 2. Drawings and Manuals:

- a. Upon completion of the work, the Contractor shall provide the Owner with "record" layouts for the system. Layouts shall indicate all equipment and the function of each item shall be indicated.

3. Operating instructions and as-built system flow diagrams and drawings shall be prepared, bound, and delivered to the Owner. Each sensor, relay, switch, motor, controller, indicator (when inside panel), and item of equipment, etc., shall be identified with a number or mark identical to one which shall be tagged on each item. Large items of equipment may be identified by a suitable symbol listed in a legend on the control diagram.

## 1.9 EMCS CONTRACTOR QUALIFICATION REQUIREMENTS

A. The Energy Management Control System Manufacturer/Contractor, to be acceptable to this project, must have had an established engineering and service office serving the Owner's area for a minimum of five years prior to bid date of this project and be the authorized installing contractor for the manufacturer of the BACnet components. This office shall have a staff of factory trained technicians fully capable of rendering training, instruction, calibration procedures, and routine and emergency maintenance service on all system components furnished.

B. Installers shall have not less than five years' experience with electronic and pneumatic controls.

- C. The entire system shall be provided by a qualified and approved Controls Manufacturer/Contractor. It shall be designed by engineers and installed by competent technicians, all of which are regularly employed by the manufacturer of the control equipment. The Manufacturer/Contractor shall maintain permanent local facilities for engineering, installation, and 24-hour maintenance and service. Submit required Qualifications Form as specified. The manufacturer shall provide evidence of the ability to support and service the work in the Owner's facilities.
- D. The Bidder/Contractor shall be certified by the manufacturer of the equipment and have factory trained installers
- E. Equipment and performance are intended as a standard of quality, but not as a means of excluding other approved Manufacturers/Control Contractors.

#### 1.10 WARRANTY

- A. The temperature control contractor shall guarantee all workmanship and material in the installed temperature regulation system for a period of one (1) year, such guarantee dating from the date of final acceptance of the entire air conditioning system by the Architect/Engineer.
- B. This warranty shall cover the repair or replacement without additional costs to the Owner of any defective materials, parts, etc. of facility workmanship.
- C. During the warranty period, the temperature controls contractor shall respond to calls for warranty service within eight (8) working hours. Emergency service shall be obtainable within four (4) hours of notification by the Owner. Emergency service shall be obtainable on a 24-hour basis, seven (7) days per week.
- D. The temperature control contractor's office shall be within a 150-mile radius of the job site.
- E. Warranty Access:
  - 1. The Owner shall grant to the Contractor, reasonable access to the EMCS system during the warranty period. The owner shall provide, at no cost to the contractor, remote software access to an on-site computer or VPN access for the following functions:
    - a. Access to the entire facility control system by the contractor to provide service and diagnostic support.
- F. Service:
  - 1. All service of the system shall be furnished by the Contractor, at no cost to the Owner, for a period of one (1) year, concurrent with the warranty period specified above.

## PART 2 - PRODUCTS

### 2.1 ACCEPTABLE EMCS VENDORS

- A. Alerton - Climatec
- B. The Engineer and Owner shall reserve all authority regarding approval, conditional approval, or rejection of systems not fully complying with these specifications.

### 2.2 MATERIALS

- A. General: All materials and equipment used shall be standard components, of regular manufacture for this application. All systems and components shall have been thoroughly tested and proven in actual use.
- B. Exceptions to the specification will qualify bid as unacceptable.

### 2.3 OPERATOR'S WORKSTATION

- A. This system is an addition to the existing control system and shall be connected to the existing local area network (LAN) and computer. No additional workstation is required.
- B. The new graphics software shall be fully integrated to the owners existing front end software and existing workstation. Floor plan and interactive color graphics shall be provided for the school with each zone providing color indication of the zone comfort level. In addition to the floor plan graphic, each piece of controlled equipment shall be represented by a graphic that is accessible by clicking on the zone or indicated piece of equipment. All points shall be available on the graphic.

## 2.4 BUILDING CONTROLLER

- A. This system is an addition to the existing control system and shall be connected to the existing building controller if feasible. Field verify if existing building controller can be expanded or if additional building controller(s) is necessary.
- B. General:
1. All communication with operator workstation and all application controllers shall be via BACnet. Building controller shall incorporate as a minimum, the functions of a 3-way BACnet router. Controller shall route BACnet messages between the high-speed LAN (Ethernet 10/100MHz), at least 4 master slave token passing (MS/TP) LANs, a point-to-point (PTP - RS-232) connection and an on-board modem.
    - a. Each MS/TP LAN must be software configurable from 9.6 to 76.8Kbps.
    - b. The RJ-45 Ethernet connection must accept either 10Base-T or 100Base-TX BACnet over twisted pair cable (UTP).
    - c. The direct access port must be a female DB-9 connector supporting BACnet temporary PTP connection of a portable BACnet operator terminal at 9.6 to 115.2 Kbps over RS-232 null modem cable.
  2. Building controller shall be capable of providing global control strategies for the system based on information from any objects in the system regardless if the object is directly monitored by the controller or by another controller. The program that implements these strategies shall be completely flexible and user definable. Any systems utilizing factory pre-programmed global strategies that cannot be modified by field personnel on-site or downloaded via remote communications are not acceptable. Changing global strategies via firmware changes is also unacceptable.
  3. Programming shall be object-oriented using control function blocks, supporting DDC functions, 1000 Analog Values and 1000 Binary Values. All flowcharts shall be generated and automatically downloaded to controller. Programming tool shall be resident on workstation and the same tool used for all controllers.
  4. Provide means to graphically view inputs and outputs to each program block in real-time as program is executing. This function may be performed via the operator's workstation or field computer.
  5. Building controller shall provide battery-backed real-time (hardware) clock functions.
  6. Controller shall have a memory needed to ensure high performance and data reliability. Battery shall retain static RAM memory and real-time clock functions for a minimum of 1.5 years (cumulative).
  7. Global control algorithms and automated control functions should execute via 32-bit processor.
  8. Controller installation shall include memory-free gel-cell battery providing ongoing power conditioning and noise filtering for operation data integrity. It shall provide up to 5 minutes of powerless operation for orderly shutdown and data backup.
  9. BACnet Conformance:
    - a. Building Controller shall as a minimum support Point-to-Point (PTP), MS/TP and Ethernet BACnet LAN types. It shall communicate directly via these BACnet LANs as a Native BACnet device and shall support simultaneous routing functions between all supported LAN types. Global controller shall be a BACnet conformance class 3 device and support all BACnet services necessary to provide the following BACnet functional groups:
    - b. Clock Functional Group
      - 1) Files Functional Group
      - 2) Reinitialize Functional Group
      - 3) Device Communications Functional Group
      - 4) Event Initiation Functional Group
  10. Refer to section 22.2, BACnet Functional Groups, in the BACnet standard for a complete list of the services that must be directly supported to provide each of the functional groups listed above. All proprietary services, if used in the system, shall be thoroughly documented and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information.
  11. Standard BACnet object types supported shall include as a minimum: Analog Value, Binary Value, Calendar, Device, File, Group, Notification Class, Program and Schedule object types. All proprietary object types, if used in the system, shall be thoroughly documented and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information.
  12. The Building Controller shall comply with Annex J of the BACnet specification for IP connections. This device shall use Ethernet to connect to the IP internetwork, while using the same Ethernet LAN for non-IP communications to other BACnet devices on the LAN. Must support interoperability on wide area networks (WANs) and campus area networks (CANs) and function as a BACnet Broadcast Management Device (BBMD).

- C. Schedules:
  - 1. Each building controller shall support a minimum of 250 BACnet Schedule Objects and 250 BACnet Calendar Objects.
- D. Logging Capabilities:
  - 1. Each building controller shall log as minimum 1000 trendlogs. Any object in the system (real or calculated) may be logged. Sample time interval shall be adjustable at the operator's workstation.
  - 2. Logs may be viewed both on-site or off-site via remote communication.
  - 3. Building controller shall periodically upload trended data to networked operator's workstation for long term archiving if desired.
  - 4. Archived data stored in database format shall be available for use in third-party spreadsheet or database programs.
  - 5. Alarm Generation:
    - a. Alarms may be generated within the system for any object change of value or state either real or calculated. This includes things such as analog object value changes, binary object state changes, and various controller communication failures.
    - b. Each alarm may be dialed out as noted in paragraph 2 above.
    - c. Alarm log shall be provided for alarm viewing. Log may be viewed on-site at the operator's terminal or off-site via remote communications.
    - d. Controller must be able to handle up to 1500 alarm setups stored as BACnet event enrollment objects - system destination and actions individually configurable.

## 2.5 WEB BROWSER CLIENTS

- A. The system shall be capable of supporting an unlimited number of clients using a standard Web browser such as Internet Explorer™ or Mozilla Firefox™. Systems requiring additional software (to enable a standard Web browser) to be resident on the client machine, or manufacture-specific browsers shall not be acceptable.
- B. The Web browser software shall run on any operating system and system configuration that is supported by the Web browser. Systems that require specific machine requirements in terms of processor speed, memory, etc., to allow the Web browser to function with the EMCS shall not be acceptable.
- C. The Web browser shall provide the same view of the system, in terms of graphics, schedules, calendars, logs, etc., and provide the same interface methodology as is provided by the Graphical User Interface. Systems that require different views or that require different means of interacting with objects such as schedules, or logs, shall not be permitted.
- D. The Web browser client shall support at a minimum, the following functions:
  - 1. User log-on identification and password shall be required. If an unauthorized user attempts access, a blank web page shall be displayed. Security authentication and encryption techniques to prevent unauthorized access shall be implemented.
  - 2. Graphical screens developed for the GUI shall be the same screens used for the Web browser client. Any animated graphical objects supported by the GUI shall be supported by the Web browser interface.
  - 3. HTML programming shall not be required to display system graphics or data on a Web page. HTML editing of the Web page shall be allowed if the user desires a specific look or format.
  - 4. Storage of the graphical screens shall be in the Network Area Controller (NAC), without requiring any graphics to be stored on the client machine. Systems that require graphics storage on each client are not acceptable.
  - 5. Real-time values displayed on a Web page shall update automatically without requiring a manual
  - 6. "refresh" of the Web page.
  - 7. Users shall have administrator-defined access privileges. Depending on the access privileges assigned, the user shall be able to perform the following:
    - a. Modify common application objects, such as schedules, calendars, and set points in a graphical manner.
      - 1) Schedule times will be adjusted using a graphical slider, without requiring any keyboard entry from the operator.
      - 2) Holidays shall be set by using a graphical calendar, without requiring any keyboard entry from the operator.
    - b. Commands to start and stop binary objects shall be done by right-clicking the selected object and selecting the appropriate command from the pop-up menu. No entry of text shall be required.
    - c. View logs and charts

- d. View and acknowledge alarms
  8. The system shall provide the capability to specify a user's (as determined by the log-on user identification) home page. Provide the ability to limit a specific user to just their defined home page. From the home page, links to other views, or pages in the system shall be possible, if allowed by the system administrator.
  9. Graphic screens on the Web Browser client shall support hypertext links to other locations on the Internet or on Intranet sites, by specifying the Uniform Resource Locator (URL) for the desired link.
- 2.6 TERMINAL UNIT APPLICATION CONTROLLERS (ROOFTOPS, HEAT PUMPS, AC UNITS, FAN COILS)
- A. General:
    1. Provide one Native BACnet application controller for each piece of unitary mechanical equipment that adequately covers all objects listed in object list for unit. All controllers shall interface to building controller via MS/TP LAN using BACnet protocol. No gateways shall be used. Controllers shall include input, output, and self-contained logic program as needed for complete control of unit.
  - B. BACnet Conformance:
    1. Application controllers shall as a minimum support MS/TP BACnet LAN types. They shall communicate directly via this BACnet LAN at 9.6, 19.2, 38.4, and 76.8 Kbps, as a Native BACnet device. Application controllers shall be of BACnet conformance class 3 and support all BACnet services necessary to provide the following BACnet functional groups:
      - a. Files Functional Group
      - b. Reinitialize Functional Group
      - c. Device Communications Functional Group
    2. Refer to section 22.2, BACnet Functional Groups in the BACnet standard for a complete list of the services that must be directly supported to provide each of the functional groups listed above. All proprietary services, if used in the system, shall be thoroughly documented and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information.
    3. Standard BACnet object types supported shall include as a minimum-Analog Input, Analog Output, Analog Value, Binary Input, Binary Output, Binary Value, Device, File and Program Object Types. All proprietary object types, if used in the system, shall be thoroughly documented and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information.
    4. Application controllers shall include universal inputs with 10-bit resolution that can accept 3K and 10K thermistors, 0-5 VDC, 4-20 mA, dry contact signals and a minimum of 3 pulse inputs. Any input on controller may be either analog or digital. Controller shall also include support and modifiable programming for interface to intelligent room sensor. Controller shall include binary outputs on board with analog outputs as needed.
    5. All program sequences shall be stored on board controller in EEPROM. No batteries shall be needed to retain logic program. All program sequences shall be executed by controller 10 times per second and shall be capable of multiple PID loops for control of multiple devices. Programming of application controller shall be completely modifiable in the field over installed BACnet LANs or remotely via modem interface. Operator shall program logic sequences by graphically moving function blocks on screen and tying blocks together on screen. Application controller shall be programmed using same programming tools as building controller and as described in operator workstation section. All programming tools shall be provided and installed as part of system.
    6. Application controller shall include support for intelligent room sensor (see Section 2.9.B.). Display on room sensor shall be programmable at controller and include an operating mode and a field service mode. All button functions and display data shall be programmable to show specific controller data in each mode based on which button is pressed on the sensor. See sequence of operation for specific display requirements at intelligent room sensor.
  - C. Smoke Detectors:
    1. Smoke detectors (duct and area type) shall be provided, installed, and wired into the Fire Alarm System by the Electrical Contractor. The Controls Contractor shall be responsible for interlock wiring between duct smoke detectors and control relays, and starter safety circuits.
- 2.7 ELECTRONIC ACTUATORS
- A. General:
    1. Shall be Electric unless otherwise specified.
    2. Shall be manufactured by Belimo. Equal substitutions allowed with written approval by owner prior to bid.

3. Five-year manufacturer's warranty. Two-year unconditional and three-year product defect from date of installation.
  4. Furnish a Freeze-stat and install "Hard Wire" interlock to disconnect the mechanical spring return actuator power circuit for fail-safe operation. Use of the control signal to drive the actuators closed is not acceptable.
  5. VAV box damper actuation shall be Floating type or Analog (2-10vdc, 4-20ma) and provide to VAV box manufactured for factory installation.
  6. Booster-heat valve actuation shall be Floating type or Analog (2-10vdc, 4-20ma).
  7. Primary valve control shall be Analog (2-10vdc, 4-20ma).
  8. UL Listed Standard 873 and Canadian Standards Association Class 481302 shall certify Actuators.
  9. Mechanical spring shall be provided when specified. Capacitors or other non-mechanical forms of fail-safe are not acceptable.
  10. Position indicator device shall be installed and made visible to the exposed side of the Actuator. For damper short shaft mounting, a separate indicator shall be provided to the exposed side of the Actuator.
  11. Overload Protection: Actuators shall provide protection against actuator burnout by using an internal current limiting circuit or digital motor rotation sensing circuit. Circuit shall insure that actuators cannot burn out due to stalled damper or mechanical and electrical paralleling. End switches to deactivate the actuator at the end of rotation are acceptable only for Butterfly Valve actuators.
  12. A push button gearbox release shall be provided for all non-spring actuators.
  13. Modulating actuators shall be 24VAC and consume 10VA power or less.
  14. Conduit connectors are required when specified and when code requires it.
- B. Damper Actuators:
1. All damper actuators shall be provided and installed by EMCS contractor.
    - a. Electronic damper actuators shall be direct-coupled rotary type, suitable for mounting directly on the damper end shaft. Electronic damper actuators shall be properly sized to provide sufficient torque to position the damper throughout its operating range. Damper actuators used on economizer and/or outside air dampers shall be spring return.
    - b. Terminal unit damper actuators shall be electric, low voltage, utilizing floating control.
    - c. Outside Air and Exhaust Air Damper Actuators shall be Mechanical Spring Return. Capacitors or other non-mechanical forms of fail-safe are not acceptable. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the damper as required.
- C. Economizer Actuators shall be provided and installed by EMCS contractor. Actuators shall utilize Analog control 2-10 VDC and shall give position feedback for Fault Detection and Diagnostics (FDD) monitoring. Floating control is not acceptable. Actuators shall be Mechanical Spring Return. Equal to Belimo LF-24-SR.
1. Electric damper actuators (including VAV box actuators) shall be direct shaft mounted and use a V-bolt and toothed V-clamp causing a cold weld effect for positive gripping. Single bolt or setscrew type fasteners are not acceptable.
  2. One electronic actuator shall be direct shaft mounted per damper section. No connecting rods or jackshafts shall be needed. Small outside air and return air economizer dampers may be mechanically linked together if one actuator has sufficient torque to drive both and damper drive shafts are both horizontal installed.
  3. Multi-section dampers with electric actuators shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per damper section. (See below execution section for more installation details.)
- D. Valve Actuators ½" to 6":
1. Electronic valve actuators shall be suitable for direct-coupled mounting to the valve bonnet. Valve actuators shall be properly sized to provide sufficient torque to position the valve throughout its operating range. Where butterfly valves are specified, double acting non-spring return actuators may be used. Unless otherwise stated, provide normally open valves for heating water applications and normally closed valves for chilled water applications.
  2. Terminal unit reheat valve actuators shall be suitable for direct-coupled mounting to the valve bonnet. Valve actuators shall be properly sized to provide sufficient torque to position the valve throughout its operating range. Non-spring return tri-state floating valve actuators may be used on terminal units where the valve is less than 1 inch.

3. Mechanical spring shall be provided on all actuators for pre-heat coil and actuators for AHU heating or cooling coil when units are mounted outside. See plans for fail save flow function: Normal Open or Normal Closed. Capacitors or other non-mechanical forms of fail-safe are not acceptable.
4. All zone service actuators shall be non-spring return unless otherwise specified.
5. The valve actuator shall be capable of providing the minimum torque required for proper valve close off for the required application.
6. All control valves actuators shall have an attached 3-foot cable for easy installation to a junction box.
7. Override handle and gearbox release shall be provided for all non-spring return valve actuators.

E. Butterfly Valve Industrial Actuators:

1. Actuators shall be approved under Canadian Standards Association or other Nationally Recognized Testing Laboratory to UL standards. CSA Class 4813 02 or equal. Enclosure shall be NEMA 4 (weatherproof) enclosure and will have an industrial quality coating.
2. Actuator shall have a motor rated for continuous duty. The motor shall be fractional horsepower; permanent split capacitor type designed to operate on a 120 VAC, 1-phase, 60 Hz supply. Two adjustable cam actuated end travel limit switches shall be provided to control direction of travel. A self-resetting thermal switch shall be imbedded in the motor for overload protection.
3. Reduction gearing shall be designed to withstand the actual motor stall torque. Gears shall be hardened alloy steel, permanently lubricated. A self-locking gear assembly or a brake shall be supplied.
4. Actuator shall have a 6 ft wiring harness provided for ease in field wiring (above 1500 in-lbs). Two adjustable SPDT cam-actuated auxiliary switches, rated at 250 VAC shall be provided for indication of open and closed position. Actuator shall have heater and thermostat to minimize condensation within the actuator housing.
5. Actuator shall be equipped with a hand wheel for manual override to permit operation of the valve in the event of electrical power failure or system malfunction. Hand wheel must be permanently attached to the actuator and when in manual operation electrical power to the actuator will be permanently interrupted. The hand wheel will not rotate while the actuator is electrically driven.
6. The actuator shall be Analog, floating, or two position as called out in the control sequence of operation. All Analog valves shall be positive positioning, and respond to a 2-10 VDC, 4-20 mA, or adjustable signal as required. Analog actuators shall have a digital control card allowing any voltage input for control and any DC voltage feedback signal for position indication.
7. Performance Verification Test
  - a. Control loops shall cause productive actuation with each movement of the actuator and actuators shall modulate at a rate which is stable and responsive. Actuator movement shall not occur before the effects of previous movement have affected the sensor.
  - b. Actuator shall have capability of signaling a trouble alarm when the actuator Stop-Go Ratio exceeds 30%.

2.8 DAMPERS AND VALVES

A. Control Dampers:

1. Control air dampers shall be parallel blade for two-position control and opposed blade for modulating control applications. Dampers shall be galvanized with nylon bearings. Blade edge and tip seals shall be included for all dampers. Leakage through the damper shall not exceed 4 CFM per square foot at 1" w.c. Blades shall be 16-gauge minimum and 10" wide maximum and frame shall be of welded channel iron. Dampers over 48" wide shall be equipped with a jackshaft to provide sufficient force throughout the intended operating range.
2. All dampers used for modulating service shall be opposed blade type arrange for normally open or normally closed operation as required. The damper is to be sized so that when wide open the pressure drop is a sufficient amount of its close-off pressure drop for effective throttling.
3. All dampers used for two-position or open-close control shall be parallel blade type arranged for normally open or closed operation as required.
4. Damper linkage hardware shall be constructed of aluminum or corrosion resistant zinc & nickel- plated steel and furnished as follows:
  - a. Bearing support bracket and drive blade pin extension shall be provided for each damper section. Sheet metal contractor shall install bearing support bracket and drive blade pin extension. Sheet metal contractor shall provide permanent indication of blade position by scratching or marking the visible end of the drive blade pin extension.

- b. Drive pin may be round only if V-bolt and toothed V-clamp is used to cause a cold weld effect for positive gripping. For single bolt or set-screw type actuator fasteners, round damper pin shafts must be milled with at least one side flat to avoid slippage.
- B. Multiple Section Dampers:
  1. Size damper sections based on actuator manufacturers specific recommendations for face velocity, differential pressure and damper type. In general:
    - a. Damper section shall not exceed 24 ft-sq. with face velocity £ 1500 FPM.
    - b. Damper section shall not exceed 18 ft-sq. with face velocity £ 2500 FPM.
    - c. Damper section shall not exceed 13 ft-sq. with face velocity £ 3000 FPM.
  2. Damper manufacturer shall supply alignment plates for all multi-section dampers.
  3. Multiple section dampers of two or more shall be arranged to allow actuators to be direct shaft mounted on the outside of the duct.
  4. Multiple section dampers of three or more sections wide shall be arranged with a 3-sided vertical channel (8" wide by 6" deep) within the duct or fan housing and between adjacent damper sections. Vertical channel shall be anchored at the top and bottom to the fan housing or building structure for support. The sides of each damper frame shall be connected to the channels. Holes in the channel shall allow damper drive blade shafts to pass through channel for direct shaft mounting of actuators. Open side of channel shall be faced down stream of the airflow, except for exhaust air dampers.
  5. Multiple section dampers to be mounted flush within a wall or housing opening shall receive either vertical channel supports as described above or sheet metal standout collars. Sheet metal collars (12" minimum) shall bring each damper section out of the wall to allow direct shaft mounting of the actuator on the side of the collar.
- C. Actuator mounting for damper and valve arrangements shall comply to the following:
  1. Damper Actuators: Shall not be installed in the air stream
  2. A weather shield shall be used if actuators are located outside. For Damper Actuators use clear plastic enclosure.
  3. Damper or valve actuator ambient temperature shall not exceed 122°F through any combination of medium temperature or surrounding air. Appropriate air gaps, thermal isolation washers or spacers, standoff legs, or insulation shall be provided as necessary.
  4. Actuator cords or conduit shall incorporate a drip leg if condensation is possible. Water shall not be allowed to contact actuator or internal parts. Location of conduits in temperatures dropping below dew point shall be avoided to prevent water from condensing in conduit and running into actuator.
  5. Damper mounting arrangements shall comply to the following:
    - a. The ventilation subcontractor shall furnish and install damper channel supports and sheet metal collars.
    - b. No jack shafting of damper sections shall be allowed.
    - c. Multi-section dampers shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per section.
- D. Valve Sizing for Water Coil:
  1. On/Off Control Valves shall be line size.
  2. Modulating Control Valve Body Size may be reduced at most two pipe sizes from the line size or not less than ½ the pipe size. The BAS contractor shall size all water coil control valves for the application as follows:
    - a. Booster-heat valves shall be sized not to exceed 4-9 psi differential pressure. Valve design pressure drop is equal to the sum of coil drop plus the balance valve drop. Control valve authority must be selected by representing at least 25% to 50% of the system loop pressure drop. The calculation will be performed and shown for each individual control valve using the available pressure drop from the pump discharge at the specific installation location of the control valve. Any control valves that do not meet the minimum 25% will be re-selected or approved for use by the Engineer.
    - b. Primary valves shall be sized not to exceed 5-15 psi differential pressure. Valve design pressure drop is equal to the sum of coil drop plus the balance valve drop. Control valve authority must be selected by representing at least 25% to 50% of the system loop pressure drop. The calculation will be performed and shown for each individual control valve using the available pressure drop from the pump discharge at the specific installation location of the control valve. Any control valves that do not meet the minimum 25% will be re-selected or approved for use by the Engineer.

- c. Butterfly valves shall be sized for modulating service at 60-70 degree rotation. Design velocity shall be 12 feet per second or less when used with standard EPDM seats.
- E. Valve mounting arrangements shall comply to the following:
1. Unions shall be provided on all ports of two-way and three-way valves.
  2. Install three-way equal percentage Characterized Control valves in a mixing configuration with the
  3. "A" port piped to the coil.
  4. Install 2½ inch and above, Three-Way globe valves, as manufactured for mixing or diverting service to the coil.
  5. Two-way valve shall be piped in the return side of the coil in order to minimize ambient heat at the coil.
- 2.9 ENCLOSURES
- A. NEMA 2 rated enclosures for inside mounting, provide with weather shield for outside mounting.
  - B. All controllers, power supplies, and relays shall be mounted in enclosures.
  - C. Enclosures may be NEMA 1 when located in a clean, dry, indoor environment. Indoor enclosures shall be NEMA 12 when installed in other than a clean environment.
  - D. Enclosures shall have hinged, locking doors.
  - E. Provide laminated plastic nameplates for all enclosures in any mechanical room or electrical room. Include location and unit served on nameplate. Laminated plastic shall be 1/8" thick sized appropriately to make label easy to read.
  - F. All direct digital controllers located indoors shall be installed in NEMA 1 enclosures. All direct digital controllers located outdoors shall be installed in NEMA 3R enclosures. Enclosures shall be of suitable size to accommodate all power supplies, relays, and accessories required for the application. Each enclosure shall include a perforated subpanel for direct mounting of the enclosed devices. Include matched key locks for all enclosures provided.
- 2.10 SENSORS, SWITCHES, CONTROLLERS, TRANSDUCERS, AND MISCELLANEOUS DEVICES
- A. Temperature Sensors:
    1. All temperature sensors to be solid state electronic, factory-calibrated to within 0.5°F, totally interchangeable with housing appropriate for application. Wall sensors to be installed as indicated on drawings. Mount 48 inches above finished floor. Duct sensors to be installed such that the sensing element is in the main air stream. Immersion sensors to be installed in wells provided by control contractor, but installed by mechanical contractor. Immersion wells shall be filled with thermal compound before installation of immersion sensors. Outside air sensors shall be installed away from exhaust or relief vents, not in an outside air intake and in a location that is in the shade most of the day.
  - B. Intelligent Room Sensor with LCD Readout:
    1. Sensor shall contain a backlit LCD digital display and user function keys along with temperature sensor. Controller shall function as room control unit, and shall allow occupant to raise and lower setpoint, and activate terminal unit for override use all within limits as programmed by building operator. Sensor shall also allow service technician access to hidden functions as described in sequence of operation.
    2. The Intelligent Room Sensor shall simultaneously display room setpoint, room temperature, outside temperature, and fan status (if applicable) at each controller. This unit shall be programmable, allowing site developers the flexibility to configure the display to match their application. The site developer should be able to program the unit to display time-of-day, room humidity, and outdoor humidity. Unit must have the capability to show temperatures in Fahrenheit or Centigrade.
    3. Override time may be set and viewed in half-hour increments. Override time count down shall be automatic, but may be reset to zero by occupant from the sensor. Time remaining shall be displayed. Display shall show the word "OFF" in unoccupied mode unless a function button is pressed.
    4. See sequence of operation for specific operation of LCD displays and function keys in field service mode and in normal occupant mode. Provide intelligent room sensors as specified in point list.
    5. Field service mode shall be customizable to fit different applications. If intelligent room sensor is connected to VAV controller, VAV box shall be balanced and all airflow parameters shall be viewed and set from the intelligent room sensor with no computer or other field service tool needed.

- C. Field Service Tool:
  - 1. Field service tool shall allow technician to view and modify all setpoints and tuning parameters stored in application controller. In addition, technician shall be able to view status of all inputs and outputs on digital readout. Each piece of data shall have a data code associated with it that is customizable.
  - 2. Field service tool shall plug into wall sensor and provide all the functionality specified. Operator workstation shall include the capability to disable operation of the field service tool.
  - 3. Provide Field Service Tool(s) for this project.
- D. Network Connection Tool:
  - 1. Network connection tool shall allow technician to connect a laptop to any MS/TP network or at any MS/TP device and view and modify all information throughout the entire BACnet network. Laptop connection to tool shall be via Ethernet or PTP.
  - 2. Provide quick connect to MS/TP LAN at each controller. Tool shall be able to adjust to all MS/TP baud rates specified in the BACnet standard.
  - 3. Provide 1 Network Connection Tool for this project.
- E. Differential Pressure Switches (Air):
  - 1. Provide differential pressure switches across fans and filters for status indication. Differential pressure switches shall have an adjustable setpoint from 0.05" w.c. to 2" w.c. with a switch differential that progressively increases from 0.02" w.c. at minimum to 0.8" w.c. at maximum. Switch shall be SPDT rated for 15A (non-inductive) at 277VAC.
- F. Differential Pressure Switches (Liquid):
  - 1. Provide differential pressure switches across pumps and chillers to prove flow. Differential pressure switches shall have a 0-150 psig working differential pressure and have an adjustable setpoint from 4" w.c. to 43.5" w.c. on a fall and 5.5" w.c. to 45" w.c. on a rise. Liquid differential pressure switch enclosure shall carry a NEMA 4 rating. Switch shall be SPDT rated for 5A (inductive) at 125VAC.
- G. Float Switches:
  - 1. Provide float switches in condensate drain pans as required by code. Float switches shall utilize a magnetically actuated dry reed switch. Float shall be constructed of seamless polypropylene. Switch shall be SPDT rated for 16A (non-inductive) at 120VAC.
- H. Mixed Air Low Limit Controllers (Freezestats):
  - 1. Mixed air low limit controllers shall be manual reset, adjustable setpoint with 20-foot element serpentine across the entering air face of center cooling coil. Control shall be responsive only to the lowest temperature along the element.
- I. Static High Limit Controllers:
  - 1. Discharge static high limit controllers shall be provided on all VAV AHU systems. When discharge static pressure exceeds setpoint, the supply fan shall be de-energized. Manual reset shall be required.
- J. Static Pressure Transducers (Air):
  - 1. Provide static pressure transducers for monitoring supply duct static pressure. Static pressure transducers shall be 100% solid state and shall include glass on silicon, ultra stable capacitance sensors. Each static pressure transducer shall incorporate short circuit and reverse polarity protection. Transmitter output shall be either 0-10VDC or 4-20mA. Static pressure transducers are to be provided in an enclosure that is suitable for duct mounting. The desired setpoint is to be in the top 50% of the transmitter's operating range.
- K. Differential Pressure Transducers (Air):
  - 1. Provide differential pressure transducers for monitoring air system and airflow measuring station differential pressures. Differential pressure transducers shall be 100% solid state and shall include glass on silicon, ultra stable capacitance sensors. Each differential pressure transducer shall incorporate short circuit and reverse polarity protection. Transducer output shall be either 0-10VDC or 4-20mA. Differential pressure transducers are to be provided in an enclosure that is suitable for duct mounting. The desired setpoint is to be in the top 50% of the transducer's operating range.
- L. Current Sensing Relays:
  - 1. Provide current switches for indication of equipment status. Amperage ratings shall be adjustable with the desired setpoint to be in the top 50% of the current relay's operating range. Current sensing relays shall incorporate trip indication LED's and shall be sized for proper operation with the equipment served.

- M. Relative Humidity Sensors:
  - 1. Relative humidity sensors shall have an accuracy of +/- 2% from 5 to 95% RH. Output signal shall be either be 0-10VDC or 4-20mA. Humidity transmitters shall be factory calibrated and require no field setting.
- N. CO2 Sensors:
  - 1. CO2 sensors shall be space or duct mounted carbon dioxide sensors as required by the application. Space CO2 sensors shall be mounted next to space temperature sensors. The sensor shall have a range of 0-2000 ppm with an accuracy of  $\pm 5\%$ . The response time for the sensor shall be less than one minute. The sensor shall be capable of providing an analog signal proportional to the CO2 level sensed. The signal shall be either 0-10VDC or 4-20mA.
- O. Duct/Well Sensors:
  - 1. Sensors for duct and water temperature sensing shall incorporate either RTD or Thermistor sensing devices. Sensing element accuracy shall be 0.1% over the sensor span or better. Where the element is being used for sensing mixed air or coil discharge temperatures and/or the duct cross sectional area is in excess of 14 square feet, the element shall be of the averaging type. Averaging duct sensors shall utilize a 6, 12, or 24 foot sensing element. Immersion sensors shall use matched 316 stainless steel bulb wells. All duct and immersion sensors shall be provided with conduit connection housings. Sensors shall be provided with adequate standoffs for insulation installation.
- P. Selector Switches:
  - 1. Selector switches shall be 2 or 3-position, knob, or key type as required by the sequence of operation. Selector switches shall feature oil tight construction and be fitted with snap-fit contact blocks rated for 10A, 600VAC/DC operation. Labels shall be provided indicating switch position.
- Q. Pushbutton Switches:
  - 1. Pushbutton switches shall be either maintained or momentary as required by the sequence of operation. Pushbutton switches shall feature oil tight construction and be fitted with snap-fit contact blocks rated for 10A, 600VAC/DC operation. Labels shall be provided indicating switch function.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Prior to starting work, carefully inspect installed work of other trades and verify that such work is complete to the point where work of this Section may properly commence.
- B. Notify the owners` representative in writing of conditions detrimental to the proper and timely completion of the work.
- C. Do not begin work until all unsatisfactory conditions are resolved.
- D. Each bid must include all costs associated with providing wiring, conduit, concrete trenching, and earth trenching.

#### **3.2 OPERATION**

- A. BACnet Object List:
  - 1. The following points as defined for each piece of equipment are designated as follows:
    - a. Binary Out (BO) - Defined as any two-state output (start/stop) (enable/disable), etc.
    - b. Binary In (BI) - Defined as any two-state input (alarm, status), etc.
    - c. Analog In (AI) - Defined as any variable input (temperature) (position), etc.
    - d. Analog Out (AO) - Defined as any electrical variable output. 0-20mA, 4-20mA, and 0-10VDC are the only acceptable analog outputs. The driver for analog outputs must come from both hardware and software resident in the controllers. Transducers will not be acceptable under any circumstance.
  - 2. Each and every point will be checked out by the Contractor and the Owner`s Representative will inspect each point with the bidder prior to acceptance. Provide complete written documented inspections, test, and checkout report. Calibrate all equipment.
- B. DDC Object Type Summary:
  - 1. Provide all database generation.

2. Displays:
  - a. System displays shall show all analog and binary object types within the system. They shall be logically laid out for easy use by the owner. Provide outside air temperature indication on all system displays associated with economizer cycles.
3. Run Time Totalization:
  - a. At a minimum, run time totalization shall be incorporated for each monitored supply fan, return fan, exhaust fan, hot water and chilled water pumps. Warning limits for each point shall be entered for alarm and or maintenance purposes.
4. Trendlog:
  - a. All binary and analog object types (including zones) shall have the capability to be automatically trended.
5. Alarm:
  - a. All analog inputs (High/Low Limits) and selected binary input alarm points shall be prioritized and routed (locally or remotely) with alarm message per owner's requirements.
6. Database Save:
  - a. Provide backup database for all stand-alone application controllers on disk.

### 3.3 INSTALLATION

- A. General:
  1. Install in accordance with manufacturer's instructions.
  2. Provide all miscellaneous devices, hardware, software, interconnections installation, and programming required to ensure a complete operating system in accordance with the sequences of operation and point schedules.
  3. Provide a complete and operational temperature control and building automation system based on the following points and sequence of operation. The system shall be complete as to sequences and standard control practices. The determined point list is the minimum amount of points that are to be provided. If additional points are required to meet the sequence of operation, they will be provided.
- B. Location and Installation of Components:
  1. Locate and install components for easy accessibility; in general, mount 48 inches above floor with minimum 3'-0" clear access space in front of units. Obtain approval on locations from owner's representative prior to installation.
  2. Enclosures and hardware or wiring shall not block or limit accessibility to service compartments of any other equipment.
  3. The work shall be coordinated fully, as it pertains to the fire protection system, fire alarm system, and electrical power system. All items shall be terminated in the DDC controllers in a predetermined order as indicated in the submittal drawings.
  4. All instruments, switches, transmitters, etc., shall be suitably wired and mounted to protect them from vibration, moisture, and high or low temperatures.
  5. Identify all equipment and panels. Provide permanently mounted tags for all panels.
  6. Provide stainless steel or brass thermowells suitable for respective application and for installation under other sections - sized to suit pipe diameter without restricting flow.
- C. Interlocking and Control Wiring:
  1. Provide all interlock and control wiring. All wiring shall be installed neatly and professionally, in accordance with Specification Division 26 and all national, state, and local electrical codes.
  2. Provide wiring as required by functions as specified and as recommended by equipment manufacturers, to serve specified control functions. Provide shielded low capacitance wire for all communications trunks.
  3. Control wiring shall not be installed in power circuit raceways. Magnetic starters and disconnect switches shall not be used as junction boxes. Provide auxiliary junction boxes as required. Coordinate location and arrangement of all control equipment with the owner's representative prior to rough-in.
  4. Provide auxiliary pilot duty relays on motor starters as required for control function.
  5. Provide power for all control components from nearest electrical control panel or as indicated on the electrical drawings. Coordinate with electrical contractor.
  6. All control wiring in the mechanical, electrical, telephone and boiler rooms to be installed in conduit. All other wiring to be installed neatly and inconspicuously per local code requirements. If local code allows, control wiring above accessible ceiling spaces may be run with plenum rated cable (without conduit).

D. Installation Requirements:

1. Any panels associated with the control system shall be furnished and installed under this section of the work. Panel wiring shall be terminated by connecting to numbered terminals strips. Wire nut connections shall not be allowed. All wiring shall be color coded and shall be tagged for future identification.
2. Unless otherwise specified, all devices, panels, etc., furnished and/or installed by the Contractor shall be located where they can be calibrated and maintained from the floor without use of a ladder. These items shall be identified by means of plates made of plastic suitably engraved, embossed, or punched, plastic tape will not be acceptable. At completion of job, the Contractor shall submit record drawings of any changes made during construction. This submittal shall be a condition of final payment.
3. Any conduit on roof shall be absolute minimum and shall have prior written approval.
4. All conduit used indoor and outdoor shall be metal and shall be of type and fittings to minimize corrosion and moisture entry.

E. Cable Installation and Attachments:

1. Control System wiring and equipment installation shall be in accordance with good engineering practices as established by the TIA/EIA and the NEC. Wiring shall meet all state and local electrical codes. All wiring shall test free from all grounds and shorts. All cable shall be supported from the building structure and bundled.
2. The support system shall provide a protective pathway to eliminate stress that could damage the cabling. The cable shall not be crushed, deformed, skinned, crimped, twisted, or formed into tight radius bends that could compromise the integrity of the cabling. Controls cables shall not be run loose on ceiling grid or ceiling tiles. Support shall be provided by mounting appropriate fasteners which may be loaded with multiple cables. Provided that the weight load is carried by the support rod or wire, the support assembly may attach to the ceiling grid for lateral stabilization. The required support wires for the ceiling grid or light fixtures shall not be utilized. Any fastener attached to the ceiling grid shall not interfere with inserting or removing ceiling tiles. All cabling and supports must be positioned at least 12 inches above the ceiling grid.
3. Controls cables shall be run in bundles above accessible ceilings and supported from building structure. Cabling shall be loosely bundled with wire wraps randomly spaced at 30 to 48 inches on center, wire wraps shall not be tight enough to deform cabling and shall not be used to support the cabling.
4. Attachments for cabling support shall be spaced at 48 to 60 inches on center. The cable bundle shall not be allowed to sag more than 12 inches mid-span between attachments. Attachments shall be sized as follows:
  - a. Bundles up to 1/2" dia. (Ten 1/4" cables) 2" bridle ring, Caddy #4BRT32 or equivalent
  - b. Bundles up to 3/4" dia. (Sixteen 1/4" cables) 3/4" J-Hook, Caddy #CAT12 or equivalent
  - c. Bundles up to 1-5/16" dia. (Fifty 1/4" cables) 1-5/16" J-Hook, Caddy #CAT21 or equivalent
  - d. Bundles up to 2" dia. (Eighty 1/4" cables) 2" J-Hook, Caddy #CAT21 or equivalent Split bundles greater than 2" dia. or provide cable tray.
5. Do not mix different signal strength cables on the same J-Hook (i.e. fire alarm, 25 volt speaker cable). Multiple J-Hooks can be on the same attachment point up to the rated weight of the attachment device.
6. Controls cables shall be run in conduit stubs, where stubs are provided, from wall mounted devices to above accessible ceilings. Conduit shall be required only within walls and concealed spaces to provide access. Provide a plastic snap bushing or sleeve on the end of each conduit stub such as Thomas & Betts Catalog no. 443 - 3/4", 424 - 1", 425 - 1 1/4", 427 - 2" or equivalent.
7. Conduit, duct, or track shall be used for controls cable in exposed areas.
8. All conduit, ducts, track and raceways shall be supported from the structure at industry standard intervals for the size specified, utilizing proper anchoring devices and techniques for each type of cable used.
9. All penetrations through fire rated walls or floors shall feature a short length of metal conduit. The hole shall be neatly cut, not oversize or irregular. Seal the interior of the conduit sleeve around the cables and around the outside of the sleeve on each side of the penetration with fire-stop caulk or putty, such as Minnesota Mining & Mfg. Co. (3M) - CP 25WB+ caulk, MPS-2+ putty, or equivalent. Install according to the manufacturers' instructions.

10. All cable shall have a label on both ends utilizing self-laminating, flexible vinyl film, and non-smear nylon marking pens. Utilize Tyton Corporation Part No. RO175 Rite-On labels and Part No. FTP1 nylon marking pens or equivalent.
11. Each cable run shall include a three foot service loop with wire tie located in the ceiling above the control unit panel. This is to allow for future re-termination or repair.
12. No terminations or splices shall be installed in or above ceilings. Cable shall be continuous from one device termination to the next.
13. Mount all equipment firmly in place. Route cable in a professional, neat, and orderly installation.
14. All cabling shall be placed with regard to the environment, EMI/RFI (interference) and its effect on communication signal transmission.
15. Do not route any controls cable within two feet of any light fixture, HVAC unit service access area, electric panel, or any device containing a motor or transformer.
16. Low voltage controls cable will not be installed in the same conduit, duct or track with line voltage electrical cable.
17. Maximum pulling tension should not exceed 25 lb/ft. or manufactures recommendation, whichever is less.
18. Any pulling compounds utilized must be approved by the cable manufacturer and shall not degrade the strength or electrical characteristics of the cable.
19. Cable bends shall not exceed the manufacturers` suggested bend radius.
20. Provide for adequate ventilation in all equipment panels.
21. Provide wiremold where wiring must run exposed. Obtain advance approval from Architect and Owner before running exposed. Coordinate with Owner and Architect.
22. For all wiring, provide numbering on all terminations (both ends).
23. Label all panels, cans, enclosures, controllers and correlate with air conditioning units served. Labeling shall relate to shop drawings and equipment served. Provide wiring diagram inside each enclosure.
24. Provide a rain-tight enclosure for each rooftop unit controller.
25. Locate outdoor air sensors shielded and on northern exposure.

F. Termination practices:

1. Strip back only as much cable jacket as required to terminate.
2. Preserve wire twists as closely as possible to point of termination (0.5" maximum) to keep signal impairment to a minimum.
3. Avoid twisting cable during installation.
4. Electrical Interlocks:
  - a. All electrical interlocks shall be provided as specified. All electrical interlocks shall be made by means of motor starters or shall be accomplished by separate relays. No motor power lead shall be utilized in an interlock circuit.

3.4 SERVICES

A. Field Services:

1. Prepare and start logic control system under provisions of this section.
2. Start-up and commission systems. Allow sufficient time for start-up and commissioning prior to placing control systems in permanent operation.
3. Provide the capability for off-site monitoring at control contractor`s local or main office. At a minimum, off-site facility shall be capable of system diagnostics and software download. Owner shall provide phone line for this service for 1 year or as specified.
4. Provide Owner`s Representative with spare parts list. Identify equipment critical to maintaining the integrity of the operating system.

B. HVAC Training:

1. Provide application engineer to instruct owner in operation of systems and equipment.
2. Provide system operator`s training to include (but not limited to) such items as the following: modification of data displays, alarm and status descriptors, requesting data, execution of commands, and request of logs. Provide this training to a minimum of 3 persons.
3. Provide on-site training above as required, up to 16 hours as part of this contract.

C. Demonstration:

1. Provide systems demonstration under provisions of Section 23 00 00.
2. Demonstrate complete operating system to owner`s representative.
3. Provide certificate stating that control system has been tested and adjusted for proper operation.

- D. Programming:
1. Prior to completion of the control installation, schedule time with Owner's designated representatives to evaluate and select programming options and requirements. Contractor shall provide engineer for such meetings and consultations on an as-needed basis. Preparation time for the conference shall be in addition to the "in conference" time, and shall be provided on an as-needed basis without additional cost to the Owner.
  2. The Contractor shall also provide additional coordination as needed with the Owner's representative and Engineer to formulate and determine functions, reports, graphics, and alarms most desirable and suitable for the school district and writing the software capability. Programming of these items shall be provided. The Contractor shall program the system using coordinated Owner provided schedules for time of day and holidays.
  3. No hardware change shall be required for program changes.
- E. Documentation:
1. The Contractor shall provide a complete documentation package to the owner which shall include floor plans indicating location of EMCS equipment, wiring diagrams, bill of materials, data base information, and sequences of operation. The sequences of operation shall be submitted and approved by the owner in writing prior to installation and programming.
- F. Coordination:
1. For construction project installations where electrical and mechanical contractors are responsible for their respective trade, the electrical contractor is to provide line voltage to required equipment and the mechanical contractor is to install any devices that are to be included in systems. It is the controls contractor's responsibility to provide all devices with diagrams for location and coordinate with mechanical contractor prior to mechanical contractor starting installations. Controls contractor shall coordinate and provide all required work and wiring for duct mounted smoke detectors, control relays for unit shutdown, and interface with any fire alarm system. For installations where controls only work is provided, all necessary work shall be performed by the controls contractor.

#### **PART 4 - SEQUENCE OF OPERATION**

##### **4.1 SEQUENCE OF OPERATION**

- A. The following are sequences of operations which will be accomplished by the EMCS. Coordinate with Owner in operating equipment to maximize comfort and economy. All points required to accomplish the sequences will be provided and connected to the EMCS.
- B. DDC Control - Rooftop Units, Split Systems, DX Units, and Heat Pumps: Each unit shall be started and stopped by the EMCS. Automatic override during low or high ambient temperatures shall be provided. Provide one outdoor air sensor per school. Provide an indoor air space sensor for every unit to monitor space temperature, and be capable of remote resetting space temperature by Owner.
- C. Provide one outside air relative humidity sensor and temperature sensor per campus. It is also acceptable to obtain outside air ambient conditions from a nearby weather station.
- D. Acronyms:
1. EMCS - Energy Management Control System. The EMCS controls all of the HVAC functions as well as lighting schedules and lawn sprinkler schedules.
  2. TCS - Temperature Control Sensor. This is the device that controls the temperature in the space. VFD - Variable Frequency Drive.
  3. DDC - Direct Digital Control. OAU - Outside Air Unit.
  4. CO2 - Carbon Dioxide.
  5. CFM - Cubic Feet per Minute GPM - Gallons Per Minute A/H - Air Handler
  6. F/C - Fan Coil Unit CHW - Chilled Water HW - Hot Water
  7. VAV - Variable Air Volume UCP - Unit Control Panel
  8. ppm - Parts Per Million - A measurement of the concentration of one substance within another. In this case, it is the number of CO2 particles in a sample of one million air particles.
  9. Adj - Adjustable - All set points are assumed to be adjustable whether specified or not. The set points specified are values that should be programmed initially but can be changed if necessary.

- E. Definitions:
1. Occupancy Period:
    - a. The period of the day that the owner wants the environmental conditions acceptable for occupancy. Outside air ventilation may not be enabled at all times during the occupancy period. This schedule will be defined for each component of the HVAC system and will not be the same for all components.
  2. Outside Air Schedule:
  3. The period of the day that outside air ventilation is enabled. This schedule will be defined for each component of the HVAC system.
  4. Warm-up Mode:
  5. The time between the end of the unoccupied and start of the occupied period during which the space temperature is increased (night setback) to the normal occupancy temperature.
  6. Cool-down Mode:
  7. The time between the end of the unoccupied and start of the occupied period during which the space temperature is lowered (night setup) to the normal occupied temperature.
  8. Unoccupied Period:
  9. The period of the day that the temperature control setting is lowered (heating) or raised (cooling) to conserve on the amount of energy required to condition the building. The fans are also turned "OFF" to conserve energy.
- F. Documentation:
1. The Contractor shall provide a complete documentation package to the owner which shall include floor plans indicating location of EMCS equipment, wiring diagrams, bill of materials, database information, and sequences of operation. The sequences of operation shall be submitted and approved by the owner in writing prior to installation and programming.

END OF SECTION 23 09 23

**SECTION 23 09 23.1**

**SEQUENCE OF OPERATIONS GENERAL**

**PART 1 - GENERAL – NOT USED**

**PART 2 - PRODUCTS – NOT USED**

**PART 3 - EXECUTION**

3.1 CONTROL

A. Building Electrical:

1. General:

- a. Provide digital monitoring of building MSB. The EMCS shall monitor the electrical energy consumption at the buildings main electric feed. Coordinate with switchgear manufacturer and/or electrical contractor.
- b. Provide dashboard with daily, weekly, monthly, and yearly usage totals.

2. Control Points:

Description	Type
KVA	AI
KWH	AI
Demand	AI
Power Factor	AI
Voltage	AI

B. Exterior Lighting:

1. General:

- a. Provide auxiliary contactor(s) to control lighting. Include all hardware and software required and connect to nearest EMCS controller. Coordinate with electrical contractor.

2. Control Points:

Description	Type
Photocell	AI/DI
Lighting Contractor	DO

C. Lighting Control System:

1. General:

- a. BACnet network controller for lighting system shall be provided by the electrical/lighting contractor. Coordinate with electrical/lighting contractor on interface being provided and associated with points.
- b. Provide lighting floorplan layer with relevant lighting data displayed.

D. Domestic Water Heater:

1. General:

- a. The domestic hot water heater(s) and associated circulating pump(s) shall be disabled/enabled by the EMCS based on a time schedule. The domestic hot water supply for the hot water heater shall be monitored and shall generate an alarm upon exceeding above or dropping below its assigned alarm limits (adj.). The points required to accomplish this sequence shall be connected to the nearest available EMCS controller.

2. Control Points:

Description	Type
Loop Hot Water Supply Temperature (Each Water Heater)	AI
Water Heater Amps/Status (Each Water Heater)	AI
Circulation Pump Amps/Status (Each Pump)	AI
Water Heater Start/Stop Command (Each Water Heater)	DO
Circulation Pump Start/Stop Command (Each Pump)	DO

E. Domestic Water Main Supply Monitoring:

1. General:

- a. The EMCS contractor shall provide a flow meter (Omni Compound C2 water flow meter or equivalent) to be installed on the main domestic water line. Coordinate with plumbing contractor.
- b. The EMCS shall monitor flow from the primary water supply to the building. When the amount of flow is greater than programmed (adj.) the EMCS shall send an alarm. Provide all flow meters and controls points for a complete system. Provide dashboard with daily, weekly, monthly, and yearly usage totals.

2. Control Points:

Description	Type
Flow Meter	AI

F. Ambient Conditions:

1. General:

- a. The EMCS shall monitor the ambient outside conditions at the building. Sensors shall be located outside the building for northern exposure.

2. Control Points:

Description	Type
Outside Temperature	AI
Outside Humidity	AI
Outside CO2	AI

G. Gang Toilet & Dressing Room Exhaust Fans (EF-1 & EF-2):

1. General:

- a. Fans to be disabled/enabled by the EMCS based on a time schedule.

2. Control Points:

Description	Type
Fan Amps/Status (Each Fan)	AI
Fan Start/Stop Command (Each Fan)	DO

H. Workshop Exhaust Fan (EF-3)

1. General:

- a. Fans to be disabled/enabled by the EMCS based on RTU-7 Operation. When RTU-7 is operational then EF-3 shall run, when RTU-7 is off then EF-3 shall be off.

2. Control Points:

Description	Type
Fan Amps/Status (Each Fan)	AI
Fan Start/Stop Command (Each Fan)	DO

3.

I. MFD/IDF Rooms:

1. General:

- a. The EMCS shall monitor space temperature for all MDF/IDF rooms. The EMCS shall generate an alarm should the space temperature exceed or drop below its assigned alarm limits (adj.)

2. Control Points:

Description	Type
Space Temperature (Each Room)	AI

J. Generator:

1. General:

- a. The EMCS shall interface and integrate the emergency generator(s). The system shall monitor and display all relevant information available such as but not limited to, alarms, status, unit operation mode, temperatures, and runtime. Coordinate with electrical contractor and manufacturer on interface being provided

END OF SECTION 23 09 23.1

## SECTION 23 11 23

### FACILITY NATURAL-GAS PIPING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Pipes, tubes, and fittings.
  - 2. Piping specialties.
  - 3. Joining materials.
  - 4. Manual gas shutoff valves.
  - 5. Motorized gas valves.
  - 6. Earthquake valves.
  - 7. Pressure regulators.
  - 8. Service meters.
  - 9. Dielectric fittings.

##### 1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. An example includes rooftop locations.
- C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- D. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

##### 1.3 ACTION SUBMITTALS

- A. Product Data:
  - 1. Piping specialties.
  - 2. Corrugated, stainless steel tubing with associated components.
  - 3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
  - 4. Pressure regulators. Indicate pressure ratings and capacities.
  - 5. Service meters. Indicate pressure ratings and capacities. Include bypass fittings.
  - 6. Dielectric fittings.
- B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
  - 1. Shop Drawing Scale: 1/4 inch per foot.
  - 2. Detail mounting, supports, and valve arrangements for service-meter assembly and pressure regulator assembly.

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
- B. Welding certificates.
- C. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
- D. Field quality-control reports.
- E. Qualification Statements: For professional engineer.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For motorized gas valves pressure regulators and service meters to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators in accordance with the ASME Boiler and Pressure Vessel Code.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping in accordance with requirements of authorities having jurisdiction.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
- D. Protect stored PE pipes and valves from direct sunlight.

1.8 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide purging and startup of natural-gas supply in accordance with requirements indicated:
  - 1. Notify Owner no fewer than two days in advance of proposed interruption of natural-gas service.
  - 2. Do not proceed with interruption of natural-gas service without Owner's written permission.

1.9 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed and concealed behind finished surfaces. Comply with requirements in Section 08 31 13 "Access Doors and Frames."
- C. Coordinate requirements for piping identification for natural-gas piping. Comply with requirements in Section 22 05 53 "Identification of Plumbing Piping and Equipment."

**PART 2 - PRODUCTS**

2.1 SOURCE LIMITATIONS

- A. Obtain each product type from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Comply with NFPA 54 the International Fuel Gas Code.
- B. Minimum Operating-Pressure Ratings:
  - 1. Piping and Valves: 100 psig minimum unless otherwise indicated.
  - 2. Service Regulators: 65 psig minimum unless otherwise indicated.
  - 3. Minimum Operating Pressure of Service Meter: 5 psig.
- C. Natural-Gas System Pressure within Buildings:
  - 1. Single Pressure: 0.5 psig or less.
  - 2. Two pressure ranges. Primary pressure is more than 0.5 psig, but not more than 2 psig, and is reduced to secondary pressure of 0.5 psig or less.
  - 3. Two pressure ranges. Primary pressure is more than 2 psig, but not more than 5 psig, and is reduced to secondary pressure of more than 0.5 psig, but not more than 2 psig.

4. Three pressure ranges. Primary pressure is more than 2 psig, but not more than 5 psig, and is reduced to secondary pressures of more than 0.5 psig, but not more than 2 psig, and is reduced again to pressures of 0.5 psig or less.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Seismic Performance: Natural-gas piping system is to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7. See Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
  1. The term "withstand" means "the piping system will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the piping system will be fully operational after the seismic event."
  2. Component Importance Factor: 1.5.
  - 3.

### 2.3 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A53/A53M, black steel, Schedule 40, Type E or S, Grade B.
  1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
  2. Wrought-Steel Welding Fittings: ASTM A234/A234M for butt welding and socket welding.
  3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
  4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
    - a. Material Group: 1.1.
    - b. End Connections: Threaded or butt welding to match pipe.
    - c. Lapped Face: Not permitted underground.
    - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum O-rings, and spiral-wound metal gaskets.
    - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
  5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
    - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
  6. Mechanical Couplings:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Baker Hughes Company.
      - 2) Smith-Blair, a Xylem brand.
    - b. Stainless steel flanges and tube with epoxy finish.
    - c. NBR seals.
    - d. Stainless steel bolts, washers, and nuts.
    - e. Coupling is to be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
    - f. Steel body couplings installed underground on plastic pipe are to be factory equipped with anode.
- B. Corrugated, Stainless Steel Tubing: Comply with ANSI/IAS LC 1/CSA 6.26.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. FlashShield Products; Gastite, a division of Titeflex Corp.
    - b. TracPipe CounterStrike; Omega Flex, Inc.
    - c. Tru-Flex Metal Hose Corp.
  2. Tubing: ASTM A240/A240M, corrugated, Series 300 stainless steel.
  3. Coating: PE with flame retardant.
    - a. Surface-Burning Characteristics: As determined by testing identical products in accordance with ASTM E84 by qualified testing agency. Identify products with appropriate markings of applicable testing agency.
      - 1) Flame-Spread Index: 25 or less.
      - 2) Smoke-Developed Index: 50 or less.
  4. Fittings: Copper-alloy mechanical fittings with ends made to fit and listed for use with corrugated stainless steel tubing and capable of metal-to-metal seal without gaskets. Include brazing socket or threaded ends complying with ASME B1.20.1.
  5. Striker Plates: Steel, designed to protect tubing from penetrations.

6. Manifolds: Malleable iron or steel with factory-applied protective coating. Threaded connections are to comply with ASME B1.20.1 for pipe inlet and corrugated tubing outlets.
7. Operating-Pressure Rating: 5 psig.
- C. Aluminum Tubing: Comply with ASTM B210 and ASTM B241/B241M.
  1. Aluminum Alloy: Alloy 5456 is prohibited.
  2. Protective Coating: Factory-applied coating capable of resisting corrosion on tubing in contact with masonry, plaster, insulation, water, detergents, and sewerage.
  3. Flare Fittings: Comply with ASME B16.26 and SAE J513.
    - a. Copper-alloy fittings.
    - b. Metal-to-metal compression seal without gasket.
    - c. Dryseal threads complying with ASME B1.20.3.
- D. Drawn-Temper Copper Tube: Comply with ASTM B837, Type G.
  1. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
  2. Bronze Flanges and Flanged Fittings: ASME B16.24, Class 150.
    - a. Gasket Material: ASME B16.20, metallic, flat, asbestos free, aluminum O-rings, and spiral-wound metal gaskets.
    - b. Bolts and Nuts: ASME B18.2.1, carbon steel or stainless steel.
  3. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of 0.022 inch thick.
- E. Annealed-Temper Copper Tube: Comply with ASTM B837, Type G.
  1. Copper Fittings: ASME B16.22, wrought copper, and streamlined pattern.
  2. Flare Fittings: Comply with ASME B16.26 and SAE J513.
    - a. Copper fittings with long nuts.
    - b. Metal-to-metal compression seal without gasket.
    - c. Dryseal threads complying with ASME B1.20.3.
  3. Protective Coating for Underground Tubing: Factory-applied, extruded PE a minimum of 0.022 inch thick.
- F. Tin-Lined Copper Tube: ASTM B280, seamless, annealed, with interior tin-plated lining.
  1. Flare Fittings: Comply with ASME B16.26 and SAE J513.
    - a. Copper fittings with long nuts.
    - b. Metal-to-metal compression seal without gasket.
    - c. Dryseal threads complying with ASME B1.20.3.
- G. PE Pipe: ASTM D2513, SDR 11.
  1. PE Fittings: ASTM D2683, socket-fusion type or ASTM D3261, butt-fusion type with dimensions matching PE pipe.
  2. PE Transition Fittings: Factory-fabricated fittings with PE pipe complying with ASTM D2513, SDR 11; and steel pipe complying with ASTM A53/A53M, black steel, Schedule 40, Type E or S, Grade B.
  3. Anodeless Service-Line Risers: Factory fabricated and leak tested.
    - a. Underground Portion: PE pipe complying with ASTM D2513, SDR 11 inlet.
    - b. Casing: Steel pipe complying with ASTM A53/A53M, Schedule 40, black steel, Type E or S, Grade B, with corrosion-protective coating covering. Vent casing aboveground.
    - c. Aboveground Portion: PE transition fitting.
    - d. Outlet is threaded or flanged or suitable for welded connection.
    - e. Tracer wire connection.
    - f. UV shield.
    - g. Stake supports with factory finish to match steel pipe casing or carrier pipe.
  4. Transition Service-Line Risers: Factory fabricated and leak tested.
    - a. Underground Portion: PE pipe complying with ASTM D2513, SDR 11 inlet connected to steel pipe complying with ASTM A53/A53M, Schedule 40, Type E or S, Grade B, with corrosion-protective coating for aboveground outlet.
    - b. Outlet is threaded or flanged or suitable for welded connection.
    - c. Bridging sleeve over mechanical coupling.
    - d. Factory-connected anode.
    - e. Tracer wire connection.
    - f. UV shield.
    - g. Stake supports with factory finish to match steel pipe casing or carrier pipe.

5. Plastic Mechanical Couplings, NPS 1-1/2 (DN 40) and Smaller: Suitable for joining PE pipe to PE pipe.
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Mueller Co. LLC; Mueller Water Products, Inc.
    - 2) Perfection Corporation.
    - 3) R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
  - b. PE body with molded-in, stainless steel support ring.
  - c. Seals: NBR.
  - d. Acetal collets.
  - e. Electro-zinc-plated steel stiffener.
6. Plastic Mechanical Couplings, NPS 2 (DN 50) and Larger: Suitable for joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Mueller Co. LLC; Mueller Water Products, Inc.
    - 2) Perfection Corporation.
    - 3) R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
  - b. Fiber-reinforced plastic body.
  - c. PE body tube.
  - d. Seals: NBR.
  - e. Acetal collets.
  - f. Stainless steel bolts, nuts, and washers.
7. Steel Mechanical Couplings: Suitable for joining plain-end PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Baker Hughes Company.
    - 2) Smith-Blair, a Xylem brand.
  - b. Stainless steel flanges and tube with epoxy finish.
  - c. Seals: NBR.
  - d. Stainless steel bolts, washers, and nuts.
  - e. Factory-installed anode for steel-body couplings installed underground.

#### 2.4 PIPING SPECIALTIES

- A. Appliance Flexible Connectors:
  1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
  2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
  3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
  4. Corrugated, stainless steel tubing with polymer coating.
  5. Operating-Pressure Rating: 0.5 psig.
  6. End Fittings: Zinc-coated steel.
  7. Threaded Ends: Comply with ASME B1.20.1.
  8. Maximum Length: 72 inches.
- B. Quick-Disconnect Devices: Comply with ANSI Z21.41.
  1. Copper-alloy convenience outlet and matching plug connector.
  2. Seals: Nitrile.
  3. Hand operated with automatic shutoff when disconnected.
  4. For indoor or outdoor applications.
  5. Adjustable, retractable restraining cable.
- C. Y-Pattern Strainers:
  1. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.
  2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
  3. Strainer Screen: 40-mesh startup strainer, and perforated stainless steel basket with 50 percent free area.
  4. CWP Rating: 125 psig.
- D. Basket Strainers:
  1. Body: ASTM A126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
  2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.

3. Strainer Screen: 40-mesh startup strainer, and perforated stainless steel basket with 50 percent free area.
  4. CWP Rating: 125 psig.
  - E. T-Pattern Strainers:
    1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
    2. End Connections: Grooved ends.
    3. Strainer Screen: 40-mesh startup strainer, and perforated stainless steel basket with 57 percent free area.
    4. CWP Rating: 750 psig.
  - F. Weatherproof Vent Cap:
    1. Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.
- 2.5 JOINING MATERIALS
- A. Joint Compound and Tape: Suitable for natural gas.
  - B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
  - C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.
- 2.6 MANUAL GAS SHUTOFF VALVES
- A. General Requirements for Metallic Valves, NPS 2 (DN 50) and Smaller: Comply with ASME B16.33.
    1. CWP Rating: 125 psig.
    2. Threaded Ends: Comply with ASME B1.20.1.
    3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
    4. Tamperproof Feature: Locking feature for valves indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
    5. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
    6. Service Mark: Valves NPS 1-1/4 to NPS 2 having initials "WOG" permanently marked on valve body.
  - B. General Requirements for Metallic Valves, NPS 2-1/2 (DN 65) and Larger: Comply with ASME B16.38.
    1. CWP Rating: 125 psig.
    2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
    3. Tamperproof Feature: Locking feature for valves indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
    4. Service Mark: Initials "WOG" permanently marked on valve body.
  - C. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.
    1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. A.Y. McDonald Mfg. Co.
      - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
      - c. BrassCraft Manufacturing Co.; a Masco company.
    2. Body: Bronze, complying with ASTM B584.
    3. Ball: Chrome-plated brass.
    4. Stem: Bronze; blowout proof.
    5. Seats: Reinforced TFE; blowout proof.
    6. Packing: Separate packnut with adjustable-stem packing threaded ends.
    7. Ends: Threaded, flared, or socket as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
    8. CWP Rating: 600 psig.
    9. Listing: Valves NPS 1 and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
    10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
  - D. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
    1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. A.Y. McDonald Mfg. Co.
      - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.

- c. BrassCraft Manufacturing Co.; a Masco company.
  2. Body: Bronze, complying with ASTM B584.
  3. Ball: Chrome-plated bronze.
  4. Stem: Bronze; blowout proof.
  5. Seats: Reinforced TFE; blowout proof.
  6. Packing: Threaded-body packnut design with adjustable-stem packing.
  7. Ends: Threaded, flared, or socket as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
  8. CWP Rating: 600 psig.
  9. Listing: Valves NPS 1 and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- E. Two-Piece, Regular-Port Bronze Ball Valves with Bronze Trim: MSS SP-110.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. A.Y. McDonald Mfg. Co.
    - b. Apollo Valves; a part of Aalberts Integrated Piping Systems.
    - c. BrassCraft Manufacturing Co.; a Masco company.
  2. Body: Bronze, complying with ASTM B584.
  3. Ball: Chrome-plated bronze.
  4. Stem: Bronze; blowout proof.
  5. Seats: Reinforced TFE.
  6. Packing: Threaded-body packnut design with adjustable-stem packing.
  7. Ends: Threaded, flared, or socket as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
  8. CWP Rating: 600 psig.
  9. Listing: Valves NPS 1 and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- F. Bronze Plug Valves: MSS SP-78.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. A.Y. McDonald Mfg. Co.
    - b. Lee Brass Company.
  2. Body: Bronze, complying with ASTM B584.
  3. Plug: Bronze.
  4. Ends: Threaded, socket, or flanged as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
  5. Operator: Square head or lug type with tamperproof feature where indicated.
  6. Pressure Class: 125 psig.
  7. Listing: Valves NPS 1 and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- G. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. A.Y. McDonald Mfg. Co.
    - b. Mueller Co. LLC; Mueller Water Products, Inc.
    - c. XOMOX; Crane ChemPharma & Energy.
  2. Body: Cast iron, complying with ASTM A126, Class B.
  3. Plug: Bronze or nickel-plated cast iron.
  4. Seat: Coated with thermoplastic.
  5. Stem Seal: Compatible with natural gas.
  6. Ends: Threaded or flanged as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
  7. Operator: Square head or lug type with tamperproof feature where indicated.
  8. Pressure Class: 125 psig.
  9. Listing: Valves NPS 1 and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- H. Cast-Iron, Lubricated Plug Valves: MSS SP-78.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. A.Y. McDonald Mfg. Co.

- b. Flowserve Corporation.
        - c. Homestead Valve: a division of Olson Technologies, Inc.
      - 2. Body: Cast iron, complying with ASTM A126, Class B.
      - 3. Plug: Bronze or nickel-plated cast iron.
      - 4. Seat: Coated with thermoplastic.
      - 5. Stem Seal: Compatible with natural gas.
      - 6. Ends: Threaded or flanged as indicated in "Underground, Manual Gas Shutoff Valve Schedule" and "Aboveground, Manual Gas Shutoff Valve Schedule" articles.
      - 7. Operator: Square head or lug type with tamperproof feature where indicated.
      - 8. Pressure Class: 125 psig.
      - 9. Listing: Valves NPS 1 and smaller are to be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
      - 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
    - I. PE Ball Valves: Comply with ASME B16.40.
      - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        - a. Kerotest Manufacturing Corp.
        - b. Perfection Corporation.
        - c. R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
      - 2. Body: PE.
      - 3. Ball: PE.
      - 4. Stem: Acetal.
      - 5. Seats and Seals: Nitrile.
      - 6. Ends: Plain or fusible to match piping.
      - 7. CWP Rating: 80 psig.
      - 8. Operating Temperature: Minus 20 to plus 140 deg F.
      - 9. Operator: Nut or flat head for key operation.
      - 10. Include plastic valve extension.
      - 11. Include tamperproof locking feature for valves where indicated on Drawings.
    - J. Valve Boxes:
      - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
        - a. Kerotest Manufacturing Corp.
        - b. Perfection Corporation.
        - c. R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
      - 2. Cast-iron, two-section box.
      - 3. Top section with cover with "GAS" lettering.
      - 4. Bottom section with base to fit over valve and barrel a minimum of 5 inches in diameter.
      - 5. Adjustable cast-iron extensions of length required for depth of bury.
      - 6. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.
- 2.7 MOTORIZED GAS VALVES
  - A. Automatic Gas Valves: Comply with ANSI Z21.21.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Eaton.
      - b. Honeywell Building Solutions; Honeywell International, Inc.
      - c. Johnson Controls, Inc.
    - 2. Body: Brass or aluminum.
    - 3. Seats and Disc: NBR.
    - 4. Springs and Valve Trim: Stainless steel.
    - 5. Normally closed.
    - 6. Visual position indicator.
    - 7. Electrical actuator operated by appliance automatic shutoff device.
  - B. Electrically Operated Valves: Comply with UL 429.
    - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. American Gas Safety, LLC.
      - b. Eclipse Innovative Thermal Technologies.
      - c. Goyen Valve Corp.
    - 2. Pilot operated.
    - 3. Body: Brass or aluminum.
    - 4. Seats and Disc: NBR.

5. Springs and Valve Trim: Stainless steel.
6. 120 V ac, 60 Hz, Class B, continuous-duty molded coil, and replaceable.
7. NEMA ICS 6, Type 4, coil enclosure.
8. Normally closed.
9. Visual position indicator.

## 2.8 EARTHQUAKE VALVES

- A. Earthquake Valves, Maximum Operating Pressure of 5 psig (34.5 kPa): Comply with ASCE/SEI 25.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Firefighter Gas Safety Products.
    - b. Pacific Seismic Products, Inc.
  2. Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  3. Maximum Operating Pressure: 5 psig.
  4. Cast-aluminum body with nickel-plated chrome steel internal parts.
  5. NBR valve washer.
  6. Sight windows for visual indication of valve position.
  7. Threaded end connections complying with ASME B1.20.1.
  8. Wall-mounting bracket with bubble level indicator.
- B. Earthquake Valves, Maximum Operating Pressure of 60 psig (414 kPa): Comply with ASCE/SEI 25.
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Pacific Seismic Products, Inc.
  2. Listed and labeled by an NRTL acceptable to authorities having jurisdiction.
  3. Maximum Operating Pressure: 60 psig.
  4. Cast-aluminum body with stainless steel internal parts.
  5. NBR, reset-stem O-ring seal.
  6. Valve position, open or closed, indicator.
  7. Composition valve seat with clapper held by spring or magnet locking mechanism.
  8. Level indicator.
  9. End Connections: Threaded for valves NPS 2 and smaller; flanged for valves NPS 2-1/2 and larger.

## 2.9 PRESSURE REGULATORS

- A. General Requirements:
1. Single stage and suitable for natural gas.
  2. Steel jacket and corrosion-resistant components.
  3. Elevation compensator.
  4. End Connections: Threaded for regulators NPS 2 and smaller; flanged for regulators NPS 2-1/2 and larger.
- B. Service Pressure Regulators: Comply with ANSI Z21.80A.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. American Meter Company.
    - b. Fischer; Emerson Electric Co., Automation Solutions.
    - c. Schneider Electric USA, Inc.
  2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
  3. Springs: Zinc-plated steel; interchangeable.
  4. Diaphragm Plate: Zinc-plated steel.
  5. Seat Disc: NBR; resistant to gas impurities, abrasion, and deformation at the valve port.
  6. Orifice: Aluminum; interchangeable.
  7. Seal Plug: UV-stabilized, mineral-filled nylon.
  8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to regulator.
  9. Pressure regulator is to maintain discharge pressure setting downstream and is to not exceed 150 percent of design discharge pressure at shutoff.
  10. Overpressure Protection Device: Factory mounted on pressure regulator.
  11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if not connected to vent piping.
  12. Maximum Inlet Pressure: 100 psig.
- C. Line Pressure Regulators: Comply with ANSI Z21.80A.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. American Meter Company.
    - b. Fischer; Emerson Electric Co., Automation Solutions.

- c. Schneider Electric USA, Inc.
    2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
    3. Springs: Zinc-plated steel; interchangeable.
    4. Diaphragm Plate: Zinc-plated steel.
    5. Seat Disc: NBR; resistant to gas impurities, abrasion, and deformation at the valve port.
    6. Orifice: Aluminum; interchangeable.
    7. Seal Plug: UV-stabilized, mineral-filled nylon.
    8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to regulator.
    9. Pressure regulator is to maintain discharge pressure setting downstream and is to not exceed 150 percent of design discharge pressure at shutoff.
    10. Overpressure Protection Device: Factory mounted on pressure regulator.
    11. Atmospheric Vent: Factory- or field-installed, stainless steel screen in opening if not connected to vent piping.
    12. Maximum Inlet Pressure: 2 psig.
  - D. Appliance Pressure Regulators: Comply with ANSI Z21.18.
    1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      - a. Canadian Meter Company, LLC; a Honeywell Company.
      - b. Dormont; A Watts Water Technologies Company.
      - c. Eaton.
    2. Body and Diaphragm Case: Die-cast aluminum.
    3. Springs: Zinc-plated steel; interchangeable.
    4. Diaphragm Plate: Zinc-plated steel.
    5. Seat Disc: NBR.
    6. Seal Plug: UV-stabilized, mineral-filled nylon.
    7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.
    8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
    9. Maximum Inlet Pressure: 1 psig.
- 2.10 SERVICE METERS
  - A. Diaphragm-Type Service Meters: Comply with ANSI B109.1 ANSI B109.2.
    1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      - a. Actaris: a brand of ITT Controls.
      - b. American Meter Company.
      - c. Schneider Electric USA, Inc.
    2. Case: Die-cast aluminum.
    3. Connections: Steel threads.
    4. Diaphragm: Synthetic fabric.
    5. Diaphragm Support Bearings: Self-lubricating.
    6. Compensation: Continuous temperature and pressure.
    7. Meter Index: Cubic feet.
    8. Meter Case and Index: Tamper resistant.
    9. Remote meter reader compatible.
    10. Maximum Inlet Pressure: 100 psig.
    11. Pressure Loss: Maximum 0.5 inch wg.
    12. Accuracy: Maximum plus or minus 1.0 percent.
  - B. Rotary-Type Service Meters: Comply with ANSI B109.3.
    1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      - a. American Meter Company.
      - b. Schneider Electric USA, Inc.
    2. Case: Extruded aluminum.
    3. Connection: Flange.
    4. Impellers: Polished aluminum.
    5. Rotor Bearings: Self-lubricating.
    6. Compensation: Continuous temperature and pressure.
    7. Meter Index: Cubic feet.

8. Tamper resistant.
  9. Remote meter reader compatible.
  10. Maximum Inlet Pressure: 100 psig.
  11. Accuracy: Maximum plus or minus 2.0 percent.
- C. Turbine Meters: Comply with ASME MFC-4M.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
    - a. American Meter Company.
    - b. Schneider Electric USA, Inc.
  2. Housing: Cast iron or welded steel.
  3. Connection Threads or Flanges: Steel.
  4. Turbine: Aluminum or plastic.
  5. Turbine Bearings: Self-lubricating.
  6. Compensation: Continuous temperature and pressure.
  7. Meter Index: Cubic feet.
  8. Tamper resistant.
  9. Remote meter reader compatible.
  10. Maximum Inlet Pressure: 100 psig.
  11. Accuracy: Maximum plus or minus 2.0 percent.
- D. Service-Meter Bars:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
    - a. A.Y. McDonald Mfg. Co.
    - b. American Meter Company.
    - c. Mueller Co. LLC; Mueller Water Products, Inc.
  2. Malleable- or cast-iron frame for supporting service meter.
  3. Include offset swivel pipes, meter nuts with O-ring seal, and factory- or field-installed dielectric unions.
  4. Omit meter offset swivel pipes if service-meter bar dimensions match service-meter connections.
- E. Service-Meter Bypass Fittings:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
    - a. R.W. Lyall; brand of Hubbell Utility Solutions; Hubbell Incorporated.
    - b. Williamson, T. D., Inc.
  2. Ferrous, tee, pipe fitting with capped side inlet for temporary natural-gas supply.
  3. Integral ball-check bypass valve.
- 2.11 DIELECTRIC FITTINGS
- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. A.Y. McDonald Mfg. Co.
    - b. Wilkins.
    - c. Zurn Industries, LLC.
  2. Description:
    - a. Standard: ASSE 1079.
    - b. Pressure Rating: 125 psig minimum at 180 deg F.
    - c. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
    - a. Capitol Manufacturing Company.
    - b. WATTS; A Watts Water Technologies Company.
    - c. Wilkins.
  2. Description:
    - a. Standard: ASSE 1079.
    - b. Factory-fabricated, bolted, companion-flange assembly.
    - c. Pressure Rating: 125 psig minimum at 180 deg F.

- d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
  - D. Dielectric-Flange Insulating Kits:
    1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      - a. Advance Products & Systems, LLC.
      - b. CALPICO, Inc.
      - c. GF Piping Systems: Georg Fischer LLC.
    2. Description:
      - a. Nonconducting materials for field assembly of companion flanges.
      - b. Pressure Rating: 150 psig.
      - c. Gasket: Neoprene or phenolic.
      - d. Bolt Sleeves: Phenolic or polyethylene.
      - e. Washers: Phenolic with steel backing washers.
- 2.12 LABELING AND IDENTIFYING
- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description and rated pressure of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.
  - B. Label and identify gas piping and pressure outside a multitenant building by tenant.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping in accordance with NFPA 54 the International Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with NFPA 54 the International Fuel Gas Code requirements for preventing accidental ignition.

#### **3.3 INSTALLATION OF OUTDOOR PIPING**

- A. Comply with NFPA 54 the International Fuel Gas Code for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements in Section 31 20 00 "Earth Moving" for excavating, trenching, and backfilling.
  1. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.
- C. Install underground, PE, natural-gas piping in accordance with ASTM D2774.
- D. Steel Piping with Protective Coating:
  1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
  2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
  3. Replace pipe having damaged PE coating with new pipe.
- E. Copper Tubing with Protective Coating:
  1. Apply joint cover kits over tubing to cover, seal, and protect joints.
  2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
- F. Install fittings for changes in direction and branch connections.
- G. Install pressure gauge downstream from each service regulator. Pressure gauges are specified in Section 23 05 00 "Common Work Results for HVAC."

### 3.4 INSTALLATION OF INDOOR PIPING

- A. Comply with NFPA 54 the International Fuel Gas Code for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Do not install piping in concealed locations unless sleeved with the sleeve open at both ends.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Where installing piping above accessible ceilings, allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access. Do not locate valves within return air plenums.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
  - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
  - 2. Install sediment trap on both sides of regulators for gas reduction to 2 psig with valve and cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- P. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.
  - 1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
  - 2. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
  - 3. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
  - 4. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
    - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
  - 5. Prohibited Locations:
    - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
    - b. Do not install natural-gas piping in solid walls or partitions.
- Q. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- R. Connect branch piping from top or side of horizontal piping.
- S. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.

- T. Do not use natural-gas piping as grounding electrode.
  - U. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
  - V. Install pressure gauge downstream from each line regulator. Pressure gauges are specified in Section 23 05 00 "Common Work Results for HVAC."
  - W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 23 05 00 "Common Work Results for HVAC."
  - X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 23 05 00 "Common Work Results for HVAC."
  - Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 23 05 00 "Common Work Results for HVAC."
- 3.5 INSTALLATION OF SERVICE-METER ASSEMBLIES
- A. Install service-meter assemblies aboveground, on concrete bases.
  - B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.
  - C. Install strainer on inlet of service-pressure regulator and meter set.
  - D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.
  - E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.
  - F. Install service meters downstream from pressure regulators.
  - G. Install metal bollards to protect meter assemblies. Comply with requirements in Section 05 50 00 "Metal Fabrications" for pipe bollards.
- 3.6 INSTALLATION OF VALVES
- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless steel tubing, aluminum, or copper connector.
  - B. Install underground valves with valve boxes.
  - C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
  - D. Install earthquake valves aboveground outside buildings according to listing.
  - E. Install anode for metallic valves in underground PE piping.
  - F. Do not install valves in return-air plenums.
- 3.7 PIPING JOINT CONSTRUCTION
- A. Ream ends of pipes and tubes and remove burrs.
  - B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
  - C. Threaded Joints:
    - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
    - 2. Cut threads full and clean using sharp dies.
    - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
    - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
    - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
  - D. Welded Joints:
    - 1. Construct joints in accordance with AWS D10.12/D10.12M, using qualified processes and welding operators.
    - 2. Bevel plain ends of steel pipe.
    - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
  - E. Brazed Joints: Construct joints in accordance with AWS's "Braze Handbook," "Pipe and Tube" Chapter.

- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
  - G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, and then use wrench. Do not overtighten.
  - H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join in accordance with ASTM D2657.
    - 1. Plain-End Pipe and Fittings: Use butt fusion.
    - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.
- 3.8 INSTALLATION OF HANGERS AND SUPPORTS
- A. Comply with requirements for seismic-restraint devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
  - B. Comply with requirements in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.
  - C. Install hangers for steel piping and copper tubing, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
  - D. Install hangers for corrugated stainless steel tubing, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
  - E. Support horizontal piping within 12 inches of each fitting.
  - F. Support vertical runs of steel piping and copper tubing to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
  - G. Support vertical runs of corrugated stainless steel tubing to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- 3.9 PIPING CONNECTIONS
- A. Connect to utility's gas main according to utility's procedures and requirements.
  - B. Install natural-gas piping electrically continuous, and bonded to gas-appliance equipment grounding conductor of the circuit powering the appliance in accordance with NFPA 70.
  - C. Where installing piping adjacent to appliances, allow space for service and maintenance of appliances.
  - D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- 3.10 LABELING AND IDENTIFICATION
- A. Comply with requirements in Section 23 05 53 "Identification for HVAC Piping and Equipment" for piping and valve identification.
  - B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.
- 3.11 CONCRETE BASES
- A. Concrete Bases: Anchor equipment to concrete base.
    - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
    - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
    - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
    - 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
    - 6. Use 3000 psig, 28-day, compressive-strength concrete and reinforcement as specified in Section 03 30 00 "Cast-in-Place Concrete."

3.12 FIELD QUALITY CONTROL

- A. Tests and Inspections:
  - 1. Test, inspect, and purge natural gas in accordance with NFPA 54 the International Fuel Gas Code and authorities having jurisdiction.
  - 2. Natural-gas piping will be considered defective if it does not pass tests and inspections.
- B. Prepare test and inspection reports.

3.13 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain earthquake valves.

3.14 OUTDOOR PIPING SCHEDULE

- A. Underground natural-gas piping is to be one of the following:
  - 1. PE pipe and fittings joined by heat fusion, or mechanical couplings; service-line risers with tracer wire terminated in an accessible location.
  - 2. Steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
  - 3. Drawn]-temper copper tube with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
  - 4. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- B. Aboveground natural-gas piping is to be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with wrought-steel fittings and welded joints.
  - 3. Drawn-temper copper tube with wrought-copper fittings and brazed joints.

3.15 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)

- A. Aboveground, branch piping NPS 1 and smaller is to be one of the following:
  - 1. Corrugated stainless steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
  - 2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
  - 3. Annealed-temper, copper tube with wrought-copper fittings and brazed joints.
  - 4. Aluminum tube with flared fittings and joints.
  - 5. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping is to be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with wrought-steel fittings and welded joints.
  - 3. Drawn-temper copper tube with wrought-copper fittings and brazed joints.
- C. Underground, below building, piping is to be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with wrought-steel fittings and welded joints.
  - 3. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
  - 4. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground portion of vent pipe and fittings with protective coating for steel piping.

3.16 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 0.5 PSIG (3.45 kPa) AND LESS THAN 5 PSIG (34.5 kPa)

- A. Aboveground, branch piping NPS 1 and smaller is to be one of the following:
  - 1. Corrugated stainless steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
  - 2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
  - 3. Annealed-temper copper tube with wrought-copper fittings and brazed joints.
  - 4. Aluminum tube with flared fittings and joints.
  - 5. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping is to be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with steel welding fittings and welded joints.

3. Drawn-temper copper tube with wrought-copper fittings and brazed joints.
  - C. Underground, below building, piping is to be one of the following:
    1. Steel pipe with malleable-iron fittings and threaded joints.
    2. Steel pipe with wrought-steel fittings and welded joints.
    3. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat underground pipe and fittings with protective coating for steel piping.
    4. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground portion of vent pipe and fittings with protective coating for steel piping.
- 3.17 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 5 PSIG (34.5 kPa)
- A. Aboveground Piping: Maximum operating pressure more than 5 psig.
  - B. Aboveground, Branch Piping: Steel pipe with steel welding fittings and welded joints.
  - C. Aboveground, distribution piping is to be one of the following:
    1. Steel pipe with steel welding fittings and welded joints.
    2. Drawn-temper copper tube with wrought-copper fittings and brazed joints.
  - D. Underground, below building, piping is to be one of the following:
    1. Steel pipe with malleable-iron fittings and threaded joints.
    2. Steel pipe with wrought-steel fittings and welded joints.
    3. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
    4. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground portion of vent pipe and fittings with protective coating for steel piping.
- 3.18 UNDERGROUND, MANUAL GAS SHUTOFF VALVE SCHEDULE
- A. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.
  - B. Underground:
    1. PE valves.
    2. NPS 2 (DN 50) and Smaller: Bronze plug valves.
    3. NPS 2-1/2 (DN 65) and Larger: Cast-iron, lubricated plug valves.
- 3.19 ABOVEGROUND, MANUAL GAS SHUTOFF VALVE SCHEDULE
- A. Valves for pipe sizes NPS 2 and smaller at service meter are to be one of the following:
    1. One-piece, bronze ball valve with bronze trim.
    2. Two-piece, full-port, bronze ball valves with bronze trim.
    3. Bronze plug valve.
  - B. Valves for pipe sizes NPS 2-1/2 and larger at service meter are to be one of the following:
    1. Two-piece, full-port, bronze ball valves with bronze trim.
    2. Bronze plug valve.
    3. Cast-iron, nonlubricated plug valve.
  - C. Distribution piping valves for pipe sizes NPS 2 and smaller are to be one of the following:
    1. One-piece, bronze ball valve with bronze trim.
    2. Two-piece, full-port, bronze ball valves with bronze trim.
    3. Bronze plug valve.
  - D. Distribution piping valves for pipe sizes NPS 2-1/2 and larger are to be one of the following:
    1. Two-piece, full-port, bronze ball valves with bronze trim.
    2. Bronze plug valve.
    3. Cast-iron, nonlubricated lubricated plug valve.
  - E. Valves in branch piping for single appliance are to be one of the following:
    1. One-piece, bronze ball valve with bronze trim.
    2. Two-piece, full-port, bronze ball valves with bronze trim.
    3. Bronze plug valve.

END OF SECTION 23 11 23

## SECTION 23 22 13

### STEAM AND CONDENSATE PIPING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Steel pipe and fittings.
  - 2. Stainless steel pipe and fittings.
  - 3. Fiberglass pipe and fittings.
  - 4. Joining materials.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Delegated Design Submittals:
  - 1. Design calculations and detailed fabrication and assembly of pipe anchors and alignment guides, hangers and supports for multiple pipes, expansion joints and loops, and attachments of the same to the building structure.
  - 2. Locations of pipe anchors and alignment guides and expansion joints and loops.
  - 3. Locations of and details for penetrations, including sleeves and sleeve seals for exterior walls, floors, basement, and foundation walls.
  - 4. Locations of and details for penetration and firestopping for fire- and smoke-rated wall and floor and ceiling assemblies.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Piping layout, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Suspended ceiling components.
  - 2. Other building services.
  - 3. Structural members.
- B. Qualification Data: For Installer.
- C. Welding certificates.
- D. Field quality-control reports.

##### 1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
  - 1. Fiberglass Pipe and Fitting Installers: Installers of fiberglass pipe and fittings shall be certified by the manufacturer of pipes and fittings as having been trained and qualified to join fiberglass piping with manufacturer-recommended adhesive.
- B. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Pipe Welding: Qualify procedures and operators according to the following:
  - 1. ASME Compliance: Comply with ASME B31.1, "Power Piping," and ASME B31.9, "Building Services Piping," for materials, products, and installation.
  - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

#### PART 2 - PRODUCTS

##### 2.1 PERFORMANCE REQUIREMENTS

- A. Components and installation shall be capable of withstanding the following minimum working pressures and temperatures unless otherwise indicated:
  - 1. Condensate Piping: 20 psig at 250 deg F.

2. Blowdown-Drain Piping: Equal to pressure of the piping system to which it is attached.
3. Air-Vent and Vacuum-Breaker Piping: Equal to pressure of the piping system to which it is attached.
4. Safety-Valve-Inlet and -Outlet Piping: Equal to pressure of the piping system to which it is attached.

## 2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A53/A53M, black steel, plain ends, welded and seamless, Grade B, and Schedule as indicated in piping applications articles.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125, 150, and 300 as indicated in piping applications articles.
- C. Malleable-Iron Threaded Fittings: ASME B16.3; Classes 150 and 300 as indicated in piping applications articles.
- D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in piping applications articles.
- E. Cast-Iron Threaded Flanges and Flanged Fittings: ASME B16.1, Classes 125 and 250 as indicated in piping applications articles; raised ground face, and bolt holes spot faced.
- F. Wrought-Steel Fittings: ASTM A234/A234M, wall thickness to match adjoining pipe.
- G. Wrought-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
  1. Material Group: 1.1.
  2. End Connections: Butt welding.
  3. Facings: Raised face.
- H. Steel Pipe Nipples: ASTM A733, made of ASTM A53/A53M, black steel of same Type, Grade, and Schedule as pipe in which installed.

## 2.3 STAINLESS STEEL PIPE AND FITTINGS

- A. Stainless Steel Pipe: ASTM A312/A312M, plain ends, seamless; stainless steel of types and schedules as indicated in piping application articles.
- B. Stainless Steel Socket Weld Fittings: Stainless steel, wrought or forged, of types and classes as indicated in piping application articles.
- C. Stainless Steel Flanges and Flanged Fittings: ASME B16.5, Class 150, wrought, raised face weld neck, including gaskets, bolts, and nuts of material to match pipe.

## 2.4 FIBERGLASS PIPE AND FITTINGS

- A. Reinforced Thermosetting Resin Pressure Pipe (RTRP): ASTM D2996, Type 1, Grade 1, Class F, filament-wound pipe with tapered bell and spigot ends for adhesive joints.
- B. Glass-Fiber-Reinforced Thermosetting-Resin: ASTM D5685, Type 2 or Type 5, Grade 1, Class F, compression or spray-up/contact molded fittings of same material, pressure class, and joining method as pipe.
- C. Flanges: ASTM D4024, Type 1, Grade 1, full-face gaskets suitable for the service, minimum 1/8 inch thick, 60-70 durometer. ASTM A307, Grade B, hex head bolts with washers.

## 2.5 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
  1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless otherwise indicated.
    - a. Full-Face Type: For flat-face flanges.
    - b. Narrow-Face Type: For raised-face flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel or stainless steel of type to match pipe unless otherwise indicated.
- C. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- D. Welding Materials: Comply with Section II, Part C, of ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

- E. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION OF PIPING**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless otherwise indicated.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Install piping to allow application of insulation.
- I. Select system components with pressure rating equal to or greater than system operating pressure.
- J. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- K. Install drains, consisting of a tee fitting, NPS 3/4 full port-ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- L. Install steam supply piping at a minimum uniform grade of 0.2 percent downward in direction of steam flow.
- M. Install condensate return piping at a minimum uniform grade of 0.4 percent downward in direction of condensate flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side down.
- O. Install branch connections to mains using mechanically formed tee fittings in main pipe, with the branch connected to top of main pipe.
- P. Install valves according to Section 23 05 23 "General-Duty Valves for HVAC Piping" or other Sections as needed.
- Q. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- R. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.
- S. Install shutoff valve immediately upstream of each dielectric fitting.
- T. Install strainers on supply side of control valves, pressure-reducing valves, traps, and elsewhere as indicated. Install NPS 3/4 nipple and full port ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.
- U. Comply with requirements in Section 23 05 00 "Common Work Results for HVAC" for installation of expansion loops, expansion joints, anchors, and pipe alignment guides.
- V. Comply with requirements in Section 23 05 53 "Identification for HVAC Piping and Equipment" for identifying piping.
- W. Install drip legs at low points and natural drainage points such as ends of mains, bottoms of risers, and ahead of pressure regulators, and control valves.
  - 1. On straight runs with no natural drainage points, install drip legs at intervals not exceeding 300 ft..
  - 2. Size drip legs same size as main. In steam mains NPS 6 and larger, drip leg size can be reduced, but to no less than NPS 4.
- X. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 23 05 00 "Common Work Results for HVAC."
- Y. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 23 05 00 "Common Work Results for HVAC."

- Z. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 23 05 00 "Common Work Results for HVAC."
- 3.2 INSTALLATION OF STEAM AND CONDENSATE PIPING SPECIALTIES
- A. Comply with requirements in Section 23 22 16 "Steam and Condensate Heating Piping Specialties" for installation requirements for strainers, flash tanks, special-duty valves, steam traps, thermostatic air vents and vacuum breakers, and steam and condensate meters.
- 3.3 INSTALLATION OF HANGERS AND SUPPORTS
- A. Comply with requirements for seismic restraints in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
  - B. Comply with requirements in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment" for installation of hangers, supports, and anchor devices.
  - C. Install the following pipe attachments:
    - 1. Adjustable steel clevis hangers for individual horizontal piping less than 20 ft. long.
    - 2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 ft. or longer.
    - 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 ft. or longer, supported on a trapeze.
    - 4. Spring hangers to support vertical runs.
  - D. Install hangers for steel steam supply piping and steel steam condensate piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
  - E. Install hangers for fiberglass piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
  - F. Support horizontal piping within 12 inches of each fitting.
  - G. Support vertical runs of steel steam supply piping and steel steam condensate piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
  - H. Support vertical runs of fiberglass piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- 3.4 PIPE JOINT CONSTRUCTION
- A. Ream ends of pipes and remove burrs. Bevel plain ends of steel pipe.
  - B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
  - C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
    - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
    - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
  - D. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
  - E. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
  - F. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.
- 3.5 TERMINAL EQUIPMENT CONNECTIONS
- A. Size for supply and return piping connections shall be the same as or larger than equipment connections.
  - B. Install traps and control valves in accessible locations close to connected equipment.
  - C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.

- D. Install vacuum breakers downstream from control valve, close to coil inlet connection.
- E. Install a drip leg at coil outlet.

3.6 FIELD QUALITY CONTROL

- A. Prepare steam and condensate piping according to ASME B31.1, "Power Piping," and ASME B31.9, "Building Services Piping," and as follows:
  - 1. Leave joints, including welds, uninsulated and exposed for examination during test.
  - 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
  - 3. Flush system with clean water. Clean strainers.
  - 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
- B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- D. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
  - 2. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength.
  - 3. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
- E. Prepare test and inspection reports.

END OF SECTION 23 22 13

**SECTION 23 23 00**  
**REFRIGERANT PIPING**

**PART 1 - GENERAL**

1.1 SUMMARY

- A. Section Includes:
  - 1. Copper tube and fittings.
  - 2. Steel pipe and fittings.
  - 3. Valves and specialties.
  - 4. Refrigerants.

1.2 ACTION SUBMITTALS

- A. Product Data: For the following:
  - 1. Solenoid valves.
  - 2. Thermostatic expansion valves.
  - 3. Hot-gas bypass valves.
  - 4. Strainers.
  - 5. Filter dryers.
  - 6. Pressure-regulating valves.
  - 7. Mufflers.
- B. Product Data Submittals: For each product.
  - 1. Submit data for each type of refrigerant piping, fitting, valve, piping specialty, and refrigerant.
- C. Delegated Design Submittals: For refrigerant piping size and layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.
- D. Shop Drawings:
  - 1. Show piping size and piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.
  - 2. Show interface and spatial relationships between piping and equipment.
  - 3. Shop Drawing Scale: 1/4 inch equals 1 foot.

1.3 INFORMATIONAL SUBMITTALS

- A. Welding Certificates: For each welder performing shop or field welding on Project.
- B. Field Quality-Control Reports: For each field quality control test and inspection.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with ASME Boiler and Pressure Vessel Code: Section IX, "Welding, Brazing, and Fusing Qualifications."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store piping with end caps in place to ensure that piping interior and exterior are clean when installed.
- B. Prepare valves and specialties for shipping as follows:
  - 1. Protect internal parts against rust and corrosion.
  - 2. Protect threads and other end connections.
- C. Use the following precautions during storage:
  - 1. Maintain valve and specialty end protection.

2. Store valves and specialties indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

## **PART 2 - PRODUCTS**

### **2.1 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," for refrigerant piping size and layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.
- B. Comply with ASHRAE 15.
- C. Comply with ASME B31.5.
- D. Test Pressure for Refrigerant R-410A and R-32:
  1. Suction Tubing for Refrigeration and Air-Conditioning Applications Other than Heat Pumps: 300 psig.
  2. Suction Tubing for Heat-Pump Applications: 535 psig.
  3. Hot-Gas and Tubing Lines: 535 psig.

### **2.2 COPPER TUBE AND FITTINGS**

- A. Copper Tube: ASTM B88, Type K or L ASTM B280, Type ACR.
- B. Wrought-Copper Fittings, Solder Joint: ASME B16.22.
- C. Wrought-Copper Fittings, Brazed Joint: ASME B16.50.
- D. Wrought-Copper Unions: ASME B16.22.
- E. Solder Filler Metals: ASTM B32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
- F. Brazing Filler Metals: AWS A5.8M/A5.8.
- G. Flexible Connectors:
  1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
  2. End Connections: Socket ends.
  3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
  4. Working Pressure Rating: Factory test at minimum 500 psig.
  5. Maximum Operating Temperature: 250 deg F.
- H. Copper-Tube, Pressure-Seal-Joint Fittings for Refrigerant Piping:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Conex Banninger - USA.
    - b. Mueller Streamline Co.; a company of Mueller Industries.
    - c. Parker Hannifin; Sporlan Division (Zoomlock).
  2. Standard: UL 207; certified by UL for field installation. Certification as a UL-recognized component alone is unacceptable.
  3. Housing: Copper.
  4. O-Rings: HNBR compatible with specific refrigerant.
  5. Tools: Manufacturer's approved special tools.
  6. Minimum Rated Pressure: 700 psig.

### **2.3 STEEL PIPE AND FITTINGS**

- A. Steel Pipe: ASTM A53/A53M, black steel with plain ends; type, grade, and wall thickness as selected in piping application articles.
- B. Wrought-Steel Fittings: ASTM A234/A234M, for welded joints.
- C. Steel Flanges and Flanged Fittings: ASME B16.5 steel, including bolts, nuts, gaskets, bevel-welded end connection, and raised face.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 and ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

- E. Flanged Unions:
  - 1. Body: Forged-steel flanges for NPS 1 to NPS 1-1/2 and ductile iron for NPS 2 to NPS 3. Factory apply rust-resistant finish.
  - 2. Gasket: Fiber asbestos free.
  - 3. Fasteners: Four plated-steel bolts, with silicon bronze nuts. Factory apply rust-resistant finish.
  - 4. End Connections: Brass tailpiece adapters for solder-end connections to copper tubing.
  - 5. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
  - 6. Pressure Rating: Factory test at minimum 400 psig.
  - 7. Maximum Operating Temperature: 330 deg F.
- F. Flexible Connectors:
  - 1. Body: Stainless steel bellows with woven, flexible, stainless steel-wire-reinforced protective jacket.
  - 2. End Connections:
    - a. NPS 2 (DN 50) and Smaller: With threaded-end connections.
    - b. NPS 2-1/2 (DN 65) and Larger: With flanged-end connections.
  - 3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
  - 4. Pressure Rating: Factory test at minimum 500 psig.
  - 5. Maximum Operating Temperature: 250 deg F.

## 2.4 VALVES AND SPECIALTIES

- A. Diaphragm Packless Valves:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Henry Technologies Inc.; The Henry Group.
    - c. Parker (Parker Hannifin).
  - 2. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
  - 3. Diaphragm: Phosphor bronze and stainless steel with stainless steel spring.
  - 4. Operator: Rising stem and hand wheel.
  - 5. Seat: Nylon.
  - 6. End Connections: Socket, union, or flanged.
  - 7. Working Pressure Rating: 500 psig.
  - 8. Maximum Operating Temperature: 240 deg F.
- B. Packed-Angle Valves:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Henry Technologies Inc.; The Henry Group.
    - c. Parker (Parker Hannifin).
  - 2. Body and Bonnet: Forged brass or cast bronze.
  - 3. Packing: Molded stem, back seating, and replaceable under pressure.
  - 4. Operator: Rising stem.
  - 5. Seat: Nonrotating, self-aligning polytetrafluoroethylene.
  - 6. Seal Cap: Forged-brass or valox hex cap.
  - 7. End Connections: Socket, union, threaded, or flanged.
  - 8. Working Pressure Rating: 500 psig.
  - 9. Maximum Operating Temperature: 275 deg F.
- C. Check Valves:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
    - b. Danfoss, Inc.
    - c. Emerson Climate Technologies; Emerson Electric Co.
  - 2. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
  - 3. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
  - 4. Piston: Removable polytetrafluoroethylene seat.
  - 5. Closing Spring: Stainless steel.
  - 6. Manual Opening Stem: Seal cap, plated-steel stem, and graphite seal.
  - 7. End Connections: Socket, union, threaded, or flanged.
  - 8. Maximum Opening Pressure: 0.50 psig.
  - 9. Working Pressure Rating: 500 psig.
  - 10. Maximum Operating Temperature: 275 deg F.

- D. Service Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Emerson Climate Technologies; Emerson Electric Co.
    - c. Henry Technologies Inc.; The Henry Group.
  2. Body: Forged brass with brass cap, including key end to remove core.
  3. Core: Removable ball-type check valve with stainless steel spring.
  4. Seat: Polytetrafluoroethylene.
  5. End Connections: Copper spring.
  6. Working Pressure Rating: 500 psig.
  7. Maximum Operating Temperature: 275 deg F.
- E. Refrigerant Locking Caps:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. C & D Valve, LLC.
    - b. JB Industries.
    - c. RectorSeal HVAC; a CSW Industrials Company.
  2. Description: Locking-type, tamper-resistant, threaded caps to protect refrigerant-charging ports from unauthorized refrigerant access and leakage.
  3. Material: Brass, with protective shroud or sleeve.
  4. Refrigerant Identification: Color-coded, refrigerant specific based on AHRI Guideline N or Universal design.
  5. Special Tool: For installing and unlocking.
- F. Solenoid Valves: Comply with AHRI 760 I-P and UL 429; listed and labeled by an NRTL.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Emerson Climate Technologies; Emerson Electric Co.
    - c. Henry Technologies Inc.; The Henry Group.
  2. Body and Bonnet: Plated steel.
  3. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
  4. Seat: Polytetrafluoroethylene.
  5. End Connections: Threaded.
  6. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter, and 24 V ac coil.
  7. Working Pressure Rating: 400 psig.
  8. Maximum Operating Temperature: 240 deg F.
- G. Safety Relief Valves: Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Henry Technologies Inc.; The Henry Group.
    - c. Parker (Parker Hannifin).
  2. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
  3. Piston, Closing Spring, and Seat Insert: Stainless steel.
  4. Seat: Polytetrafluoroethylene.
  5. End Connections: Threaded.
  6. Working Pressure Rating: 400 psig.
  7. Maximum Operating Temperature: 240 deg F.
- H. Thermostatic Expansion Valves: Comply with AHRI 750 I-P.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Emerson Climate Technologies; Emerson Electric Co.
    - c. Henry Technologies Inc.; The Henry Group.
  2. Body, Bonnet, and Seal Cap: Forged brass or steel.
  3. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
  4. Packing and Gaskets: Non-asbestos.
  5. Capillary and Bulb: Copper tubing filled with refrigerant charge.
  6. Suction Temperature: 40 deg F.
  7. Superheat: Adjustable.
  8. Reverse-flow option (for heat-pump applications).
  9. End Connections: Socket, flare, or threaded union.

10. Working Pressure Rating: 700 psig.
- I. Hot-Gas Bypass Valves: Comply with UL 429; listed and labeled by an NRTL.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Henry Technologies Inc.; The Henry Group.
    - c. Parker (Parker Hannifin).
  2. Body, Bonnet, and Seal Cap: Ductile iron or steel.
  3. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
  4. Packing and Gaskets: Non-asbestos.
  5. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
  6. Seat: Polytetrafluoroethylene.
  7. Equalizer: Internal.
  8. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter and 24 V ac coil.
  9. End Connections: Socket.
  10. Set Pressure: .
  11. Throttling Range: Maximum 5 psig.
  12. Working Pressure Rating: 500 psig.
  13. Maximum Operating Temperature: 240 deg F.
- J. Straight-Type Strainers:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Henry Technologies Inc.; The Henry Group.
    - c. Parker (Parker Hannifin).
  2. Body: Welded steel with corrosion-resistant coating.
  3. Screen: 100-mesh stainless steel.
  4. End Connections: Socket or flare.
  5. Working Pressure Rating: 500 psig.
  6. Maximum Operating Temperature: 275 deg F.
- K. Angle-Type Strainers:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Henry Technologies Inc.; The Henry Group.
    - c. Parker (Parker Hannifin).
  2. Body: Forged brass or cast bronze.
  3. Drain Plug: Brass hex plug.
  4. Screen: 100-mesh monel.
  5. End Connections: Socket or flare.
  6. Working Pressure Rating: 500 psig.
  7. Maximum Operating Temperature: 275 deg F.
- L. Moisture/Liquid Indicators:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Emerson Climate Technologies; Emerson Electric Co.
    - c. Henry Technologies Inc.; The Henry Group.
  2. Body: Forged brass.
  3. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
  4. Indicator: Color-coded to show moisture content in parts per million (ppm).
  5. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.
  6. End Connections: Socket or flare.
  7. Working Pressure Rating: 500 psig.
  8. Maximum Operating Temperature: 240 deg F.
- M. Replaceable-Core Filter Dryers: Comply with AHRI 730 I-P.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Emerson Climate Technologies; Emerson Electric Co.
    - c. Henry Technologies Inc.; The Henry Group.
  2. Body and Cover: Painted-steel shell with ductile-iron cover, stainless steel screws, and neoprene gaskets.
  3. Filter Media: 10 micron, pleated with integral end rings; stainless steel support.

4. Desiccant Media: Activated charcoal.
  5. Design: Reverse flow (for heat-pump applications).
  6. End Connections: Socket.
  7. Access Ports: NPS 1/4 connections at entering and leaving sides for pressure differential measurement.
  8. Maximum Pressure Loss: 2 psig.
  9. Rated Flow: .
  10. Working Pressure Rating: 500 psig.
  11. Maximum Operating Temperature: 240 deg F.
- N. Permanent Filter Dryers: Comply with AHRI 730 I-P.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Emerson Climate Technologies; Emerson Electric Co.
    - c. Henry Technologies Inc.; The Henry Group.
  2. Body and Cover: Painted-steel shell.
  3. Filter Media: 10 micron, pleated with integral end rings; stainless steel support.
  4. Desiccant Media: Activated charcoal.
  5. Design: Reverse flow (for heat-pump applications).
  6. End Connections: Socket.
  7. Access Ports: NPS 1/4 connections at entering and leaving sides for pressure differential measurement.
  8. Maximum Pressure Loss: 2 psig.
  9. Rated Flow: .
  10. Working Pressure Rating: 500 psig.
  11. Maximum Operating Temperature: 240 deg F.
- O. Mufflers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Danfoss, Inc.
    - b. Emerson Climate Technologies; Emerson Electric Co.
    - c. Henry Technologies Inc.; The Henry Group.
  2. Body: Welded steel with corrosion-resistant coating.
  3. End Connections: Socket or flare.
  4. Working Pressure Rating: 500 psig.
  5. Maximum Operating Temperature: 275 deg F.
- P. Receivers: Comply with AHRI 495.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Henry Technologies Inc.; The Henry Group.
    - b. Parker Hannifin; Sporlan Division (Zoomlock).
  2. Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
  3. Comply with UL 207; listed and labeled by an NRTL.
  4. Body: Welded steel with corrosion-resistant coating.
  5. Tappings: Inlet, outlet, liquid-level indicator, and safety-relief valve.
  6. End Connections: Socket or threaded.
  7. Working Pressure Rating: 450 psig.
  8. Maximum Operating Temperature: 250 deg F.
- Q. Liquid Accumulators: Comply with AHRI 495.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Emerson Climate Technologies; Emerson Electric Co.
    - b. Henry Technologies Inc.; The Henry Group.
    - c. Parker (Parker Hannifin).
  2. Body: Welded steel with corrosion-resistant coating.
  3. End Connections: Socket or threaded.
  4. Working Pressure Rating: 500 psig.
  5. Maximum Operating Temperature: 275 deg F .

## 2.5 REFRIGERANTS

- A. R-410A, ASHRAE 34: Pentafluoroethane/Difluoromethane.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Arkema Inc.
    - b. DuPont Fluorochemicals Div.

- c. Genetron Refrigerants; Honeywell International Inc.

### **PART 3 - EXECUTION**

#### **3.1 PIPING APPLICATION SCHEDULES**

- A. Refrigerant: R-410A
- B. Suction, Hot-Gas, and Liquid Tubing for Conventional Air-Conditioning (Cooling-Only) Applications, NPS 1-1/2 (DN 40) and Smaller: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed or soldered joints.
- C. Suction, Hot-Gas, and Liquid Tubing for Conventional Air-Conditioning (Cooling-Only) Applications, NPS 4 (DN 100) and Smaller: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
- D. Suction, Hot-Gas, and Liquid Tubing for Conventional Air-Conditioning (Cooling-Only) Applications, NPS 2 to NPS 4 (DN 50 to DN 100): Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
- E. Safety-Relief-Valve Discharge Tubing for Conventional Air-Conditioning (Cooling-Only) Applications, Copper: Type K or Type L, drawn-temper or annealed-temper tubing and wrought-copper fittings with brazed or soldered joints.
- F. Safety-Relief-Valve Discharge Piping for Conventional Air-Conditioning (Cooling-Only) Applications, Steel: Schedule 40, black steel and wrought-steel fittings with welded joints.
- G. Suction, Hot-Gas, and Liquid Tubing for Heat-Pump Applications, NPS 1-1/2 (DN 40) and Smaller: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed or soldered joints.
- H. Suction, Hot-Gas, and Liquid Tubing for Heat-Pump Applications, NPS 4 (DN 100) and Smaller: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
- I. Suction, Hot-Gas, and Liquid Tubing for Heat-Pump Applications, NPS 2 to NPS 4 (DN 50 to DN 100): Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.
- J. Safety-Relief-Valve Discharge Tubing for Heat-Pump Applications, Copper: Type K or Type L, drawn-temper or annealed-temper tubing and wrought-copper fittings with brazed or soldered joints
- K. Safety-Relief-Valve Discharge Piping for Heat-Pump Applications, Steel: Schedule 40, black steel and wrought-steel fittings with welded joints.

#### **3.2 VALVE AND SPECIALTY APPLICATIONS**

- A. Install diaphragm packless valves in suction and discharge lines of compressor.
- B. Install service valves for gauge taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.
- C. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.
- D. Except as otherwise indicated, install diaphragm packless valves on inlet and outlet side of filter dryers.
- E. Install a full-size, three-valve bypass around filter dryers.
- F. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at top.
- G. Install thermostatic expansion valves as close as possible to distributors on evaporators.
  - 1. Install valve so diaphragm case is warmer than bulb.
  - 2. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
  - 3. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.
- H. Install safety-relief valves where required by ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside in accordance with ASHRAE 15.
- I. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.

- J. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for the device being protected:
  - 1. Solenoid valves.
  - 2. Thermostatic expansion valves.
  - 3. Hot-gas bypass valves.
  - 4. Compressor.
- K. Install filter dryers in liquid line between compressor and thermostatic expansion valve, and in the suction line at the compressor.
- L. Install receivers sized to accommodate pump-down charge.
- M. Install flexible connectors at compressors.
- N. Provide refrigerant locking caps on refrigerant charging ports that are located outdoors unless otherwise protected from unauthorized access by a means acceptable to authority having jurisdiction.

### 3.3 INSTALLATION OF PIPING, GENERAL

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.
- B. Install refrigerant piping in accordance with ASHRAE 15.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping adjacent to machines to allow service and maintenance.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Select system components with pressure rating equal to or greater than system operating pressure.
- J. Refer to Section 23 09 23 "Direct Digital Control (DDC) System for HVAC" and Section 23 09 93.11 "Sequence of Operations for HVAC DDC" for solenoid valve controllers, control wiring, and sequence of operation.
- K. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- L. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Section 08 31 13 "Access Doors and Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.
- M. Install refrigerant piping in protective conduit where installed belowground.
- N. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- O. Slope refrigerant piping as follows:
  - 1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
  - 2. Install horizontal suction lines with a uniform slope downward to compressor.
  - 3. Install traps and double risers to entrain oil in vertical runs.
  - 4. Liquid lines may be installed level.
- P. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
- Q. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:
  - 1. Shot blast the interior of piping.
  - 2. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.
  - 3. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
  - 4. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.

5. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
  6. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.
- R. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- S. Identify refrigerant piping and valves in accordance with Section 23 05 53 "Identification for HVAC Piping and Equipment."
- T. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 23 05 00 "Common Work Results for HVAC."
- U. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 23 05 00 "Common Work Results for HVAC."
- V. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 23 05 00 "Common Work Results for HVAC."
- 3.4 PIPE JOINT CONSTRUCTION
- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.
- D. Soldered Joints: Construct joints in accordance with ASTM B828 or CDA's "Copper Tube Handbook."
- E. Brazed Joints: Construct joints in accordance with AWS BRH, "Brazing Handbook," Ch. 35, "Pipe and Tubing."
1. Use Type BCuP (copper-phosphorus) alloy for joining copper socket fittings with copper pipe.
  2. Use Type BA<sub>g</sub> (cadmium-free silver) alloy for joining copper with bronze or steel.
- F. Threaded Joints: Thread steel pipe with tapered pipe threads in accordance with ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and to restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
  2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.
- H. Welded Joints: Construct joints in accordance with AWS D10.12M/D10.12.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- 3.5 INSTALLATION OF HANGERS AND SUPPORTS
- A. Comply with requirements for seismic restraints in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
- B. Comply with Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.
- C. Install the following pipe attachments:
1. Adjustable steel clevis hangers for individual horizontal runs less than 20 ft. long.
  2. Roller hangers and spring hangers for individual horizontal runs 20 ft. or longer.
  3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 ft. or longer, supported on a trapeze.
  4. Spring hangers to support vertical runs.
  5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- D. Install hangers for copper tubing and steel piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
- E. Support horizontal piping within 12 inches of each fitting.
- F. Support vertical runs of copper tubing and steel piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Tests and Inspections:
  - 1. Comply with ASME B31.5, Chapter VI.
  - 2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
  - 3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in "Performance Requirements" Article.
    - a. Fill system with nitrogen to the required test pressure.
    - b. System must maintain test pressure at the manifold gauge throughout duration of test.
    - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
    - d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.
- C. Prepare test and inspection reports.

3.7 SYSTEM CHARGING

- A. Charge system using the following procedures:
  - 1. Install core in filter dryers after leak test but before evacuation.
  - 2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
  - 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
  - 4. Charge system with a new filter-dryer core in charging line.

3.8 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, in accordance with manufacturer's written instructions:
  - 1. Open shutoff valves in condenser water circuit.
  - 2. Verify that compressor oil level is correct.
  - 3. Open compressor suction and discharge valves.
  - 4. Open refrigerant valves but not bypass valves that are used for other purposes.
  - 5. Check open compressor-motor alignment and verify lubrication for motors and bearings.
- E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION 23 23 00

## SECTION 23 31 13

### METAL DUCTS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Single-wall rectangular ducts and fittings.
  - 2. Double-wall rectangular ducts and fittings.
  - 3. Single-wall round ducts and fittings.
  - 4. Double-wall round ducts and fittings.
  - 5. Sheet metal materials.
  - 6. Duct liner.
  - 7. Sealants and gaskets.
  - 8. Hangers and supports.
- B. Related Requirements:
  - 1. Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
  - 2. Section 23 33 00 "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

##### 1.2 DEFINITIONS

- A. OSHPD: Office of Statewide Health Planning and Development (State of California).

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of the following products:
  - 1. Liners and adhesives.
  - 2. Sealants and gaskets.
  - 3. Seismic-restraint devices.
- B. Shop Drawings:
  - 1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
  - 2. Factory- and shop-fabricated ducts and fittings.
  - 3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
  - 4. Elevation of top and bottom of ducts.
  - 5. Dimensions of all duct runs from building grid lines.
  - 6. Fittings.
  - 7. Reinforcement and spacing.
  - 8. Seam and joint construction.
  - 9. Penetrations through fire-rated and other partitions.
  - 10. Equipment installation based on equipment being used on Project.
  - 11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
  - 12. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.
  - 13.
- C. Delegated Design Submittals:
  - 1. Sheet metal thicknesses.
  - 2. Joint and seam construction and sealing.
  - 3. Reinforcement details and spacing.
  - 4. Materials, fabrication, assembly, and spacing of hangers and supports.
  - 5. Design Calculations: Calculations, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation for selecting hangers and supports.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: A single set of plans or BIM model, drawn to scale, showing the items described in this Section, and coordinated with all building trades.
- B. Welding certificates.
- C. Field quality-control reports.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
  - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
  - 3. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for duct joint and seam welding.
- B. Mockups:
  - 1. Before installing duct systems, build mockups representing static-pressure classes in excess of 3 inch wg. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
    - a. Five transverse joints.
    - b. One access door(s).
    - c. Two typical branch connections, each with at least one elbow.
    - d. Two typical flexible duct or flexible-connector connections for each duct and apparatus.
    - e. One 90-degree turn(s) with turning vanes.
    - f. One fire damper(s).
    - g. One smoke damper(s).
    - h. Perform leakage tests specified in "Field Quality Control" Article. Revise mockup construction and perform additional tests as required to achieve specified minimum acceptable results.
  - 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and with performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports are to withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible".
- C. Seismic Performance: Ductwork to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7. See Section 23 05 48 "Vibration and Seismic Controls for HVAC."
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
  - 2. Component Importance Factor: 1.5.
  - 3.
- D. Wind Performance: Ducts are to withstand the effects of wind determined in accordance with to ASCE/SEI 7. See Section 23 05 48 "Vibration and Seismic Controls for HVAC."
- E. Airstream Surfaces: Surfaces in contact with airstream comply with requirements in ASHRAE 62.1.
- F. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Startup."
- G. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
- H. Duct Dimensions: Unless otherwise indicated, all duct dimensions indicated on Drawings are inside clear dimensions and do not include insulation or duct wall thickness.

## 2.2 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
  - 1. Construct ducts of galvanized sheet steel unless otherwise indicated.
  - 2. For ducts exposed to weather, construct of Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
- B. Transverse Joints: Fabricate joints in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. For ducts with longest side less than 36 inches, select joint types in accordance with Figure 2-1.
  - 2. For ducts with longest side 36 inches or greater, use flange joint connector Type T-22, T-24, T-24A, T-25a, or T-25b. Factory-fabricated flanged duct connection system may be used if submitted and approved by engineer of record.
  - 3. Where specified for specific applications, all joints are to be welded.
- C. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. Where specified for specific applications, all joints are to be welded.
- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

## 2.3 DOUBLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. <Double click here to find, evaluate, and insert list of manufacturers and products.>
- B. Source Limitations: Obtain double-wall rectangular ducts and fittings from single manufacturer.
- C. Rectangular Ducts: Fabricate ducts with indicated dimensions for clear internal dimensions of the inner duct.
- D. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
  - 1. Construct ducts of galvanized sheet steel unless otherwise indicated.
  - 2. For ducts exposed to weather, construct outer duct of Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
- E. Transverse Joints: Select joint types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. For ducts with longest side less than 36 inches, select joint types in accordance with Figure 2-1.
  - 2. For ducts with longest side 36 inches or greater, use flange joint connector Type T-22, T-24, T-24A, T-25a, or T-25b. Factory-fabricated flanged duct connection system may be used if submitted and approved by engineer of record.
  - 3. Where specified for specific applications, all joints are to be welded.
- F. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. Where specified for specific applications, all joints are to be welded.
- G. Interstitial Insulation, Fibrous Glass: Duct liner complying with ASTM C1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
  - 1. Maximum Thermal Conductivity: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
  - 2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
  - 3. Coat insulation with antimicrobial coating.
  - 4. Cover insulation with polyester film complying with UL 181, Class 1.

- H. Interstitial Insulation, Flexible Elastomeric: Duct liner complying with ASTM C534/C534M, Type II for sheet materials, and with NFPA 90A or NFPA 90B.
  - 1. Maximum Thermal Conductivity: 0.25 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
- I. Inner Duct: Minimum 24-gauge perforated galvanized sheet steel having 3/32-inch-diameter perforations, with overall open area of 23 percent.

#### 2.4 SINGLE-WALL ROUND DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
  - 1. Construct ducts of galvanized sheet steel unless otherwise indicated.
  - 2. For ducts exposed to weather, construct of Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
  - 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. GreenSeam.
    - b. Nordfab Ducting.
    - c. Ductmate Industries, Inc; a DMI company.
- B. Source Limitations: Obtain single-wall round ducts and fittings from single manufacturer.
- C. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- D. Transverse Joints: Select joint types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
- E. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
  - 2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
- F. Tees and Laterals: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

#### 2.5 DOUBLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. MKT Metal Manufacturing.
  - 2. SEMCO, LLC; part of FlaktGroup.
  - 3. Set Duct Manufacturing.
- B. Source Limitations: Obtain double-wall round ducts and fittings from single manufacturer.
- C. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension) of the inner duct.
- D. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 3, "Round, Oval, and Flexible Duct," based on static-pressure class unless otherwise indicated.
  - 1. Construct ducts of galvanized sheet steel unless otherwise indicated.
  - 2. For ducts exposed to weather, construct outer duct of Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
  - 3. Transverse Joints: Select joint types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
    - a. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.

4. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
    - a. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
    - b. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
  5. Tees and Laterals: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - E. Inner Duct: Minimum 24-gauge perforated galvanized sheet steel having 3/32-inch-diameter perforations, with overall open area of 23 percent.
  - F. Interstitial Insulation, Fibrous Glass: Duct liner complying with ASTM C1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
    1. Maximum Thermal Conductivity: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
    2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
    3. Coat insulation with antimicrobial coating.
    4. Cover insulation with polyester film complying with UL 181, Class 1.
  - G. Interstitial Insulation, Flexible Elastomeric: Duct liner complying with ASTM C534/C534M, Type II for sheet materials, and with NFPA 90A or NFPA 90B.
    1. Maximum Thermal Conductivity: 0.25 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
- 2.6 SHEET METAL MATERIALS
- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials are to be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
  - B. Galvanized Sheet Steel: Comply with ASTM A653/A653M.
    1. Galvanized Coating Designation: G90.
    2. Finishes for Surfaces Exposed to View: Mill phosphatized.
  - C. PVC-Coated, Galvanized Sheet Steel: Comply with ASTM A653/A653M.
    1. Galvanized Coating Designation: G90.
    2. Minimum Thickness for Factory-Applied PVC Coating: 4 mils thick on sheet metal surface of ducts and fittings exposed to corrosive conditions, and minimum 1 mil thick on opposite surface.
    3. Coating Materials: Acceptable to authorities having jurisdiction for use on ducts listed and labeled by an NRTL for compliance with UL 181, Class 1.
  - D. Carbon-Steel Sheets: Comply with ASTM A1008/A1008M, with oiled, matte finish for exposed ducts.
  - E. Stainless Steel Sheets: Comply with ASTM A480/A480M, Type 304 or 316, as indicated in "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish is to be No. 2B, No. 2D, No. 3, or No. 4 as indicated in "Duct Schedule" Article.
  - F. Aluminum Sheets: Comply with ASTM B209 Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
  - G. Factory- or Shop-Applied Antimicrobial Coating:
    1. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating is to be applied to the exterior surface.
    2. Antimicrobial compound is to be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
    3. Coating containing the antimicrobial compound is to have a hardness of 2H, minimum, when tested in accordance with ASTM D3363.
    4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.
    5. Shop-Applied Coating Color: Black.
    6. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.

- H. Reinforcement Shapes and Plates: ASTM A36/A36M, steel plates, shapes, and bars; black and galvanized.
  - 1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.
- I. Tie Rods: Galvanized steel, 1/4-inch-minimum diameter for lengths 36 inches or less; 3/8-inch-minimum diameter for lengths longer than 36 inches.

## 2.7 DUCT LINER

- A. Fibrous-Glass Duct Liner: Comply with ASTM C1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. CertainTeed; SAINT-GOBAIN.
    - b. Johns Manville; a Berkshire Hathaway company.
    - c. Owens Corning.
  - 2. Source Limitations: Obtain fibrous-glass duct liner from single manufacturer.
  - 3. Maximum Thermal Conductivity:
    - a. Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
    - b. Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
  - 4. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound is to be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
  - 5. Solvent-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C916.
- B. Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C534/C534M, Type II, Grade 1; and with NFPA 90A or NFPA 90B.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Aeroflex USA.
    - b. Armacell LLC.
    - c. K-Flex USA.
  - 2. Source Limitations: Obtain flexible elastomeric duct liner from single manufacturer.
  - 3. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.
  - 4. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
- C. Fibrous-Glass-Free, Natural-Fiber Duct Liner: Made from partially recycled cotton or polyester products and containing no fiberglass. Airstream surface overlaid with fire-resistant facing to prevent surface erosion by airstream, complying with NFPA 90A or NFPA 90B. Treat natural-fiber products with antimicrobial coating.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Acoustical Surfaces, Inc.
    - b. Ductmate Industries, Inc; a DMI company.
  - 2. Source Limitations: Obtain fibrous-glass-free, natural-fiber duct liner from single manufacturer.
  - 3. Maximum Thermal Conductivity: 0.24 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature when tested in accordance with ASTM C518.
  - 4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with ASTM E84; certified by an NRTL.
  - 5. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
- D. Polyolefin Duct Liner: Cross-linked, partially open-cell polyolefin foam sheet or roll materials, with reinforced aluminum foil facing and adhesive backing, complying with NFPA 90A or NFPA 90B; sheet (Type II) complying with ASTM C1427.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Sekisui Voltek, LLC.
  - 2. Source Limitations: Obtain polyolefin duct liner from single manufacturer.
  - 3. Foam Core Density: 1.5 pcf.
  - 4. Maximum Thermal Conductivity: 0.25 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature when tested in accordance with ASTM C518.
  - 5. Minimum Noise Reduction Coefficient (NRC): 0.50 for 3/8-inch thickness, 0.45 for 5/8-inch thickness, 0.55 for 1-inch thickness, 0.55 for 2-1/8-inch thickness.

6. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.
  7. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
- E. Insulation Pins and Washers:
1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
  2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick galvanized steel; with beveled edge sized as required to hold insulation securely in place, but not less than 1-1/2 inches in diameter.
- F. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."
1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
  2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
  3. Butt transverse joints without gaps, and coat joint with adhesive.
  4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
  5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
  6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm or greater.
  7. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
  8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
    - a. Fan discharges.
    - b. Intervals of lined duct preceding unlined duct.
    - c. Upstream edges of transverse joints in ducts where air velocities are higher than 2500 fpm or where indicated.
  9. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.
    - a. Sheet Metal Inner Duct Perforations: 3/32-inch diameter, with an overall open area of 23 percent.
  10. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.
- 2.8 SEALANT AND GASKETS
- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets are to be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.
- B. Two-Part Tape Sealing System:
1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
  2. Tape Width: 3 inches.
  3. Sealant: Modified styrene acrylic.
  4. Water resistant.
  5. Mold and mildew resistant.
  6. Maximum Static-Pressure Class: 10 inch wg, positive and negative.
  7. Service: Indoor and outdoor.
  8. Service Temperature: Minus 40 to plus 200 deg F.
  9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
- C. Water-Based Joint and Seam Sealant:
1. Application Method: Brush on.

2. Solids Content: Minimum 65 percent.
  3. Shore A Hardness: Minimum 20.
  4. Water resistant.
  5. Mold and mildew resistant.
  6. VOC: Maximum 75 g/L (less water).
  7. Maximum Static-Pressure Class: 10 inch wg, positive and negative.
  8. Service: Indoor or outdoor.
  9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- D. Solvent-Based Joint and Seam Sealant:
1. Application Method: Brush on.
  2. Base: Synthetic rubber resin.
  3. Solvent: Toluene and heptane.
  4. Solids Content: Minimum 60 percent.
  5. Shore A Hardness: Minimum 60.
  6. Water resistant.
  7. Mold and mildew resistant.
  8. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
  9. Service: Indoor or outdoor.
  10. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- E. Flanged Joint Sealant: Comply with ASTM C920.
1. General: Single-component, acid-curing, silicone, elastomeric.
  2. Type: S.
  3. Grade: NS.
  4. Class: 25.
  5. Use: O.
- F. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- G. Round Duct Joint O-Ring Seals:
1. Seal is to provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and is to be rated for 10-inch wg static-pressure class, positive or negative.
  2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
  3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.
- 2.9 HANGERS AND SUPPORTS
- A. Hanger Rods for Noncorrosive Environments: Galvanized-steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A603.
- E. Steel Cables for Stainless Steel Ducts: Stainless steel complying with ASTM A492.
- F. Steel Cable End Connections: Galvanized-steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
  2. Supports for Stainless Steel Ducts: Stainless steel shapes and plates.
  3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

### **PART 3 - EXECUTION**

#### **3.1 DUCT INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and coordination drawings.
- B. Install ducts in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install ducts in maximum practical lengths with fewest possible joints.
- D. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- E. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- F. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- G. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
- H. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- I. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.
- J. Install fire, combination fire/smoke, and smoke dampers where indicated on Drawings and as required by code, and by local authorities having jurisdiction. Comply with requirements in Section 23 33 00 "Air Duct Accessories" for fire and smoke dampers and specific installation requirements of the damper UL listing.
- K. Install heating coils, cooling coils, air filters, dampers, and all other duct-mounted accessories in air ducts where indicated on Drawings.
- L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials both before and after installation. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."
- M. Elbows: Use long-radius elbows wherever they fit.
  - 1. Fabricate 90-degree rectangular mitered elbows to include turning vanes.
  - 2. Fabricate 90-degree round elbows with a minimum of three segments for 12 inches and smaller and a minimum of five segments for 14 inches and larger.
- N. Branch Connections: Use lateral or conical branch connections.

#### **3.2 INSTALLATION OF EXPOSED DUCTWORK**

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

#### **3.3 ADDITIONAL INSTALLATION REQUIREMENTS FOR TYPE 1 COMMERCIAL KITCHEN GREASE HOOD EXHAUST DUCT**

- A. Install ducts in accordance with NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operation"; SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; and SMACNA's "Kitchen Ventilation Systems and Food Service Equipment Fabrication and Installation Guidelines" unless otherwise indicated.
- B. Install all ducts without dips and traps that may hold grease, and sloped a minimum of 2 percent to drain grease back to the hood.

- C. All ducts exposed to view are to be constructed of stainless steel as per "Duct Schedule" Article. All ducts concealed from view are to be stainless steel as per "Duct Schedule" Article.
  - D. All joints are to be welded and are to be telescoping, bell, or flange joint as per NFPA 96.
  - E. Install fire-rated access panel assemblies at each change in direction and at maximum intervals of 20 feet in horizontal ducts, and at every floor for vertical ducts, or as indicated on Drawings.
  - F. Do not penetrate fire-rated assemblies except as allowed by applicable building codes and authorities having jurisdiction.
- 3.4 ADDITIONAL INSTALLATION REQUIREMENTS FOR EXHAUST DUCTS SERVING COMMERCIAL DISHWASHERS AND OTHER HIGH-HUMIDITY LOCATIONS
- A. Install dishwasher exhaust ducts and other exhaust ducts from wet, high-humidity locations without dips and traps that may hold water. Slope ducts a minimum of 2 percent back to dishwasher or toward drain.
  - B. Provide a drain pocket at each low point and at the base of each riser with a 1-inch trapped copper drain from each drain pocket to open site floor drain.
  - C. Minimize number of transverse seams.
  - D. Do not locate longitudinal seams on bottom of duct.
- 3.5 ADDITIONAL INSTALLATION REQUIREMENTS FOR LABORATORY EXHAUST AND FUME HOOD EXHAUST DUCTS
- A. Install ducts in accordance with NFPA 45, "Fire Protection for Laboratories Using Chemicals."
  - B. Install exhaust ducts without dips and traps that may hold water. Slope ducts a minimum of 2 percent back to hood or inlet. Where indicated on Drawings, install trapped drain piping.
  - C. Connect duct to fan, fume hood, and other equipment indicated on Drawings.
- 3.6 DUCTWORK EXPOSED TO WEATHER
- A. All external joints are to be welded. Seal all openings to provide weatherproof construction.
  - B. Construct ductwork to resist external loads of wind, snow, ice, and other effects of weather. Provide necessary supporting structures.
  - C. Single Wall:
    - 1. Ductwork is to be Type 304 stainless steel.
    - 2. Ductwork is to be galvanized steel.
      - a. If duct outer surface is uninsulated, protect outer surface with suitable paint. Paint materials and application requirements are specified in Section 09 91 13 "Exterior Painting."
    - 3. Where ducts have external insulation, provide weatherproof aluminum jacket. See Section 23 07 13 "Duct Insulation."
  - D. Double Wall:
    - 1. Ductwork complies with requirements in "Double-Wall Rectangular Ducts and Fittings" or "Double-Wall Round Ducts and Fittings" Article.
    - 2. Ductwork outer wall is to be Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
    - 3. Provide interstitial insulation.
- 3.7 DUCT SEALING
- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - B. Seal ducts at a minimum to the following seal classes in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
    - 1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
    - 2. Outdoor, Supply-Air Ducts: Seal Class A.
    - 3. Outdoor, Exhaust Ducts: Seal Class C.
    - 4. Outdoor, Return-Air Ducts: Seal Class C.
    - 5. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class B.
    - 6. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg: Seal Class A.
    - 7. Unconditioned Space, Exhaust Ducts: Seal Class C.
    - 8. Unconditioned Space, Return-Air Ducts: Seal Class B.
    - 9. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class C.

10. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg: Seal Class B.
11. Conditioned Space, Exhaust Ducts: Seal Class B.
12. Conditioned Space, Return-Air Ducts: Seal Class C.

### 3.8 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
  1. Where practical, install concrete inserts before placing concrete.
  2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
  3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
  4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
  5. Do not use powder-actuated concrete fasteners for seismic restraints. Coordinate with Section 23 05 48 "Vibration and Seismic Controls for HVAC."
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

### 3.9 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. See Section 23 05 48 "Vibration and Seismic Controls for HVAC" for seismic restraint installation requirements.

### 3.10 DUCTWORK CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Section 23 33 00 "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

### 3.11 PAINTING

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 09 91 13 "Exterior Painting" and Section 09 91 23 "Interior Painting."

### 3.12 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:
  1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
  2. Test the following systems:
    - a. Ducts with a Pressure Class Higher Than 3-Inch wg: Test representative duct sections, selected by Architect from sections installed, totaling no less than 25 percent of total installed duct area for each designated pressure class.
    - b. Supply Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections totaling no less than 50 percent of total installed duct area for each designated pressure class.
    - c. Return Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections totaling no less than 50 percent of total installed duct area for each designated pressure class.

- d. Exhaust Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections, selected by Architect from sections installed, totaling no less than 50 percent of total installed duct area for each designated pressure class.
      - e. Outdoor-Air Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections totaling no less than 50 percent of total installed duct area for each designated pressure class.
    3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
    4. Testing of each duct section is to be performed with access doors, coils, filters, dampers, and other duct-mounted devices in place as designed. No devices are to be removed or blanked off so as to reduce or prevent additional leakage.
    5. Test for leaks before applying external insulation.
    6. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
    7. Give seven days' advance notice for testing.
  - C. Duct System Cleanliness Tests:
    1. Visually inspect duct system to ensure that no visible contaminants are present.
    2. Test sections of metal duct system, chosen randomly by Owner, for cleanliness in accordance with "Description of Method 3 - NADCA Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."
      - a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media is to not exceed 0.75 mg/100 sq. cm.
  - D. Duct system will be considered defective if it does not pass tests and inspections.
  - E. Prepare test and inspection reports.
- 3.13 DUCT CLEANING
  - A. Clean new duct system(s) before testing, adjusting, and balancing.
  - B. For cleaning of existing ductwork, see Section 23 01 30.52 "Existing HVAC Air Distribution System Cleaning."
  - C. Use duct cleaning methodology as indicated in NADCA ACR.
  - D. Use service openings for entry and inspection.
    1. Provide openings with access panels appropriate for duct static-pressure and leakage class at dampers, coils, and any other locations where required for inspection and cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer. Comply with Section 23 33 00 "Air Duct Accessories" for access panels and doors.
    2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
    3. Remove and reinstall ceiling to gain access during the cleaning process.
  - E. Particulate Collection and Odor Control:
    1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
    2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.
  - F. Clean the following components by removing surface contaminants and deposits:
    1. Air outlets and inlets (registers, grilles, and diffusers).
    2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
    3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
    4. Coils and related components.
    5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
    6. Supply-air ducts, dampers, actuators, and turning vanes.
    7. Dedicated exhaust and ventilation components and makeup air systems.

G. Mechanical Cleaning Methodology:

1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans in accordance with NADCA ACR. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide drainage and cleanup for wash-down procedures.
7. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents in accordance with manufacturer's written instructions after removal of surface deposits and debris.

3.14 STARTUP

- A. Air Balance: Comply with requirements in Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC."

3.15 DUCT SCHEDULE

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:

1. Fabricate all ducts to achieve SMACNA pressure class, seal class, and leakage class as indicated below.
2. Underground Ducts: Concrete-encased, galvanized sheet steel.

- B. Supply Ducts:

1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
  - a. Pressure Class: Positive 2-inch wg.
  - b. Minimum SMACNA Seal Class: A.
  - c. SMACNA Leakage Class for Rectangular: 2.
  - d. SMACNA Leakage Class for Round and Flat Oval: 2.
2. Ducts Connected to Constant-Volume Air-Handling Units:
  - a. Pressure Class: Positive 2-inch wg.
  - b. Minimum SMACNA Seal Class: A.
  - c. SMACNA Leakage Class for Rectangular: 2.
  - d. SMACNA Leakage Class for Round and Flat Oval: 2.
3. Ducts Connected to Variable-Air-Volume Air-Handling Units:
  - a. Pressure Class: Positive 3-inch wg.
  - b. Minimum SMACNA Seal Class: A.
  - c. SMACNA Leakage Class for Rectangular: 2.
  - d. SMACNA Leakage Class for Round and Flat Oval: 2.
4. Ducts Connected to Equipment Not Listed Above:
  - a. Pressure Class: Positive 2-inch wg.
  - b. Minimum SMACNA Seal Class: A.
  - c. SMACNA Leakage Class for Rectangular: 2.
  - d. SMACNA Leakage Class for Round and Flat Oval: 2.

- C. Return Ducts:

1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
  - a. Pressure Class: Positive or negative 2-inch wg.
  - b. Minimum SMACNA Seal Class: A.
  - c. SMACNA Leakage Class for Rectangular: 2.
  - d. SMACNA Leakage Class for Round and Flat Oval: 2.
2. Ducts Connected to Air-Handling Units:
  - a. Pressure Class: Positive or negative 3- Insert numberinch wg.
  - b. Minimum SMACNA Seal Class: A.
  - c. SMACNA Leakage Class for Rectangular: 2.
  - d. SMACNA Leakage Class for Round and Flat Oval: 2.
3. Ducts Connected to Equipment Not Listed above:
  - a. Pressure Class: Positive or negative 2-inch wg.
  - b. Minimum SMACNA Seal Class: A.

- c. SMACNA Leakage Class for Rectangular: 2.
  - d. SMACNA Leakage Class for Round and Flat Oval: 2.
- D. Exhaust Ducts:
- 1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
    - a. Pressure Class: Negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: A if negative pressure, and A if positive pressure.
    - c. SMACNA Leakage Class for Rectangular: 2.
    - d. SMACNA Leakage Class for Round and Flat Oval: 2.
  - 2. Ducts Connected to Air-Handling Units:
    - a. Pressure Class: Positive or negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: A if negative pressure, and A if positive pressure.
    - c. SMACNA Leakage Class for Rectangular: 2.
    - d. SMACNA Leakage Class for Round and Flat Oval: 2.
  - 3. Ducts Connected to Commercial Kitchen Hoods: Comply with NFPA 96.
    - a. Exposed to View: Type 304, stainless steel sheet, No. 4 finish.
    - b. Concealed: Type 304, stainless steel sheet, No. 2D finish.
    - c. Welded seams and joints.
    - d. Pressure Class: Positive or negative 2-inch wg.
    - e. Airtight/watertight.
  - 4. Ducts Connected to Dishwashers, Dishwasher Hoods, and Other High-Humidity Locations:
    - a. Type 304, stainless steel sheet.
    - b. Exposed to View: No. 4 finish.
    - c. Concealed: No. 2D finish.
    - d. Welded longitudinal seams; welded or flanged transverse joints with watertight EPDM gaskets.
    - e. Pressure Class: Positive or negative 2-inch wg.
    - f. Airtight/watertight.
  - 5. Ducts Connected to Fans Exhausting Fume Hood, Laboratory, and Process (ASHRAE 62.1, Class 3 and Class 4) Air:
    - a. Type 304, stainless steel sheet.
      - 1) Exposed to View: No. 4 finish.
      - 2) Concealed: No. 2B finish.
    - b. PVC-coated, galvanized sheet steel with thicker coating on duct interior.
    - c. Pressure Class: Positive or negative 3-inch wg.
    - d. Minimum SMACNA Seal Class A.
    - e. SMACNA Leakage Class 2.
    - f. Airtight/watertight.
  - 6. Ducts Connected to Equipment Not Listed above:
    - a. Pressure Class: Positive or negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: A if negative pressure; A if positive pressure.
    - c. SMACNA Leakage Class for Rectangular: 2.
    - d. SMACNA Leakage Class for Round and Flat Oval: 2.
- E. Outdoor-Air (Not Filtered, Heated, or Cooled) Ducts:
- 1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units:
    - a. Pressure Class: Positive or negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: A.
    - c. SMACNA Leakage Class for Rectangular: 8.
    - d. SMACNA Leakage Class for Round and Flat Oval: 8.
  - 2. Ducts Connected to Air-Handling Units:
    - a. Pressure Class: Positive or negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: A.
    - c. SMACNA Leakage Class for Rectangular: 2.
    - d. SMACNA Leakage Class for Round and Flat Oval: 2.
  - 3. Ducts Connected to Equipment Not Listed Above:
    - a. Pressure Class: Positive or negative 2-inch wg.
    - b. Minimum SMACNA Seal Class: A.
    - c. SMACNA Leakage Class for Rectangular: 2.
    - d. SMACNA Leakage Class for Round and Flat Oval: 2.
- F. Intermediate Reinforcement:
- 1. Galvanized-Steel Ducts: Galvanized steel.

2. PVC-Coated Ducts:
    - a. Exposed to Airstream: Match duct material.
    - b. Not Exposed to Airstream: Match duct material.
  3. Stainless Steel Ducts:
    - a. Exposed to Airstream: Match duct material.
    - b. Not Exposed to Airstream: Match duct material.
  4. Aluminum Ducts: Aluminum galvanized steel coated with zinc chromate.
- G. Liner:
1. Supply-Air Ducts: Fibrous glass, Type I, 1 inch thick.
  2. Return-Air Ducts: Fibrous glass, Type I, 1 inch thick.
  3. Exhaust-Air Ducts: Fibrous glass, Type I, 1 inch thick.
  4. Supply Fan Plenums: Fibrous glass, Type II, 1 inch thick.
  5. Return- and Exhaust-Fan Plenums: Fibrous glass, Type II, 1 inches thick.
  6. Transfer Ducts: Fibrous glass, Type I, 1 inch thick.
- H. Double-Wall Duct Interstitial Insulation:
1. Supply-Air Ducts: 1 inch thick.
  2. Return-Air Ducts: 1 inch thick.
  3. Exhaust-Air Ducts: 1 inch thick.
- I. Elbow Configuration:
1. Rectangular Duct - Requirements for Different Velocities: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
    - a. Velocity 1000 fpm or Lower:
      - 1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
      - 2) Mitered Type RE 4 without vanes.
    - b. Velocity 1000 to 1500 fpm:
      - 1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
      - 2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
      - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
    - c. Velocity 1500 fpm or Higher:
      - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
      - 2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
      - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
  2. Rectangular Duct - Requirements for All Velocities: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
    - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
    - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
    - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
  3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
    - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
      - 1) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
      - 2) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
      - 3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
      - 4) Radius-to Diameter Ratio: 1.5.
    - b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
    - c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam.

- J. Branch Configuration:
1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
    - a. Rectangular Main to Rectangular Branch: 45-degree entry.
    - b. Rectangular Main to Round Branch: Conical spin in.
  2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
    - a. Velocity 1000 fpm or Lower: 90-degree tap.
    - b. Velocity 1000 to 1500 fpm: Conical tap.
    - c. Velocity 1500 fpm or Higher: 45-degree lateral.

END OF SECTION 23 31 13

## SECTION 23 33 00

### AIR DUCT ACCESSORIES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
1. Backdraft and pressure relief dampers.
  2. Barometric relief dampers.
  3. Manual volume dampers.
  4. Control dampers.
  5. Fire dampers.
  6. Ceiling radiation dampers.
  7. Smoke dampers.
  8. Combination fire and smoke dampers.
  9. Corridor dampers.
  10. Flange connectors.
  11. Duct silencers.
  12. Turning vanes.
  13. Remote damper operators.
  14. Duct-mounted access doors.
  15. Duct access panel assemblies.
  16. Flexible connectors.
  17. Duct security bars.
  18. Duct accessory hardware.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. For duct silencers, include pressure drop, dynamic insertion loss, and self-generated noise data. Include breakout noise calculations for high-transmission-loss casings.
- B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details, and attachments to other work.
1. Detail duct accessories' fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
    - a. Special fittings.
    - b. Manual volume damper installations.
    - c. Control-damper installations.
    - d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor-damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
    - e. Duct security bars.
    - f. Include diagrams for power, signal, and control wiring.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, or BIM model, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from installers of the items involved.
- B. Source quality-control reports.

##### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with NFPA 90A and NFPA 90B.
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Greenheck Fan Corporation.
  - 2. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
  - 3. Safe Air - Dowco.
- B. Description: Gravity balanced.
- C. Performance:
  - 1. Maximum Air Velocity: 1250 fpm.
  - 2. Maximum System Pressure: 2 inches wg.
  - 3. AMCA Certification: Test and rate in accordance with AMCA 511.
  - 4. Leakage:
    - a. Class IA: Leakage shall not exceed 3 cfm/sq. ft. against 1-inch wg differential static pressure.
    - b. Class I: Leakage shall not exceed 4 cfm/sq. ft. against 1-inch wg differential static pressure.
    - c. Class II: Leakage shall not exceed 10 cfm/sq. ft. against 1-inch wg differential static pressure.
    - d. Class III: Leakage shall not exceed 40 cfm/sq. ft. against 1-inch wg differential static pressure.
- D. Construction:
  - 1. Frame:
    - a. Hat shaped.
    - b. 16-gauge-thick, galvanized sheet steel, with welded or mechanically attached corners and mounting flange.
  - 2. Blades:
    - a. Multiple single-piece blades.
    - b. Center pivoted, maximum 6-inch width, 16-gauge-thick, with sealed edges.
  - 3. Blade Action: Parallel.
- E. Blade Seals: Neoprene, mechanically locked.
- F. Blade Axles:
  - 1. Material: Galvanized steel.
  - 2. Diameter: 0.20 inch.
- G. Tie Bars and Brackets: Galvanized steel.
- H. Return Spring: Adjustable tension.
- I. Bearings: Steel ball Brass sleeve or synthetic pivot bushings.
- J. Damper Actuator - Electric:
  - 1. Electric - 24 V ac.
  - 2. UL 873 plenum rated.
  - 3. Two position with fail-safe spring return.
    - a. Sufficient motor torque and spring torque to drive damper fully closed with adequate force to achieve required damper seal.
    - b. Minimum 90-degree drive rotation.
  - 4. Clockwise or counterclockwise drive rotation as required for application.

5. Environmental Operating Range:
    - a. Temperature: Minus 40 to plus 130 deg F.
    - b. Humidity: 5 to 95 percent relative humidity noncondensing.
  6. Environmental Enclosure: NEMA 2.
  7. Actuator to be factory mounted and provided with a single-point wiring connection.
- K. Damper Actuator - Pneumatic:
1. Operated by 0 to 20 psig pneumatic signal.
  2. Two position with fail-safe spring return.
    - a. Sufficient power and spring force to drive damper fully closed with adequate force to achieve required damper seal.
    - b. Maximum 15-second full-stroke closure.
  3. Actuator to be factory mounted.
- L. Controllers, Electrical Devices, and Wiring:
1. Comply with requirements for electrical devices and connections specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC."
  2. Electrical Connection: 24 V, 60 Hz.
- M. Accessories:
1. Adjustment device to permit setting for varying differential static pressure.
  2. Counterweights and spring-assist kits for vertical airflow installations.
  3. Chain pulls.
  4. Screen Mounting:
    - a. Front mounted in sleeve.
      - 1) Sleeve Thickness: 20 gauge minimum.
      - 2) Sleeve Length: 6 inches minimum.
  5. Screen Material: Galvanized steel.
  6. Screen Type: Bird.
  7. 90-degree stops.
- 2.3 BAROMETRIC RELIEF DAMPERS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Greenheck Fan Corporation.
  2. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
  3. Safe Air - Dowco.
- B. General Requirements:
1. Suitable for horizontal or vertical mounting.
  2. Maximum Air Velocity: 1250 fpm.
  3. Maximum System Pressure: 3 inches wg.
- C. Construction:
1. Frame: Hat shaped, 16-gauge-thick, galvanized sheet steel, with welded corners or mechanically attached and mounting flange.
  2. Blades:
    - a. Multiple, 16-gauge-thick, galvanized sheet steel.
    - b. Maximum Width: 6 inches.
    - c. Action: Parallel.
    - d. Balance: Gravity.
    - e. Eccentrically pivoted.
  3. Blade Seals: Neoprene.
  4. Blade Axles: Galvanized steel.
  5. Tie Bars and Brackets:
    - a. Material: Galvanized steel.
    - b. Rattle free with 90-degree stop.
  6. Bearings: Stainless steel.
- D. Pressure Adjustment: Return spring or counter weight with adjustable tension.
- E. Accessories:
1. Flange on intake.
  2. Adjustment device to permit setting for varying differential static pressures.
  - 3.

## 2.4 MANUAL VOLUME DAMPERS

- A. Standard, Steel, Manual Volume Dampers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Aire Technologies, Inc.; DMI Companies.
    - b. Greenheck Fan Corporation.
    - c. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
  2. Performance:
    - a. Leakage Rating Class III: Leakage not exceeding 40 cfm/sq. ft. against 1-inch wg differential static pressure.
  3. Construction:
    - a. Linkage out of airstream.
    - b. Suitable for horizontal or vertical airflow applications.
  4. Frames:
    - a. Hat-shaped, 16-gauge-thick, galvanized sheet steel.
    - b. Mitered and welded corners.
    - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
  5. Blades:
    - a. Multiple or single blade.
    - b. Parallel- or opposed-blade design.
    - c. Stiffen damper blades for stability.
    - d. Galvanized steel; 16 gauge thick.
  6. Blade Axles: Galvanized steel.
  7. Bearings:
    - a. Oil-impregnated bronze.
    - b. Dampers mounted with vertical blades to have thrust bearing at each end of every blade.
  8. Tie Bars and Brackets: Galvanized steel.
  9. Locking device to hold damper blades in a fixed position without vibration.
- B. Standard, Aluminum, Manual Volume Dampers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Arrow United Industries; Mestek, Inc.
    - b. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
    - c. Safe Air - Dowco.
  2. Performance:
    - a. Leakage Rating Class III: Leakage not exceeding 40 cfm/sq. ft. against 1-inch wg differential static pressure.
  3. Construction:
    - a. Linkage out of airstream.
    - b. Suitable for horizontal or vertical airflow applications.
  4. Frames:
    - a. Hat-shaped, 0.10-inch-thick, aluminum sheet channels.
    - b. Flanges for attaching to walls and flangeless frames for installing in ducts.
  5. Blades:
    - a. Multiple or single blade.
    - b. Parallel- or opposed-blade design.
    - c. Stiffen damper blades for stability.
    - d. Roll-Formed Aluminum Blades: 0.10-inch-thick aluminum sheet.
    - e. Extruded-Aluminum Blades: 0.050-inch-thick extruded aluminum.
  6. Blade Axles: Galvanized steel.
  7. Bearings:
    - a. Oil-impregnated bronze.
    - b. Dampers mounted with vertical blades to have thrust bearing at each end of every blade.
  8. Tie Bars and Brackets: Aluminum.
  9. Locking device to hold damper blades in a fixed position without vibration.
- C. Low-Leakage, Steel, Manual Volume Dampers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Air Balance; MESTEK, Inc.
    - b. Greenheck Fan Corporation.
    - c. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
  2. Performance:
    - a. AMCA Certification: Test and rate in accordance with AMCA 511.

- b. Leakage:
    - 1) Class IA: Leakage shall not exceed 3 cfm/sq. ft. against 1-inch wg differential static pressure.
    - 2) Class I: Leakage shall not exceed 4 cfm/sq. ft. against 1-inch wg differential static pressure.
    - 3) Class II: Leakage shall not exceed 10 cfm/sq. ft. against 1-inch wg differential static pressure.
  3. Construction:
    - a. Linkage: Out of airstream.
    - b. Suitable for horizontal or vertical airflow applications.
  4. Frames:
    - a. Hat, U, or angle shaped.
    - b. Thickness: 16-gauge galvanized sheet steel.
    - c. Mitered and welded corners.
    - d. Flanges for attaching to walls and flangeless frames for installing in ducts.
  5. Blades:
    - a. Multiple or single blade.
    - b. Parallel- or opposed-blade design.
    - c. Stiffen damper blades for stability.
    - d. Galvanized, roll-formed steel; 16 gauge thick.
  6. Blade Edging Seals:
    - a. Closed-cell neoprene.
    - b. Inflatable seal blade edging or replaceable rubber seals.
  7. Blade Jamb Seals: Flexible metal compression type.
  8. Blade Axles: Galvanized steel.
  9. Bearings:
    - a. Oil-impregnated bronze.
    - b. Dampers mounted with vertical blades to have thrust bearing at each end of every blade.
  10. Tie Bars and Brackets: Galvanized steel.
  11. Locking device to hold damper blades in a fixed position without vibration.
- D. Low-Leakage, Aluminum, Manual Volume Dampers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Air Balance; MESTEK, Inc.
    - b. Arrow United Industries; Mestek, Inc.
    - c. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
  2. Performance:
    - a. AMCA Certification: Test and rate in accordance with AMCA 511.
    - b. Leakage:
      - 1) Class IA: Leakage shall not exceed 3 cfm/sq. ft. against 1-inch wg differential static pressure.
      - 2) Class I: Leakage shall not exceed 4 cfm/sq. ft. against 1-inch wg differential static pressure.
      - 3) Class II: Leakage shall not exceed 10 cfm/sq. ft. against 1-inch wg differential static pressure.
  3. Construction:
    - a. Linkage out of airstream.
    - b. Suitable for horizontal or vertical airflow applications.
  4. Frames:
    - a. Hat, U, or angle shaped.
    - b. Thickness: 0.08-inch aluminum sheet channels.
    - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
  5. Blades:
    - a. Multiple or single blade.
    - b. Parallel- or opposed-blade design.
    - c. Roll-Formed Aluminum Blades: 0.072-inch thick aluminum sheet.
    - d. Extruded-Aluminum Blades: 0.050-inch-thick extruded aluminum.
  6. Blade Edging Seals:
    - a. Closed-cell neoprene.
    - b. Inflatable seal blade edging or replaceable rubber seals.
  7. Blade Jamb Seals: Flexible metal compression type.
  8. Blade Axles: Galvanized steel.

9. Bearings:
  - a. Oil-impregnated bronze.
  - b. Dampers mounted with vertical blades to have thrust bearings at each end of every blade.
10. Tie Bars and Brackets: Galvanized steel.
11. Locking device to hold damper blades in a fixed position without vibration.

E. Jackshaft:

1. Size: 0.5-inch diameter.
2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.

F. Damper Hardware:

1. Zinc-plated, die-cast core with dial and handle, made of 3/32-inch-thick zinc-plated steel, and a 3/4-inch hexagon locking nut.
2. Include center hole to suit damper operating-rod size.
3. Include elevated platform for insulated duct mounting.

## 2.5 CONTROL DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Carnes Company.
2. Greenheck Fan Corporation.
3. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.

B. General Requirements:

1. Unless otherwise indicated, use parallel-blade configuration for two-position control, equipment isolation service, and when mixing two airstreams. For other applications, use opposed-blade configuration.
2. Factory or field assemble multiple damper sections to provide a single damper assembly of size required by the application.

C. Performance:

1. AMCA Certification: Test and rate in accordance with AMCA 511.
2. Leakage:
  - a. Class IA: Leakage shall not exceed 3 cfm/sq. ft. against 1-inch wg differential static pressure.
  - b. Class I: Leakage shall not exceed 4 cfm/sq. ft. against 1-inch wg differential static pressure.
  - c. Class II: Leakage shall not exceed 10 cfm/sq. ft. against 1-inch wg differential static pressure.
  - d. Class III: Leakage shall not exceed 40 cfm/sq. ft. against 1-inch wg differential static pressure.
3. Pressure Drop: 0.05 inch wg at 1500 fpm across a 24-by-24-inch damper when tested in accordance with AMCA 500-D, Figure 5.3.
4. Velocity: Up to 3000 fpm.
5. Temperature: Minus 25 to plus 180 deg F.
6. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.

D. Construction:

1. Linkage out of airstream.
2. Suitable for horizontal or vertical airflow applications.
3. Frames:
  - a. Hat, U, or angle shaped.
  - b. 0.08-inch-thick extruded aluminum.
  - c. Mitered and welded corners.
  - d. Flanges for attaching to walls and flangeless frames for installing in ducts.
4. Blades:
  - a. Multiple blade with maximum blade width of 6 inches.
  - b. Parallel-blade design.
  - c. Galvanized steel.
  - d. 16-gauge-thick single skin.
5. Blade Edging Seals:
  - a. Replaceable Closed-cell neoprene.

- b. Inflatable seal blade edging, or replaceable rubber seals.
    6. Blade Jamb Seal: Flexible stainless steel, compression type.
    7. Blade Axles: 1/2-inch diameter; galvanized steel.
    8. Blade-Linkage Hardware: Zinc-plated steel and brass; ends sealed against blade bearings. Linkage mounted out of air stream.
    9. Bearings:
      - a. Oil-impregnated bronze.
      - b. Dampers mounted with vertical blades to have thrust bearings at each end of every blade.
  - E. Damper Actuator - Electric:
    1. Electric - 24 V ac.
    2. UL 873, plenum rated.
    3. Two position with fail-safe spring return.
      - a. Sufficient motor torque and spring torque to drive damper fully open and fully closed with adequate force to achieve required damper seal.
      - b. Minimum 90-degree drive rotation.
    4. Clockwise or counterclockwise drive rotation as required for application.
    5. Environmental Operating Range:
      - a. Temperature: Minus 40 to plus 130 deg F.
      - b. Humidity: 5 to 95 percent relative humidity noncondensing.
    6. Environmental enclosure: NEMA 2.
    7. Actuator to be factory mounted and provided with a single-point wiring connection.
  - F. Damper Actuator - Pneumatic:
    1. Operated by 0 to 20 psig pneumatic signal.
    2. Two position with fail-safe spring return.
      - a. Sufficient power and spring force to drive damper fully open and fully closed with adequate force to achieve required damper seal.
      - b. Maximum 15-second full-stroke closure.
    3. Actuator to be factory mounted.
  - G. Controllers, Electrical Devices, and Wiring:
    1. Comply with requirements for electrical devices and connections specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC."
    2. Electrical Connection: 24 V, 60 Hz.
- 2.6 FIRE DAMPERS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    1. Air Balance; MESTEK, Inc.
    2. Greenheck Fan Corporation.
    3. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
  - B. Type: Static and dynamic; rated and labeled in accordance with UL 555 by an NRTL.
  - C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000 fpm velocity.
  - D. Fire Rating: 1-1/2 and 3 hours.
  - E. Frame: Curtain type with blades inside airstream; fabricated with roll-formed galvanized steel; with mitered and interlocking corners; gauge in accordance with UL listing.
  - F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel; gauge in accordance with UL listing.
  - G. Mounting Orientation: Vertical or horizontal as indicated.
  - H. Blades: Roll-formed galvanized sheet steel,. Material gauge is to be in accordance with UL listing.
  - I. Horizontal Dampers: Include blade lock and stainless steel closure spring.
  - J. Heat-Responsive Device:
    1. Replaceable, 165 deg F rated, fusible links.
    2. Electric, replaceable link and switch package, factory installed, 165 deg F rated.
- 2.7 SMOKE DAMPERS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    1. Aire Technologies, Inc.; DMI Companies.
    2. Greenheck Fan Corporation.
    3. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.

- B. General Requirements:
1. Label to indicate conformance to UL 555 and UL 555S by an NRTL.
  2. Label to indicate conformance to NFPA 80 and NFPA 90A by an NRTL.
  3. Unless otherwise indicated, use parallel-blade configuration.
  4. Factory or field assemble multiple damper sections to provide a single damper assembly of size required by the application.
  5. Factory install damper actuator by damper manufacturer as integral part of damper assembly. Coordinate actuator location, mounting, and electrical requirements with damper manufacturer.
- C. Performance:
1. AMCA Certification: Test and rate in accordance with AMCA Publication 511.
  2. Leakage:
    - a. Class IA: Leakage shall not exceed 3 cfm/sq. ft. against 1-inch wg differential static pressure.
    - b. Class I: Leakage shall not exceed 4 cfm/sq. ft. against 1-inch wg differential static pressure.
    - c. Class II: Leakage shall not exceed 10 cfm/sq. ft. against 1-inch wg differential static pressure.
  3. Pressure Drop: 0.05 inch wg at 1500 fpm across a 24-by-24-inch damper when tested in accordance with AMCA 500-D, Figure 5.3.
  4. Velocity: Up to 3000 fpm.
  5. Temperature: Minus 25 to plus 180 deg F.
  6. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
- D. Construction:
1. Suitable for horizontal or vertical airflow applications.
  2. Linkage out of airstream.
  3. Frame:
    - a. Hat shaped.
    - b. Galvanized sheet steel, with welded interlocking, gusseted or mechanically attached corners and mounting flange.
    - c. Gauge in accordance with UL listing.
  4. Blades:
    - a. Roll-formed, horizontal, v-groove airfoil, galvanized sheet steel.
    - b. Maximum width and gauge in accordance with UL listing.
  5. Blade Edging Seals:
    - a. Silicone rubber.
  6. Blade Jamb Seal: Flexible stainless steel, compression type.
  7. Blade Axles: 1/2-inch diameter; galvanized steel; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings. Linkage is to be mounted out of airstream.
  8. Bearings:
    - a. Oil-impregnated bronze.
- E. Mounting Sleeve: Factory-installed, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone caulking; gauge in accordance with UL listing.
- F. Damper Actuator - Electric:
1. Electric - 24 V ac.
  2. UL 873, plenum rated.
  3. Designed to operate in smoke-control systems complying with UL 555S requirements.
  4. Two position with fail-safe spring return.
    - a. Sufficient motor torque and spring torque to drive damper fully open and fully closed with adequate force to achieve required damper seal.
    - b. Maximum 15-second full-stroke closure.
    - c. Minimum 90-degree drive rotation.
  5. Clockwise or counterclockwise drive rotation as required for application.
  6. Environmental Operating Range:
    - a. Temperature: Minus 40 to plus 130 deg F.
    - b. Humidity: 5 to 95 percent relative humidity noncondensing.
  7. Environmental Enclosure: NEMA 2.
  8. Actuator to be factory mounted and provided with single-point wiring connection.
- G. Damper Actuator - Pneumatic:
1. Operated by 0 to 20 psig pneumatic signal.
  2. Designed to operate in smoke-control systems complying with UL 555S requirements.

3. Two position with fail-safe spring return.
    - a. Sufficient power and spring force to drive damper fully open and fully closed with adequate force to achieve required damper seal.
    - b. Maximum 15-second full-stroke closure.
  4. Actuator to be factory mounted.
- H. Controllers, Electrical Devices, and Wiring:
1. Comply with requirements for electrical devices and connections specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC."
  2. Electrical Connection: 24 V, 60 Hz.
- I. Accessories:
1. Auxiliary switches for signaling fan control or position indication.
  2. Test and reset switches, damper mounted.
  3. Smoke Detector: Integral, factory wired for single-point connection.
- 2.8 COMBINATION FIRE AND SMOKE DAMPERS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aire Technologies, Inc.; DMI Companies.
  2. Greenheck Fan Corporation.
  3. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
- B. General Requirements:
1. Label to indicate conformance to UL 555 and UL 555S by an NRTL.
  2. Label to indicate conformance to NFPA 80 and NFPA 90A by an NRTL.
  3. Unless otherwise indicated, use parallel-blade configuration.
- C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000 fpm velocity.
- D. Fire Rating: 1-1/2 and 3 hours.
- E. Performance:
1. AMCA Certification: Test and rate in accordance with AMCE Publication 511.
  2. Leakage:
    - a. Class IA: Leakage shall not exceed 3 cfm/sq. ft. against 1-inch wg differential static pressure.
    - b. Class I: Leakage shall not exceed 4 cfm/sq. ft. against 1-inch wg differential static pressure.
    - c. Class II: Leakage shall not exceed 10 cfm/sq. ft. against 1-inch wg differential static pressure.
  3. Pressure Drop: 0.05 in. wg at 1500 fpm across a 24-by-24-inch damper when tested in accordance with AMCA 500-D, Figure 5.3.
  4. Velocity: Up to 3000 fpm.
  5. Temperature: Minus 25 to plus 180 deg F.
  6. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.
- F. Construction:
1. Suitable for horizontal or vertical airflow applications.
  2. Linkage out of airstream.
  3. Frame:
    - a. Hat shaped.
    - b. Galvanized sheet steel, with welded interlocking, gusseted or mechanically attached corners and mounting flange.
    - c. Gauge is to be in accordance with UL listing.
  4. Blades:
    - a. Roll-formed, horizontal, v-groove airfoil, galvanized sheet steel.
    - b. Maximum width and gauge in accordance with UL listing.
  5. Blade Edging Seals:
    - a. Silicone rubber.
  6. Blade Jamb Seal: Flexible stainless steel, compression type.
  7. Blade Axles: 1/2-inch-diameter; galvanized steel; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings. Linkage mounted out of airstream.
  8. Bearings:
    - a. Oil-impregnated bronze.

- G. Mounting Sleeve:
  - 1. Factory installed, galvanized sheet steel.
  - 2. Length to suit wall or floor application with factory-furnished silicone caulking.
  - 3. Gauge in accordance with UL listing.
- H. Heat-Responsive Device:
  - 1. Resettable, 165 deg F rated, fusible links fire-closure device.
  - 2. Electric resettable device and switch package, factory installed, rated.
- I. Master control panel for use in dynamic smoke-management systems.
- J. Damper Actuator - Electric:
  - 1. Electric - 24 V ac.
  - 2. UL 873, plenum rated.
  - 3. Designed to operate in smoke-control systems complying with UL 555S requirements.
  - 4. Two position with fail-safe spring return.
    - a. Sufficient motor torque and spring torque to drive damper fully open and fully closed with adequate force to achieve required damper seal.
    - b. Maximum 15-second full-stroke closure.
    - c. Minimum 90-degree drive rotation.
  - 5. Clockwise or counterclockwise drive rotation as required for application.
  - 6. Environmental Operating Range:
    - a. Temperature: Minus 40 to plus 130 deg F.
    - b. Humidity: 5 to 95 percent relative humidity noncondensing.
  - 7. Environmental Enclosure: NEMA 2.
  - 8. Actuator to be factory mounted and provided with single-point wiring connection.
- K. Damper Actuator - Pneumatic:
  - 1. Operated by 0 to 20 psig pneumatic signal.
  - 2. Designed to operate in smoke control systems complying with UL 555S requirements.
  - 3. Two position with fail-safe spring return.
    - a. Sufficient power and spring force to drive damper fully open and fully closed with adequate force to achieve required damper seal.
    - b. Maximum 15-second full-stroke closure.
  - 4. Actuator to be factory mounted.
- L. Controllers, Electrical Devices, and Wiring:
  - 1. Comply with requirements for electrical devices and connections specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC."
  - 2. Electrical Connection: 24 V, 60 Hz.
- M. Accessories:
  - 1. Auxiliary switches for signaling fan control or position indication.
  - 2. Test and reset switches, damper mounted.
  - 3. Smoke Detector: Integral, factory wired for single-point connection.

## 2.9 FLANGE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. CL WARD & Family Inc.
  - 2. Ductmate Industries, Inc; a DMI company.
  - 3. Ward Industries; a brand of Hart & Cooley, LLC.
- B. Description: Add-on or roll-formed, factory fabricated, slide-on transverse flange connectors, gaskets, and components.
- C. Material: Galvanized steel.
- D. Gauge and Shape: Match connecting ductwork.

## 2.10 DUCT SILENCERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Flexmaster U.S.A., Inc.
  - 2. Price Industries Limited.
  - 3. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
- B. General Requirements:
  - 1. Factory fabricated.

2. Fire-Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested in accordance with ASTM E84.
  3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
  4. Bearing AMCA's Certified Ratings Seal for prefabricated silencer sound and air performance.
- C. Shape:
1. Rectangular straight with splitters or baffles.
  2. Round straight with center bodies or pods.
  3. Rectangular elbow with splitters or baffles.
  4. Round elbow with center bodies or pods.
  5. Rectangular transitional with splitters or baffles.
- D. Rectangular Silencer Outer Casing: ASTM A653/A653M, G90, galvanized sheet steel, 0.034 inch thick.
- E. Round Silencer Outer Casing: ASTM A653/A653M, G90, galvanized sheet steel.
1. Sheet Metal Thickness for Units up to 24 Inches in Diameter: 22 gauge thick.
  2. Sheet Metal Thickness for Units 26 through 40 Inches in Diameter: 20 gauge thick.
  3. Sheet Metal Thickness for Units 42 through 52 Inches in Diameter: 18 gauge thick.
  4. Sheet Metal Thickness for Units 54 through 60 Inches in Diameter: 16 gauge thick.
- F. Inner Casing and Baffles: ASTM A653/A653M, G90 galvanized sheet metal, 22 gauge thick, and with 1/8-inch-diameter perforations.
- G. Special Construction:
1. Suitable for outdoor use.
  2. High transmission loss to achieve STC 45.
- H. Connection Sizes: Match connecting ductwork unless otherwise indicated.
- I. Principal Sound-Absorbing Mechanism:
1. Controlled impedance membranes and broadly tuned resonators without absorptive media.
  2. Dissipative type with fill material.
    - a. Fill Material: Inert and vermin-proof fibrous material, packed under not less than 5 percent compression.
    - b. Erosion Barrier: Polymer bag enclosing fill, heat-sealed before assembly.
  3. Lining: None.
- J. Fabricate silencers to form rigid units that will not pulsate, vibrate, rattle, or otherwise react to system pressure variations. Do not use mechanical fasteners for unit assemblies.
1. Joints: Lock formed and sealed Continuously welded or flanged connections.
  2. Suspended Units: Factory-installed suspension hooks or lugs attached to frame in quantities and spaced to prevent deflection or distortion.
  3. Reinforcement: Cross or trapeze angles for rigid suspension.
- K. Accessories:
1. Integral 1-1/2-hour fire damper with access door. Access door to be high transmission loss to match silencer.
  2. Factory-installed end caps to prevent contamination during shipping.
  3. Removable splitters.
  4. Airflow-measuring devices.
- L. Source Quality Control:
1. Test in accordance with ASTM E477.
  2. Testing to be witnessed by Owner.
  3. Record acoustic ratings, including dynamic insertion loss and generated-noise power levels with an airflow of at least 2000 fpm face velocity.
  4. Leak Test: Test units for airtightness at 200 percent of associated fan static pressure or 6-inch wg static pressure, whichever is greater.
- M. Capacities and Characteristics:
1. Configuration: Straight.
  2. Shape: Rectangular.
  3. Attenuation Mechanism: Acoustical glass fiber.
  4. Maximum Pressure Drop: 0.35 inch wg.
  5. Casing:
    - a. Attenuation: Standard.

- b. Outer Material: Galvanized steel.
- c. Inner Material: Galvanized steel.
- 6. Accessories:
  - a. Access door.
  - b. Birdscreen.

#### 2.11 TURNING VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Aero-Dyne Sound Control Co.
  - 2. CL WARD & Family Inc.
  - 3. Ductmate Industries, Inc; a DMI company.
- B. Manufactured Turning Vanes for Metal Ducts: Fabricate curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
  - 1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
- D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
- E. Vane Construction:
  - 1. Single wall.
  - 2. Single wall for ducts up to 48 inches wide and double wall for larger dimensions.

#### 2.12 REMOTE DAMPER OPERATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. DynAir; a Carlisle Company.
  - 2. METALAIRE, Inc.
  - 3. United Enertech Corp.
- B. Description: Cable system designed for remote manual damper adjustment.
- C. Tubing: Copper.
- D. Cable: Steel.
- E. Wall-Box Mounting: Surface.
- F. Wall-Box Cover-Plate Material: Steel.

#### 2.13 DUCT-MOUNTED ACCESS DOORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Flexmaster U.S.A., Inc.
  - 2. McGill AirFlow LLC.
  - 3. Ruskin; Air Distribution Technologies, Inc.; Johnson Controls, Inc.
- B. Duct-Mounted Access Doors: Fabricate access panels in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figure 7-2 (7-2M), "Duct Access Doors and Panels," and Figure 7-3, "Access Doors - Round Duct."
  - 1. Door:
    - a. Double wall, rectangular.
    - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
    - c. 24-gauge-thick galvanized steel or 0.032-inch thick aluminum or 24-gauge-thick stainless steel door panel.
    - d. Vision panel.
    - e. Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.
    - f. Fabricate doors airtight and suitable for duct pressure class.
  - 2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
    - a. 24-gauge-thick galvanized steel or 0.032-inch-thick aluminum frame.
  - 3. Number of Hinges and Locks:
    - a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
    - b. Access Doors up to 18 Inches Square: Two hinges and two sash locks.

- c. Access Doors up to 24 by 48 Inches: Three hinges and two compression latches with outside and inside handles.
      - d. Access Doors Larger Than 24 by 48 Inches: Four hinges and two compression latches with outside and inside handles.
    - C. Pressure Relief Access Door:
      - 1. Door and Frame Material: Galvanized sheet steel.
        - a. 24-gauge-thick galvanized steel or 0.032-inch-thick aluminum or 24-gauge-thick stainless steel door panel.
      - 2. Door: Single wall with metal thickness applicable for duct pressure class.
      - 3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
      - 4. Factory set at 3.0 to 8.0 inches wg.
      - 5. Doors close when pressures are within set-point range.
      - 6. Hinge: Continuous piano.
      - 7. Latches: Cam.
      - 8. Seal: Neoprene or foam rubber.
      - 9. Insulation Fill: 1-inch-thick, fibrous-glass or polystyrene-foam board.
- 2.14 DUCT ACCESS PANEL ASSEMBLIES
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1. CL WARD & Family Inc.
    - 2. Ductmate Industries, Inc; a DMI company.
    - 3. Flame Gard, Inc.
  - B. Access panels used in cooking applications:
    - 1. Labeled compliant to NFPA 96 for grease duct access doors.
    - 2. Labeled in accordance with UL 1978 by an NRTL.
  - C. Panel and Frame: Minimum thickness 16-gauge carbon steel.
  - D. Fasteners: Carbon steel. Panel fasteners shall not penetrate duct wall.
  - E. Gasket: Comply with NFPA 96, grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F.
  - F. Minimum Pressure Rating: 10 inches wg positive or negative.
- 2.15 FLEXIBLE CONNECTORS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1. CL WARD & Family Inc.
    - 2. Ductmate Industries, Inc; a DMI company.
    - 3. Elgen Manufacturing.
  - B. Fire-Performance Characteristics: Adhesives, sealants, fabric materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested in accordance with ASTM E84.
  - C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
  - D. Materials: Flame-retardant or noncombustible fabrics.
  - E. Coatings and Adhesives: Comply with UL 181, Class 1.
  - F. Metal-Edged Connectors: Factory fabricated with a fabric strip 3-1/2 inches wide attached to two strips of 2-3/4-inch-wide, 0.028-inch-thick, galvanized sheet steel or 0.032-inch-thick aluminum sheets. Provide metal compatible with connected ducts.
  - G. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
    - 1. Minimum Weight: 26 oz./sq. yd..
    - 2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
    - 3. Service Temperature: Minus 40 to plus 200 deg F.
  - H. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
    - 1. Minimum Weight: 24 oz./sq. yd..
    - 2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
    - 3. Service Temperature: Minus 50 to plus 250 deg F.

- I. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.
    - 1. Minimum Weight: 16 oz./sq. yd..
    - 2. Tensile Strength: 285 lbf/inch in the warp and 185 lbf/inch in the filling.
    - 3. Service Temperature: Minus 67 to plus 500 deg F.
  - J. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.
    - 1. Minimum Weight: 14 oz./sq. yd..
    - 2. Tensile Strength: 450 lbf/inch in the warp and 340 lbf/inch in the filling.
    - 3. Service Temperature: Minus 67 to plus 500 deg F.
  - K. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.
    - 1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
    - 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
    - 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
    - 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
    - 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
    - 6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
    - 7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch movement at start and stop.
- 2.16 DUCT ACCESSORY HARDWARE
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1. Ductmate Industries, Inc; a DMI company.
    - 2. Elgen Manufacturing.
    - 3. Ward Industries; a brand of Hart & Cooley, LLC.
  - B. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
  - C. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.
- 2.17 MATERIALS
- A. Galvanized Sheet Steel: Comply with ASTM A653/A653M.
    - 1. Galvanized Coating Designation: G90.
    - 2. Exposed-Surface Finish: Mill phosphatized.
  - B. Stainless Steel Sheets: Comply with ASTM A480/A480M, Type 304, and having a No. 2 finish for concealed ducts and finish for exposed ducts.
  - C. Aluminum Sheets: Comply with ASTM B209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, one-side bright finish for exposed ducts.
  - D. Extruded Aluminum: Comply with ASTM B221, Alloy 6063, Temper T6.
  - E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless steel ducts.
  - F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install duct accessories in accordance with applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116 for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless steel accessories in stainless steel ducts, and aluminum accessories in aluminum ducts.

- C. Install backdraft dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Where multiple damper sections are necessary to achieve required dimensions, provide reinforcement to fully support damper assembly when fully closed at full system design static pressure.
- E. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
  - 1. Install steel volume dampers in steel ducts.
  - 2. Install aluminum volume dampers in aluminum ducts.
- F. Set dampers to fully open position before testing, adjusting, and balancing.
- G. Install test holes at fan inlets and outlets and elsewhere as indicated and as needed for testing and balancing.
- H. Install fire and smoke dampers in accordance with UL listing.
- I. Duct security bars:
  - 1. Construct duct security bars from 0.164-inch steel sleeve, continuously welded at all joints, and 1/2-inch-diameter steel bars, 6 inches o.c. in each direction in center of sleeve. Weld each bar to steel sleeve and each crossing bar. Weld 2-1/2-by-2-1/2-by-1/4-inch steel angle to four sides and both ends of sleeve.
  - 2. Connect duct security bars to ducts with flexible connections. Provide 12-by-12-inch hinged access panel with cam lock in duct in each side of sleeve.
  - 3. Secure duct security bar assembly to building structure as indicated in manufacturer's installation instructions.
- J. Connect ducts to duct silencers with flexible duct connectors.
- K. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
  - 1. On both sides of duct coils.
  - 2. Upstream from duct filters.
  - 3. At outdoor-air intakes and mixed-air plenums.
  - 4. At drain pans and seals.
  - 5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
  - 6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
  - 7. At each change in direction and at maximum 50-ft. spacing.
  - 8. Upstream from turning vanes.
  - 9. Upstream or downstream from duct silencers.
  - 10. For grease ducts, install at locations and spacing as required by NFPA 96.
  - 11. Control devices requiring inspection.
  - 12. Elsewhere as indicated.
- L. Install access doors with swing against duct static pressure.
- M. Access Door Sizes:
  - 1. One-Hand or Inspection Access: 8 by 5 inches.
  - 2. Two-Hand Access: 12 by 6 inches.
  - 3. Head and Hand Access: 18 by 10 inches.
  - 4. Head and Shoulders Access: 21 by 14 inches.
  - 5. Body Access: 25 by 14 inches.
  - 6. Body plus Ladder Access: 25 by 17 inches.
- N. Label access doors according to Section 23 05 53 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.
- O. Install flexible connectors to connect ducts to equipment.
- P. For fans developing static pressures of 5 inches wg and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
- Q. Install duct test holes where required for testing and balancing purposes.
- R. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors, and verify that size and location of access doors are adequate to perform required operation.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation, and verify that vanes do not move or rattle.
5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 23 33 00

## SECTION 23 33 46

### FLEXIBLE DUCTS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Flexible ducts, noninsulated.
  - 2. Flexible ducts, insulated.
  - 3. Flexible duct connectors.

##### 1.2 ACTION SUBMITTALS

- A. Product Data:
  - 1. Flexible ducts, noninsulated.
  - 2. Flexible ducts, insulated.
  - 3. Flexible duct connectors.
- B. Product Data Submittals: For each type of product.
- C. Shop Drawings: For flexible ducts.
  - 1. Include plans showing locations, mounting details, and attachment details.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from installers of the items involved.

#### PART 2 - PRODUCTS

##### 2.1 ASSEMBLY DESCRIPTION

- A. Comply with NFPA 90A and NFPA 90B.
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials must be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- C. Comply with the Air Duct Council's (formerly, Air Diffusion Council) "ADC Flexible Air Duct Test Code - FD 72-R1" and "Flexible Duct Performance & Installation Standards."
- D. Comply with ASTM E96/E96M.

##### 2.2 FLEXIBLE DUCTS, NONINSULATED

- A. Standard: Product is to be UL 181 listed and bearing the UL label.
- B. Flexible Ducts, Noninsulated - Class 1, Two-Ply Vinyl or Polyethylene Film Supported by Helically Wound, Spring-Steel Wire:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Flexmaster U.S.A., Inc.
    - b. JP Lamborn Co.
    - c. Thermaflex; a Flex-Tek Group company.
  - 2. Pressure Rating: 10 inch wg positive and 1.0 inch wg negative.
  - 3. Maximum Air Velocity: 4000 fpm.
  - 4. Temperature Range: Minus 10 to plus 160 deg F.
- C. Flexible Ducts, Noninsulated - Class 1, Black Polymer Film Supported by Helically Wound, Spring-Steel Wire:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Flexmaster U.S.A., Inc.

2. Pressure Rating: 4 inch wg positive and 0.5 inch wg negative.
  3. Maximum Air Velocity: 4000 fpm.
  4. Temperature Range: Minus 20 to plus 175 deg F.
- D. Flexible Ducts, Noninsulated - Class 1, Multiple Layers of Aluminum Laminate Supported by Helically Wound, Spring-Steel Wire:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Flexmaster U.S.A., Inc.
  2. Pressure Rating: 10 inch wg positive and 1.0 inch wg negative.
  3. Maximum Air Velocity: 4000 fpm.
  4. Temperature Range: Minus 20 to plus 210 deg F.
- E. Flexible Ducts, Noninsulated - Class 1, Aluminum Laminate and Polyester Film with Latex Adhesive Supported by Helically Wound, Spring-Steel Wire:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Flexmaster U.S.A., Inc.
  2. Pressure Rating: 10 inch wg positive and 1.0 inch wg negative.
  3. Maximum Air Velocity: 4000 fpm.
  4. Temperature Range: Minus 20 to plus 210 deg F.
- F. Flexible Ducts, Noninsulated - Class 0, Interlocking Spiral of Aluminum Foil:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ATCO Rubber Products, Inc.
    - b. Flexmaster U.S.A., Inc.
  2. Pressure Rating: 8 inch wg positive or negative.
  3. Maximum Air Velocity: 5000 fpm.
  4. Temperature Range: Minus 100 to plus 435 deg F.
- 2.3 FLEXIBLE DUCTS, INSULATED
- A. Standard: Product is to be UL 181 listed and bearing the UL label.
- B. Flexible Ducts, Insulated - Class 1, Two-Ply Vinyl Film Supported by Helically Wound, Spring-Steel Wire; Fibrous-Glass Insulation:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ATCO Rubber Products, Inc.
    - b. Flexmaster U.S.A., Inc.
    - c. Thermaflex; a Flex-Tek Group company.
  2. Pressure Rating: 10 inch wg positive and 1.0 inch wg negative.
  3. Maximum Air Velocity: 4000 fpm.
  4. Temperature Range: Minus 10 to plus 160 deg F.
  5. Insulation R-Value: Comply with ASHRAE/IES 90.1.
  6. Vapor-Barrier Film: Polyethylene.
- C. Flexible Ducts, Insulated - Class 1, Black Polymer Film Supported by Helically Wound, Spring-Steel Wire; Fibrous-Glass Insulation:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Flexmaster U.S.A., Inc.
    - b. JP Lamborn Co.
    - c. Thermaflex; a Flex-Tek Group company.
  2. Pressure Rating: 4 inch wg positive and 0.5 inch wg negative.
  3. Maximum Air Velocity: 4000 fpm.
  4. Temperature Range: Minus 20 to plus 175 deg F.
  5. Insulation R-Value: Comply with ASHRAE/IES 90.1.
  6. Vapor-Barrier Film: Polyethylene.
- D. Flexible Ducts, Insulated - Class 1, Multiple Layers of Aluminum Laminate Supported by Helically Wound, Spring-Steel Wire; Fibrous-Glass Insulation:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Flexmaster U.S.A., Inc.
    - b. JP Lamborn Co.
    - c. Thermaflex; a Flex-Tek Group company.
  2. Pressure Rating: 10 inch wg positive and 1.0 inch wg negative.
  3. Maximum Air Velocity: 4000 fpm.
  4. Temperature Range: Minus 20 to plus 210 deg F.

5. Insulation R-Value: Comply with ASHRAE/IES 90.1.
  6. Vapor-Barrier Film: Polyethylene.
- E. Flexible Ducts, Insulated - Class 1, Aluminum Laminate and Polyester Film with Latex Adhesive Supported by Helically Wound, Spring-Steel Wire; Fibrous-Glass Insulation:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Flexmaster U.S.A., Inc.
  2. Pressure Rating: 10 inch wg positive and 1.0 inch wg negative.
  3. Maximum Air Velocity: 4000 fpm.
  4. Temperature Range: Minus 20 to plus 210 deg F.
  5. Insulation R-Value: Comply with ASHRAE/IES 90.1.
  6. Vapor-Barrier Film: Polyethylene.
- F. Flexible Ducts, Insulated - Class 0, Interlocking Spiral of Aluminum Foil; Fibrous-Glass Insulation:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Flexmaster U.S.A., Inc.
  2. Pressure Rating: 8 inch wg positive or negative.
  3. Maximum Air Velocity: 5000 fpm.
  4. Temperature Range: Minus 20 to plus 250 deg F.
  5. Insulation R-Value: Comply with ASHRAE/IES 90.1.
  6. Vapor-Barrier Film: Polyethylene.
- 2.4 FLEXIBLE DUCT CONNECTORS
- A. Clamps: Stainless steel band with stainless steel or zinc-plated hex screw to tighten band with a worm-gear action Nylon strap in sizes 3 through 18 inches, to suit duct size.
- B. Non-Clamp Connectors: Adhesive.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION OF FLEXIBLE DUCTS**

- A. Install flexible ducts in accordance with applicable details in the following publications:
1. ADC's "Flexible Duct Performance & Installation Standards" for flexible ducts.
  2. NAIMA AH116.
  3. SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts.
  4. SMACNA's "Fibrous Glass Duct Construction Standards" for fibrous-glass ducts.
- B. Install in indoor applications only. Do not install flexible duct in locations where it will be exposed to UV lighting.
- C. Connect terminal units to supply ducts directly or with maximum 12-inch lengths of flexible duct. Do not use flexible ducts to change directions.
- D. Connect diffusers and light troffer boots to ducts directly or with maximum 60-inch lengths of flexible duct clamped or strapped in place.
- E. Connect flexible ducts to metal ducts with liquid adhesive plus tape.
- F. Installation:
1. Install ducts fully extended.
  2. Do not bend ducts across sharp corners.
  3. Bends of flexible ducting must not exceed a minimum of one-duct diameter.
  4. Avoid contact with metal fixtures, water lines, pipes, or conduits.
  5. Install flexible ducts in a direct line, without sags, twists, or turns.
  6. Install in accordance with ADC instructions.
- G. Supporting Flexible Ducts:
1. Support flexible duct at manufacturer's recommended intervals, but at no greater distance than 4 ft.. Provide sufficient support so that maximum centerline sag is 1/2 in. per ft. between supports. A connection to rigid duct or equipment may be considered a support joint.
  2. Install extra supports at bends placed approximately one-duct diameter from center line of the bend.
  3. Ducts may rest on ceiling joists or truss supports. Spacing between supports must not exceed the maximum spacing in accordance with manufacturer's written installation instructions.

4. Vertically installed ducts must be stabilized by support straps at a maximum of 72 inches o.c.

END OF SECTION 23 33 46

## SECTION 23 34 00

### HVAC FANS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Ventilators, centrifugal - roof-mounted downblast.
  - 2.

##### 1.2 ACTION SUBMITTALS

- A. Product Data:
  - 1. For each type of product.
    - a. Construction details, material descriptions, dimensions of individual components and profiles, and finishes for fans.
    - b. Rated capacities, furnished specialties, and accessories for each fan.
    - c. Fans:
      - 1) Certified fan performance curves with system operating conditions indicated.
      - 2) Certified fan sound-power ratings.
      - 3) Fan construction and accessories.
      - 4) Motor ratings and electrical characteristics, plus motor and electrical accessories.
      - 5) Fan speed controllers.
    - d. Material thickness and finishes, including color charts.
    - e. Dampers, including housings, linkages, and operators.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Include diagrams for power, signal, and control wiring.
  - 4. Design Calculations: Calculate requirements for selecting vibration isolators and for designing vibration isolation bases.
  - 5. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
- C. Delegated Design Submittal: For vibration isolation, supports, indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Design Calculations: Calculate requirements for selecting vibration isolators, supports,.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans showing fan rooms and fan system layouts, reflected ceiling plans, and other drawings required to illustrate relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- B. Seismic Qualification Data: Certificates, for fans, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Startup service reports.
- D. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fans and ventilators, include the following:
1. Operation in normal and emergency modes.
  2. Operation and maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective coverage for storage and identified with labels describing contents.
1. Belts: One set(s) for each belt-driven unit.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design vibration isolation, supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

2.2 VENTILATORS, CENTRIFUGAL - ROOF-MOUNTED DOWNBLAST

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Greenheck Fan Corporation.
  2. Loren Cook Company.
  3. PennBarry; division of Air System Components.
- B. Source Limitations: Obtain roof-mounted downblast centrifugal ventilators from single manufacturer.
- C. Standards: Comply with UL 705.
- D. Housing: Downblast; removable spun-aluminum dome top and outlet baffle extruded-aluminum rectangular top galvanized-steel mushroom-domed top spun aluminum; square, one-piece aluminum base with venturi inlet cone.
- E. Fan Wheels: Aluminum hub and wheel with backward-inclined blades; spark-resistant construction classified in accordance with AMCA 99, Section 8, Type A.
- F. Belt Drives:
1. Resiliently mounted to housing.
  2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
  3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
  4. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
  5. Motor Pulleys: Adjustable pitch for use with motors through 5 hp. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions. Provide fixed pitch for use with motors larger than 5 hp.
  6. Fan and motor are isolated from exhaust airstream.
- G. Accessories:
1. Variable-Frequency Motor Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
  2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted outside fan housing, factory wired through an internal aluminum conduit.
  3. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
  4. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
  5. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.

6. Spark-resistant, all-aluminum wheel construction.
  7. Mounting Pedestal: Galvanized steel with removable access panel.
- H. Prefabricated Roof Curbs: Galvanized steel; mitered and welded corners; 1-1/2-inch-thick, rigid, fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to suit roof opening and fan base.
1. Configuration: Self-flashing without a cant strip, with mounting flange Manufactured to accommodate roof slope.
  2. Overall Height: 12 inches.
  3. Sound Curb: Curb with sound-absorbing insulation.
  4. Hinged sub-base to provide access to damper or as cleanout for grease applications.
  5. Burglar Bars: 1/2-inch- thick steel bars welded in place to form 6-inch squares.
  6. Pitch Mounting: Manufacture curb for roof slope.
  7. Metal Liner: Galvanized steel.
  8. Mounting Pedestal: Galvanized steel with removable access panel.
- 2.3 MOTORS
- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 05 00 "Common Work Results for HVAC."
  - B. Where variable-frequency drives are indicated or scheduled, provide fan motor compatible with variable-frequency drive.
- 2.4 SOURCE QUALITY CONTROL
- A. AMCA Certification for Fan Sound Performance Rating: Test, rate, and label in accordance with AMCA 311.
  - B. AMCA Certification for Fan Aerodynamic Performance Ratings: Test, rate, and label in accordance with AMCA 211.
  - C. AMCA Certification for Fan Energy Index (FEI): Test, rate, and label in accordance with AMCA 211.
  - D. Fan Operating Limits: Classify fans in accordance with AMCA 99, Section 14.

### **PART 3 - EXECUTION**

- 3.1 INSTALLATION, GENERAL
- A. Install fans level and plumb.
  - B. Disassemble and reassemble units, as required for moving to the final location, in accordance with manufacturer's written instructions.
  - C. Lift and support units with manufacturer's designated lifting or supporting points.
  - D. Equipment Mounting:
    1. Install floor-mounted fans on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
    2. Install roof-mounted fans on roof curbs or support steel. See Drawings for specific requirements.
    3. Unit Support: Install fans level on structural curbs. Coordinate with duct connections. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.
    4. Support duct-mounted and other hanging fans directly from the building structure, using suitable hanging systems as specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."
    5. Comply with requirements for vibration isolation and seismic-control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
    6. Comply with requirements for vibration isolation devices specified in Section 23 05 48.13 "Vibration Controls for HVAC."
  - E. Curb Support, Prefabricated: Rail-type wood support provided by fan manufacturer.
  - F. Unit Support: Install centrifugal fans level on structural curbs. Coordinate with duct connections. Coordinate wall penetrations and flashing with wall construction. Secure units to structural support with anchor bolts.

- G. Isolation Curb Support: Install centrifugal fans on isolation curbs, and install flexible duct connectors and vibration-isolation and seismic-control devices.
    - 1. Comply with requirements for vibration isolation and seismic-control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
    - 2. Comply with requirements in Section 23 05 48.13 "Vibration Controls for HVAC."
  - H. Install units with adequate clearances for service and maintenance.
  - I. Label fans in accordance with requirements specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."
- 3.2 DUCTWORK CONNECTIONS
- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 23 33 00 "Air Duct Accessories."
  - B. Where installing ducts adjacent to fans, allow space for service and maintenance.
- 3.3 PIPING CONNECTIONS
- A. Install piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain with pipe sizes matching the drain connection.
  - B. Install heat tracing on all drain piping subject to freezing temperature and as indicated on Drawings. Furnish and install heat tracing in accordance with Section 23 05 33 "Heat Tracing for HVAC Piping."
- 3.4 ELECTRICAL CONNECTIONS
- A. Connect wiring in accordance with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
  - B. Ground equipment in accordance with Section 26 05 26 "Grounding and Bonding for Electrical Systems."
  - C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
  - D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
    - 1. Nameplate is to be laminated acrylic or melamine plastic signs, as specified in Section 26 05 53 "Identification for Electrical Systems."
    - 2. Nameplate is to be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.
- 3.5 CONTROL CONNECTIONS
- A. Install control and electrical power wiring to field-mounted control devices.
  - B. Connect wiring in accordance with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- 3.6 STARTUP SERVICE:
- A. Perform startup service.
    - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
    - 2. Verify that shipping, blocking, and bracing are removed.
    - 3. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
    - 4. Verify that cleaning and adjusting are complete.
    - 5. For direct-drive fans, verify proper motor rotation direction and verify fan wheel free rotation and smooth bearing operation.
    - 6. For belt-drive fans, disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
    - 7. Adjust belt tension.
    - 8. Adjust damper linkages for proper damper operation.
    - 9. Verify lubrication for bearings and other moving parts.
    - 10. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.

11. Disable automatic temperature-control operators, energize motor and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
12. Shut unit down and reconnect automatic temperature-control operators.
13. Remove and replace malfunctioning units and retest as specified above.

3.7 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.
- D. Comply with requirements in Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC."

3.8 CLEANING

- A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean fans internally to remove foreign material and construction dirt and dust.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative.
  1. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  2. Test and adjust controls and safeties.
  3. Fans and components will be considered defective if they do not pass tests and inspections.
  4. Prepare test and inspection reports.

3.10 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain HVAC fans.

END OF SECTION 23 34 00

## SECTION 23 36 00

### AIR TERMINAL UNITS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
1. Bypass, single-duct air terminal units.
  2. Modulating, single-duct air terminal units.
  3. Parallel fan-powered air terminal units.
  4. Series fan-powered air terminal units.
  5. Dual-duct air terminal units.
  6. Induction air terminal units.
  7. Diffuser-type air terminal units.
  8. Balancing terminal units.
  9. Pressure-control terminal units.
  10. Critical environment control valve.
  11. Underfloor air distribution terminal units.
  12. Exhaust single-duct terminal units.
  13. DOAS, series, fan-powered air terminal units.
  14. Casing liner.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of air terminal unit.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for air terminal units.
  2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For air terminal units.
1. Include plans, elevations, sections, and mounting details.
  2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  3. Include diagrams for power, signal, and control wiring.
  4. Hangers and supports, including methods for duct and building attachment and vibration isolation.
- C. Delegated Design Submittal: For vibration isolation and supports, indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Materials, fabrication, assembly, and spacing of hangers and supports.
  2. Design Calculations: Calculate requirements for selecting vibration isolators, supports,.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans and other details, or BIM model, drawn to scale, indicating the items described in this Section, and coordinated with all building trades.
- B. Seismic Qualification Data: For air terminal units, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals.
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Instructions for resetting minimum and maximum air volumes.
    - b. Instructions for adjusting software set points.

#### 1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fan-Powered-Unit Filters: Furnish one spare filter(s) for each filter installed.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a Qualified Electrical Testing Laboratory, and marked for intended location and application.
- B. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Start-up."
- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, "Section 6 - Heating, Ventilating, and Air Conditioning."
- D. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design vibration isolation, supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

#### 2.2 MODULATING, SINGLE-DUCT AIR TERMINAL UNITS VAV-1 THRU VAV-9

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Carnes Company.
  - 2. Price Industries Limited.
  - 3. Titus; brand of Johnson Controls International plc, Global Products.
- B. Description: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Casing: Minimum 20-gauge- thick galvanized steel.
  - 1. Casing Liner: Comply with requirements in "Casing Liner" Article below.
  - 2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
  - 3. Air Outlet: S-slip and drive connections, size matching inlet size.
  - 4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
  - 1. Maximum Damper Leakage: AHRI 880 rated, 1 percent of nominal airflow at 3-inch wg inlet static pressure.
- E. Velocity Sensors: Multipoint array with velocity inlet sensors.
- F. Attenuator Section: Casing material and thickness matching associated air terminal unit casing. Provide packless attenuator integral with the air terminal unit, with noise transmission loss performance as required in schedules on Drawings.
- G. Hydronic Heating Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch. Include manual air vent and drain valve. Provide hydronic heating coils for air terminal units scheduled on Drawings.
- H. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless steel, machine-staked terminals secured with stainless steel hardware. Provide electric-resistance heating coils for air terminal units scheduled on Drawings.
  - 1. Stage(s): One.

2. SCR controlled.
  3. Access door interlocked disconnect switch.
  4. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable).
  5. Nickel chrome 80/20 heating elements.
  6. Airflow switch for proof of airflow.
  7. Fan interlock contacts.
  8. Fuses in terminal box for overcurrent protection (for coils of more than 48 A).
  9. Pneumatic-electric switches and relays.
  10. Magnetic contactor for each step of control (for three-phase coils).
- I. Electric Controls:
1. Electric Damper Actuator: 24 V, spring-return open.
  2. Electric Thermostat: Wall-mounted electronic type with clock display, temperature display in Fahrenheit and Celsius, and space temperature set point.
  3. Air Volume Controls: Pressure-dependent volume controls with field-adjustable minimum and maximum position stops.
- J. Electronic Controls:
1. Electronic Damper Actuator: 24 V, spring-return open.
  2. Electronic Thermostat: Wall-mounted electronic type with temperature set-point display in Fahrenheit and Celsius.
  3. Electronic Air Volume Controller: Pressure-independent analog electronic controller, factory calibrated and field adjustable to minimum and maximum air volumes; provides consistent airflow to the space in response to electronic thermostat signal while compensating for inlet static-pressure variations of up to 4 inches wg; includes a multipoint velocity sensor at air inlet.
- K. Pneumatic Controls:
1. Pneumatic Damper Actuator: 0 to 13 psig spring range.
  2. Pneumatic Thermostat: Wall-mounted pneumatic type direct acting and reverse acting with appropriate mounting hardware.
  3. Pneumatic Air Volume Controller: Factory calibrated and field adjustable to minimum and maximum air volumes; provides consistent airflow to the space in response to pneumatic thermostat signal while compensating for inlet static-pressure variations of up to 4 inches wg; includes a multipoint velocity sensor at air inlet.
- L. Direct Digital Controls:
1. Terminal Unit Controller: Pressure-independent, VAV controller and integrated actuator, and electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes.
    - a. Occupied and unoccupied operating mode.
    - b. Remote reset of airflow or temperature set points.
    - c. Adjusting and monitoring with portable terminal.
    - d. Communication with temperature-control system specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC."
  2. Room Sensor: Wall mounted with temperature set-point adjustment and access for connection of portable operator terminal.
  3. Terminal Unit Controller, Section 23 09 23: Controller is to be factory mounted and wired by air terminal manufacturer; unit controllers, integrated actuators, and room sensors to be furnished under Section 23 09 23 "Direct Digital Controls (DDC) for HVAC."
- M. Control Sequence: See Section 23 09 93 "Sequence of Operation" for control sequences.
- 2.3 CASING LINER
- A. Casing Liner, Fibrous Glass: Fibrous-glass duct liner, complying with ASTM C1071, NFPA 90A or NFPA 90B, and with NAIMA AH124.
1. Minimum Thickness: 1/2 inch.
    - a. Maximum Thermal Conductivity:
      - 1) Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
      - 2) Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
  2. Antimicrobial Erosion-Resistant Coating: Apply to surface of liner that will form interior surface of duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound is to be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.

3. Foil-Faced Liner: Minimum 0.001-inch reinforced, nonporous aluminum foil applied to matted insulation airstream face. Encapsulate all insulation edges with sheet metal angles and channels, or tape.
  4. Solid Metal Liner: Solid galvanized sheet metal encapsulating matted insulation face from airstream.
  5. Perforated Metal Liner: Perforated galvanized sheet metal encapsulating matted insulation face from airstream.
  6. Specialty Liner: Insert specialty liner in coordination with manufacturers.
  7. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C916.
- B. Casing Liner, Flexible Elastomeric: Flexible elastomeric duct liner fabricated of preformed, cellular, closed-cell, sheet materials complying with ASTM C534/C534M, Type II, Grade 1; and with NFPA 90A or NFPA 90B.
1. Minimum Thickness: 1/2 inch.
  2. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.
  3. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
- 2.4 SOURCE QUALITY CONTROL
- A. AHRI 880 Certification: Test, rate, and label assembled air terminal units in accordance with AHRI 880.
  - B. AHRI 880: Test and rate assembled air terminal units in accordance with AHRI 880.
  - C. Water Coils: Factory pressure test to 300 psig in accordance with AHRI 410 and ASHRAE 33.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION, GENERAL**

- A. Comply with Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment" and Section 23 31 13 "Metal Ducts" for hangers and supports.
- B. Install air terminal units according to NFPA 90A.
- C. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- D. Install wall-mounted thermostats.

#### **3.2 DUCTWORK CONNECTIONS**

- A. Comply with requirements in Section 23 31 13 "Metal Ducts" for connecting ducts to air terminal units.
- B. Make connections to air terminal units with flexible connectors complying with requirements in Section 23 33 00 "Air Duct Accessories."

#### **3.3 ELECTRICAL CONNECTIONS**

- A. Install field power to each air terminal unit electrical power connection. Coordinate with air terminal unit manufacturer and installers.
- B. Connect wiring in accordance with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- C. Ground equipment in accordance with Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- D. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
  1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 05 53 "Identification for Electrical Systems."
  2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

#### **3.4 CONTROL CONNECTIONS**

- A. Install control and electrical power wiring to field-mounted control devices.

- B. Connect control wiring in accordance with Section 26 05 23 "Control-Voltage Electrical Power Cables."

3.5 IDENTIFICATION

- A. Label each air terminal unit with drawing designation, nominal airflow, maximum and minimum factory-set airflows, and coil type. Comply with requirements in Section 23 05 53 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
  - 2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
  - 3. Verify that controls and control enclosure are accessible.
  - 4. Verify that control connections are complete.
  - 5. Verify that nameplate and identification tag are visible.
  - 6. Verify that controls respond to inputs as specified.
  - 7.

3.7 ADJUSTING

- A. Comply with requirements in Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for air terminal unit testing, adjusting, and balancing.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
  - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Air terminal unit will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.9 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

END OF SECTION 23 36 00

## SECTION 23 37 13.13

### AIR DIFFUSERS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
1. Ceiling diffusers - round face.
  2. Ceiling diffusers - rectangular and square face.
  3. Diffusers - perforated face.
  4. Diffusers - louver face.
  5. Diffusers - linear bar.
  6. Diffusers - ceiling-integral plenum slot.
  7. Diffusers - ceiling-linear continuous slot.
  8. Diffusers - light troffer.
  9. Diffusers - induction underfloor air distribution, round.
  10. Diffuser plenums - linear underfloor air distribution.
  11. Diffusers - drum louvers, high capacity.
  12. Diffusers - modular-core grille, high capacity.
  13. Diffusers - HEPA, laminar flow, filtered.
  14. Diffusers - jet nozzle and punkah.

##### 1.2 ACTION SUBMITTALS

- A. Product Data:
1. For each type of product.
    - a. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
    - b. Diffuser Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
  - B. Samples: For each exposed product and for each color and texture specified. Actual size of smallest diffuser indicated.
  - C. Samples for Initial Selection: For diffusers with factory-applied color finishes. Actual size of smallest diffuser indicated.
  - D. Samples for Verification: For diffusers, in manufacturer's standard sizes to verify color selected. Actual size of smallest diffuser indicated.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Ceiling suspension assembly members.
  2. Method of attaching hangers to building structure.
  3. Size and location of initial access modules for acoustical tile.
  4. Ceiling-mounted items, including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
  5. Duct access panels.
- B. Source quality-control reports.

#### PART 2 - PRODUCTS

##### 2.1 CEILING DIFFUSERS - RECTANGULAR AND SQUARE FACE

- A. Ceiling Diffuser - Rectangular and Square:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. METALAIRE, Inc.
    - b. Price Industries Limited.

- c. Titus; brand of Johnson Controls International plc, Global Products.
2. Description: Square ceiling diffuser with round or rectangular duct collar and a series of curved louvers to provide discharge parallel to ceiling surface.
3. Source Limitations: Obtain from single source from single manufacturer.
4. Material: Aluminum.
5. Finish: Baked enamel, color selected by Architect.
6. Face Size: 24 by 24 inches.
7. Face Style: Three cone.
8. Mounting: T-bar Snap in Mounting panel.
9. Pattern: Fixed.
10. Dampers: Radial opposed blade.
11. Accessories:
  - a. Equalizing grid.
  - b. Plaster ring.
  - c. Safety chain.
  - d. Wire guard.
  - e. Sectorizing baffles.
  - f. Manual remote balancing damper operator.
  - g. UL 555C fire-rated assembly, including fire damper and insulating blanket.

## 2.2 DIFFUSERS - PERFORATED FACE

- A. Diffuser - Perforated Face:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. METALAIRE, Inc.
    - b. Price Industries Limited.
    - c. Titus; brand of Johnson Controls International plc, Global Products.
  2. Description: Square ceiling diffuser with duct collar and perforated face plate.
  3. Source Limitations: Obtain from single source from single manufacturer.
  4. Material: Steel backpan and pattern controllers, with aluminum face.
  5. Finish: Baked enamel, color selected by Architect.
  6. Face Size: 24 by 24 inches.
  7. Duct Inlet: Square.
  8. Face Style: Flush.
  9. Mounting: Surface T-bar Snap in Mounting panel.
  10. Pattern Controller: Four louvered deflector patches.
  11. Dampers: Opposed blade.
  12. Accessories:
    - a. Equalizing grid.
    - b. Plaster ring.
    - c. Safety chain.
    - d. Wire guard.
    - e. Sectorizing baffles.
    - f. Manual remote balancing damper operator.
    - g. UL 555C fire-rated assembly, including fire damper and insulating blanket.

## 2.3 DIFFUSERS - LOUVER FACE

- A. Diffuser - Louver Face:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. METALAIRE, Inc.
    - b. Price Industries Limited.
    - c. Titus; brand of Johnson Controls International plc, Global Products.
  2. Description: Square diffuser with outer border, duct collar, and curved face louvers to direct air discharge in one, two, three, or four directions, parallel to ceiling surface.
  3. Source Limitations: Obtain from single source from single manufacturer.
  4. Material: Aluminum.
  5. Finish: Baked enamel, color selected by Architect.
  6. Face Size: See schedule.
  7. Mounting: Surface Surface with beveled frame.
  8. Pattern: core style as indicated on the Drawings.
  9. Dampers: Radial opposed blade.

10. Accessories:
  - a. Square to round neck adaptor.
  - b. Adjustable pattern vanes.
  - c. Throw reducing vanes.
  - d. Equalizing grid.
  - e. Plaster ring.
  - f. Safety chain.
  - g. Wire guard.
  - h. Sectorizing baffles.
  - i. Manual remote balancing damper operator.
  - j. UL 555C fire-rated assembly including fire damper and insulating blanket.

#### 2.4 DIFFUSERS - CEILING-INTEGRAL PLENUM SLOT

##### A. Diffuser - Ceiling-Integral Plenum Slot:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. METALAIRE, Inc.
  - b. Price Industries Limited.
  - c. Titus; brand of Johnson Controls International plc, Global Products.
2. Description: Diffuser assembly with integral pattern controller, one or more linear discharge slots, and an integral plenum and duct collar. Assembly is to be installed in modular T-bar ceilings.
3. Source Limitations: Obtain from single source from single manufacturer.
4. Material:
  - a. Face: Aluminum.
  - b. Pattern Controller and Tees: Aluminum.
  - c. Plenum: Steel, internally insulated.
  - d. Plenum Insulation: Comply with UL 181.
5. Finish:
  - a. Face and Plenum: Baked enamel.
  - b. Pattern Controller: Baked enamel, black.
  - c. Tees: Baked enamel, color selected by Architect.
6. Slot Width: 1 inch.
7. Number of Slots: See schedule .
8. Length: See schedule.
9. Accessories: See schedule.
10. Fire-Rated Construction: Integral fire damper and fire-rated assembly listing in the Underwriters Laboratory Fire Resistance Directory, tested in accordance with UL 263 and complying with NFPA 90A requirements.

#### 2.5 DIFFUSERS - CEILING-LINEAR CONTINUOUS SLOT

##### A. Diffuser - Ceiling-Linear Continuous Slot:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. METALAIRE, Inc.
  - b. Price Industries Limited.
  - c. Titus; brand of Johnson Controls International plc, Global Products.
2. Description: Linear diffuser assembly with continuous slots; adjustable vane in each slot to direct airflow in required direction.
3. Source Limitations: Obtain from single source from single manufacturer.
4. Slot Width: 1 inch.
5. Section Length: See schedule.
6. Straight and curved sections as required to accommodate layout.
7. Mitered tees and corners.
8. Pattern control vanes.
9. Material: Aluminum, extruded, heavy wall.
10. Finishes:
  - a. Exterior: Standard white.
  - b. Interior: Standard black.
11. Throw: Horizontal.
12. Mounting: Ceiling.
13. Plenum: Insulated.
14. Other Features:
  - a. Blank-offs.

2.6 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers in accordance with ASHRAE 70.

**PART 3 - EXECUTION**

3.1 INSTALLATION OF AIR DIFFUSERS

- A. Install diffusers level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
- C. Install diffusers with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.2 ADJUSTING

- A. After installation, adjust diffusers to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13.13

## SECTION 23 37 13.23

### REGISTERS AND GRILLES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Registers - adjustable-blade face.
  - 2. Registers - fixed-blade face.
  - 3. Grilles - adjustable-blade face.
  - 4. Grilles - fixed-blade face.
  - 5. Grilles - linear bar.
- B. Related Requirements:
  - 1. Section 23 33 00 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to registers and grilles.
  - 2. Section 23 37 13.13 "Air Diffusers" for various types of air diffusers.
  - 3. Section 23 37 13.43 "Security Registers and Grilles" for security registers and security grilles.
  - 4. Section 23 37 16 "Fabric Air-Diffusion Devices" for continuous tubular diffusers.

##### 1.2 ACTION SUBMITTALS

- A. Product Data:
  - 1. For each type of product.
    - a. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
    - b. Register and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- B. Samples: For each exposed product and for each color and texture specified. Smallest size register and grille indicated.
- C. Samples for Initial Selection: For registers and grilles with factory-applied color finishes. Actual size of smallest register and grille indicated.
- D. Samples for Verification: For registers and grilles, in manufacturer's standard sizes to verify color selected. Actual size of smallest size register and grille indicated.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Ceiling suspension assembly members.
  - 2. Method of attaching hangers to building structure.
  - 3. Size and location of initial access modules for acoustical tile.
  - 4. Ceiling-mounted items, including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
  - 5. Duct access panels.
- B. Source quality-control reports.

#### PART 2 - PRODUCTS

##### 2.1 REGISTERS

- A. Registers - Adjustable-Blade Face:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. METALAIRE, Inc.
    - b. Price Industries Limited.
    - c. Titus; brand of Johnson Controls International plc, Global Products.
  - 2. Material: Aluminum.

3. Finish: Baked enamel, color selected by Architect.
4. Face-Blade Arrangement: Face blades with adjustable angle to permit manual adjustment of air discharge direction. Blades horizontally spaced 3/4 inch apart.
5. Core Construction: Integral.
6. Rear-Blade Arrangement: Rear blades with adjustable angle to permit manual adjustment of air discharge direction. Blades horizontally spaced 3/4 inch apart.
7. Frame: 1 inch wide.
8. Mounting: Countersunk screw Lay in.
9. Accessories:
  - a. Damper Type: Adjustable opposed blade.
  - b. Front-blade gang operator.
  - c. Filter.

B. Registers - Fixed-Blade Face:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. METALAIRE, Inc.
  - b. Price Industries Limited.
  - c. Titus; brand of Johnson Controls International plc, Global Products.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Architect.
4. Face-Blade Arrangement: Fixed-position face blades, horizontally spaced 3/4 inch apart.
5. Core Construction: Integral.
6. Frame: 1 inch wide.
7. Mounting: Countersunk screw Lay in.
8. Damper Type: Adjustable opposed blade.

2.2 GRILLES

A. Grilles - Adjustable-Blade Face:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. METALAIRE, Inc.
  - b. Price Industries Limited.
  - c. Titus; brand of Johnson Controls International plc, Global Products.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Architect.
4. Face-Blade Arrangement: Face blades with adjustable angle to permit manual adjustment of discharge direction. Blades horizontally spaced 3/4 inch apart.
5. Core Construction: Integral.
6. Rear-Blade Arrangement: All rear blades with adjustable angle to permit manual adjustment of air-discharge direction. Blades horizontally spaced 3/4 inch apart.
7. Frame: 1 inch wide.
8. Mounting: Countersunk screw Lay in.
9. Accessories:
  - a. Damper: Opposed blade, spring closing, and with NRTL listed fusible link for 160 deg F.
  - b. Front-blade gang operator.
  - c. Filter.

B. Grilles - Fixed-Blade Face:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. METALAIRE, Inc.
  - b. Price Industries Limited.
  - c. Titus; brand of Johnson Controls International plc, Global Products.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Architect.
4. Face-Blade Arrangement: Fixed-face blade position, horizontally spaced 3/4 inch apart.
5. Core Construction: Integral.
6. Frame: 1 inch wide.
7. Mounting: Countersunk screw Lay in.
8. Accessory: Filter.

2.3 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate registers and grilles in accordance with ASHRAE 70.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine areas where registers and grilles are installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION OF REGISTERS AND GRILLES**

- A. Install registers and grilles level and plumb.
- B. Outlets and Inlets Locations: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
- C. Install registers and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

**3.3 ADJUSTING**

- A. After installation, adjust registers and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13.23

## SECTION 23 73 43.16

### OUTDOOR, SEMI-CUSTOM AIR-HANDLING UNITS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
1. Outdoor, semi-custom air-handling units.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each air-handling unit.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
  2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
  3. Include unit dimensions and weight.
  4. Include cabinet material, metal thickness, finishes, insulation, and accessories.
  5. Fans:
    - a. Include certified fan-performance curves with system operating conditions indicated.
    - b. Include certified fan-sound power ratings.
    - c. Include fan construction and accessories.
    - d. Include motor ratings, electrical characteristics, and motor accessories.
  6. Include certified coil-performance ratings with system operating conditions indicated.
  7. Include dampers, including housings, linkages, and operators.
- B. Shop Drawings: For each outdoor, semi-custom air-handling unit.
1. Include plans, elevations, sections, and mounting details.
  2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  3. Detail fabrication and assembly of outdoor, semi-custom air-handling units, as well as procedure and diagrams.
  4. Include diagrams for power, signal, and control wiring.
- C. Delegated Design Submittal: For vibration isolation, supports, indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Design Calculations: Calculate requirements for selecting vibration isolators, supports, and for designing vibration isolation bases.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans and other details, or BIM model, drawn to scale, showing the items described in this Section, and coordinated with all building trades.
- B. Sample Warranty: For manufacturer's warranty.
- C. Seismic Qualification Data: Certificates for air-handling units, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
  4. Restraint of internal components.
- D. Wind Qualification Data: Certificates for air-handling units, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculations.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of wind force and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- E. Source quality-control reports.
- F. Startup service reports.
- G. Field quality-control reports.
- 1.4 CLOSEOUT SUBMITTALS
- A. Operation and Maintenance Data: For air-handling units to include in emergency, operation, and maintenance manuals.
- 1.5 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Filters: One set(s) for each air-handling unit.
  2. Gaskets: One set(s) for each access door.
  3. Fan Belts: One set(s) for each air-handling unit fan.
- 1.6 WARRANTY
- A. Warranty: Manufacturer agrees to repair or replace components of outdoor, semi-custom, air-handling unit that fail in materials or workmanship within specified warranty period.
1. Warranty Period for Entire Unit: Manufacturer's standard but not less than one year(s) from date of Substantial Completion.
  2. Warranty Period for Heat Wheels: Not less than five years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

- 2.1 PERFORMANCE REQUIREMENTS
- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design vibration isolation, supports, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- F. Structural Performance:
1. Casing Panels: Self-supporting and capable of withstanding positive/negative 8-inch wg internal static pressure, without exceeding a midpoint deflection of 0.0042 inch/inch of panel span.
  2. Floor and Roof Panels: Self-supporting and capable of withstanding 300-lb static load at midspan, without exceeding a midpoint deflection of 0.0042 inch/inch.
  3. Roof Panels: Self-supporting and capable of withstanding a static snow load of 30 lb/sq. ft., without exceeding a midpoint deflection of 0.0042 inch/inch.
- G. Casing Leakage Performance: ASHRAE 111, Class 6 leakage or better at plus or minus 8-inch wg.
- 2.2 CAPACITIES AND CHARACTERISTICS
- A. Supply Fan:
1. Type: SWSI, airfoil unshoused centrifugal fan.
  2. Class: AMCA 99, Section 14, Class II.
  3. Drive: Direct.
  4. Number of Fan Wheels: See schedule.

5. Fan Diameter: See schedule.
  6. Airflow: See schedule.
  7. Total Static Pressure: See schedule.
  8. External Static Pressure: See schedule.
  9. Speed: See schedule.
  10. Maximum Outlet Velocity: See schedule.
  11. Motor:
    - a. Size: See schedule.
    - b. Speed: See schedule.
    - c. Volts: 460 V.
    - d. Phase: Three.
    - e. Hertz: 60 Hz.
    - f. Full-Load Amperes: See schedule.
    - g. Minimum Circuit Ampacity: See schedule.
    - h. Maximum Overcurrent Protection: See schedule.
- B. Fan: Exhaust.
1. Type: SWSI, airfoil unhooded centrifugal plenum fan.
  2. Class: AMCA 99, Section 14, Class II.
  3. Drive: Direct.
  4. Number of Fan Wheels: See schedule.
  5. Fan Diameter: See schedule.
  6. Airflow: See schedule.
  7. Total Static Pressure: See schedule.
  8. External Static Pressure: See schedule.
  9. Speed: See schedule.
  10. Maximum See schedule.
  11. Motor:
    - a. Size: See schedule.
    - b. Speed: See schedule.
    - c. Volts: 460 V.
    - d. Phase: Three.
    - e. Hertz: 60 Hz.
    - f. Full-Load Amperes: See schedule.
    - g. Minimum Circuit Ampacity: See schedule.
    - h. Maximum Overcurrent Protection: See schedule.
- C. Preheat Coil:
1. Heat-Transfer Rate: See schedule.
  2. Entering-Air Temperature: See schedule.
  3. Leaving-Air Temperature: See schedule.
- D. Heating Coil:
1. Heat-Transfer Rate: See schedule.
  2. Entering-Air Temperature: See schedule.
  3. Leaving-Air Temperature: See schedule.
- E. Cooling Coil:
1. Sensible Heat-Transfer Rate: See schedule.
  2. Total Heat-Transfer Rate: See schedule.
  3. Entering-Air, Dry-Bulb Temperature: See schedule.
  4. Entering-Air, Wet-Bulb Temperature: See schedule.
  5. Leaving-Air, Dry-Bulb Temperature: See schedule.
  6. Leaving-Air, Wet-Bulb Temperature: See schedule.
  7. Refrigerant:
    - a. Refrigerant Type: R-32.
- F. Prefilters:
1. Minimum Efficiency Reporting Value:
    - a. MERV Rating: MERV 13, according to ASHRAE 52.2.
- G. Final Filters:
1. Minimum Efficiency Reporting Value:
    - a. MERV Rating: MERV 13, according to ASHRAE 52.2.

- H. SCCR:
  - 1. 10kAIC

### 2.3 OUTDOOR, SEMI-CUSTOM AIR-HANDLING UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Daikin Applied.
  - 2. YORK; brand of Johnson Controls International plc, Building Solutions North America.
  - 3. AAON.
- B. Source Limitations: Obtain from single source from single manufacturer.
- C. Unit Casings:
  - 1. Frame: Modular and providing overall structural integrity without reliance on casing panels for structural support.
  - 2. Base Rail:
    - a. Material: Galvanized steel.
  - 3. Casing Joints: Hermetically sealed at each corner and around entire perimeter.
  - 4. Double-Wall Construction:
    - a. Outside Casing Wall:
      - 1) Material, Galvanized Steel: Minimum 18 gauge thick.
      - 2) Factory Finish: Provide manufacturer's standard finish.
    - b. Inside Casing Wall:
      - 1) Material, Galvanized Steel: Solid, minimum 18 gauge thick.
  - 5. Floor Plate:
    - a. Material:
      - 1) Galvanized steel, treadplate, minimum 18 gauge thick.
    - b. Antimicrobial Coating: Applied during the manufacturing process. EPA approved.
  - 6. Roof: Cross-broken and pitched with "C" caps over joints to provide watertight seal.
  - 7. Piping Vestibule: Insulated with same insulation and thickness as casing, 18 inches deep by full width of piping connections.
  - 8. Casing Insulation:
    - a. Materials: Glass-fiber blanket or board insulation, Type I or Type II ASTM C1071 or injected polyurethane foam insulation.
    - b. Casing Panel R-Value: Minimum R-11.
    - c. Insulation Thickness: 2 inches.
    - d. Thermal Break: Provide continuity of insulation with no through-casing metal in casing walls, floors, or roofs of air-handling unit.
  - 9. Airstream Surfaces: Surfaces in contact with airstream shall comply with requirements in ASHRAE 62.1.
  - 10. Panels, Doors, and Windows:
    - a. Panels:
      - 1) Fabrication: Formed and reinforced, double-wall and insulated panels of same materials and thicknesses as casing.
      - 2) Fasteners: Two or more camlock type for panel lift-out operation. Arrangement shall allow panels to be opened against airflow
      - 3) Gasket: Neoprene, applied around entire perimeters of panel frames.
      - 4) Size: Large enough to allow unobstructed access for inspection and maintenance of air-handling unit's internal components. At least 18 inches wide by full height of unit casing up to a maximum height of 60 inches.
    - b. Doors:
      - 1) Fabrication: Formed and reinforced, double-wall and insulated panels of same materials and thicknesses as casing.
      - 2) Hinges: A minimum of two ball-bearing hinges or stainless steel piano hinge and two wedge-lever latches, operable from inside and outside. Arrange doors to be opened against airflow. Provide safety latch retainers on doors so that doors do not open uncontrollably.
      - 3) Gasket: Neoprene, applied around entire perimeters of panel frames.
      - 4) Size: Large enough to allow for unobstructed access for inspection and maintenance of air-handling unit's internal components. At least 18 inches wide by full height of unit casing up to a maximum height of 60 inches.
    - c. Locations and Applications:
      - 1) Fan Section: Doors.

- 2) Coil Section: Panels.
  - 3) Access Section: Doors.
  - 4) Access Sections Immediately Upstream and Downstream of Coil Sections: Doors.
  - 5) Damper Section: Doors.
  - 6) Filter Section: Doors large enough to allow periodic removal and installation of filters.
  - 7) Access Sections Immediately Upstream and Downstream of Filter Sections: Doors.
  - 8) Mixing Section: Doors.
  - 9) Humidifier Section: Doors.
  - d. Service Lights: LED vaporproof luminaire with individual switched junction box located outside, adjacent to each access door and panel.
    - 1) Locations: Each section accessed with a door or panel.
  - e. Convenience Outlets: One 20-A duplex GFCI receptacle per location with junction box located on outside casing wall.
    - 1) Locations: Each section accessed with a door or panel.
11. Condensate Drain Pans:
- a. Location: Each type of cooling coil.
  - b. Construction:
    - 1) Single-wall, galvanized-steel or noncorrosive polymer stainless steel sheet.
    - 2) Double-wall, galvanized-steel or noncorrosive polymer stainless steel sheet with space between walls filled with foam insulation and moisture-tight seal.
  - c. Drain Connection:
    - 1) Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
    - 2) Minimum Connection Size: NPS 1.
  - d. Slope: Minimum 0.125-in./ft. slope, to comply with ASHRAE 62.1, in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and from humidifiers and to direct water toward drain connection.
  - e. Length: Extend drain pan downstream from leaving face for distance to comply with ASHRAE 62.1.
  - f. Width: Entire width of water producing device.
  - g. Depth: A minimum of 2 inches deep.
  - h. Formed sections.
  - i. Pan-Top Surface Coating for Galvanized-Steel Drain Pans: Asphaltic waterproofing compound.
  - j. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.
- D. Fan, Drive, and Motor Section:
1. Fan and Drive Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum-rated fan speed and motor horsepower.
  2. Fans: Centrifugal, galvanized steel; mounted on solid-steel shaft.
    - a. Shafts: With field-adjustable alignment.
      - 1) Turned, ground, and polished hot-rolled steel with keyway.
    - b. Shaft Bearings:
      - 1) Prelubricated and Sealed, Ball Bearings: Self-aligning, pillow-block type with an L-50 rated life of 200,000 hours according to ABMA 9.
      - 2) Grease-Lubricated, Tapered-Roller Bearings: Self-aligning, pillow-block type with double-locking collars and two-piece, cast-iron housing with grease lines extended to outside unit and an L-50 Insert bearing life rating rated life of 200,000 hours according to ABMA 11.
      - 3) Grease-Lubricated Bearings: Self-aligning, pillow-block-type, ball or roller bearings with adapter mount and two-piece, cast-iron housing with grease lines extended to outside unit and an L-50 rated life of 200,000.
    - c. Housings: Formed- and reinforced-steel panels to form curved scroll housings with shaped cutoff and spun-metal inlet bell.
      - 1) Bracing: Steel angle or channel supports for mounting and supporting fan scroll, wheel, motor, and accessories.
    - d. Housings, Plenum Fans: Steel frame and panel; fabricated without fan scroll and volute housing. Provide inlet screens for Type SWSI fans.
    - e. Plenum Fan Arrays: Contained as defined in AHRI 430. Steel or aluminum frame with inlet cone and structural framing around each fan built into an array of multiple fans. Provide motorized dampers at each fan to prevent short circuiting of flow if one fan is not operating.

- f. Backward-Inclined, Centrifugal Fan Wheels: Construction with curved inlet flange, backplate, backward-inclined blades welded or riveted to flange and backplate; steel hub riveted to backplate and fastened to shaft with setscrews.
- g. Forward-Curved, Centrifugal Fan Wheels: Inlet flange, backplate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically fastened to flange and backplate; steel hub swaged to backplate and fastened to shaft with setscrews.
- h. Airfoil, Centrifugal Fan Wheels (Plenum Fan Wheels): Smooth-curved inlet flange, backplate, and hollow die-formed airfoil-shaped blades continuously welded at tip flange and backplate; steel hub riveted to backplate and fastened to shaft with setscrews.
- i. Mounting: For internal vibration isolation. Factory-mount fans with manufacturer's standard restrained vibration isolation mounting devices having a minimum static deflection of 1 inch.
- j. Shaft Lubrication Lines: Extended to a location outside the casing.
- k. Flexible Connector: Factory fabricated with a fabric strip minimum 3-1/2 inches wide, attached to two strips of minimum by.
  - 1) Flexible Connector Fabric: Glass fabric, double coated with neoprene. Fabrics, coatings, and adhesives shall comply with UL 181, Class 1.
    - a) Fabric Minimum Weight: 26 oz./sq. yd.
    - b) Fabric Minimum Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
    - c) Fabric Minimum Service Temperature Range: Minus 40 to plus 200 deg F.
- 3. Drive, Direct: Factory-mounted, direct drive.
- 4. Drive, Belt: Factory-mounted, V-belt drive, with adjustable alignment and belt tensioning, and with 1.5 service factor based on fan motor.
  - a. Pulleys: Cast iron or cast steel with split, tapered bushing, dynamically balanced at the factory.
  - b. Belts: Oil resistant, non-sparking and nonstatic; in matched sets for multiple-belt drives.
  - c. Belt Guards: Comply with requirements specified by OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards"; 0.146-inch- thick, 3/4-inch diamond-mesh wire screen, welded to steel angle frame; prime coated.
- 5. Motors:
  - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 23 05 00 "Common Work Results for HVAC."
  - b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
  - c. Enclosure Type: Open, dripproof.
  - d. Enclosure Materials: Cast iron.
  - e. Motor Pulleys: Adjustable pitch for use with 5-hp motors and smaller; fixed pitch for use with motors larger than 5 hp. Select pulley size so pitch adjustment is at the middle of adjustment range at fan design conditions.
  - f. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
  - g. Mount unit-mounted disconnect switches on exterior of unit.
- 6. Comply with Section 26 29 23 "Variable-Frequency Motor Controllers."
- 7. Variable-Frequency Motor Controller: Serving each fan individually in fan array.
  - a. Manufactured Units: Pulse-width modulated; constant torque and variable torque for inverter-duty motors.
  - b. Output Rating: Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range; maximum voltage equals input voltage.
  - c. Unit Operating Requirements:
    - 1) Internal Adjustability:
      - a) Minimum Speed: 5 to 25 percent of maximum rpm.
      - b) Maximum Speed: 80 to 100 percent of maximum rpm.
      - c) Acceleration: 0.1 to 999.9 seconds.
      - d) Deceleration: 0.1 to 999.9 seconds.
      - e) Current Limit: 30 to minimum of 150 percent of maximum rating.
    - 2) Self-Protection and Reliability Features:
      - a) Surge suppression.
      - b) Loss of input signal protection.
      - c) Under- and overvoltage trips.
      - d) Variable-frequency motor controller and motor-overload/overtemperature protection.

- e) Critical frequency rejection.
  - f) Loss-of-phase protection.
  - g) Reverse-phase protection.
  - h) Motor-temperature fault.
  - 3) Bidirectional autospeed search.
  - 4) Torque boost.
  - 5) Motor temperature compensation at slow speeds.
    - a) Panel-mounted operator station.
    - b) Historical logging information and displays.
    - c) Digital indicating devices.
  - 6) Control Signal Interface: Electric.
  - 7) Proportional Integral Directive (PID) control interface.
  - 8) DDC system for HVAC Protocols for Network Communications: ASHRAE 135.
  - d. Line Conditioning:
    - 1) Input line conditioning.
    - 2) Output filtering.
    - 3) EMI/RFI filtering.
  - e. Bypass Systems:
    - 1) Bypass Mode: Manual operation only.
    - 2) Bypass Controller, Two-Contactor Style: With bypass and output isolating contactors and isolating switch.
    - 3) Bypass Controller, Three-Contactor Style: With bypass and input and output isolating contactors and isolating switch.
    - 4) Bypass Contactor Configuration: Full-voltage (across the line) type.
- E. Coil Section:
- 1. General Requirements for Coil Section:
    - a. Comply with AHRI 410.
    - b. Fabricate coil section to allow removal and replacement of coil for maintenance and to allow in-place access for service and maintenance of coil(s).
    - c. For multizone units, provide air deflectors and air baffles to balance airflow across coils.
    - d. Coils shall not act as structural component of unit.
  - 2. Cooling Coils:
    - a. Refrigerant Coil:
      - 1) Tubes: Copper.
      - 2) Fins:
        - a) Material: Copper.
        - b) Fin Spacing: Maximum 12 fins per inch.
      - 3) Fin and Tube Joints: Mechanical bond.
      - 4) Headers: Seamless-copper headers with brazed connections.
      - 5) Frames: Galvanized steel.
      - 6) Coatings: Corrosion-resistant coating.
      - 7) Ratings: Designed, tested, and rated according to ASHRAE 33 and AHRI 410.
        - a) Working Pressure: Minimum 300 psig.
- F. Dampers:
- 1. Comply with requirements in Section 23 09 23.12 "Control Dampers."
  - 2. Outdoor- and Return-Air Dampers: Low-leakage, double-skin, airfoil-blade, galvanized-steel dampers with compressible jamb seals and extruded-vinyl blade edge seals in opposed-blade arrangement with zinc-replated steel operating rods rotating in stainless steel sleeve bearings mounted in a single galvanized-steel frame, and with operating rods connected with a common linkage. Leakage rate shall not exceed 4 cfm/sq. ft. at 1-inch wg and 8 cfm/sq. ft. at 4-inch wg, leakage Class 1, tested, rated, and labeled in accordance with AMCA 511.
  - 3. Face-and-Bypass Dampers: Opposed-blade, galvanized-steel dampers with zinc-plated steel operating rods rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame and with operating rods connected with a common linkage. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.
  - 4. Zone Dampers: Two single-blade, galvanized-steel dampers offset 90 degrees from each other on zinc-plated steel operating rod rotating in sintered bronze or nylon bearings mounted in a single galvanized-steel frame. Provide blade gaskets and edge seals, and mechanically fasten blades to operating rod.
  - 5. Damper Operators: Comply with requirements in Section 23 09 23.12 "Control Dampers."

6. Electronic Damper Operators:
    - a. Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
    - b. Electronic damper position indicator shall have visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.
    - c. Operator Motors:
      - 1) Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 23 05 00 "Common Work Results for HVAC."
      - 2) Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.
      - 3) Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.
    - d. Nonspring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running torque of 150 in. x lbf and breakaway torque of 300 in. x lbf.
    - e. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running and breakaway torque of 150 in. x lbf.
    - f. Size dampers for running torque calculated as follows:
      - 1) Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. of damper.
      - 2) Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. of damper.
      - 3) Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft. of damper.
      - 4) Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. of damper.
      - 5) Dampers with 2- to 3-Inch wg (500 to 750 Pa) of Pressure Drop or Face Velocities of 1000 to 2500 fpm (5 to 13 m/s): Increase running torque by 1.5.
      - 6) Dampers with 3- to 4-Inch wg (750 to 1000 Pa) of Pressure Drop or Face Velocities of 2500 to 3000 fpm (13 to 15 m/s): Increase running torque by 2.0.
    - g. Coupling: V-bolt and V-shaped, toothed cradle.
    - h. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
    - i. Fail-Safe Operation: Mechanical, spring-return mechanism with external, manual gear release on nonspring-return actuators.
    - j. Power Requirements (Two-Position Spring Return): 24 V dc.
    - k. Power Requirements (Modulating): Maximum 10 VA at 24 V ac or 8 W at 24 V dc.
    - l. Proportional Signal: 2 to 10 V dc or 4 to 20 mA, and 2- to 10-V dc position feedback signal.
    - m. Temperature Rating: Minus 22 to plus 122 deg F.
    - n. Run Time: 12 seconds open, 5 seconds closed.
  7. Mixing Section: Multiple-blade, air-mixer assembly located immediately downstream of mixing section.
  8. Combination Filter and Mixing Section:
    - a. Cabinet support members shall hold 2-inch thick, pleated, flat, permanent or throwaway filters.
    - b. Multiple-blade, air-mixer assembly shall mix air to prevent stratification, located immediately downstream of mixing box.
- G. Roof Curbs:
1. Materials: Galvanized steel with corrosion-resistant coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
    - a. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
      - 1) Materials: ASTM C1071, Type I or II.
      - 2) Thickness: 1-1/2 inches.
    - b. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
      - 1) Liner Adhesive: Comply with ASTM C916, Type I.
      - 2) Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
      - 3) Liner materials applied in this location shall have airstream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
  2. Curb Dimensions: Height of 14 inches.
- H. Intake and Relief Air Openings:
1. Provide hood, including moisture eliminator, over all unit intake and relief openings. Match material and finish of casing exterior.

## 2.4 MATERIALS

- A. Steel:
  - 1. ASTM A36/A36M for carbon structural steel.
  - 2. ASTM A568/A568M for steel sheet.
- B. Stainless Steel:
  - 1. Manufacturer's standard grade for casing.
  - 2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.
- C. Galvanized Steel: ASTM A653/A653M.
- D. Aluminum: ASTM B209.
- E. Comply with Section 23 05 46 "Coatings for HVAC" for corrosion-resistant coating.
- F. Corrosion-Resistant Coating: Coat with a corrosion-resistant coating capable of withstanding a 3000-hour salt-spray test according to ASTM B117.
  - 1. Standards:
    - a. ASTM B117 for salt spray.
    - b. ASTM D2794 for minimum impact resistance of 100 in-lb.
    - c. ASTM B3359 for cross-hatch adhesion of 5B.
  - 2. Application: Immersion.
  - 3. Thickness: 1 mil.
  - 4. Gloss: Minimum gloss of 60 on a 60-degree meter.

## 2.5 SOURCE QUALITY CONTROL

- A. AHRI 430 Certification: Test, rate, and label air-handling units and their components in accordance with AHRI 430.
- B. AHRI 1060 Certification: Test, rate, and label air-handling units that include air-to-air energy recovery devices in accordance with AHRI 1060.
- C. AHRI 260 or AMCA 311 Sound Performance Rating Certification: Test, rate, and label in accordance with AHRI 260 or AMCA 311.
- D. Fan Aerodynamic Performance Rating: Test and rate fan performance for airflow, pressure, power, air density, rotation speed, and efficiency in accordance with AMCA 210.
- E. Fan Energy Index (FEI): Test in accordance with AMCA 210 and rate in accordance with AMCA 99, AMCA 207, and AMCA 208.
- F. Fan Operating Limits: Classify fans in accordance with AMCA 99, Section 14.
- G. Water Coils: Factory tested to 300 psig according to AHRI 410 and ASHRAE 33.
- H. Steam Coils: Factory tested to 300 and 200 psig underwater according to AHRI 410 and ASHRAE 33.
- I. Refrigerant Coils: Factory tested to minimum 450-psig internal pressure and to minimum 300-psig internal pressure while underwater, according to AHRI 410 and ASHRAE 33.
- J. Witnessed Casing Leakage Tests:
  - 1. Pay for all expenses, for one representative designated by Owner, to travel to the factory to witness cabinet air-leakage testing on the specific assembled unit(s) prior to release for delivery to Project site.
  - 2. If the unit(s) does not meet specified leakage requirements, perform factory modifications and retest. Do not release unit for shipment until tested leakage is measured to be within specified leakage and leakage testing report has been accepted by Owner's designated representative.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine casing insulation materials and filter media before air-handling unit installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for steam, hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION OF OUTDOOR, SEMI-CUSTOM AIR-HANDLING UNITS

- A. Roof Curb: Install on roof structure or concrete base, level and secure, according to NRCA's "NRCA Roofing Manual: Membrane Roof Systems." AHRI Guideline B. Install units on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 07 72 00 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts. Coordinate sizes and locations of roof curbs with actual equipment provided.
- B. Unit Support: Install unit level on structural curbs. Coordinate roof penetrations and flashing with roof construction. Secure units to structural support with anchor bolts. Coordinate sizes and locations of curbs with actual equipment provided.
- C. Arrange installation of units to provide access space around air-handling units for service and maintenance.
- D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.
- E. Install filter-gauge, static-pressure taps upstream and downstream of filters. Mount filter gauges on outside of filter housing or filter plenum in accessible position. Provide filter gauges on filter banks, installed with separate static-pressure taps upstream and downstream of filters.
- F. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 23 33 00 "Air Duct Accessories."

### 3.3 PIPING CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to air-handling unit, allow space for service and maintenance.
- C. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- D. Connect condensate drain pans using NPS 1-1/4, ASTM B88, Type M copper tubing. Extend to nearest equipment or roof drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.
- E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 23 21 13 "Hydronic Piping" and Section 23 21 16 "Hydronic Piping Specialties." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.
- F. Steam and Condensate Piping: Comply with applicable requirements in Section 23 22 13 "Steam and Condensate Heating Piping" and Section 23 22 16 "Steam and Condensate Heating Piping Specialties." Install shutoff valve at steam supply connections, float and thermostatic trap, and union or flange at each coil return connection. Install gate valve and inlet strainer at supply connection of dry steam humidifiers, and inverted bucket steam trap to condensate return connection.
- G. Refrigerant Piping: Comply with applicable requirements in Section 23 23 00 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

### 3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
  - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 05 53 "Identification for Electrical Systems."
  - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

### 3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring according to Section 26 05 23 "Control-Voltage Electrical Power Cables."

### 3.6 STARTUP SERVICE

- A. Perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
  - 2. Verify that shipping, blocking, and bracing are removed.
  - 3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
  - 4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
  - 5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
  - 6. Verify that zone dampers fully open and close for each zone.
  - 7. Verify that face-and-bypass dampers provide full face flow.
  - 8. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
  - 9. Comb coil fins for parallel orientation.
  - 10. Verify that proper thermal-overload protection is installed for electric coils.
  - 11. Install new, clean filters.
  - 12. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- B. Starting procedures for air-handling units include the following:
  - 1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
  - 2. Measure and record motor electrical values for voltage and amperage.
  - 3. Manually operate dampers from fully closed to fully open position and record fan performance.

### 3.7 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.
- C. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

### 3.8 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, coils, and filter housings, and install new, clean filters.

### 3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Leak Test: After installation, fill water and steam coils with water, and test coils and connections for leaks.
  - 2. Charge refrigerant coils with refrigerant and test for leaks.
  - 3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 4. HEPA Filters: Pressurize housing to a minimum of 3-inch wg or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter with soapy water to check for air leaks.
  - 5. HEPA Filters, Critical Applications: Pressurize housing to a minimum of 3-inch wg or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter for air leaks according to ASME AG-1, pressure-decay method.
  - 6. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

7. Air-handling unit and components will be considered defective if unit or components do not pass tests and inspections.
8. Prepare test and inspection reports.

3.10 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

END OF SECTION 23 73 43.16

## SECTION 23 81 26

### SPLIT-SYSTEM AIR-CONDITIONERS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Split-system air-conditioners.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: For units with factory-applied color finishes.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Warranty: Sample of special warranty.

##### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

##### 1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Filters: One set(s) for each air-handling unit.
  - 2. Gaskets: One set(s) for each access door.
  - 3. Fan Belts: One set(s) for each air-handling unit fan.

##### 1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance:
  - 1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
  - 2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - "Procedures," and Section 7 - "Construction and System Start-up."
- C. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

##### 1.7 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Section 03 30 00 "Cast-in-Place Concrete."
- B. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
1. Warranty Period:
    - a. For Compressor: Five year(s) from date of Substantial Completion.
    - b. For Parts: Five year(s) from date of Substantial Completion.
    - c. For Labor: Five year(s) from date of Substantial Completion.

**PART 2 - PRODUCTS**

2.1 SPLIT-SYSTEM AIR-CONDITIONERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Mitsubishi Electric & Electronics USA, Inc.
  2. Trane.
  3. Daikin.
- B. Indoor Units (5 tons (18 kW) or Less):
1. Concealed Evaporator-Fan Components:
    - a. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
    - b. Insulation: Faced, glass-fiber duct liner.
    - c. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
    - d. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch; leak tested to 300 psig underwater; with a two-position control valve.
    - e. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
    - f. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
    - g. Fan Motors:
      - 1) Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 23 05 00 "Common Work Results for HVAC."
      - 2) Multitapped, multispeed with internal thermal protection and permanent lubrication.
      - 3) Wiring Terminations: Connect motor to chassis wiring with plug connection.
    - h. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
    - i. Filters: Permanent, cleanable.
    - j. Condensate Drain Pans:
      - 1) Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
        - a) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
        - b) Depth: A minimum of 2 inches deep.
      - 2) Single-wall, galvanized-steel sheet.
      - 3) Double-wall, galvanized-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
      - 4) Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
        - a) Minimum Connection Size: NPS 1.
      - 5) Pan-Top Surface Coating: Asphaltic waterproofing compound.
      - 6) Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.
  2. Floor-Mounted, Evaporator-Fan Components:
    - a. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect.
      - 1) Discharge Grille: Steel with surface-mounted frame.

- 2) Insulation: Faced, glass-fiber duct liner.
- 3) Drain Pans: Galvanized steel, with connection for drain; insulated.
- b. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
- c. Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch; leak tested to 300 psig underwater; with a two-position control valve.
- d. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
- e. Fan: Direct drive, centrifugal, with power-induced outside air.
- f. Fan Motors:
  - 1) Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 23 05 00 "Common Work Results for HVAC."
  - 2) Multitapped, multispeed with internal thermal protection and permanent lubrication.
- g. Air Filtration Section:
  - 1) General Requirements for Air Filtration Section:
    - a) Comply with NFPA 90A.
    - b) Minimum MERV according to ASHRAE 52.2.
    - c) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
  - 2) Disposable Panel Filters:
    - a) Factory-fabricated, viscous-coated, flat-panel type.
    - b) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.
  - 3) Extended-Surface, Disposable Panel Filters:
    - a) Factory-fabricated, dry, extended-surface type.
    - b) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
3. Wall-Mounted, Evaporator-Fan Components:
  - a. Cabinet: Enameled steel with removable panels on front and ends in color selected by Architect, and discharge drain pans with drain connection.
  - b. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
  - c. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
  - d. Fan: Direct drive, centrifugal.
  - e. Fan Motors:
    - 1) Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 23 05 00 "Common Work Results for HVAC."
    - 2) Multitapped, multispeed with internal thermal protection and permanent lubrication.
    - 3) Enclosure Type: Totally enclosed, fan cooled.
    - 4) NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
    - 5) Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
    - 6) Mount unit-mounted disconnect switches on exterior of unit.
  - f. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
  - g. Condensate Drain Pans:
    - 1) Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
      - a) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
      - b) Depth: A minimum of 1 inch deep.
    - 2) Single-wall, galvanized-steel sheet.

- 3) Double-wall, galvanized-steel sheet with space between walls filled with foam insulation and moisture-tight seal.
  - 4) Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
  - 5) Minimum Connection Size: NPS 1.
  - 6) Pan-Top Surface Coating: Asphaltic waterproofing compound.
  - h. Air Filtration Section:
    - 1) General Requirements for Air Filtration Section:
      - a) Comply with NFPA 90A.
      - b) Minimum MERV according to ASHRAE 52.2.
      - c) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
    - 2) Disposable Panel Filters:
      - a) Factory-fabricated, viscous-coated, flat-panel type.
      - b) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.
    - 3) Extended-Surface, Disposable Panel Filters:
      - a) Factory-fabricated, dry, extended-surface type.
      - b) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- C. Outdoor Units (5 tons (18 kW) or Less:
1. Air-Cooled, Compressor-Condenser Components:
    - a. Casing: Steel, finished with baked enamel in color selected by Architect, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
    - b. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
      - 1) Compressor Type: Scroll.
      - 2) Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
      - 3) Refrigerant: R-32.
      - 4) Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.
    - c. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
    - d. Fan: Aluminum-propeller type, directly connected to motor.
    - e. Motor: Permanently lubricated, with integral thermal-overload protection.
    - f. Low Ambient Kit: Permits operation down to 45 deg F.
    - g. Mounting Base: Polyethylene.
- D. Accessories
1. Control equipment and sequence of operation are specified in Section 23 09 23 "Direct Digital Control (DDC) System for HVAC" and Section 23 09 93 "Sequence of Operations for HVAC DDC."
  2. Thermostat:
    - a. Low voltage with subbase to control compressor and evaporator fan.
    - b. Wireless infrared functioning to remotely control compressor and evaporator fan, with the following features:
      - 1) Compressor time delay.
      - 2) 24-hour time control of system stop and start.
      - 3) Liquid-crystal display indicating temperature, set-point temperature, time setting, operating mode, and fan speed.
      - 4) Fan-speed selection including auto setting.
  3. Automatic-reset timer to prevent rapid cycling of compressor.
  4. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
  5. Drain Hose: For condensate.
  6. Monitoring:
    - a. Monitor constant and variable motor loads.
    - b. Monitor variable-frequency-drive operation.
    - c. Monitor economizer cycle.
    - d. Monitor cooling load.

- e. Monitor air distribution static pressure and ventilation air volumes.
- E. Capacities and Characteristics
  - 1. Cooling Capacity:
  - 2. See schedule.
  - 3. Heating Capacity:
    - a. Type: Electric.
    - b. Total Capacity: See schedule.
    - c. Electric Heating Coil:
      - 1) See schedule.
  - 4. Indoor Unit:
    - a. Fan Motor Electrical Characteristics:
      - 1) See schedule.
      - 2) Hertz: 60.
    - b. Airflow: See schedule.
  - 5. Outdoor Unit:
    - a. Type: Air cooled.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install units level and plumb.
- B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- C. Install roof-mounted, compressor-condenser components on equipment supports specified in Section 07 72 00 "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.
- D. Equipment Mounting:
  - 1. Install ground-mounted, compressor-condenser components on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
  - 2. Install ground-mounted, compressor-condenser components on polyethylene mounting base.
  - 3. Comply with requirements for vibration isolation and seismic control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
  - 4. Comply with requirements for vibration isolation devices specified in Section 23 05 48.13 "Vibration Controls for HVAC."
- E. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

#### **3.2 CONNECTIONS**

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
  - 1. Water Coil Connections: Comply with requirements specified in Section 23 21 13 "Hydronic Piping" and Section 23 21 16 Hydronic Piping Specialties." Connect hydronic piping to supply and return coil connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
  - 2. Remote, Water-Cooled Condenser Connections: Comply with requirements specified in Section 23 21 13 "Hydronic Piping" and Section 23 21 16 Hydronic Piping Specialties." Connect hydronic piping to supply and return connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
- B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.
- C. Duct Connections: Duct installation requirements are specified in Section 23 31 13 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Section 23 33 00 "Air Duct Accessories."

#### **3.3 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

- B. Perform tests and inspections.
    - 1. Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
  - C. Tests and Inspections:
    - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
    - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
    - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  - D. Remove and replace malfunctioning units and retest as specified above.
  - E. Prepare test and inspection reports.
- 3.4 STARTUP SERVICE
- A. Perform startup service.
    - 1. Complete installation and startup checks according to manufacturer's written instructions.
    - 2.
- 3.5 DEMONSTRATION
- A. Train Owner's maintenance personnel to adjust, operate, and maintain units.

END OF SECTION 23 81 26

## SECTION 23 84 13.29

### SELF-CONTAINED STEAM HUMIDIFIERS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Self-contained electric-resistance humidifiers.
  - 2. Self-contained electrode humidifiers.
  - 3. Self-contained gas-fired humidifiers.
  - 4. Condensate drain coolers.

##### 1.2 DEFINITIONS

- A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, distributor tubes/manifolds, and attachments to other work.
  - 1. Include diagrams for power, signal, and control wiring.

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
  - 1. Structural members to which humidifiers will be attached.
  - 2. Size and location of initial access modules for acoustical tile.
- B. Seismic Qualification Data: Certificates, for humidifiers, accessories, and components from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.

##### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For humidifiers to include in operation and maintenance manuals.

##### 1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An NRTL.

##### 1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Supply one replacement electrode cylinder with each self-contained humidifier.

##### 1.8 COORDINATION

- A. Coordinate location and installation of humidifiers with distributor tubes/manifolds in ducts and plenums or occupied space. Revise locations and elevations to suit field conditions and to ensure proper humidifier operation.

## **PART 2 - PRODUCTS**

### **2.1 PERFORMANCE REQUIREMENTS**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with AHRI 640.
- C. Comply with UL 998.
- D. Listed and labeled by, as complying with applicable AGA/CGA standards.
- E. Listed and labeled by ETL.
- F. Seismic Performance: Self-contained steam humidifiers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Component Importance Factor: 1.5.
  - 3.
- G. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 25 or less.
  - 2. Smoke-Developed Index: 50 or less.

### **2.2 SELF-CONTAINED ELECTRODE HUMIDIFIERS**

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - 1. Nortec Industries Inc.
- B. Capacities and Characteristics:
- C. See schedule.
- D. Water Type: Suitable for use with tap water.
- E. Cylinders: Replaceable or cleanable plastic humidifier water reservoir, steel electrode assembly, suitable for use with tap water.
- F. Cabinet:
  - 1. Baked-enamel, Powder-coated-steel, or stainless-steel enclosure houses heater cylinder, electrical wiring, components, controls, and control panel. Cabinet is factory insulated for safe operating surface temperature.
  - 2. Hinged or removable cover, keyed to restrict unauthorized access.
  - 3. Plumbing and electrical components housed in separate compartments of the cabinet.
  - 4. Threaded outlet in bottom of cabinet for drain piping.
- G. Weatherproof Outdoor Enclosure: Insulated, with automatically controlled heating and ventilating system to maintain minimum operating conditions within the enclosure.
- H. Control Panel:
  - 1. Microprocessor-based control system for modulating cycling control.
  - 2. Factory-wired disconnect switch.
  - 3. Liquid-crystal display.
  - 4. Programmable keypad.
  - 5. Low-voltage control circuit.
  - 6. Diagnostic, maintenance, alarm, and status features.
  - 7. Safety switch interlocked to shut off heaters when cabinet is open.
  - 8. Internal electrical controls prewired to appropriately marked terminals for field connection.
  - 9. Electrical terminals for connection to each controlling device and alarm.
  - 10. NEMA 250, Type 3R, to comply with environmental conditions at installed locations.
  - 11. Building Automation System Interface:
    - a. Full communication interface: BACnet.
    - b. Web-based remote factory online monitoring with same functionality as local keypad/display.

- I. Controls:
  - 1. Solenoid fill valve and automatic drain valve or drain pump maintain water level. Include bronze inlet strainer, bronze solenoid fill valve with flow regulator, bronze solenoid drain valve or drain pump, and fill tee with built-in air gap to prevent back siphoning.
  - 2. Controls shall drain tanks if no demand for humidification for more than 72 hours.
  - 3. Set-point adjustment.
  - 4. Electrode current shutdown upon sensing unsafe condition (e.g., drain system malfunction, fill system malfunction, or overcurrent malfunction).
  - 5. Tri-conductivity sensor probes for water-level control.
  - 6. Foaming detection and correction.
- J. Area Dispersion Accessory: Stainless-steel tube, with integral fan that discharges vapor directly into occupied space. Designed for integral mounting onto humidifier cabinet.
- K. Atmospheric Steam Distributer Tube(s): Single or multiple, atmospheric steam distributer tube extending across entire width of duct or plenum and equipped with mounting brackets on ends. Nozzles/metered orifices are spaced evenly along distributer tubes and provide dry and uniform steam distribution.
  - 1. Material: Stainless steel.
  - 2. Insulation: Insulated.
- L. Atmospheric Steam Panel Distribution Manifold:
  - 1. Prefabricated steam dispersion grid assembly.
  - 2. Designed for short absorption distance.
  - 3. Suitable for atmospheric steam applications.
  - 4. Extending the full width and height of duct or plenum.
  - 5. Horizontal header with multiple vertical or horizontal tubes designed for dry steam injection within short absorption distance.
  - 6. Nozzles/metered orifices, spaced evenly along distribution tubes, provide dry and uniform steam distribution.
  - 7. Distribution panel extending the full width and height of duct or plenum.
  - 8. Headers and Distribution Tubes:
    - a. Material: Stainless steel.
    - b. Insulation: Insulated.
  - 9. Steam Separator: Separators/baffles, integral to the header, provide condensate-free steam to distribution tubes.
- M. Accessories:
  - 1. Humidistat Humidity Sensor: Wall mounted.
  - 2. Airflow switch prevents humidifier operation without airflow.
  - 3. Steam and Condensate Hoses: For interconnection of humidifier to distributer tube(s)/manifold.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.
- B. Seal all duct and plenum penetrations with flange.
- C. Install humidifier assemblies in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
- D. Install galvanized-steel drain pan under each manifold mounted in duct.
  - 1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
  - 2. Connect to condensate trap and drainage piping.

3. Extend drain pan upstream and downstream from tube(s)/manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.
  - E. Install tube(s)/manifold supply piping pitched to drain condensate back to humidifier or as recommended by manufacturer.
  - F. Equipment Mounting:
    1. Install floor-mounted humidifiers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
    2. Comply with requirements for vibration isolation and seismic control devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC."
    3. Comply with requirements for vibration isolation devices specified in Section 23 05 48.13 "Vibration Controls for HVAC."
  - G. Install gas-fired steam generators according to NFPA 54.
  - H. Install all manufacturer-furnished accessories in accordance with manufacturer's written installation instructions.
- 3.3 PIPING CONNECTIONS
- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
    1. Install piping adjacent to humidifiers to allow service and maintenance.
    2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.
  - B. Install piping specialties furnished by manufacturer but not factory mounted.
  - C. Install piping from safety relief valves to nearest floor drain.
  - D. Connect gas piping full size to steam-generator, gas-train inlet with union. Gas piping materials and specialties are specified in Section 23 11 23 "Facility Natural-Gas Piping."
  - E. Connect breeching full size to steam-generator outlet. Venting materials are specified in Section 23 51 23 "Gas Vents."
  - F. Connect combustion-air inlet to intake terminal using PVC piping with solvent-cemented joints. Run from boiler connection to outside and terminate adjacent to flue termination.
- 3.4 ELECTRICAL CONNECTIONS
- A. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
  - B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
  - C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
    1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 26 05 53 "Identification for Electrical Systems."
    2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.
    3. Locate nameplate where easily visible.
- 3.5 CONTROL CONNECTIONS
- A. Install control and electrical power wiring to field-mounted control devices.
  - B. Connect control wiring between control devices.
  - C. Connect control wiring according to Section 26 05 23 "Control Voltage Electrical Power Cables."
- 3.6 FIELD QUALITY CONTROL
- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
  - B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
  - C. Perform the following tests and inspections with the assistance of a factory-authorized service agent:
    1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Humidifier will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.
- 3.7 DEMONSTRATION
- A. Train Owner's maintenance personnel to adjust, operate, and maintain humidifiers.

END OF SECTION 23 84 13.29

**SECTION 26 05 00**

**COMMON WORK RESULTS FOR ELECTRICAL**

**PART 1 - GENERAL**

1.1 SUMMARY

- A. Section Includes:
1. Electrical equipment coordination and installation.
  2. Sleeves for raceways and cables.
  3. Fire Rated Sleeves for cables.
  4. Grout.
  5. Common electrical installation requirements.
  6. Utility company coordination requirements.

1.2 REFERENCES

- A. Abbreviations and Acronyms for Electrical Terms and Units of Measure:
1. A: Ampere, unit of electrical current.
  2. AC or ac: Alternating current.
  3. AF : Amp Frame
  4. AFCI: Arc-fault circuit interrupter.
  5. AIC: Ampere interrupting capacity.
  6. AL, Al, or ALUM: Aluminum.
  7. AP: Wireless access point
  8. ASD: Adjustable-speed drive.
  9. AT: Amp Trip
  10. ATS: Automatic transfer switch.
  11. AV: Audio-Video, audio-visual
  12. AWG: American wire gauge; see ASTM B258.
  13. BAS: Building automation system.
  14. BIL: Basic impulse insulation level.
  15. BIM: Building information modeling.
  16. BJ: Bonding jumper
  17. BKR: Breaker
  18. BMS: Building Management System
  19. C: Conduit
  20. CAD: Computer-aided design or drafting.
  21. CATV: Community antenna television, Cable Television
  22. CB: Circuit breaker.
  23. CCTV: Closed circuit television
  24. CFCI: Contractor furnished contractor installed
  25. CKT: Circuit
  26. CU or Cu: Copper.
  27. CU-AL or AL-CU: Copper-aluminum.
  28. dB or DB: Decibel, a unitless logarithmic ratio of two electrical, acoustical, or optical power values.
  29. DC or dc: Direct current.
  30. DDC: Direct digital control (HVAC).
  31. DISC: Disconnect
  32. DP: Distribution Panelboard
  33. DW: Dishwasher
  34. ECS: Emergency communication system
  35. EGB: Electrical grounding busbar
  36. EGC: Equipment grounding conductor.
  37. EMD: Estimated maximum demand.
  38. EMGB: Electrical main grounding busbar
  39. EMI: Electromagnetic interference.
  40. EP: Explosion proof
  41. EPS: Emergency power supply.

42. EPSS: Emergency power supply system.
43. ER: Existing to be relocated
44. ERMS: Energy reduction maintenance switch
45. ESS: Energy storage system.
46. EV: Electric vehicle.
47. EWC: Electric water cooler
48. FA: Fire Alarm
49. FAA: Fire alarm annunciator
50. FACP: Fire alarm control panel
51. FC or fc: Footcandle, a unit of illuminance equal to one lumen per square foot.
52. FLA: Full load amps
53. FLC: Full-load current.
54. FS: Flow Switch
55. FSD: Fire smoke damper
56. ft.: Foot.
57. G or GND: Equipment grounding conductor
58. GEC: Grounding electrode conductor.
59. GEN: Generator
60. GFI or GFCI: Ground-fault circuit interrupter.
61. GFPE: Ground-fault protection of equipment.
62. GND: Ground.
63. HACR: Heating, air conditioning, and refrigeration.
64. HDPE: High-density polyethylene.
65. HID: High-intensity discharge.
66. HH: Handhole
67. HOA: Hand-off-automatic
68. HP or hp: Horsepower.
69. HVAC: Heating, ventilating, and air conditioning.
70. Hz: Hertz.
71. IC: Intercom
72. IG: Isolated ground.
73. inch: Inch. To avoid confusion, the abbreviation "in." is not used.
74. IP: Ingress protection rating (enclosures); Internet protocol (communications).
75. IR: Infrared.
76. IS: Intrinsically safe.
77. ITE: Information technology equipment.
78. JB: Junction Box
79. KAIC or kAIC: Kiloampere interrupting capacity.
80. kcmil or MCM: One thousand circular mils.
81. KV or kV: Kilovolt.
82. KVA or kVA: Kilovolt-ampere.
83. kVAr or kVAR: Kilovolt-ampere reactive.
84. KW or kW: Kilowatt.
85. kWh: Kilowatt-hour.
86. LAN: Local area network.
87. LT: Light
88. LTG: Lighting
89. lb: Pound (weight).
90. LCD: Liquid-crystal display.
91. LED: Light-emitting diode.
92. LRC: Locked-rotor current.
93. MCA: Minimum circuit ampacity
94. MCB: Main circuit breaker
95. MCC: Motor-control center.
96. MDC: Modular data center.
97. MG set: Motor-generator set.
98. MH: Manhole
99. MLO: Main lugs only.
100. MOCP: Maximum overcurrent protection
101. MRTS: Motor rated toggle switch
102. MSB: Main switchboard
103. MTD: Mounted

- 104. MTG: Mounting
- 105. MTS: Main transfer switch
- 106. MVA: Megavolt-ampere.
- 107. mW: Milliwatt.
- 108. MW: Megawatt.
- 109. MWh: Megawatt-hour.
- 110. N: Neutral
- 111. N.C. or NC: Normally closed.
- 112. NF: Non-fused
- 113. NiCd: Nickel cadmium.
- 114. NL: Night light.
- 115. N.O. or NO: Normally open.
- 116. OCPD: Overcurrent protective device.
- 117. OFCI: Owner furnished contractor installed.
- 118. ONT: Optical network terminal.
- 119. P: Pole – referring to an electrical position in a panel
- 120. PA: Public address
- 121. PB: Pull box
- 122. PC: Personal computer.
- 123. PF or pf: Power factor.
- 124. PH or ph: Phase
- 125. PIV: Post indicator valve.
- 126. PLC: Programmable logic controller.
- 127. PoE: Power over Ethernet.
- 128. PVC: Polyvinyl chloride.
- 129. RCP: Reflected ceiling plan.
- 130. RECPT: Receptacle.
- 131. REF: Reference.
- 132. RFI: Radio-frequency interference (electrical); Request for interpretation (contract).
- 133. RMS or rms: Root-mean-square.
- 134. RPM or rpm: Revolutions per minute.
- 135. SCADA: Supervisory control and data acquisition.
- 136. SCCR: Short circuit current rating.
- 137. SEC: Secondary.
- 138. SPD: Surge protective device.
- 139. sq.: Square.
- 140. SWD: Switching duty.
- 141. SWBD: Switchboard.
- 142. TBB: Telecommunications bonding backbone.
- 143. TC: Time clock.
- 144. TCP/IP: Transmission control protocol/Internet protocol.
- 145. TGB: Telecommunications grounding busbar.
- 146. TMGB: Telecommunications main grounding busbar.
- 147. TO: Telecommunications outlet.
- 148. TR: Telecommunications room.
- 149. TR: Tamper resistant.
- 150. TS: Tamper switch.
- 151. TV: Television.
- 152. TVSS: Transient voltage surge suppressor.
- 153. UG : Underground.
- 154. UL: Underwriters Laboratories, Inc. (standards) or UL LLC (services).
- 155. UPS: Uninterruptible power supply.
- 156. USB: Universal serial bus.
- 157. UV: Ultraviolet.
- 158. V: Volt, unit of electromotive force.
- 159. Vac or V(ac): Volt, alternating current.
- 160. Vdc or V(dc): Volt, direct current.
- 161. VA: Volt-ampere, unit of complex electrical power.
- 162. VAR or VAR: Volt-ampere reactive, unit of reactive electrical power.
- 163. VFC: Variable-frequency controller.
- 164. VFD: Variable-frequency drive.
- 165. VPN: Virtual private network.

- 166. VRLA: Valve-regulated lead acid.
- 167. W: Watt, unit of real electrical power or Wire.
- 168. WG: Wire guard.
- 169. Wh: Watt-hour, unit of electrical energy usage.
- 170. WP: Weather proof.
- 171. WR: Weather resistant.
- 172. XFMR: Transformer.

### 1.3 DEFINITIONS

- A. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- B. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
- C. "Provide": Furnish and install, complete and ready for the intended use.

### 1.4 ACTION SUBMITTALS

- A. Product Data: For Fire Rated Sleeves for cables.
  - 1.

### 1.5 COORDINATION

- A. Trade Coordination: Include physical characteristics, electrical characteristics, device layout plans, wiring diagrams, and connections as required per Division 26, Electrical Coordination Documents. For equipment with electrical connections, furnish copy of approved submittal for inclusion in Division 26, Electrical submittal.
- B. Location of electrical outlets and equipment:
  - 1. Location of electrical outlets and equipment shown on electrical drawings are diagrammatic. Unless indicated otherwise do not use electrical drawings to locate electrical outlets and equipment.
  - 2. Luminaires and outlets:
    - a. Ceiling mounted luminaires and outlets: use architectural reflected ceiling plans and details to determine location unless indicated otherwise.
    - b. Wall mounted luminaires and outlets:
      - 1) Use architectural elevation and section drawings to determine location unless indicated otherwise.
      - 2) Where architectural elevation and section drawings do not indicate location of wall outlets then locate the outlet within 12 inches of location shown on electrical drawings considering field conditions.
      - 3) Coordinate location with consideration of owner provided equipment such as wall mounted televisions, white boards, furniture, cabinets and the like.
    - c. Floor mounted outlets: use architectural drawings to determine location unless indicated otherwise. If not clearly indicated, then send request for information to Architect.
    - d. Cabinet mounted luminaires and outlets: use cabinet details and shop drawings to determine location unless indicated otherwise.
    - e. Exterior luminaire poles and bollards: use locations indicated on electrical site plans and civil plans unless indicated otherwise
  - 3. Electrical equipment: Utilize approved manufacturer's shop drawing dimensions to determine location of equipment in space. Comply with NEC 110.26 access, working space and dedicated equipment space requirements. Maintain manufacturer requirements for maintenance access.
  - 4. Electrical handholes and manholes: use location shown on electrical site plans unless indicated otherwise.
  - 5. Outdoor Electrical equipment: use location shown on electrical site plans unless indicated otherwise.
- C. Shop Drawings: Provide coordinated shop drawings which include physical characteristics of all systems, device layout plans, and control wiring diagrams. Reference individual Division 26, Electrical specification sections for additional requirements for shop drawings outside of these requirements.
- D. Electrical connections to equipment supplied by owner or other trades:
  - 1. Prior to procurement of electrical equipment and field work coordinate with shop drawings and/or manufacturer's installation instructions the actual electrical characteristics of the equipment to be connected.

2. Notify engineer of significant deviations or conflicts between the shop drawings and/or the manufacturer's installation instructions and information in the contract documents.
- E. Coordinate arrangement, mounting, and support of electrical equipment:
1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
  2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
  3. To allow right of way for piping and conduit installed at required slope so connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- F. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- G. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Section 08 31 13 "Access Doors and Frames."
- H. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 07 84 13 "Penetration Firestopping."
- I. Coordinate and install wiring for appliances and systems furnished under other specification Divisions or furnished by the Owner. Install electrical wiring in accordance with manufacturer's instructions.:
1. Motorized door operators.
  2. Electric water coolers.
  3. Exterior signage.
  4. Owner provided equipment
- 1.6 PERMITS AND FEES
- A. Obtain and pay all fees for permits, licensing, and inspections applicable to work of Division 26, 27 and 28
- 1.7 QUALITY ASSURANCE
- A. Regulatory Requirements: Install work and materials to conform with local, State and Federal codes, and other applicable laws and regulations.
- B. Drawings are intended to be diagrammatic and reflect the Basis of Design manufacturer's equipment. Drawings are not intended to show every item in its exact location, or details of equipment or proposed systems layout. Verify actual dimensions of systems (i.e. distribution equipment, duct banks, light fixtures, etc.) and equipment proposed to assure that systems and equipment will fit in available space. Contractor is responsible for design and construction costs incurred for equipment other than Basis of Design, including, but not limited to, architectural, structural, electrical, HVAC, fire sprinkler, and plumbing systems.
- C. Manufacturer's Instructions: Follow manufacturer's written instructions. If in conflict with Contract Documents, obtain clarification. Notify Engineer/Architect, in writing, before starting work.
- D. Items shown on Drawings are not necessarily included in Specifications or vice versa. Confirm requirements in all Contract Documents. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. Provide Qualified Personnel that are thoroughly knowledgeable of applicable codes related to electrical systems to perform the electrical work. Installations shall be performed by skilled electrical tradesmen fully aware of the latest techniques, practices, and standards of the industry. Refer to N.E.C. Article 100-Definitions, Qualified Person.
- F. Install electrical equipment and components in a neat and workmanlike manner in accordance with recognized practices and industry standards. Refer to N.E.C.110-12. Haphazard or poor installation practice will be cause for rejection of the work.

## **PART 2 - PRODUCTS**

### **2.1 SUBSTITUTION LIMITATIONS FOR ELECTRICAL EQUIPMENT**

- A. Substitution requests for electrical equipment will be entertained under the following conditions:
  - 1. Substitution requests may be submitted for consideration if accompanied by value analysis data indicating that substitution will comply with Project performance requirements while significantly increasing value for Owner throughout life of facility.
  - 2. Substitution requests may be submitted for consideration concurrently with submission of power system study reports when those reports indicate that substitution is necessary for safety of maintenance personnel and facility occupants.
  - 3. Contractor is responsible for sequencing and scheduling power system studies and electrical equipment procurement. Insufficient lead time for electrical equipment delivery will not be considered a valid reason for substitution.

### **2.2 SLEEVES FOR RACEWAYS AND CABLES**

- A. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral water stop, unless otherwise indicated.
- B. Sleeves for Rectangular Openings: Galvanized sheet steel.
  - 1. Minimum Metal Thickness:
    - a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.
    - b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.
- C. EMT: Electrical Metallic Tubing.
- D. PVC: Schedule 40 or 80.

### **2.3 FIRE RATED SLEEVES FOR CABLES**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. 3M
  - 2. Hilti
  - 3. Specified Technologies, Inc (STI)
  - 4. Wiremold.
- B. Factory assembled rectangular steel pathway containing an intumescent insert material that adjusts automatically to cable addition or subtraction.
- C. Sleeve shall have an F Rating equal to or greater than the rating of the wall in which the sleeve is installed.
- D. Sleeve shall be UL listed and bear the UL Classification marking.
- E. Sleeve shall be tested in accordance with ASTM E814 (ANSI/UL1479).
- F. Provide square wall plate kits for single sleeve applications. Provide multi-gang wall/floor plate kits for ganged applications.
- G. Subject to compatibility with requirements and field conditions, i.e. sleeve size, wall thickness, etc., acceptable products include the following:
  - 1. 3M Fire Barrier Pass-Through Devices
  - 2. Hilti Speed Sleeves
  - 3. Specified Technologies Inc. EZ-Path Fire Rated Pathway (series 33).
  - 4. Wiremold Flamestopper FS4 Series

### **2.4 GROUT**

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION OF ELECTRICAL WORK**

- A. Unless more stringent requirements are specified in the Contract Documents or manufacturers' written instructions, comply with NFPA 70 and NECA NEIS 1 for installation of Work specified in Division 26. Consult Architect for resolution of conflicting requirements.
- B. Comply with NECA 1.
- C. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- D. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- E. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- F. Right of Way: Give to piping systems installed at a required slope.

#### **3.2 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS**

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete, masonry and gypsum board walls, or fire-rated floor and wall assemblies.
- B. Sleeves are required where cables (not in raceway) penetrate walls or floors. Sleeves are not required where raceways penetrate walls, except where raceways penetrate exterior walls/foundations below grade.
- C. Concrete Slabs and Walls: Install sleeves during erection of slabs and walls.
- D. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- E. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- F. Provide insulated bushings on EMT sleeves for cable not in conduit. Bushings shall be plenum rated where installed in a plenum.
- G. Extend sleeves installed in floors 4 inches above finished floor level unless noted otherwise.
- H. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless indicated otherwise.
- I. Seal space outside of sleeves with grout for penetrations of concrete and masonry.
  - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 07 92 00 "Joint Sealants."
- K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Section 07 84 13 "Penetration Firestopping."
- L. Underground, Exterior-Wall Penetrations: Install cast-iron pipe or PVC, schedule 40 or 80, sleeves. Size sleeves to allow for 1-inch annular clear space between raceway and sleeve. Cut sleeves to length for mounting flush with both surfaces of walls.
- M. Fire Rated Sleeves for cables: Fabricate openings in wall or floor assemblies per manufacturer's recommendations.

#### **3.3 SLEEVE APPLICATION**

- A. Sleeves for cables not in conduit:
  - 1. Through Non-Rated Interior Walls: EMT sleeves.
  - 2. Through Non-Rated Floors: EMT sleeves.
  - 3. Through Fire Rated Interior Walls: Fire Rated Sleeves for cables.
  - 4. Through Fire Rated Floors: Fire Rated Sleeves for cables.

- B. Sleeves for conduits:
  - 1. Through Exterior Walls Below Grade: Refer to details on structural Drawings. Absent any such details provide cast iron pipe or PVC, Schedule 40 or 80, sleeve two trade sizes larger than the conduit.
- C. Sleeves for Cable Trays:
  - 1. Through Non-Rated Interior Walls: Rectangular galvanized sheet metal opening.
  - 2. Through Fire Rated Walls: Stop cable tray 6 inches maximum for each side of wall and provide multiple fire rated sleeves for cables with combined allowable area for cable equal to the capacity of the cable tray unless noted otherwise.

#### 3.4 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Section 07 84 13 "Penetration Firestopping."

END OF SECTION 26 05 00

## SECTION 26 05 03

### DEMOLITION OF ELECTRICAL SYSTEMS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section includes:
  - 1. Demolition and removal of selected portion of electrical systems, including special systems normally specified in Division 27 and 28.
  - 2. Salvage of existing items to be reused.
  - 3. Salvage of existing items to be delivered to the Owner.

##### 1.2 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site unless indicated to be removed and salvaged or removed and reinstalled.
- B. Remove and Salvage: Carefully detach from existing construction, in a manner to prevent damage, and deliver to Owner.
- C. Remove and Reinstall: Detach items from existing construction, prepare for reuse, and reinstall where indicated.
- D. Existing to Remain: Existing items of construction that are not to be permanently removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

##### 1.3 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Remove and salvage items noted as 'salvage', 'return to Owner' or similar manner on the Drawings.
- C. Remove and salvage items as requested by the Owner. Conduct a meeting with the Owner prior to commencing demolition to determine items that the Owner wishes to retain.

##### 1.4 PRE-TESTING

- A. Prior to commencing work, perform testing of devices and systems to verify devices and systems to remain are in good working condition. Devices shall include wiring devices and lighting control devices. Systems shall include, but is not limited to, fire alarm, and intercom.
- B. Prepare a type written report documenting any items found to be damaged or in a non-working condition. Submit report to the Owner and Architect prior to commencing work. All devices and systems shall be considered in good working conditions if a report is not submitted and acknowledged by the Owner prior to commencing work.
- C. Arrange a time to perform testing with the Owner with at least two weeks advanced notice.
- D. Existing Branch Circuits that Remain: Trace and ring-out existing branch circuits. Update panel schedules and relabel outlets, disconnect switches, boxes, and the like with actual branch circuit designations. Include such information in record drawings.
- E. Where infrared scanning results indicate excessive heat, tighten the mechanical lugs and retest after 24 hours.
- F. Include testing reports for above in closeout documentation. Record measurements and actions taken.

**PART 2 - PRODUCTS (Not Applicable)**

**PART 3 - EXECUTION**

**3.1 ELECTRICAL SYSTEMS DEMOLITION**

- A. Remove items depicted or denoted for demolition on the Drawings. Unless noted otherwise, removal of the items shall include devices, boxes, cable, supporting elements, raceway, etc. associated with the item back to the panelboard or nearest j-box or device to remain.
- B. Drawings are intended to indicate the general scope of demolition work. Visit the Project site to verify existing conditions prior to bidding. Determine means and methods for performing work. Identify existing building finishes, ceiling types, access, and fire walls. Determine locations, routings, and distances as necessary. Coordinate with the Owner to gain access to the facility.
  - 1. Wherever walls, ceilings, structures, or electric-powered equipment are indicated as being removed on the Drawings (including architectural demolition plans and mechanical demolition plans) remove associated electrical system components, equipment, devices, fixtures, raceways, and wiring. Remove, relocate, and extend existing installations, as necessary, to accommodate demolition work, new work, and to maintain the existing electrical installations that shall remain operational. Repair adjacent construction and finishes damaged during demolition and extension work. Patch openings to match existing surrounding finishes.
  - 2. Disconnect and remove electrical devices and equipment serving utilization equipment that has been removed.
  - 3. Disconnect and remove abandoned luminaires. Remove brackets, stems, hangers, and other accessories
- C. Verify that abandoned wiring and equipment serve only abandoned equipment or facilities. Extend conduit and wire to loads that remain in operation (i.e., facilities, luminaires, wiring devices, equipment, etc.). Extension of conduit and wire to equipment shall be compatible with the surrounding area.
  - 1. Maintain access to existing electrical installations that remain active. Modify installation or provide access panel and/or junction boxes where appropriate.
  - 2. Remove exposed abandoned raceway, including abandoned raceway above accessible ceiling finishes. Cut raceway flush with walls and floors, and patch surfaces. Remove all associated clamps, hangers, supports, etc. associated with raceway removal.
- D. Where existing conduits and/or cables, which remain in service, pass through areas to be renovated and where such conduits and/or cables interfere with new work, reroute these conduits and/or cables to avoid new construction. Provide necessary boxes, cables, splicing and fittings for the rerouting of the circuits. Field-verify to determine complete scope of work prior to bidding.
- E. Existing conduit may remain if all the following are true:
  - 1. Conduit will be reused to feed items installed under this contract.
  - 2. Conduit does not interfere with other trades.
  - 3. Conduit was originally installed meeting specifications related to this project.
  - 4. Conduit will not be exposed in a finished area (unless noted otherwise).
- F. Provide plugs on boxes to remain where conduits have been removed.
- G. Conduits concealed in masonry walls or under concrete slabs may be cut back, sealed and abandoned.
- H. Provide blank cover-plates on all abandoned boxes to remain in existing masonry or stud walls. Plate color and material shall match wiring devices plates specified for the project. In the absence of such specification, match the color and material of existing wiring devices in the area.
- I. Maintain power to end-of-line or downstream devices to remain. Provide raceways, boxes, conductors and all other necessary materials as required to re-establish damaged or interrupted feeders and branch circuits. Intercept existing feeders or branch circuits at nearest accessible space or device and reconnect to original feeder or branch circuit source.
- J. Repair or replace ceilings, ceiling tiles, and ceiling-grids that are damaged by this contractor.
- K. Electrical installations that remain shall be concealed, unless otherwise indicated or unless located within unfinished utility-type spaces. Cut and patch existing walls and ceilings as required. Exposed conduits and raceways will be rejected, unless prior approval has been obtained. Confirm scope of work and specific requirements for all such work directly with the Owner and the Architect.
- L. Prior to drilling existing precast concrete walls, detect and locate existing structural members imbedded within the precast panels to ensure they are not damaged.

3.2 SPECIAL SYSTEMS DEMOLITION

- A. Remove items depicted or denoted for demolition on the Drawings. Unless noted otherwise, removal of the items shall include devices, boxes, cable, supporting elements, etc. associated with the item back to the control panel, terminal block, punch block, patch panel, or similar type of termination point.

3.3 REMOVED MATERIALS

- A. Existing wiring removed shall be regarded as scrap materials to be recycled by this contractor. Scrap value shall be determined by the contractor and accounted for in the contractor's bid.
  - 1. All other demolished electrical items (e.g., power panels, luminaires, receptacles, switches, controllers, system devices, etc.) shall be regarded as the Owner's property. The Owner reserves the right to identify which items shall be salvaged—and, thus, carefully removed by this contractor and placed in storage on site as directed by the Owner. The contractor shall be responsible for the proper disposal of all demolished materials that the Owner does not want to salvage. Coordinate specific requirements directly with Owner.
- B. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
  - 1. Ballasts in luminaires installed prior to 1980 shall be incinerated in EPA approved incinerator or disposed of in EPA certified containers and deposited in an EPA landfill certified for PCB disposal or recycled by permitted ballast recycler. Punctured or leaking ballasts must be disposed of according to Federal Regulations under the Toxic Substance Control Act. Provide to Owner and architect/engineer with a Certificate of Destruction to verify proper disposal.
  - 2. HID and fluorescent lamps, determined by the Toxicity Characteristic Leachate procedure (TCLP), to be hazardous waste shall be disposed of in a permitted hazardous waste disposal facility or by a permitted lamp recycler.

END OF SECTION 26 05 03

## SECTION 26 05 19

### LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Copper building wire rated 600 V or less.
  - 2. Aluminum building wire rated 600 V or less.
  - 3. Metal-clad cable, Type MC, rated 600 V or less
  - 4. Cord Products
  - 5. Connectors, splices, and terminations rated 600 V and less.
- B. Related Requirements:
  - 1. Section 26 05 33 "Raceway and Boxes for Electrical Systems" for allowable applications of raceways and cable assemblies. Cable assemblies, such as Type MC cable, shall not be permitted unless noted otherwise.
  - 2. Section 26 05 53 "Identification for Electrical Systems" for conductor color coding.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

##### 1.4 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70.

#### PART 2 - PRODUCTS

##### 2.1 BUILDING WIRE

- A. Copper Building Wire
  - 1.
  - 2. Description: Flexible, insulated and uninsulated, drawn copper current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.
  - 3. Conductors: complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors.
- B. Aluminum Building Wire
  - 1. Description: Flexible, insulated and uninsulated, drawn aluminum current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.
  - 2. Conductors: 8000 series electrical grade aluminum alloy, complying with ASTM B800 and ASTM B801.
  - 3. Permitted for feeders greater than 100 amps only.
  - 4. Aluminum building wire shall not be used for connections to any equipment that has not been used UL tested with aluminum building wire connections or where such connection will void or reduce the manufacturer's warranty. Such equipment may include HVAC equipment and elevators.
  - 5. Not permitted for motor feeders or branch circuits.
- C. Standards:
  - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
  - 2. RoHS compliant.

3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."
  - D. Conductor Insulation:
    1. Type THHN and Type THWN-2: Comply with UL 83.
    2. Type XHHW-2: Comply with UL 44.
  - E. Temperature Ratings: All conductors shall be rated 75-degree C minimum.
- 2.2 METAL-CLAD CABLE, TYPE MC
- A. Description: A factory assembly of one or more current-carrying insulated conductors in an overall metallic sheath.
  - B. Standards:
    1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
    2. Comply with UL 1569.
    3. RoHS compliant.
  - C. Circuits:
  - D. Single circuit. Separate neutral conductors shall be included for each circuit originating from a unique overcurrent protection device.
  - E. Conductors: Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors.
  - F. Ground Conductor: Insulated.
  - G. Conductor Insulation:
    1. Type THHN/THWN-2: Comply with UL 83.
    2. Type XHHW-2: Comply with UL 44.
  - H. Armor: Steel or Aluminum, interlocked.
  - I. Jacket: PVC applied over armor.
- 2.3 CORD PRODUCTS
- A. Description: Flexible, hard-use service cord with black rubber jacket. Type SO, SOW, etc.
  - B. Circuits: Single circuit and multi-circuit with color coded conductors. Separate neutral conductors shall be included for each circuit originating from a unique overcurrent protection device.
  - C. Conductors: Copper, complying with ASTM B8 for stranded conductors.
  - D. Ground Conductor: Insulated.
  - E. Conductor Insulation:
    1. Type THHN/THWN-2: Comply with UL 83.
- 2.4 CONNECTORS AND SPLICES
- A. Description: Factory-fabricated connectors, splices, and lugs of size, ampacity rating, material, type, and class for application and service indicated; listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
  - B. Jacketed Cable Connectors: For steel and aluminum jacketed cables, zinc die-cast with set screws, designed to connect conductors specified in this Section.
  - C. Lugs: One piece, seamless, designed to terminate conductors specified in this Section.
    1. Lugs for attachment to telecommunications systems grounding busbars shall be two-hole with long barrels and irreversible crimp terminations.

### **PART 3 - EXECUTION**

- 3.1 CONDUCTOR MATERIAL APPLICATIONS
- A. Feeders:
    1. 100 amps and less: Copper, stranded.
    2. Over 100 amps: Copper or aluminum, stranded.

- B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- 3.2 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS
- A. Feeders to Distribution Equipment and Panelboards: Type XHHW-2, single conductors in raceway.
  - B. Exterior Feeders and branch circuits routed horizontally on roofs: Type XHHW-2, single conductors in raceway.
  - C. Other Feeders and Branch Circuits: Type THHN-THWN, single conductors in raceway.
  - D. Feeders connected from the load-side of VFDs to electric motors: Type XHHW-2 single conductors installed in a raceway or Type XHHW-2 MC cable where permitted.
  - E. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.
  - F. Metal Clad Cable
    - 1. Uses permitted:
      - a. Branch circuits rated less than 50 amps
      - b. In areas that have accessible ceiling space
    - 2. Uses not permitted:
      - a. Feeders
      - b. Homeruns.
      - c. Areas where there is no access to the ceiling space
      - d. Areas that have no ceiling or exposed structure
      - e. Exposed
      - f. Wet or damp areas
- 3.3 CONDUCTOR SIZES
- A. Minimum Wire Size (Interior Work): No. 12 AWG, except No. 14 AWG shall be permitted for signal, pilot control circuits and fixture whips.
  - B. Minimum Wire Size (Exterior Work): No 10 AWG.
  - C. Use #10 AWG minimum conductor size in lieu of #12 AWG minimum for 20 ampere, 120 volt branch circuits where homeruns are longer than 75 feet and for 20 ampere, 277 volt branch circuits where homeruns are longer than 175 feet. Increase in size as required for a maximum of 3 percent voltage drop from panel to load.
  - D. Derate conductors based on quantity of current carrying conductors in each conduit. Refer to the NEC for derating factors.
  - E. Derate conductors for high ambient temperatures. Refer to the NEC for derating factors.
- 3.4 INSTALLATION OF CONDUCTORS AND CABLES
- A. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.
  - B. Complete raceway installation between conductor and cable termination points according to Section 26 05 33 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.
  - C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
  - D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
  - E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
  - F. Support cables according to Section 26 05 29 "Hangers and Supports for Electrical Systems."
  - G. Branch circuits serving receptacles and lighting loads shall have dedicated neutral conductors and shall not share a common neutral conductor. The use of handle ties across single pole circuit breakers to allow the use of a common neutral is not acceptable.

- H. Multiwire Branch Circuits and Shared Neutrals:
  - 1. Multiwire branch circuits (as defined by the NEC) and shared neutrals (common grounded conductors) are not permitted, except as follows:
    - a. Wherever a multiwire branch circuit is specifically indicated on the Drawings and a multi-pole breaker is provided in the panel from which it originates as a means to simultaneously disconnect all ungrounded conductors.
  - 2. Derating factors shall be applied, per NEC Article 310, to multiple current-carrying conductors installed within the same conduit. Neutral conductors shall be regarded as current-carrying conductors. Wire sizes shall be increased as needed to maintain the ampacity that corresponds to the overcurrent protection device rating.

### 3.5 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- B. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
  - 1. Use oxide inhibitor in each splice, termination, and tap for aluminum conductors.
- C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack.

### 3.6 IDENTIFICATION

- A. Identify and color-code conductors and cables according to Section 26 05 53 "Identification for Electrical Systems."
- B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

### 3.7 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepared test reports.
  - 1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors for compliance with requirements.
  - 2. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors 100 amps and larger for compliance with requirements:
  - 3. Perform each of the following visual and electrical tests:
    - a. Inspect exposed sections of conductor and cable for physical damage and correct connection according to the single-line diagram.
    - b. Test bolted connections for high resistance using one of the following:
      - 1) A low-resistance ohmmeter.
      - 2) Calibrated torque wrench.
      - 3) Thermographic survey.
    - c. Inspect compression-applied connectors for correct cable match and indentation.
    - d. Inspect for correct identification.
    - e. Inspect cable jacket and condition.
    - f. Insulation-resistance test on each conductor for ground and adjacent conductors. Apply a potential of 500-V dc for 300-V rated cable and 1000-V dc for 600-V rated cable for a one-minute duration.
    - g. Continuity test on each conductor and cable.
    - h. Uniform resistance of parallel conductors.
- B. Cables will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports to record the following:
  - 1. Procedures used.
  - 2. Results that comply with requirements.
  - 3. Results that do not comply with requirements, and corrective action taken to achieve compliance with requirements.

END OF SECTION 26 05 19

## SECTION 26 05 26

### GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section includes grounding and bonding systems and equipment.
- B. Section includes grounding and bonding systems and equipment, plus the following special applications:
  - 1. Underground distribution grounding
  - 2. Ground bonding common with lightning protection system.
  - 3. Foundation steel electrodes.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Photographic evidence of underground electrode(s) installation.
- C. Dimension drawings showing locations of test wells, grounding electrodes, ground rods, ground ring and connections to steel.

##### 1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals.
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Plans showing as-built, dimensioned locations of system described in "Field Quality Control" Article, including the following:
      - 1) Test wells.
      - 2) Ground rods.
      - 3) Ground rings.

##### 1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Certified by NETA.

#### PART 2 - PRODUCTS

##### 2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with UL 467 for grounding and bonding materials and equipment.

##### 2.2 ELECTRICAL GROUNDING BUSBARS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Chatsworth.
  - 2. Cooper B-Line.
  - 3. Erico.
  - 4. Harger.
- B. Products shall be UL listed.
- C. Copper busbar, 0.25-inch thick minimum, insulated stand-offs, factory predrilled standard size holes.
- D. Electrical Grounding Busbars: Height shall be 4-inches minimum and length shall be 24-inches minimum unless indicated otherwise on Drawings.
- E. Connector Lugs: Lugs for connecting to grounding electrode conductors and bonding conductors shall be UL listed two-hole, long barrel, electro tinplated compression lugs.

### 2.3 TELECOMMUNICATIONS GROUNDING BUSBARS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Cooper B-Line
  - 2. Chatsworth
  - 3. Erico.
  - 4. Harger
  - 5. Legrand Ortronics
  - 6. Panduit
- B. Products shall be UL listed meet the specification of TIA/EIA 607 and conform to BICSI recommendations.
- C. Copper busbar, 0.25-inch thick minimum, insulated stand-offs, factory predrilled standard size holes per TIA/EIA 607 standard.
- D. Telecommunications Main Grounding Busbars: Height shall be 4-inches. Length shall be 20-inches minimum unless indicated otherwise on Drawings. Chatsworth 40153 series or equal.
- E. Telecommunications Grounding Busbars: Height shall be 2-inches. Length shall be 10-inches minimum unless indicated otherwise on Drawings. Chatsworth 13622 series or equal.
- F. Connector Lugs: Lugs for connecting to telecommunications grounding busbars shall be UL listed two-hole, long barrel, electro tinplated compression lugs.

### 2.4 CONDUCTORS

- A. Insulated Conductors: tinned-copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.
- B. Bare Copper Conductors:
  - 1. Solid Conductors: ASTM B3.
  - 2. Stranded Conductors: ASTM B8.
  - 3. Tinned Conductors: ASTM B33.
  - 4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch in diameter.
  - 5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
  - 6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
  - 7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

### 2.5 CONNECTORS

- A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.
- B. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.
- C. Bus-Bar Connectors: Mechanical type, cast silicon bronze, solderless compression-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.
- D. Beam Clamps: Mechanical type, terminal, ground wire access from four directions, with dual, tin-plated or silicon bronze bolts.
- E. Cable-to-Cable Connectors: Compression type, copper or copper alloy.
- F. Cable Tray Ground Clamp: Mechanical type, zinc-plated malleable iron.
- G. Conduit Hubs: Mechanical type, terminal with threaded hub.
- H. Water Pipe Clamps:
  - 1. Mechanical type, two pieces with zinc-plated bolts.
    - a. Material: Tin-plated aluminum.
    - b. Listed for direct burial.
  - 2. U-bolt type with malleable-iron clamp and copper ground connector rated for direct burial.

### 2.6 GROUNDING ELECTRODES

- A. Ground Rods: Copper-clad steel, sectional type; 3/4 inch by 10 feet.

### **PART 3 - EXECUTION**

#### **3.1 APPLICATIONS**

- A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.
- B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2/0 AWG minimum.
  - 1. Bury at least 30 inches below grade.
- C. Grounding Conductors: Green-colored insulation with continuous yellow stripe..
- D. Isolated Grounding Conductors: Green-colored insulation with more than one continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow
- E. Grounding Bus: Install in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
  - 1. Install bus horizontally, on insulated spacers 2 inches minimum from wall, 6 inches above finished floor unless otherwise indicated.
- F. Conductor Terminations and Connections:
  - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
  - 2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
  - 3. Connections to Ground Rods at Test Wells: Bolted connectors.
  - 4. Connections to Structural Steel: Welded connectors.

#### **3.2 EQUIPMENT GROUNDING**

- A. Install insulated equipment grounding conductors with all feeders and branch circuits.
- B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
  - 1. Feeders and branch circuits.
  - 2. Lighting circuits.
  - 3. Receptacle circuits.
  - 4. Single-phase motor and appliance branch circuits.
  - 5. Three-phase motor and appliance branch circuits.
  - 6. Flexible raceway runs.
  - 7. Armored and metal-clad cable runs.
  - 8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
- C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
- D. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
- E. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.
- F. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install a separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived systems or service unless otherwise indicated.

#### **3.3 TELECOMMUNICATIONS GROUNDING**

- A. Provide grounding in accordance with TIA 607 and as indicated on the Drawings.

3.4 INSTALLATION

- A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
- C. Ground Rods: Drive rods until tops are 2 inches below finished floor or final grade unless otherwise indicated.
  - 1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
  - 2. Use exothermic welds for all below-grade connections.
  - 3. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.
- D. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 26 05 43 "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches deep, with cover.
  - 1. Install at least one test well for the ground ring. Set top of test well flush with finished grade or floor.
- E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
  - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
  - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
  - 3. Use exothermic-welded connectors for outdoor locations.
- F. Grounding and Bonding for Piping:
  - 1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
  - 2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
  - 3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
- G. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.
- H. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet apart.
- I. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each steel column, extending around the perimeter of building.
  - 1. Install tinned-copper conductor not less than No. 2/0 AWG for ground ring and for taps to building steel.
  - 2. Bury ground ring not less than 24 inches from building's foundation.
- J. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70; use a minimum of 20 feet of bare copper conductor not smaller than No. 4 AWG.
  - 1. If concrete foundation is less than 20 feet long, coil excess conductor within base of foundation.
  - 2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.

- K. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
  - 1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
  - 2. Make connections with clean, bare metal at points of contact.
  - 3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
  - 4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
  - 5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

### 3.5 FIELD QUALITY CONTROL

- A. Prior to covering underground UFER grounds and connections to ground rods, take digital photographs of the grounding electrodes including conductor connections. Record locations of each photograph. Submit to A/E for documentation purposes.
- B. Perform tests and inspections with the assistance of a factory-authorized service representative.
- C. Tests and Inspections:
  - 1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
  - 2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
  - 3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal. Make tests at ground rods before any conductors are connected.
    - a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
    - b. Perform tests by fall-of-potential method according to IEEE 81.
  - 4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.
- D. Grounding system will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.
- F. Report measured ground resistances:
- G. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION 26 05 26

## SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

### PART 1 - GENERAL

- A. References
  - 1. Division 3 – Concrete Specifications
  - 2. Division 5 – Metals Specifications
- 1.2 SUMMARY
  - A. Section Includes:
    - 1. Steel slotted support systems.
    - 2. Conduit and cable support devices.
    - 3. Support for conductors in vertical conduit.
    - 4. Structural steel for fabricated supports and restraints.
    - 5. Mounting, anchoring, and attachment components, including powder-actuated fasteners, mechanical expansion anchors, concrete inserts, clamps, through bolts, toggle bolts, and hanger rods.
    - 6. Fabricated metal equipment support assemblies.
- 1.3 SUBMITTALS
  - A. Submittals not required this Section
- 1.4 QUALITY ASSURANCE
  - A. Comply with NFPA 70
  - B. Welding Qualifications: Qualify procedures and personnel according to the following:
    - 1. AWS D1.1/D1.1M – Structural Welding Code - Steel.
    - 2. AWS D1.2/D1.2M – Structural Welding Code - Aluminum.
  - C. Applicable Specifications: Latest edition of following specifications and recommended practices shall become part of this specification as if written herein. Wherever requirements conflict, the more stringent shall govern.
    - 1. ACI 318, Appendix D/Chapter 17
    - 2. Mechanical Anchors: ACI 355.2, "Qualification of Post-Installed Mechanical Anchors in Concrete".
    - 3. Adhesive Anchors: ACI 355.4, "Qualification of Post-Installed Adhesive Anchors in Concrete".
  - D. All post-installed anchors in concrete shall
    - 1. Have current published ICC-ES Evaluation Report indicating the anchor is approved for installation in cracked concrete and shall have seismic qualification to meet the project requirements.
    - 2. Special inspection, where required by code, shall be in accordance with a current published ICC-ES Evaluation Report (IBC 2012 Table 1705.3 Note B)
    - 3. Where material or equipment must be supported from the structure, the installer of that material or equipment support shall be responsible for supplying the anchors and meeting the requirements of this specification unless specifically noted otherwise on the plans.
- 1.5 STORAGE AND HANDLING
  - A. Keep post installed anchors, rod materials, nuts and washers in original manufacturer's packaging with label intact until needed for use. Keep anchors free of dirt and debris. Protect anchors from corrosion and deterioration. Store all anchoring products in strict accordance with manufacturer's recommendations. For adhesive anchors, consider temperature, exposure to sunlight, and shelf life.

### PART 2 - PRODUCTS

- 2.1 PERFORMANCE REQUIREMENTS
  - A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design hanger and support system.

## 2.2 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Preformed steel channels and angles with minimum 13/32-inch- diameter holes at a maximum of 8 inches o.c. in at least one surface.
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Allied Tube & Conduit.
    - b. Cooper B-Line, Inc.; a division of Cooper Industries.
    - c. ERICO International Corporation.
    - d. Thomas & Betts Corporation.
    - e. Unistrut; Tyco International, Ltd.
    - f. Wesanco, Inc.
  2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
  3. Material for Channel, Fittings, and Accessories: Galvanized steel.
  4. Channel Width: Selected for applicable load criteria.
  5. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-
- B. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- C. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be made of malleable iron.
- D. Structural Steel for Fabricated Supports and Restraints: ASTM A36/A36M steel plates, shapes, and bars; black and galvanized.
- E. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
    - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      - 1) Cooper B-Line, Inc.; a division of Cooper Industries.
      - 2) Empire Tool and Manufacturing Co., Inc.
      - 3) Hilti Inc.
      - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      - 5) MKT Fastening, LLC.
      - 6) DEWALT
    - b. Post Installed Anchoring Products for use in normal weight concrete, sand light weight concrete, concrete over metal deck and masonry
      - 1) Expansion Anchors:
        - a) DeWalt "Power-Stud+ SD1" (ICC-ES ESR 2818)
        - b) DeWalt "Power-Stud+ SD2" (ICC-ES ESR 2502)
        - c) DeWalt "Power-Stud+ SD4", Type 304 SS (ICC-ES ESR 2502)
        - d) DeWalt "Power-Stud+ SD6", Type 316 SS (ICC-ES ESR 2502)
        - e) Approved equal
      - 2) Screw Anchors:
        - a) DeWalt "Screw- Bolt+" (ICC-ES ESR 3889)
        - b) DeWalt "Snake+" Internally threaded (ICC-ES ESR 2272)
        - c) DeWalt "Hanger-Mate+" Internally threaded coupler (ICC-ES ESR 3889)
        - d) Approved Equal
      - 3) Adhesive Injection Systems:
        - a) DeWalt "Pure110+" Epoxy Adhesive, standard cure (ICC-ES ESR 3298)
        - b) DeWalt "AC200+" Acrylic Adhesive, fast cure (ICC-ES ESR 3889)
        - c) Approved Equal
      - 4) Cast-in-place Inserts:
        - a) DeWalt "Wood-Knocker II" Internally threaded (ICC-ES ESR 3657)
        - b) DeWalt "Bang-It" Internally threaded (ICC-ES ESR 3657)
        - c) DeWalt "DDI+" Headed Stud Specialty Insert (ICC-ES ESR 3958)
        - d) Approved Equal

- 5) Shallow Embedment Internally Threaded Insert (3/4" Max. Embedment)
  - a) DeWalt "Mini-Undercut+" (ICC-ES-ESR 3912)
2. Concrete Inserts: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.
3. Clamps for Attachment to Steel Structural Elements: MSS SP-58 units are suitable for attached structural element.
4. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM F3125/F3125M, Grade A325.
5. Toggle Bolts: All -steel springhead type.
6. Hanger Rods: Threaded steel.

### 2.3 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

- A. Description: Welded or bolted structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Section 05 50 00 "Metal Fabrications" for steel shapes and plates.

## PART 3 - EXECUTION

### 3.1 APPLICATION

- A. Comply with the following standards for application and installation requirements of hangers and supports, except where requirements on Drawings or in this Section are stricter:
  1. NECA 1.
  2. NECA 101
- B. Comply with requirements in Section 07 84 13 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- C. Comply with requirements for raceways and boxes specified in Section 26 05 33 "Raceways and Boxes for Electrical Systems."
- D. Maximum Support Spacing and Minimum Hanger Rod Size for Raceways: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.
- E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
  1. Secure raceways and cables to these supports with two-bolt conduit clamps.
- F. Damp or wet locations: Utilize hot dipped galvanized steel slotted support systems. Apply galvanizing-repair paint to comply with ASTM A780 on cut edges.

### 3.2 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this article.
- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT IMC and RMC may be supported by openings through structure members, according to NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.
- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
  1. To Wood: Fasten with lag screws or through bolts.
  2. To New Concrete: Bolt to concrete inserts.
  3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
  4. To Existing Concrete: Expansion anchor fasteners.
  5. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts.
  6. To Light Steel: Sheet metal screws.
  7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.
- F. Installation of all post installed anchor products shall be conducted in strict accordance with the Manufacturer's Published Installation Instructions (MPII). Use hammer drills for adhesive anchors (unless noted otherwise).
- G. All post installed anchors shall be installed by an installer trained for that specific product by a manufacturer's field representative. All training must be conducted on the jobsite prior to the installation of any products. A record of training must be submitted to the EOR per the submittal instructions.
- H. All adhesive anchor installations in the horizontal to vertically overhead orientation shall be conducted by a certified Adhesive Anchor Installer as certified by ACI/CSRI per ACI 318-11 9.2.2. Current AAI Certificated must be submitted to the Engineer of Record for approval prior to commencement of any adhesive anchor installations.

### 3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Comply with installation requirements in Section 05 50 00 "Metal Fabrications" for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

### 3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 4500-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Section 03 30 00 "Cast-in-Place Concrete."
- C. Anchor equipment to concrete base as follows:
  - 1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

### 3.5 PAINTING

- A. Touchup: Comply with requirements in Section 09 91 23 "Interior Painting" and Section 09 96 00 "High-Performance Coatings" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780.

END OF SECTION 26 05 29

## SECTION 26 05 33

### RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Metal conduits and fittings.
  - 2. Nonmetallic conduits and fittings.
  - 3. Surface raceways.
  - 4. Boxes.
  - 5. Handholes and boxes for exterior underground cabling.
  - 6. Seals
- B. Related Requirements:
  - 1. Section 07 84 13 "Penetration Firestopping" for firestopping at conduit and box entrances.
  - 2. Section 27 05 28 "Pathways for Communications Systems" for conduits, wireways, surface pathways, innerduct, boxes, faceplate adapters, enclosures, cabinets, and handholes serving communications systems.
  - 3. Section 26 05 19 "Low-Voltage Power Conductors and Cables" for cable assemblies such as metal clad cable. See part 3 in section 26 05 19 for application for metal clad cable.

##### 1.2 DEFINITIONS

- A. GRC: Galvanized rigid steel conduit.
- B. IMC: Intermediate metal conduit.
- C. LFMC: Liquidtight flexible metal conduit.

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, cabinets, and handholes.

#### PART 2 - PRODUCTS

##### 2.1 METAL CONDUITS AND FITTINGS

- A. Metal Conduit:
  - 1. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 2. GRC: Comply with ANSI C80.1 and UL 6.
  - 3. IMC: Comply with ANSI C80.6 and UL 1242.
  - 4. EMT: Comply with ANSI C80.3 and UL 797.
  - 5. FMC: Comply with UL 1; zinc-coated steel.
  - 6. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.
- B. Metal Fittings:
  - 1. Comply with NEMA FB 1 and UL 514B.
  - 2. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 3. Fittings, General: Listed and labeled for type of conduit, location, and use.
  - 4. Fittings for EMT:
    - a. Material: Steel.
    - b. Type: compression.
  - 5. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.

- C. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

## 2.2 NONMETALLIC CONDUITS AND FITTINGS

- A. Nonmetallic Conduit:
  - 1. Listing and Labeling: Nonmetallic conduit shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 2. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
- B. Nonmetallic Fittings:
  - 1. Fittings, General: Listed and labeled for type of conduit, location, and use.
  - 2. Fittings for RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
  - 3. Below Grade Long Radius Elbows:
    - a. Conduits 2 inches to 2.5 inches: use minimum 24-inch radius Fiberglass Elbow.
    - b. Conduits larger than 2.5 inches: use minimum 36-inch radius Fiberglass Elbow.
  - 4. Solvents and Adhesives: As recommended by conduit manufacturer.

## 2.3 SURFACE RACEWAYS

- A. Listing and Labeling: Surface raceways and tele-power poles shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. MonoSystems, Inc.
    - b. Wiremold; Legrand North America, LLC.
    - c. Wiring Device-Kellems; Hubbell Incorporated, Commercial and Industrial.
  - 2. Two-Compartment Divided Surface Metal Raceway for Power and Data: UL Listed two-piece steel construction with baked-on powder-coat epoxy finish. Provide divider integral with base. Corner and T-fittings shall have a 2.5-inch (minimum) bend-radius to support CAT-6A communications cables.
    - a. Design Basis: Wiremold 4000 series with V4050 mounting brackets and V5507D faceplates for duplex receptacles. Provide wiring device brackets for low-profile mounting of standard duplex receptacles in-line with the raceway.
    - b. Device Spacing:
      - 1) Power Outlets (120V Duplex Receptacles): 30 inches on-center, unless otherwise indicated on the drawings.
      - 2) Toggle Switch: 120V, single pole toggle switch for control of circuit.
    - c. Include all components necessary for fully equipped, complete, and functional raceway system.
    - d. Color: Gray.

## 2.4 BOXES

- A. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.
- B. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
- C. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.
- D. Metal Floor Boxes:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Hubbell
    - b. ABB
    - c. Legrand/Wiremold
    - d. Steel City
    - e. FSR
  - 2. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 3. Multi-Compartment Floor Boxes:
    - a. Provide multi-service shallow stamped steel recessed floor box, fully adjustable with feed-through tunneling to adjacent compartments.

- b. Duplex receptacles: provide as indicated on the drawings
  - c. Telecom jacks: provide as indicated on the drawings
  - d. Audio Visual connectors: provide as indicated on the drawings
  - e. Provide water resistant activation cover meeting UL scrub water exclusion requirement.
  - f. Basis of design Legrand/Wiremold RFB-SS series. See additional information on drawings.
  - g. Include all accessories for a complete installation.
  - h. Floor Box Cover Assembly:
    - 1) Carpet: Flanged lid, flat smooth surface with no inserts, die-cast aluminum with black finish. Flanged lid must be installed tight to floor—no exceptions.
- E. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb. Outlet boxes designed for attachment of luminaires weighing more than 50 lb shall be listed and marked for the maximum allowable weight.
- F. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- G. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
- H. Device Box Dimensions: 4 inches by 2-1/8 inches by 2-1/8 inches deep .
- I. Gangable boxes are allowed.
- 2.5 SLEEVE AND SLEEVE SEALS
- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 1. Advance Products & Systems, Inc.
  - 2. Calpico, Inc.
  - 3. Metraflex Co.
  - 4. Pipeline Seal and Insulator, Inc.
- C. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and cable.
- 1. Sealing Elements: EPDM (Ethylene-propylene-diene terpolymer rubber) or NBR (Acrylonitrile-butadiene rubber) interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
  - 2. Pressure Plates: Plastic or carbon steel or stainless steel. Include two for each sealing element.
  - 3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating or stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.
- D. Grout: Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.
- 2.6 WATERTIGHT SEALS
- A. Apply Century-Line® with Link-Seal® modular seals to seal conduits/sleeves that penetrate perimeter walls below finished grade.
- B. At wall penetration, provide watertight seal inside conduit around conductors using an industry standard expanding foam sealant. Sealant must be accessible through equipment or pull box located on interior side of wall.
- C. One year after the date of Substantial Completion, inspect and ensure seals do not leak (and have not leaked) any water inside and around conduits. Repair as needed.
- 2.7 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING
- A. General Requirements for Handholes and Boxes:
- 1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
  - 2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 3. Size: minimum as required by NFPA 70 unless larger size is indicated on drawings or as indicated on plans

- B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following: Oldcastle, Armormcast, Quazite (Hubbell), Newbasis, or approved.
  - 2. Standard: Comply with SCTE 77.
  - 3. Configuration: Designed for flush burial with open bottom unless otherwise indicated.
  - 4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
  - 5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
  - 6. Cover Legend: Molded lettering, Match system (ie electric, data, telecom, fire alarm, etc.)
  - 7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
  - 8. Handholes 12 Inches Wide by 24 Inches Long and Larger: Have inserts for cable racks and pulling-in irons installed before concrete is poured.

## 2.8 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

- A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
  - 1. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
  - 2. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012 and traceable to NIST standards.

## PART 3 - EXECUTION

### 3.1 RACEWAY APPLICATION

- A. Outdoors: Apply raceway products as specified below unless otherwise indicated:
  - 1. Above Grade Exposed Conduit: GRC or IMC.
  - 2. Concealed Conduit, Aboveground: GRC or IMC.
  - 3. Underground Conduit:
    - a. Under footprint of building: RNC, Type EPC-40-PVC, direct buried or as indicated on the drawings.
    - b. Outside of the building footprint: RNC, Type EPC-40-PVC
  - 4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC
  - 5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
- B. Indoors: Apply raceway products as specified below unless otherwise indicated:
  - 1. Exposed, Not Subject to Severe Physical Damage: EMT.
  - 2. Exposed and Subject to Severe Physical Damage: GRC or IMC. Raceway locations include the following:
    - a. Loading dock.
    - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    - c. Mechanical rooms.
    - d. Workshop
  - 3. Concealed in Ceilings and Interior Walls and Partitions: EMT.
  - 4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
  - 5. Damp or Wet Locations: IMC.
  - 6. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in damp or wet locations.
- C. Minimum Raceway Size:
  - 1. Indoor areas: 1/2-inch trade size minimum
  - 2. Buried, below or in concrete slab: 3/4-inch trade size minimum
- D. Raceway Fittings: Compatible with raceways and suitable for use and location.
  - 1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
  - 2. EMT: Use compression, steel fittings. Comply with NEMA FB 2.10.
  - 3. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

- E. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F

### 3.2 INSTALLATION

- A. Comply with requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems" for hangers and supports.
- B. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.
- C. Do not install raceways or electrical items on any rotating equipment.
- D. Do not fasten conduits onto the bottom side of a metal deck roof.
- E. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
- F. Complete raceway installation before starting conductor installation.
- G. Arrange stub-ups so curved portions of bends are not visible above finished slab.
- H. Install no more than the equivalent of three 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 12 inches of changes in direction.
- I. Make bends in raceway using large-radius preformed ells. Field bending shall be according to NFPA 70 minimum radii requirements. Use only equipment specifically designed for material and size involved.
- J. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines. The following are exceptions for concealing conduits:
  - 1. Where specifically noted or indicated on the drawings
  - 2. Electrical rooms with surface mounted panels
  - 3. Mechanical rooms
  - 4. In open ceilings with exposed structure
  - 5. Unfinished utility corridors with exposed ceiling structure.
  - 6. In finished spaces only where specifically identified on the drawings provide surface metal raceway and surface-mount style boxes are painted to match the surrounding finishes. Coordinate work directly with contractor responsible ceiling, walls, and partition finishes.
- K. Do not install conduits exposed to solar heat gain such as roof tops unless indicated on the drawings.
- L. Support conduit within 12 inches of enclosures to which attached.
- M. Raceways Embedded in Slabs:
  - 1. Conduit embedded in concrete slabs shall be positioned within the middle third of the slab and secured with approved supports. In no case shall the outside dimension of the conduit exceed 1/3 the thickness of the slab. Conduits in slabs shall not be placed any closer than 3 conduit diameters on-center, and they shall not cross over each other.
  - 2. Secure raceways to reinforcing rods to prevent sagging or shifting during concrete placement. Space raceways laterally to prevent voids in concrete.
  - 3. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure raceways to reinforcement at maximum 10-foot intervals.
  - 4. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
  - 5. Arrange raceways to keep a minimum of 2 inches of concrete cover in all directions.
  - 6. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
- N. Stub-Ups to Above Recessed Ceilings:
  - 1. Use EMT, IMC, or RMC for raceways.
  - 2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.
- O. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
- P. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.

- Q. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch trade size and insulated throat metal bushings on 1-1/2-inch trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.
- R. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.
- S. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.
- T. Cut conduit perpendicular to the length. For conduits 2-inch trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.
- U. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.
- V. Surface Raceways:
  - 1. Install surface raceway with a minimum 2-inch radius control at bend points.
  - 2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.
- W. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:
  - 1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces, or from conditioned spaces to non-conditioned spaces or to exterior structures.
  - 2. Where an underground service raceway enters a building or structure.
  - 3. Conduit extending from interior to exterior of building.
  - 4. Conduit extending into pressurized duct and equipment.
  - 5. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
  - 6. Where otherwise required by NFPA 70.
- X. Comply with manufacturer's written instructions for solvent welding RNC and fittings.
- Y. Expansion-Joint Fittings:
  - 1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F and that has straight-run length that exceeds 25 feet. Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F and that has straight-run length that exceeds 100 feet.
  - 2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
    - a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
    - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
    - c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
  - 3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
  - 4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
  - 5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
- Z. Flexible Conduit Connections: Comply with NEMA RV 3. Use a maximum of 72 inches of flexible conduit for recessed and semi-recessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
  - 1. Use LFMC in damp or wet locations.
- AA. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.

- BB. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
  - CC. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
  - DD. Locate boxes so that cover or plate will not span different building finishes.
  - EE. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
  - FF. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
  - GG. Set metal floor boxes level and flush with finished floor surface.
  - HH. Existing Building Surfaces: In finished rooms where an existing wall or ceiling remains in place, cut and patch to match the surrounding finishes as required to conceal all raceways. Coordinate work directly with contractor responsible ceiling, walls, and partition finishes.
- II. Conceal raceways within existing finished ceilings, walls, and partitions, unless otherwise indicated on the drawings or as follows:
- 1. Existing Hollow Walls (such as stud walls, hollow masonry walls, or other wall types with internal voids or vertical cavities):
    - a. Outlet Boxes: If possible, use existing openings in wall, provided the opening is positioned within 24-inches of the location shown on plan for the new outlet. Otherwise, cut and patch wall as needed to install box flush.
    - b. Conduit: If possible, fish FMC (or MC cabling where permitted) down within the existing wall cavity. Otherwise, saw-cut and patch wall as needed to conceal conduit within the wall. Finish wall to match original.
    - c. This Contractor shall visit the facility to review existing conditions and determine means and methods of installation prior to bidding.
    - d. Where specifically identified on the drawings, use surface-mounted boxes and or surface-mounted conduit painted to match the surrounding finishes.
  - 2. Existing Solid Walls (filled masonry walls):
    - a. Use surface-mounted boxes and or surface-mounted conduit painted to match the surrounding finishes.
- 3.3 INSTALLATION OF CONDUIT BENEATH EXPOSED ROOF DECKING
- A. Where raceways are routed beneath roof decking that is visible from below in finished spaces, install either GRC or IMC conduit tucked-in tight within the flute of the corrugated steel decking. Avoid running conduit perpendicular to flutes by routing it across from adjacent rooms if necessary. Run conduit in a fashion that renders it as inconspicuous as possible.
  - B. Coordinate the placement of exposed conduits and junction boxes directly with the owner's jobsite representative prior to installation.
  - C. No raceways shall be routed on the topside of roof decking.
  - D. No EMT shall be routed within two inches below the underside of any roof decking.
- 3.4 INSTALLATION OF UNDERGROUND CONDUIT
- A. Direct-Buried Conduit:
    - 1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 31 20 00 "Earth Moving" for pipe less than 6 inches in nominal diameter.
    - 2. Install backfill as specified in Section 31 20 00 "Earth Moving."
    - 3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 31 20 00 "Earth Moving."

4. Install manufactured rigid steel conduit or fiberglass elbows for stub-ups at poles and equipment, horizontal directional changes and at building entrances through floor.
  - a. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel or fiberglass conduit horizontally a minimum of 60 inches from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment if steel conduit is used.
5. Underground Warning Tape: Comply with requirements in Section 26 05 53 "Identification for Electrical Systems."

### 3.5 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.
- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth. Provide 12 inches depth of crushed stone or gravel under the handhole.
- C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch above finished grade.
- D. Install handholes with bottom below frost line, below grade.
- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables but short enough to preserve adequate working clearances in enclosure.
- F. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
- G. Grass area: Provide 8-inch thick by 12-inch wide concrete around handhole.

### 3.6 FIRESTOPPING

- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 07 84 13 "Penetration Firestopping."

### 3.7 PROTECTION

- A. Protect coatings, finishes, and cabinets from damage and deterioration.
  1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
  2. Repair damage to paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 26 05 33

## SECTION 26 05 53

### IDENTIFICATION FOR ELECTRICAL SYSTEMS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Color and legend requirements for raceways, conductors, and warning labels and signs.
  - 2. Labels.
  - 3. Bands and tubes.
  - 4. Tapes and stencils.
  - 5. Tags.
  - 6. Signs.
  - 7. Cable ties.
  - 8. Paint for identification.
  - 9. Fasteners for labels and signs.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for electrical identification products.
- B. Identification Schedule: For each piece of electrical equipment and electrical system components to be an index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.
- C. Delegated-Design Submittal: For arc-flash hazard study.

#### PART 2 - PRODUCTS

##### 2.1 PERFORMANCE REQUIREMENTS

- A. Comply with NFPA 70.
- B. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.
- C. Comply with ANSI Z535.4 for safety signs and labels.
- D. Comply with NFPA 70E and Section 26 05 70 "Overcurrent Protective Device Studies" requirements for arc-flash warning labels.
- E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
  - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

##### 2.2 COLOR AND LEGEND REQUIREMENTS

- A. Raceways and Cables Carrying Circuits at 600 V or Less:
  - 1. Black letters on an orange field.
  - 2. Legend: Indicate voltage and system or service type.
- B. Color-Coding for Phase- and Voltage-Level Identification, 600 V or Less: Use colors listed below for ungrounded service feeder and branch-circuit conductors.
  - 1. Color shall be factory applied or field applied for sizes larger than No. 8 AWG if authorities having jurisdiction permit.
  - 2. Colors for 208/120-V Circuits:
    - a. Phase A: Black.
    - b. Phase B: Red.
    - c. Phase C: Blue.
    - d. Neutral: White

3. Colors for 480/277-V Circuits:
    - a. Phase A: Brown.
    - b. Phase B: Orange.
    - c. Phase C: Yellow.
    - d. Neutral: Gray
  4. Color for Equipment Grounds: Green.
  5. Colors for Isolated Grounds: Green with two or more yellow stripes.
- C. Warning Label Colors:
1. Identify system voltage with black letters on an orange background.
- D. Warning labels and signs shall include, but are not limited to, the following legends:
1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
  2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES."
- E. Equipment Identification Labels:
1. Black letters on a white field.
- 2.3 LABELS
- A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.
- B. Snap-around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters and that stay in place by gripping action.
- C. Self-Adhesive Wraparound Labels: Preprinted, 3-mil- thick, polyester or vinyl flexible label with acrylic pressure-sensitive adhesive.
1. Self-Lamination: Clear; UV-, weather- and chemical-resistant; self-laminating, protective shield over the legend. Labels sized such that the clear shield overlaps the entire printed legend.
  2. Marker for Labels: Permanent, waterproof, black ink marker recommended by tag manufacturer.
  3. Marker for Labels: Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.
- D. Self-Adhesive Labels: Polyester or Vinyl, thermal, transfer-printed, 3-mil- thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.
1. Minimum Nominal Size:
    - a. 1-1/2 by 6 inches for raceway and conductors
    - b. 3-1/2 by 5 inches for equipment.
    - c. As required by authorities having jurisdiction.
- 2.4 BANDS AND TUBES
- A. Snap-around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches long, with diameters sized to suit diameters and that stay in place by gripping action.
- 2.5 TAPES AND STENCILS
- A. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than 3 mils thick by 1 to 2 inches wide; compounded for outdoor use.
- B. Floor Marking Tape: 2-inch- wide, 5-mil pressure-sensitive vinyl tape, with yellow and black stripes and clear vinyl overlay.
- C. Underground-Line Warning Tape:
1. Tape:
    - a. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical utility lines.
    - b. Printing on tape shall be permanent and shall not be damaged by burial operations.
    - c. Tape material and ink shall be chemically inert and not subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.
  2. Color and Printing:
    - a. Comply with ANSI Z535.1, ANSI Z535.2, ANSI Z535.3, ANSI Z535.4, and ANSI Z535.5.
    - b. Inscriptions for Red-Colored Tapes: "ELECTRIC LINE, HIGH VOLTAGE"

3. Tag: Type I :
    - a. Pigmented polyolefin, bright colored, continuous-printed on one side with the inscription of the utility, compounded for direct-burial service.
    - b. Width: 3 inches.
    - c. Thickness: 4 mils.
    - d. Weight: 18.5 lb/1000 sq. ft..
    - e. Tensile according to ASTM D882: 30 lbf and 2500 psi.
  4. Tag: Type ID:
    - a. Detectable three-layer laminate, consisting of a printed pigmented polyolefin film, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core; bright colored, continuous-printed on one side with the inscription of the utility, compounded for direct-burial service.
    - b. Width: 3 inches.
    - c. Overall Thickness: 5 mils.
    - d. Foil Core Thickness: 0.35 mil.
    - e. Weight: 28 lb/1000 sq. ft..
    - f. Tensile according to ASTM D882: 70 lbf and 4600 psi.
- D. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be 1 inch.
- 2.6 TAGS
- A. Nonmetallic Preprinted Tags: Polyethylene tags, 0.015 inch thick, color-coded for phase and voltage level, with factory printed permanent designations; punched for use with self-locking cable tie fastener.
- 2.7 SIGNS
- A. Laminated Acrylic or Melamine Plastic Signs:
1. Engraved legend.
  2. Thickness:
    - a. For signs up to 20 sq. in., minimum 1/16 inch thick.
    - b. For signs larger than 20 sq. in., 1/8 inch thick.
    - c. Engraved legend with black letters on white face
    - d. Self-adhesive.
    - e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.
- 2.8 CABLE TIES
- A. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.
1. Minimum Width: 3/16 inch.
  2. Tensile Strength at 73 Deg F according to ASTM D638: 12,000 psi.
  3. Temperature Range: Minus 40 to plus 185 deg F.
  4. Color: Black, except where used for color-coding.
- B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.
1. Minimum Width: 3/16 inch.
  2. Tensile Strength at 73 Deg F according to ASTM D638: 12,000 psi.
  3. Temperature Range: Minus 40 to plus 185 deg F.
  4. Color: Black.
- C. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.
1. Minimum Width: 3/16 inch.
  2. Tensile Strength at 73 Deg F according to ASTM D638: 7000 psi.
  3. UL 94 Flame Rating: 94V-0.
  4. Temperature Range: Minus 50 to plus 284 deg F.
  5. Color: Black.
- 2.9 MISCELLANEOUS IDENTIFICATION PRODUCTS
- A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).
- B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

#### **3.2 INSTALLATION**

- A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.
- B. Install identifying devices before installing acoustical ceilings and similar concealment.
- C. Verify identity of each item before installing identification products.
- D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.
- E. Apply identification devices to surfaces that require finish after completing finish work.
- F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.
- G. System Identification for Raceways and Cables under 600 V: Identification shall completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.
  - 1. Secure tight to surface of conductor, cable, or raceway.
- H. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.
- I. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum 3/8-inch- high letters for emergency instructions at equipment used for power transfer.
- J. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.
- K. Accessible Fittings for Raceways: Identify the covers of each junction and pull box of the following systems with the wiring system legend and system voltage. System legends shall be as follows:
  - 1. "EMERGENCY POWER."
  - 2. "POWER."
- L. Vinyl Wraparound Labels:
  - 1. Secure tight to surface of raceway or cable at a location with high visibility and accessibility.
  - 2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to the location and substrate.
- M. Snap-around Labels: Secure tight to surface at a location with high visibility and accessibility.
- N. Self-Adhesive Wraparound Labels: Secure tight to surface at a location with high visibility and accessibility.
- O. Self-Adhesive Labels:
  - 1. On each item, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
  - 2. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2-inch-high label; where two lines of text are required, use labels 2 inches high.
- P. Snap-around Color-Coding Bands: Secure tight to surface at a location with high visibility and accessibility.
- Q. Marker Tapes: Secure tight to surface at a location with high visibility and accessibility.
- R. Self-Adhesive Vinyl Tape: Secure tight to surface at a location with high visibility and accessibility.
  - 1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.
- S. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's written instructions.
- T. Underground Line Warning Tape:
  - 1. During backfilling of trenches, install continuous underground-line warning tape directly above cable or raceway at 6 to 8 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.
  - 2. Use detectable Type ID underground warning tape at duct banks that have two or more conduits

3. Use Type I underground warning tape at underground branch circuits and feeders.
4. Install underground-line warning tape for direct-buried cables and cables in raceways.

U. Nonmetallic Preprinted Tags:

1. Place in a location with high visibility and accessibility.
2. Secure using cable ties.

V. Laminated Acrylic or Melamine Plastic Signs:

1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.
2. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2-inch-high sign; where two lines of text are required, use labels 2 inches high.

W. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

### 3.3 IDENTIFICATION SCHEDULE

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

C. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits, More Than 30 A: Identify with self-adhesive raceway labels or vinyl tape applied in bands.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.
2. Apply the following identification colors:
  - a. 480Y/277 Volt Distribution System: Orange.
  - b. 208Y/120 Volt, Distribution System: White.
  - c. Fire Alarm System: Red.
  - d. Motor and Other Control Systems: Black.
  - e. Clock, Sound, Intercom, Data: Blue.
  - f. Ground: Green.

D. Accessible Fittings for Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive labels containing the wiring system legend and system voltage. System legends shall be as follows:

1. "EMERGENCY POWER."
2. "POWER."

E. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use vinyl wraparound labels to identify the phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

F. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use self-adhesive labels with the conductor or cable designation, origin, and destination.

G. Control-Circuit Conductor Termination Identification: For identification at terminations, provide self-adhesive labels with the conductor designation.

H. Auxiliary Electrical Systems Conductor Identification: Marker tape or Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
2. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
3. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
4. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual.
5. Identify the following systems with color-coded, self-adhesive vinyl tape applied in bands or snap-around color-coding bands:
  - a. Fire Alarm System: Red.

- b. Security System: Blue and yellow.
  - c. Mechanical and Electrical Supervisory System: Brown.
  - d. Telecommunication System: Blue and yellow.
  - e. Control Wiring: Orange and red.
- I. Grounding Electrode Conductors and Grounding System Conductors: At each electrical room and communications room ground bus bar, label each raceway or conductor at the ground bus bar. Identify the destination of each grounding electrode conductor, bonding jumper and grounding system conductor. The labeling shall be by permanent adhesive label on the raceway. Conductors that terminate in the same room and the entire path is readily visible do not require labeling.
- J. Locations of Underground Lines: Underground-line warning tape for power, lighting, communication, and control wiring and optical-fiber cable.
- K. Workspace Indication: Apply floor marking tape to finished surfaces. Show working clearances in the direction of access to live parts. Workspace shall comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.
- L. Instructional Signs: Self-adhesive labels, including the color code for grounded and ungrounded conductors.
- M. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Self-adhesive labels.
- 1. Apply to exterior of door, cover, or other access.
  - 2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:
    - a. Power-transfer switches.
    - b. Controls with external control power connections.
    - c. Central Battery Inverter
- N. Arc Flash Warning Labeling: Self-adhesive labels.
- O. Operating Instruction Signs: Self-adhesive labels.
- P. Emergency Operating Instruction Signs: Self-adhesive labels with white legend on a red background with minimum 3/8-inch- high letters for emergency instructions at equipment used for power transfer.
- Q. Equipment Identification Labels:
- 1. Indoor Equipment: Self-adhesive label.
  - 2. Equipment to Be Labeled:
    - a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be in the form of a self-adhesive, engraved, laminated acrylic or melamine label.
    - b. Enclosures and electrical cabinets.
    - c. Access doors and panels for concealed electrical items.
    - d. Switchboards.
    - e. Transformers: Label that includes tag designation indicated on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.
    - f. Emergency system boxes and enclosures.
    - g. Enclosed switches.
    - h. Enclosed circuit breakers.
    - i. Enclosed controllers.
    - j. Variable-speed controllers.
    - k. Push-button stations.
    - l. Power-transfer equipment.
    - m. Contactors.
    - n. Remote-controlled switches, dimmer modules, and control devices.
    - o. Central Battery Inverter
    - p. Monitoring and control equipment.

END OF SECTION 26 05 53

## SECTION 26 05 70

### OVERCURRENT PROTECTIVE DEVICE STUDIES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section includes a computer-based studies and analysis as follows:
  - 1. Fault-current study to determine the minimum interrupting capacity of circuit protective devices.
  - 2. Overcurrent protective device coordination studies to determine overcurrent protective devices and to determine overcurrent protective device settings for selective tripping.
  - 3. Arc-flash study to determine the arc-flash hazard distance and the incident energy to which personnel could be exposed during work on or near electrical equipment.
- B. Normal distribution devices shall be coordinated to 0.2 seconds. Emergency System devices shall be selectively coordinated per NEC Article 700.32.

##### 1.2 DEFINITIONS

- A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed and salvaged, or removed and reinstalled. Existing to remain items shall remain functional throughout the construction period.
- B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- C. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.
- D. Power Systems Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.
- E. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion of the circuit from the system.
- F. SCCR: Short-circuit current rating.
- G. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
- H. Single-Line Diagram: See "One-Line Diagram."

##### 1.3 ACTION SUBMITTALS

- A. Product Data:
  - 1. For computer software program to be used for studies.
  - 2. Submit the following after the approval of system protective devices submittals. Submittals shall be in digital form.
    - a. Short-circuit study input data, including completed computer program input data sheets.
    - b. Short-circuit study and equipment evaluation report; signed, dated, and sealed by a qualified professional engineer.
      - 1) Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
      - 2) Revised one-line diagram, reflecting field investigation results and results of short-circuit study.
    - c. Coordination-study input data, including completed computer program input data sheets.
    - d. Study and equipment evaluation reports.
    - e. Arc-flash study input data, including completed computer program input data sheets.
    - f. Arc-flash study report; signed, dated, and sealed by Power Systems Analysis Specialist.

3. Overcurrent protective device coordination and arc-flash study report; signed, dated, and sealed by a qualified professional engineer.
  - a. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.

#### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data:
  1. For Power System Analysis Specialist.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data:
  1. For overcurrent protective devices to include in emergency, operation, and maintenance manuals.
  2. The following are from the Short-Circuit Study Report:
    - a. Final one-line diagram.
    - b. Final Short-Circuit Study Report.
    - c. Short-circuit study data files.
    - d. Power system data.
    - e. Final protective device coordination study.
    - f. Coordination study data files.
    - g. List of all protective device settings.
    - h. Time-current coordination curves.
  3. Provide maintenance procedures in equipment manuals according to requirements in NFPA 70E.

#### 1.6 QUALITY ASSURANCE

- A. Studies shall be performed using commercially developed and distributed software designed specifically for power system analysis.
- B. Software algorithms shall comply with requirements of standards and guides specified in this Section.
- C. Manual calculations are unacceptable.
- D. Power Systems Analysis Specialist Qualifications: Professional engineer licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional engineer.
- E. Short-Circuit Study Certification: Short-Circuit Study Report shall be signed and sealed by Power Systems Analysis Specialist.
- F. Arc-Flash Study Certification: Arc-Flash Study Report shall be signed and sealed by Power Systems Analysis Specialist.

### **PART 2 - PRODUCTS**

#### 2.1 POWER SYSTEM ANALYSIS SOFTWARE DEVELOPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. SKM Systems Analysis, Inc.
- B. Comply with IEEE 242, IEEE 399, IEEE 551, IEEE 1584 and NFPA 70E.
- C. Analytical features of power systems analysis software program shall have capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.
- D. Computer software program shall be capable of the following:
  1. Plotting and diagramming time-current-characteristic curves as part of its output.
  2. Report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.
  3. Arcing faults.

#### 2.2 SHORT-CIRCUIT STUDY REPORT CONTENTS

- A. Executive summary of study findings.

- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
- C. One-line diagram of modeled power system, showing the following:
  - 1. Protective device designations and ampere ratings.
  - 2. Conductor types, sizes, and lengths.
  - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
  - 4. Motor and generator designations and kVA ratings.
  - 5. Switchgear, switchboard, motor-control center, and panelboard designations and ratings.
  - 6. Derating factors and environmental conditions.
  - 7. Any revisions to electrical equipment required by the study.
- D. Comments and recommendations for system improvements or revisions in a written document, separate from one-line diagram.
- E. Protective Device Evaluation:
  - 1. Evaluate equipment and protective devices and compare to available short-circuit currents. Verify that equipment withstand ratings exceed available short-circuit current at equipment installation locations.
  - 2. Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
  - 3. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
  - 4. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in standards to 1/2-cycle symmetrical fault current.
  - 5. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
- F. Short-Circuit Study Input Data:
  - 1. One-line diagram of system being studied.
  - 2. Power sources available.
  - 3. Manufacturer, model, and interrupting rating of protective devices.
  - 4. Conductors.
  - 5. Transformer data.
- G. Short-Circuit Study Output Reports:
  - 1. Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
    - a. Voltage.
    - b. Calculated fault-current magnitude and angle.
    - c. Fault-point X/R ratio.
    - d. Equivalent impedance.
  - 2. Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
    - a. Voltage.
    - b. Calculated symmetrical fault-current magnitude and angle.
    - c. Fault-point X/R ratio.
    - d. Calculated asymmetrical fault currents:
      - 1) Based on fault-point X/R ratio.
      - 2) Based on calculated symmetrical value multiplied by 1.6.
      - 3) Based on calculated symmetrical value multiplied by 2.7.
  - 3. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
    - a. Voltage.
    - b. Calculated symmetrical fault-current magnitude and angle.
    - c. Fault-point X/R ratio.
    - d. No AC Decrement (NACD) ratio.
    - e. Equivalent impedance.
    - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
    - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

### 2.3 COORDINATION STUDY REPORT CONTENTS

- A. Executive summary of study findings.
- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
- C. One-line diagram of modeled power system, showing the following:
  - 1. Protective device designations and ampere ratings.
  - 2. Conductor types, sizes, and lengths.
  - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
  - 4. Motor designations and kVA ratings.
  - 5. Switchboard, and panelboard designations.
  - 6. Any revisions to electrical equipment required by the study.
  - 7. Study Input Data: As described in "Power System Data" Article.
- D. Protective Device Coordination Study:
  - 1. Report recommended settings of protective devices, ready to be applied in the field. Use manufacturer's data sheets for recording the recommended setting of overcurrent protective devices when available.
    - a. Phase and Ground Relays:
      - 1) Device tag.
      - 2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
      - 3) Recommendations on improved relaying systems, if applicable.
    - b. Circuit Breakers:
      - 1) Adjustable pickups and time delays (long time, short time, and ground).
      - 2) Adjustable time-current characteristic.
      - 3) Adjustable instantaneous pickup.
      - 4) Recommendations on improved trip systems, if applicable.
    - c. Fuses: Show current rating, voltage, and class.
- E. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:
  - 1. Device tag and title, one-line diagram with legend identifying the portion of the system covered.
  - 2. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
  - 3. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
  - 4. Plot the following listed characteristic curves, as applicable:
    - a. Low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
    - b. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
    - c. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
    - d. Cables and conductors damage curves.
    - e. Ground-fault protective devices.
    - f. Motor-starting characteristics and motor damage points.
    - g. The largest feeder circuit breaker in each panelboard.
  - 5. Maintain selectivity for tripping currents caused by overloads.
  - 6. Maintain maximum achievable selectivity for tripping currents caused by overloads on series-rated devices.
  - 7. Provide adequate time margins between device characteristics such that selective operation is achieved.
  - 8. Comments and recommendations for system improvements.

### 2.4 ARC-FLASH STUDY REPORT CONTENT

- A. Executive summary of study findings.
- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

- C. One-line diagram, showing the following:
    - 1. Protective device designations and ampere ratings.
    - 2. Conductor types, sizes, and lengths.
    - 3. Transformer kilovolt ampere (kVA) and voltage ratings, including derating factors and environmental conditions.
    - 4. Motor designations and kVA ratings.
    - 5. Switchboard, panelboard designations, and ratings.
  - D. Study Input Data: As described in "Power System Data" Article.
  - E. Arc-Flash Study Output Reports:
    - 1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each equipment location included in the report:
      - a. Voltage.
      - b. Calculated symmetrical fault-current magnitude and angle.
      - c. Fault-point X/R ratio.
      - d. No AC Decrement (NACD) ratio.
      - e. Equivalent impedance.
      - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
      - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.
  - F. Incident Energy and Flash Protection Boundary Calculations:
    - 1. Arcing fault magnitude.
    - 2. Protective device clearing time.
    - 3. Duration of arc.
    - 4. Arc-flash boundary.
    - 5. Restricted approach boundary.
    - 6. Limited approach boundary.
    - 7. Working distance.
    - 8. Incident energy.
    - 9. Hazard risk category.
    - 10. Recommendations for arc-flash energy reduction.
  - G. Fault study input data, case descriptions, and fault-current calculations including a definition of terms and guide for interpretation of computer printout.
- 2.5 ARC-FLASH WARNING LABELS
- A. Comply with requirements in Section 26 05 53 "Identification for Electrical Systems" for self-adhesive equipment labels. Produce a 3.5-by-5-inch self-adhesive equipment label for each work location included in the analysis.
  - B. Label shall have an orange header with the wording, "WARNING, ARC-FLASH HAZARD," and shall include the following information taken directly from the arc-flash hazard analysis:
    - 1. Location designation.
    - 2. Nominal voltage.
    - 3. Protection boundaries.
      - a. Arc-flash boundary.
      - b. Restricted approach boundary.
      - c. Limited approach boundary.
    - 4. Arc flash PPE category.
    - 5. Required minimum arc rating of PPE in Cal/cm squared.
    - 6. Available incident energy.
    - 7. Working distance.
    - 8. Engineering report number, revision number, and issue date.
  - C. Labels shall be machine printed, with no field-applied markings.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance of the Work. Devices to be coordinated are indicated on Drawings.
  - 1. Proceed with coordination study only after relevant equipment submittals have been assembled.
- B. Examine Project overcurrent protective device submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.
- C. Provide necessary data required to complete the study to Power System Analysis Specialist.

#### **3.2 POWER SYSTEM DATA**

- A. Obtain all data necessary for conduct of the studies.
  - 1. Verify completeness of data supplied on one-line diagram. Call any discrepancies to Architect's attention.
  - 2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.
  - 3. For equipment that is existing to remain, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. Qualifications of technicians and engineers shall be as defined by NFPA 70E.
- B. Gather and tabulate the required input data to support the short-circuit study, coordination study and arc-flash study. Comply with requirements in Section 01 78 39 "Project Record Documents" for recording circuit protective device characteristics. Record data on a Record Document copy of one-line diagram. Comply with recommendations in IEEE 551 as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer or its representative who holds NETA ETT-Certified Technician Level III or NICET Electrical Power Testing Level III certification. Data include, but are not limited to, the following:
  - 1. Product Data for Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
  - 2. Obtain electrical power utility impedance at the service.
  - 3. Power sources and ties.
  - 4. Short-circuit current at each system bus (three phase and line to ground).
  - 5. Full-load current of all loads.
  - 6. Voltage level at each bus.
  - 7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
  - 8. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip, SCCR, current rating, and breaker settings.
  - 9. Maximum demands from service meters.
  - 10. Motor horsepower and NEMA MG 1 code letter designation.
  - 11. Conductor sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
  - 12. Derating factors.
  - 13. Data sheets to supplement electrical distribution system one-line diagram, cross-referenced with tag numbers on diagram, showing the following:
    - a. Special load considerations, including starting inrush currents and frequent starting and stopping.
    - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
    - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
    - d. Generator thermal-damage curve.
    - e. Ratings, types, and settings of utility company's overcurrent protective devices.
    - f. Special overcurrent protective device settings or types stipulated by utility company.
    - g. Time-current-characteristic curves of devices indicated to be coordinated.

- h. Manufacturer, frame size, interrupting rating in amperes root mean square (rms) symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
- i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
- j. Switchgear, switchboards, motor-control centers, and panelboards ampacity, and SCCR in amperes rms symmetrical.
- k. Identify series-rated interrupting devices for a condition where the available fault current is greater than the interrupting rating of downstream equipment. Obtain device data details to allow verification that series application of these devices complies with NFPA 70 and UL 489 requirements.

### 3.3 SHORT-CIRCUIT STUDY

- A. Perform study following the general study procedures contained in IEEE 399.
- B. Calculate short-circuit currents according to IEEE 551.
- C. Base study on device characteristics supplied by device manufacturer.
- D. Extent of electrical power system to be studied is indicated on Drawings.
- E. Begin short-circuit current analysis at the service, extending down to system overcurrent protective devices as follows:
  - 1. To normal system low-voltage load buses where fault current is 10 kA or less.
- F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.
- G. Include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for the fault-current dc decrement to address asymmetrical requirements of interrupting equipment.
- H. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.
  - 1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.
- I. Include in the report identification of any protective device applied outside its capacity.

### 3.4 COORDINATION STUDY

- A. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.
- B. Comply with IEEE 399 for general study procedures.
- C. Base study on device characteristics supplied by device manufacturer.
- D. Extent of electrical power system to be studied is indicated on Drawings.
- E. Begin analysis at the service, extending down to system overcurrent protective devices as follows:
  - 1. To normal system low-voltage load buses where fault current is 10 kA or less.
- F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.
- G. Transformer Primary Overcurrent Protective Devices:
  - 1. Device shall not operate in response to the following:
    - a. Inrush current when first energized.
    - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
    - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
  - 2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.
- H. Motor Protection:
  - 1. Select protection for low-voltage motors according to IEEE 242 and NFPA 70.
  - 2. Select protection for motors served at voltages more than 600 V according to IEEE 620.

- I. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.
  - J. Include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for fault-current dc decrement, to address asymmetrical requirements of interrupting equipment.
  - K. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and a single line-to-ground fault at each equipment indicated on one-line diagram.
    - 1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.
  - L. Protective Device Evaluation:
    - 1. Evaluate equipment and protective devices and compare to short-circuit ratings.
    - 2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
    - 3. Any application of series-rated devices shall be recertified, complying with requirements in NFPA 70.
    - 4. Include in the report identification of any protective device applied outside its capacity.
- 3.5 ARC-FLASH HAZARD ANALYSIS
- A. Comply with NFPA 70E and its Annex D for hazard analysis study.
  - B. Preparatory Studies: Perform the Short-Circuit and Protective Device Coordination studies prior to starting the Arc-Flash Hazard Analysis.
  - C. Calculate maximum and minimum contributions of fault-current size.
    - 1. Maximum calculation shall assume a maximum contribution from the utility and shall assume motors to be operating under full-load conditions.
    - 2. Calculate arc-flash energy at 85 percent of maximum short-circuit current according to IEEE 1584 recommendations.
    - 3. Calculate arc-flash energy at 38 percent of maximum short-circuit current according to NFPA 70E recommendations.
    - 4. Calculate arc-flash energy with the utility contribution at a minimum and assume no motor contribution.
  - D. Calculate the arc-flash protection boundary and incident energy at locations in electrical distribution system where personnel could perform work on energized parts.
  - E. Include medium- and low-voltage equipment locations, except equipment rated 240 V ac or less fed from transformers less than 125 kVA.
  - F. Calculate the limited, restricted, and prohibited approach boundaries for each location.
  - G. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented as follows:
    - 1. Fault contribution from induction motors shall not be considered beyond three to five cycles.
    - 2. Fault contribution from synchronous motors and generators shall be decayed to match the actual decrement of each as closely as possible (for example, contributions from permanent magnet generators will typically decay from 10 per unit to three per unit after 10 cycles).
  - H. Arc-flash energy shall generally be reported for the maximum of line or load side of a circuit breaker. However, arc-flash computation shall be performed and reported for both line and load side of a circuit breaker as follows:
    - 1. When the circuit breaker is in a separate enclosure.
    - 2. When the line terminals of the circuit breaker are separate from the work location.
  - I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.

3.6 FIELD ADJUSTING

- A. Adjust relay and protective device settings according to recommended settings provided by the coordination study. Field adjustments shall be completed by the engineering service division of equipment manufacturer under the "Startup and Acceptance Testing" contract portion.
- B. Make minor modifications to equipment as required to accomplish compliance with short-circuit and protective device coordination studies.

3.7 LABELING

- A. Apply one arc-flash label on the front cover of each section of the equipment and on side or rear covers with accessible live parts and hinged doors or removable plates for each equipment included in the study. Base arc-flash label data on highest values calculated at each location.
- B. Each piece of equipment listed below shall have an arc-flash label applied to it:
  - 1. Low-voltage switchboard.
  - 2. Low voltage transformers.
  - 3. Panelboard and safety switch over 250 V.
  - 4. Applicable panelboard and safety switch under 250 V.
  - 5. Control panel.
- C. Note on record Drawings the location of equipment where the personnel could be exposed to arc-flash hazard during their work.
  - 1. Indicate arc-flash energy.
  - 2. Indicate protection level required.

3.8 APPLICATION OF WARNING LABELS

- A. Install arc-flash warning labels under the direct supervision and control of Power System Analysis Specialist.

3.9 DEMONSTRATION

- A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in potential arc-flash hazards associated with working on energized equipment and the significance of arc-flash warning labels.

END OF SECTION 26 05 70

## SECTION 26 08 00

### COMMISSIONING OF ELECTRICAL SYSTEMS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

###### A. Section Includes:

1. Electrical equipment connected to Normal electrical systems, including the following:
  - a. Transformers.
  - b. Primary and secondary service electrical systems.
  - c. Distribution and branch-circuit panelboards.
  - d. Lightning protection systems.
  - e. Grounding systems.
2. Electrical equipment connected to Emergency electrical systems that provide an alternative source of power in the absence of power from the Normal electrical system, including the following:
  - a. Central Battery Inverter
3. Controls and instrumentation, including the following:
  - a. Lighting control systems.
  - b. Fire-alarm systems.
4. Systems testing and verification, including Normal and Emergency electrical systems, and transitions from Normal to Emergency electrical systems and back.

###### B. Related Requirements:

1. Section 01 91 13 "General Commissioning Requirements" for general Cx process requirements and CxA responsibilities.
2. Section 26 05 00 "Common Work Results for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

##### 1.2 DEFINITIONS

- A. BoD: Basis-of-Design Document, as defined in Section 01 91 13 "General Commissioning Requirements."
- B. Cx: Commissioning, as defined in Section 01 91 13 "General Commissioning Requirements."
- C. CxA: Commissioning Authority, as defined in Section 01 91 13 "General Commissioning Requirements."
- D. OPR: Owner's Project Requirements, as defined in Section 01 91 13 "General Commissioning Requirements."
- E. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they mean "as-built" systems, assemblies, subsystems, equipment, and components.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Construction Checklists by CxA: Draft construction checklists will be created by CxA for Contractor review.
- B. Construction Checklists by Contractor: Include the following and comply with requirements in Section 01 91 13 "General Commissioning Requirements" for construction checklists:
  1. Instrumentation and control for electrical systems.
  2. Instrumentation and control for lighting control systems.
  3. Low-voltage power cables.
  4. Control voltage power cables.
  5. Electrical feeders and branch circuits.
  6. Dry-type transformers.
  7. Instrument transformers.
  8. Low-voltage motor starters.
  9. Low-voltage air circuit breakers.
  10. Low-voltage surge protective devices.
  11. Molded-case circuit breakers.
  12. Low-voltage power circuit breakers.
  13. Grounding systems.

14. Ground-fault protection systems.
15. Panelboards.
16. Receptacles and devices.
17. Central Battery Inverter.

#### 1.4 QUALITY ASSURANCE

- A. Testing Equipment and Instrumentation Quality and Calibration: For test equipment and instrumentation required to perform electrical Cx work, perform the following:
  1. Submit test equipment and instrumentation list. For each equipment or instrument, identify the following:
    - a. Equipment/instrument identification number.
    - b. Planned Cx application or use.
    - c. Manufacturer, make, model, and serial number.
    - d. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.
  2. Test equipment and instrumentation must meet the following criteria:
    - a. Capable of testing and measuring performance within the specified acceptance criteria.
    - b. Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
    - c. Be maintained in good repair and operating condition throughout duration of use on Project.
    - d. Be recalibrated/repared if dropped or damaged in any way since last calibrated.
- B. Proprietary Test Instrumentation and Tools:
  1. Equipment Manufacturer's Proprietary Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise work on its equipment or required as a condition of equipment warranty, perform the following:
    - a. Submit proprietary instrumentation and tools list. For each instrument or tool, identify the following:
      - 1) Instrument or tool identification number.
      - 2) Equipment schedule designation of equipment for which the instrument or tool is required.
      - 3) Manufacturer, make, model, and serial number.
      - 4) Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.
    - b. Include a separate list of proprietary test instrumentation and tools in operation and maintenance manuals.
    - c. Electrical proprietary test instrumentation and tools become property of Owner at the time of Substantial Completion.

### **PART 2 - PRODUCTS (Not Used)**

### **PART 3 - EXECUTION**

#### 3.1 CONSTRUCTION CHECKLISTS

- A. Prepare detailed construction checklists for electrical systems, subsystems, equipment, and components. Complete and submit construction checklists.

#### 3.2 CONSTRUCTION CHECKLIST REVIEW

- A. Review and provide written comments on draft construction checklists. CxA will create required draft construction checklists and provide them to Contractor.
- B. Return draft Construction Checklist review comments within 10 days of receipt.
- C. When review comments have been resolved, CxA will provide final construction checklists, marked "Approved for Use, (date)."
- D. Use only construction checklists, marked "Approved for Use, (date)."

### 3.3 GENERAL TESTING REQUIREMENTS

- A. Certify that electrical systems, subsystems, and equipment have been installed, calibrated, and started and that they are operating according to the Contract Documents and approved Shop Drawings and submittals.
- B. Certify that electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents and approved Shop Drawings and submittals, and that pretest set points have been recorded.
- C. Set systems, subsystems, and equipment into operating mode to be tested according to approved test procedures (for example, normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- D. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions to verify compliance with acceptance criteria.
- E. Test systems, assemblies, subsystems, equipment, and components operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and response according to acceptance criteria.
- F. Construction Checklists: Prepare and submit detailed construction checklists for electrical systems, subsystems, equipment, and components.
  - 1. Contributors to development of construction checklists must include, but are not limited to, the following:
    - a. Electrical systems and equipment installers.
    - b. Electrical instrumentation and controls installers.
- G. Perform tests using design conditions, whenever possible.
  - 1. Simulated conditions may, with approval of Architect, be imposed using an artificial load when it is impractical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by CxA, and document simulated conditions and methods of simulation. After tests, return configurations and settings to normal operating conditions.
  - 2. Cx test procedures may direct that set points be altered when simulating conditions is impractical.
  - 3. Cx test procedures may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are impractical.
- H. If tests cannot be completed because of a deficiency outside the scope of the electrical system, document the deficiency and report it to Owner. After deficiencies are resolved, reschedule tests.
- I. If seasonal testing is specified, complete appropriate initial performance tests and documentation and schedule seasonal tests.
- J. Coordinate schedule with, and perform Cx activities at the direction of the CxA.
- K. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance tests requirements specified in Sections specifying electrical systems and equipment.
- L. Provide qualified testing and inspecting agency personnel in accordance with Section 26 00 10 "Supplemental Requirements for Electrical," instrumentation, tools, and equipment to complete and document the following:
  - 1. Performance tests.
  - 2. Demonstration of a sample of performance tests.
  - 3. Cx tests.
  - 4. Cx test demonstrations.

### 3.4 Cx TESTS FOR ELECTRICAL SYSTEMS

- A. Verification of Normal Electrical System Operation:
  - 1. Prerequisites: Acceptance of results for construction checklists for Division 26 electrical components associated with Normal electrical system.
  - 2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
  - 3. Test Purpose: Verify operation of Normal electrical system.
  - 4. Test Conditions: Energize components of Normal electrical system, one at a time.
  - 5. Acceptance Criteria: Proper operation of Normal electrical system over a 48-hour period.

- B. Verification of Essential Electrical System Operation:
  - 1. Prerequisites:
    - a. Acceptance of results for construction checklists for Division 26 electrical components associated with Essential electrical system.
    - b. Completion of "Verification of Normal Electrical System Operation" tests.
  - 2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
  - 3. Test Purpose: Verify operation of Essential electrical system.
  - 4. Test Conditions:
    - a. Energize components of Normal electrical system.
    - b. Simulate a failure of Normal electrical system.
  - 5. Acceptance Criteria: Transfer of power from Normal to Essential electrical system within OPR.
- C. Verification of Control and Instrumentation:
  - 1. Prerequisites: Acceptance of results for construction checklists.
    - a. Section 26 09 23 "Lighting Control Systems and Devices."
    - b.
- D. Test Purpose: Verify operation of control and monitoring systems for Normal and Essential electrical systems.
- E. Test Conditions:
  - 1. Energize components of Normal electrical system.
  - 2. Test operation of equipment.
- F. Acceptance Criteria: Operation of equipment according to OPR.

END OF SECTION 26 08 00

## SECTION 26 09 23

### LIGHTING CONTROL SYSTEMS AND DEVICES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. This Section includes the following lighting control devices:
  - 1. Timer Switch
  - 2. Standalone dimmers for LED lighting
  - 3. Standalone Phase cut dimming relay
  - 4. Lighting control system.
  - 5. Lighting control system components.
  - 6. Conductors and Cables.
- B. Related Sections include the following:
  - 1. Section 26 27 26 "Wiring Devices" for manual light switches.
  - 2. Section 26 51 00 "Lighting" for luminaire integral wireless control devices.
  - 3. Section 11 61 13 "Networked Lighting Control Systems" for theatrical control systems and devices within the Auditorium.

##### 1.2 DEFINITIONS

- A. BAS: Building Automation System.
- B. LED: Light-emitting diode.
- C. PIR: Passive infrared.
- D. Node: Digitally addressable, network device location

##### 1.3 OCCUPANCY SENSOR SYSTEM PERFORMANCE

- A. Coverage: Coverage patterns shall extend to the door of the room and provide coverage of 90% of the room minimum.
- B. Operation: Sensors shall operate as a manual on, auto off. If a sensor is dual technology, either technology can keep lights on.
- C. Time delays: Sensors shall come from factory with a 10 minute time delay. Time delay can then be adjusted in the field as necessary.

##### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Prepared by a factory authorized representative, show installation details for lighting control relays, digital switches, and occupancy sensors.
  - 1. Interconnection diagrams showing field-installed wiring.
  - 2. Schedules of all control panels
  - 3. Complete occupancy sensor layout with mounting, types, and locations indicated.
  - 4. Installation sequence and programming schedule.
- C. Order forms for all custom engraved light switches.

##### 1.5 CLOSEOUT SUBMITTALS

- A. Record drawings reflecting as-built information, including floor plans, wiring diagrams, equipment and wiring schedules, and room schedules.
- B. Operation and Maintenance Manuals:
  - 1. Manufacturer's technical product data and maintenance data.
  - 2. Manufacturer's warranty documentation.
- C. Software and Firmware Operational Documentation:
  - 1. Software service agreement.
  - 2. Software operating and upgrade manuals.

3. Device address list.
  4. Printout of software application and graphic screens.
- D. Attic Stock: provide proof of attic stock materials delivered to the owner at Substantial Completion.
1. 4 room controllers, type L1
  2. 4 room controllers, type L2
  3. 4 occupancy sensors
- 1.6 SOFTWARE AND FIRMWARE SERVICE AGREEMENT
- A. Technical Support: Beginning at Substantial Completion provide a 5-year software service agreement to the Owner.
- B. Software and Firmware Upgrades:
1. At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within two years from the date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.
  2. Upgrade Notice: Provide a 30-day notice to Owner to allow scheduling and access to the system and to allow Owner upgrade to computer equipment if necessary.
  3. Upgrade Reports: Prepare written report after each update, documenting upgrades installed.
- 1.7 SUBSTITUTIONS
- A. Product model numbers indicated on the drawings are the basis of design and function with integral fixture control. Product substitutions of this Section affect fixture control and may result in different wiring schemes. The Contractor acknowledges that all wiring variations, equipment variations, and cost associated with the product substitution shall be borne by the Contractor and shall be at no additional cost to the Owner.
- B. Specific products listed within the specification and drawings are to be used as a standard for comparison for substitute products offered by approved manufacturers. All features and specifications of products listed are applicable to substitute products. Listing of specific products within the specification is not to be construed as approval of manufacturer for complete product line.
- 1.8 QUALITY ASSURANCE
- A. Codes and Standards:
1. NFPA 70, National Electrical Code (NEC).
  2. UL 508, Standard for Industrial Control Panels.
  3. UL 916, Standard for Energy Management Equipment.
  4. UL 917, Standard for Clock Operated Switches.
  5. UL 924, Standard for Emergency Lighting and Power Equipment.
  6. 47 CFR, Subparts A and B, for Class A digital devices.
- B. Factory Authorized Representative: A factory authorized representative shall be involved with the project for shop drawings, on-site visits for pre-wire installation, on-site inspections, on-site programming, on-site system start-up, and commissioning.
- C. Manufacturer's Quality System: Registered to ISO 9001:2000 Quality Standard.
- D. Comply with NEC, NEMA, and FCC emission requirements for Class A applications. Comply with applicable city, county, and state codes and ordinances.
- E. Certification: Manufacturer shall certify that products will meet product specifications and local energy codes. If any additional equipment is required to meet coverage patterns and local energy codes, provide additional equipment at no additional cost to the Owner.
- 1.9 COORDINATION
- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies. Space devices from sources of potential inference per manufactures recommendations.

1.10 WARRANTY

- A. Provide a five-year parts and one-year labor warranty on the entire control system. Warranty shall begin at the time of Project Substantial Completion.

**PART 2 - PRODUCTS**

2.1 TIMER SWITCH, DIGITAL

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Intermatic
  2. Leviton
  3. Paragon
  4. Tork
- B. Description: Combination digital timer and conventional switch lighting control unit. Switchbox-mounted, backlit LCD display, with selectable time interval in 5-minute increments.
1. Rated 1000 W at 120 V(ac) and 277 V(ac) for LED lighting, and 1/4 hp at 120 V(ac).
  2. Standards: Comply with UL 20.
  3. Integral relay for connection to BAS.
  4. Voltage: Match the circuit voltage.

2.2 STANDALONE DIMMERS FOR LED LIGHTING (0-10V)

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper.
  2. Current.
  3. Leviton.
  4. Lutron.
  5. Pass & Seymour.
- B. Basis of Design: Cooper SKYE-SF10P series or Lutron Diva (either style is acceptable).
- C. Applications: As per the drawings, single-pole (one location) or 3-way (multiple locations) wherever dimmable LED lighting fixtures are specified in rooms or spaces in which there is no requirement for a digital lighting management system or a programmable LRC.
- D. Each controller shall provide both enable-on/off and 0-10 VDC 200 mA control signal and shall be fully compatible with the LED drivers that it serves.
- E. The controller itself shall be a self-contained device rated to open and close a line-voltage branch lighting circuit or it shall consist of a local low-voltage operating device provided in conjunction with a remote line-voltage power supply/control relay rated to open and close a line-voltage branch lighting circuit.
- F. Features:
1. Classic linear-slide dimmer control, full-range, continuously variable dimming.
  2. Integral preset.
  3. ON/OFF switch that automatically returns lights to preset level.
  4. Load status LED indicator.
  5. Power-failure memory: Returns to the lighting level prior to power interruption.
  6. Integral surge protection: Meets ANSI/IEEE Standard C62.41-1980, tested to withstand momentary voltage surges up to 6000V and current surges up to 200A without damage.
  7. Electrical ratings:
    - a. 1200 W at 120 V(ac), 60 Hz.
    - b. 1660 W at 277 V(ac), 60 Hz.
    - c. For higher wattage applications, provide remote relay rated for 125% of the load.
  8. Back & side wire terminals, plus 10V wire leads.
  9. Neutral Terminal: If applicable, line-voltage devices shall be equipped with a terminal for connecting the branch circuit neutral (grounded) conductor per NEC 404.2(C), in addition to the equipment grounding conductor termination.
  10. Meets UL 94 requirements, V2 rated.
- G. Multiple dimmers located within in the same vicinity shall be mounted in a common wall-box provided with a multi-gang faceplate. Provide multiple single-gang boxes, if necessary, to maintain the wattage rating of each device, per the manufacturer's instructions.

### 2.3 STANDALONE PHASE-CUT DIMMING RELAY

- A. Phase Cut Dimming Power/ Relay Packs – 120 or 277 VAC compatible and shall have two Class 2 low-voltage cabling connectors for connecting to and from the system. Every power pack shall be configurable remotely from the software and locally via low-voltage push-button stations. Power pack shall be configurable in either occupancy or vacancy modes. Power pack mounts securely to junction box through the threaded half-inch chase nipple or can be secured to the luminaire driver channel.
1. For use converting the following dimming types:
    - a. Two-wire
    - b. Three-wire
    - c. Magnetic low voltage
    - d. Electronic low voltage

### 2.4 LIGHTING CONTROL SYSTEM

- A. Description: Fully-networked, digital lighting control system (hereafter referred to as “the system”) connected via low-voltage communications cabling:
1. The System shall have an architecture that operates with the following components:
    - a. Digital lighting control devices
    - b. Standalone lighting control zones
    - c. Network backbone for remote or time based operation.
  2. Provide system software and hardware that is warranted by a single manufacturer.
  3. Contractor is responsible to coordinate all work of this Section with all the trades covered in other Sections of the specifications to provide a complete and operable system.
- B. A networked distributed lighting control system currently exists in the existing building. Components need to be compatible with existing system and installed to tie into existing networked lighting control system. Comply with the following manufacturer:
1. Acuity Controls, Nlight
- C. Digital control devices and luminaires communicate via low-voltage cabling.
1. Control of nodes can happen at the fixture level, integral to the fixture or remotely mounted, or by zones of commonly controlled fixtures.
  2. All nodes shall communicate bidirectional via networked low-voltage cabling allowing control of relays throughout the building from common digital control switch(es).
  3. System shall be capable of interfacing with the LAN to interface with Building Management System.
  4. Isolated contacts within each relay shall provide true relay state to the electronics. True relay state shall be indicated by an on-board LED and shall be available to external control devices and systems.
  5. Operates relays on-off at programmable times, with manual switches, and with photoelectric relays.
  6. Capable of providing sequential start within groups preventing demand peaks caused by simultaneous switching.
  7. Capable of programmable manual override for after-hours occupancy with occupant warning signal.
  8. Relay quantity as indicated on schedule with indicated spare capacity.
  9. Include all accessories necessary for the system to function as indicated in the sequence of operations and lighting control schedules.
  10. System Components:
    - a. System Control Module
    - b. Wired Networked Communications Bridge
    - c. Wall Switch Sensors
    - d. Occupancy/ Vacancy Sensors
    - e. Indoor Photoelectric Sensors
    - f. Power/ Relay Packs
    - g. Auxiliary Input/ Output Devices
    - h. Wall Switches & Dimmers
- D. Computer Interface: Web or software based control system for modifying lighting control programming. Interface to include:
1. Building plans indicating zones.
  2. On/off status of all zones.
  3. Schedules to program weekend or holiday settings.
  4. Time of day control for all zones.

- E. Accessories:
  - 1. Building Automation System Interface: Provide system with optional interface to system via LON Network or BACnet IP. Interface is NIC.
  - 2. Network Card: To interface software with building network.
  - 3. Network Clock
  - 4. Provide additional modules as necessary to provide a complete system that functions as indicated on the drawings and the sequence of operations.

## 2.5 LIGHTING CONTROL SYSTEM COMPONENTS

- A. System Control Module
  - 1. Eclipse Controller, nLight model nECY or approved equal
  - 2. Shall be capable of facilitating communication and time-based control of downstream network devices and linking them to the entire system.
  - 3. Controller contains ability to reference astronomical clock for control of exterior lighting.
  - 4. Each Controller shall be capable of linking 750 devices to the network and be scalable to control up to 20,000 devices
- B. Building Network Interface
  - 1. nLight Eclipse Touchscreen, model nGWY2 GFX, or approved equal.
  - 2. Shall be capable of facilitating communication and control of downstream devices.
- C. Wired Networked Communications Bridge
  - 1. nLight model nBRG or approved equal.
  - 2. Device shall be surface-mountable to a standard 4"x4" square junction box and shall have eight Class 2 low-voltage connectors for connecting to the system. Device shall be capable of aggregating communication from multiple lighting control zones for purposes of minimizing backbone wiring requirements back to the System Control Module.
- D. Wall Switch Sensors – performance as described in article 2.1 above. Each switch sensor shall have two Class 2 low-voltage cabling connectors for connecting to and from the system.
  - 1. Dual-Tech: nLight model nWSXA PDT, or approved equal
  - 2. Dual-Tech with Dimming: nLight model nWSXA PDT LV DX, or approved equal
- E. Indoor Occupancy/ Vacancy Sensors – performance as described in article 2.1 above. Each sensor shall have two Class 2 low-voltage cabling connectors for connecting to and from the system.
  - 1. Dual-Tech: nLight model nCM PDT 9 or 10, or approved equal
  - 2. Dual-Tech with integrated Dimming Photocell: nLight model nCM PDT 9 or 10 ADCX, or approved equal
  - 3. Dual-Tech with High Mount Coverage: nLight model nCM PDT 6 ADCX or approved equal.
  - 4. Dual-Tech with Low Temp / High Humidity option: nLight model nCM PDT 9 or 10 LT
  - 5. Dual-Tech with integrated Dimming Photocell and Low Temp / High Humidity options: nLight model nCM 9 or 10 ADCX LT, or approved equal
- F. Indoor Photoelectric Sensors – each sensor shall have two Class 2 low-voltage cabling connectors for connecting to and from the system.
  - 1. nLight model nCMD ADCX, or approved equal
- G. Power/Relay Packs – each sensor shall have two Class 2 low-voltage cabling connectors for connecting to and from the system. Every power pack shall be configurable remotely from the software and locally via low-voltage push-button stations. Power pack mounts securely to junction box through a threaded half-inch chase nipple or can be secured to a luminaire driver channel.
  - 1. Power pack: nLight model nPP16, or approved equal
  - 2. Power pack with dimming: nLight model nPP16 D, or approved equal
  - 3. UL924 listed Power pack: nLight model nPP16 ER, or approved equal
  - 4. UL924 listed Power pack with dimming: nLight model nPP16 D ER or approved equal.
- H. Phase Cut Dimming Power/ Relay Packs – 120 or 277 VAC compatible and shall have two Class 2 low-voltage cabling connectors for connecting to and from the system. Every power pack shall be configurable remotely from the software and locally via low-voltage push-button stations. Power pack shall be configurable in either occupancy or vacancy modes. Power pack mounts securely to junction box through the threaded half-inch chase nipple or can be secured to the luminaire driver channel.
  - 1. For use converting the following dimming types:
    - a. Two-wire
    - b. Three-wire
    - c. Magnetic low voltage

d. Electronic low voltage

- I. Auxiliary Input/Output Devices – provide as required for a complete installation. Devices shall be plenum rated and be inline wired and shall have two Class 2 low-voltage cabling connectors for connecting to and from the system.
  - 1. I/O device with dimming: nLight model nIO D
  - 2. I/O device with contact closure or 0-10V dimming: nLight model nIO 1S, or approved equal
  - 3. I/O device for connection to outdoor photocell: nLight model nIO NLI, or approved equal
- J. Digital Switches – devices shall recess into a single-gang switch box and shall have two Class 2 low-voltage cabling connectors for connecting to and from the system. Multiple, adjacent switches shall be ganged together and installed with the appropriate multi-gang faceplate. Devices shall have mechanical push-buttons that provide tactile feedback and have an LED indicator light on each button and shall be custom engravable – see Low Voltage Switch Schedule on Drawing E7.2 for engraving information.
  - 1. Provide nLight model nPODMA family of low voltage switches or approved equal.

2.6 CONDUCTORS AND CABLES

- A. Power Wiring to Supply and Load Side of Remote-Control Power Sources: Not smaller than No. 12 AWG.
- B. Classes 2 and 3 Control Cable: Multi-conductor cable with stranded-copper conductors sized per manufacturer's recommendations.
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors.

2.7 EQUIPMENT ENCLOSURES

- A. Enclosed Controllers: NEMA ICS 6, to comply with environmental conditions at installed location.
  - 1. Dry and Clean Indoor Locations: NEMA 250, Type 1.
  - 2. Outdoor Locations: NEMA 250, Type 3R.

**PART 3 - EXECUTION**

3.1 DELEGATED DESIGN

- A. This contract shall include the complete design and application of lighting control systems. Determine all system components, cabling specifications, and programming required for complete and functional operation. If necessary, obtain clarification from Architect/Engineer prior to bidding regarding intent of contract documents.
- B. Provide additional quantities and placement of sensors as needed to achieve coverage of area served at actual mounting heights.
- C. The wiring methods indicated on the electrical drawings are to indicate design intent only. Approved manufacturer controls products may have different driver and sensor requirements and different wiring methods than what is shown on the electrical drawings. Contractors are required to familiarize themselves with all required wiring, additional parts, required installation labor, etc. to provide a complete installed system that meets the intent and functionality of the specified system.
- D. The Contractor shall provide as part of the shop drawing submittals, complete lighting drawings including all wiring, equipment, equipment locations, etc. for the submitted system.
- E. All costs shall be included in the bid for a complete operational system that meets the specified and designed system.
- F. Control Intent: Control Intent includes, but is not limited to the following:
  - 1. Defaults and initial calibration settings for such items as time delay, sensitivity, fade rates, etc.
  - 2. Initial sensor and switching zones.
  - 3. Initial time switch settings.

3.2 SENSOR INSTALLATION

- A. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.3 LIGHTING CONTROL SYSTEM INSTALLATION

- A. Install equipment in accordance with manufacturer's written installation instructions.
- B. Provide complete installation of system in accordance with Contract Documents.

- C. Install panels and connect line voltage wires from panelboard to lighting control panels and distributed relays.
- D. Connect luminaires to control network and controller interface.
- E. Connect relays and dimming control to luminaires without integral control.
- F. Install digital switches and program per lighting control switch schedule on Drawing E7.2.
- G. Connect all power supplies to spare 20A circuit in panelboard serving area.

### 3.4 WIRING INSTALLATION

- A. Wiring Method: Comply with Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 3/4 inch.
- B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- C. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.
- D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.
- E. Install low voltage cables between panels and between panels and switches per manufactures written instructions.
- F. Install cabling per Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables." Follow "Installation of Conductors and Cables" for all low voltage control and dimming of light fixtures.
- G. For systems using unshielded twisted pair cables and crimp-on type RJ45 connectors: All cable terminations shall be performed by a BISCO certified Installer and tested using a LAN network tester.

### 3.5 SEQUENCE OF OPERATIONS

- A. See Lighting Control Sequence of Operations schedule on Drawing E7.1.
- B. Lighting controls are to utilize integral time clock and internal programming for occupied mode, unoccupied mode, and dusk to dawn operation. The lighting controls programming shall comply with 2021 International Energy Conservation Code requirements for night overrides while in unoccupied mode. Coordinate final programing and schedule with owner.
- C. Interior Lighting: Program switches to only allow lighting on for a programmable length of time during unoccupied mode. Time delay is programmable up to two (2) hours, see drawings for time delay settings for each room type.
- D. Exterior Lighting: See drawings and schedules.
- E. Interior Photoelectric Sensors: See drawings and schedules.

### 3.6 IDENTIFICATION

- A. Identify components and power and control wiring according to Section 26 05 53 "Identification for Electrical Systems."
  - 1. Identify controlled circuits in lighting contactors and lighting control panels.
  - 2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
- B. Label lighting control system switches with engraved and filled lettering.

### 3.7 PROGRAMMING AND DEVICE SETTINGS

- A. Manufacturer's Field Service and Commissioning: Engage a factory-authorized service representative to program, configure, test, and adjust components associated with each lighting control system and each lighting control device.
- B. Initial Programming: Upon energizing luminaires associated with lighting control stations, each control station shall be programmed to provide basic manual on/off functions (so that no luminaire remains on or off 24/7 without manual control). This initial programming shall be provided prior to the manufacturer's factory-authorized technician performing their official system programming, configuration, startup, and system commissioning services.

- C. Included in this Section is programming of the system. This start-up shall include a minimum of three (2) separate on-site visits for system verification and programming. An example outline of how this could be phased:
    - 1. Auditorium and support spaces
    - 2. Remainder of Main Building and Site
  - D. Programming of the system, per the Construction Documents, shall be performed by a factory trained manufacturer's representative.
    - 1. Programming services shall be provided at three separate times throughout the construction schedule. The installing contractor and the programmer shall prepare a plan for implementation and submit during the shop drawing submittal process. The intent is for segments of the building to be controlled as soon as practical once installed.
  - E. All lighting control equipment, devices and accessories shall be installed and operational prior to programming.
  - F. Custom engraved light switches shall be installed at all locations called out in the Construction Documents prior to programming.
  - G. BAS Controls – Coordination and Integration
    - 1. Prior to bidding, coordinate with the Division 23 temperature control contractor for wiring, integrating, and programming of building automation system (BAS) to control lighting contactors as indicated. Refer to the drawings for specific zones of control and time scheduling requirements. Coordinate final settings directly with the Owner.
- 3.8 SYSTEM STARTUP AND SYSTEM COMMISSIONING
- A. System Startup: Manufacturer's authorized technician shall confirm proper installation and operation of system components.
  - B. Provide commissioning of The System per Section 26 08 00 "Commissioning of Electrical Systems" and 2021 IECC Requirements.
- 3.9 FIELD QUALITY CONTROL
- A. Provide factory authorized representative for Initial start-up and programming of lighting control system.
  - B. Perform the following field tests and inspections and prepare test reports.
    - 1. After installing switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.
    - 2. Operational Test: Verify operation of each lighting control device and adjust time delays.
  - C. Lighting control devices that fail tests and inspections are considered defective.
- 3.10 ADJUSTING
- A. Occupancy Adjustments: When requested by Owner within 12 months from date of Substantial Completion, provide on-site assistance in adjusting lighting control devices to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose, including up to 10 hours of labor plus the necessary travel time.
    - 1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
    - 2. For daylight-harvesting controls, adjust set points and deadband controls to suit Owner's operations.
- 3.11 DEMONSTRATION
- A. Engage a factory-authorized service representative to train Owner's maintenance personnel as specified below. Training shall not be conducted by the electrical contractor.
    - 1. Train Owner's maintenance personnel on troubleshooting, computer interface, servicing, adjusting, and preventive maintenance of all lighting control devices. Provide a minimum of four (4) hours training. Provide a USB flash drive, or other acceptable digital video format, of the video-recorded training session to the owner.
    - 2. Training Aid: Use the approved final version of maintenance manuals as a training aid.
    - 3. Schedule training with Owner, through Architect-Engineer, with at least seven (7) days' advance notice.

4. Six months after completion of project, factory-authorized representative shall provide one 2-hour owner re-training session.

END OF SECTION 26 09 23

## SECTION 26 22 13

### LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section includes distribution, dry-type transformers with a nominal primary and secondary rating of 600 V and less, with capacities up to 1500 kVA.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type and size of transformer.
  - 2. Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer.
- B. Shop Drawings:
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
  - 3. Include diagrams for power, signal, and control wiring.

##### 1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

##### 1.4 DELIVERY, STORAGE, AND HANDLING

- A. Inspection: On receipt, inspect for and note any shipping damage to packaging and transformer.
  - 1. If manufacturer packaging is removed for inspection, and transformer will be stored after inspection, re-package transformer using original or new packaging materials that provide protection equivalent to manufacturer's packaging.
- B. Storage: Store in a warm, dry, and temperature-stable location in original shipping packaging.
- C. Handling: Follow manufacturer's instructions for lifting and transporting transformers.

#### PART 2 - PRODUCTS

##### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. ABB (Electrification Products Division).
  - 2. Acme Electric Corporation.
  - 3. Eaton.
  - 4. Schneider Electric USA (Square D).
  - 5. Siemens Industry, Inc., Energy Management Division.
  - 6. Sola/Hevi-Duty; Emerson Electric Co
- B. Source Limitations: Obtain each transformer type from single source from single manufacturer.

##### 2.2 GENERAL TRANSFORMER REQUIREMENTS

- A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.
- B. Comply with NFPA 70.
  - 1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

- C. Transformers Rated 15 kVA and Larger:
  - 1. Comply with 10 CFR 431 (DOE 2016) efficiency levels.
  - 2. Marked as compliant with DOE 2016 efficiency levels by an NRTL.

### 2.3 DISTRIBUTION TRANSFORMERS

- A. Comply with NFPA 70, and list and label as complying with UL 1561.
- B. Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses.
  - 1. One leg per phase.
  - 2. Grounded to enclosure.
- C. Coils: Continuous windings without splices except for taps.
  - 1. Coil Material: Copper.
  - 2. Internal Coil Connections: Brazed or pressure type.
  - 3. Terminal Connections: Welded.
- D. Enclosure: Ventilated.
  - 1. NEMA 250, Type 2: Core and coil shall be encapsulated within resin compound using a vacuum-pressure impregnation process to seal out moisture and air.
  - 2. KVA Ratings: Based on convection cooling only and not relying on auxiliary fans.
  - 3. Wiring Compartment: Sized for conduit entry and wiring installation.
  - 4. Finish: Comply with NEMA 250.
- E. Taps for Transformers 3 kVA and Smaller: None.
- F. Taps for Transformers 7.5 to 24 kVA: One 5 percent tap above and one 5 percent tap below normal full capacity.
- G. Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.
- H. Insulation Class, Smaller Than 30 kVA: 180 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.
- I. Insulation Class, 30 kVA and Larger: 220 deg C, UL-component-recognized insulation system with a maximum of 80 deg C rise above 40 deg C ambient temperature.
- J. Grounding: Provide ground-bar kit or a ground bar installed on the inside of the transformer enclosure.
- K. K-factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor
  - 1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor without exceeding the indicated insulation class in a 40 deg C maximum ambient and a 24-hour average ambient of 30 deg C.
  - 2. Indicate value of K-factor on transformer nameplate.
  - 3. Unit shall comply with requirements of DOE 2016 efficiency levels when tested according to NEMA TP 2 with a K-factor equal to one.
- L. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
  - 1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
  - 2. Include special terminal for grounding the shield.
- M. Neutral: Rated 200 percent of full load current for K-factor-rated transformers.
- N. Low-Sound-Level Requirements: Maximum sound levels when factory tested according to IEEE C57.12.91, as follows:
  - 1. 9.00 kVA and Less: 40dBA.
  - 2. 9.01 to 30.00 kVA: 45dBA.
  - 3. 30.01 to 50.00 kVA: 45 dBA for K-factors of 1, 4, and 9, 48 dBA for K-factors of 13 and 20.
  - 4. 50.01 to 150.00 kVA: 50 dBA for K-factors of 1, 4, and 9, 53 dBA for K-factors of 13 and 20.
  - 5. 150.01 to 300.00 kVA: 55 dBA for K-factors of 1, 4, and 9, 58 dBA for K-factors of 13 and 20.

### 2.4 IDENTIFICATION

- A. Nameplates: Engraved, laminated-acrylic or melamine plastic signs for each distribution transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 26 05 53 "Identification for Electrical Systems."

## 2.5 SOURCE QUALITY CONTROL

- A. Test and inspect transformers according to IEEE C57.12.01 and IEEE C57.12.91.
  - 1. Resistance measurements of all windings at rated voltage connections and at all tap connections.
  - 2. Ratio tests at rated voltage connections and at all tap connections.
  - 3. Phase relation and polarity tests at rated voltage connections.
  - 4. No load losses, and excitation current and rated voltage at rated voltage connections.
  - 5. Impedance and load losses at rated current and rated frequency at rated voltage connections.
  - 6. Applied and induced tensile tests.
  - 7. Regulation and efficiency at rated load and voltage.
  - 8. Insulation-Resistance Tests:
    - a. High-voltage to ground.
    - b. Low-voltage to ground.
    - c. High-voltage to low-voltage.
  - 9. Temperature tests.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.
- D. Verify that ground connections are in place and requirements in Section 26 05 26 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install transformers level and plumb on a concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.
- B. Construct concrete bases according to Section 03 30 00 "Cast-in-Place Concrete" and anchor floor-mounted transformers according to manufacturer's written instructions and requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems."
  - 1. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- C. Secure transformer to concrete base according to manufacturer's written instructions.
- D. Install transformers on isolation waffle pads where indicated on drawings.
- E. Secure covers to enclosure and tighten all bolts to manufacturer-recommended torques to reduce noise generation.
- F. Remove shipping bolts, blocking, and wedges.

### 3.3 CONNECTIONS

- A. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- D. Provide flexible connections at all conduit and conductor terminations and supports to eliminate sound and vibration transmission to the building structure.

### 3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections with the assistance of a factory-authorized service representative.

- B. Dry-Type Transformer Field Tests:
  - 1. Visual and Mechanical Inspection.
    - a. Inspect physical and mechanical condition.
    - b. Inspect anchorage, alignment, and grounding.
    - c. Verify that resilient mounts are free and that any shipping brackets have been removed.
    - d. Verify the unit is clean.
    - e. Perform specific inspections and mechanical tests recommended by manufacturer.
    - f. Verify that as-left tap connections are as specified.
    - g. Verify the presence of surge arresters and that their ratings are as specified.
  - 2. Electrical Tests:
    - a. Measure resistance at each winding, tap, and bolted connection.
    - b. Perform insulation-resistance tests winding-to-winding and each winding-to-ground. Apply voltage according to manufacturer's published data. In the absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: the value of the index shall not be less than 1.0.
    - c. Perform turns-ratio tests at all tap positions. Test results shall not deviate by more than one-half percent from either the adjacent coils or the calculated ratio. If test fails, replace the transformer.
    - d. Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
- C. Remove and replace units that do not pass tests or inspections and retest as specified above.
- D. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

### 3.5 ADJUSTING

- A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 5 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.
- B. Output Settings Report: Prepare a written report recording output voltages and tap settings.

### 3.6 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 26 22 13

## SECTION 26 24 13

### SWITCHBOARDS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Service and distribution switchboards rated 600 V and less.
  - 2. Surge protection devices.
  - 3. Disconnecting and overcurrent protective devices.
  - 4. Instrumentation.
  - 5. Identification.
- B. Related Requirements
  - 1. Section 26 05 70 "Overcurrent Protective Device Studies" for selecting overcurrent devices, adjustment of breakers, and arc flash analysis requirements.

##### 1.2 ACTION SUBMITTALS

- A. Submit written Short Circuit and Coordination Studies, Arc-Flash Hazard Analysis and reports, as required by Section 26 05 70 concurrently or prior to submittals required by this section.
- B. Product Data: For each switchboard, overcurrent protective device, surge protection device, ground-fault protector, accessory, and component.
  - 1. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
- C. Shop Drawings: For each switchboard and related equipment.
  - 1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
  - 2. Detail enclosure types for types other than NEMA 250, Type 1.
  - 3. Detail bus configuration, current, and voltage ratings.
  - 4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
  - 5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
  - 6. Detail utility company's metering provisions with indication of approval by utility company.
  - 7. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  - 8. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
  - 9. Include schematic and wiring diagrams for power, signal, and control wiring.
- D. Delegated Design Submittals:
  - 1. For arc-flash hazard analysis.
  - 2. For arc-flash labels.
  - 3. For Short Circuit Studies
  - 4. For Coordination Studies

##### 1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals.
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Routine maintenance requirements for switchboards and all installed components.
    - b. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
    - c. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.
- B. Testing Agency Qualifications: Accredited by NETA.
  - 1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.
- B. Handle and prepare switchboards for installation according to NEMA PB 2.1.

1.6 FIELD CONDITIONS

- A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.
- B. Environmental Limitations:
  - 1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not exceeding 104 deg F.
- C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
  - 1. Notify Owner no fewer than seven days in advance of proposed interruption of electric service.
  - 2. Indicate method of providing temporary electric service.
  - 3. Do not proceed with interruption of electric service without Owner's written permission.
  - 4. Comply with NFPA 70E.

1.7 COORDINATION

- A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.8 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace switchboard enclosures, buswork, overcurrent protective devices, accessories, and factory installed interconnection wiring that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Three years from date of Substantial Completion.
- B. Manufacturer's Warranty: Manufacturer's agrees to repair or replace surge protection devices that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS**

2.1 SWITCHBOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. ABB (Electrification Products Division).
  - 2. Eaton.
  - 3. Schneider Electric USA (Square D).
  - 4. Siemens Industry, Inc., Energy Management Division.
- B. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
  - D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - E. Comply with NEMA PB 2.
  - F. Comply with NFPA 70.
  - G. Comply with UL 891.
  - H. Front-Connected, Front-Accessible Switchboards:
    - 1. Main Devices: Fixed, individually mounted.
    - 2. Branch Devices: Panel mounted.
    - 3. Sections front and rear aligned.
  - I. Nominal System Voltage: As indicated on one-line diagram
  - J. Main-Bus Continuous: As indicated on one-line diagram
  - K. Indoor Enclosures: Steel, NEMA 250, Type 1.
  - L. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.
  - M. Barriers: Between adjacent switchboard sections.
  - N. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.
  - O. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.
  - P. Buses and Connections: Three phase, four wire unless otherwise indicated.
    - 1. Provide phase bus arrangement A, B, C from front to back, top to bottom, and left to right when viewed from the front of the switchboard.
    - 2. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity,.
    - 3. Copper feeder circuit-breaker line connections.
    - 4. Ground Bus: Minimum-size required by UL 891, hard-drawn copper of 98 percent conductivity, equipped with mechanical connectors for feeder and branch-circuit ground conductors.
    - 5. Main-Phase Buses and Equipment-Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions on one end.
    - 6. Disconnect Links:
      - a. Isolate neutral bus from incoming neutral conductors.
      - b. Bond neutral bus to equipment-ground bus for switchboards utilized as service equipment or separately derived systems.
    - 7. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
  - Q. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.
- 2.2 SURGE PROTECTION DEVICES
- A. SPDs: Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 1449, Type 2.
  - B. Features and Accessories:
    - 1. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
    - 2. Indicator light display for protection status.
    - 3. Form-C contacts rated at 2 A and 24-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
    - 4. Surge counter.

- C. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 300 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.
- D. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V and 208Y/120 V, three-phase, four-wire circuits shall not exceed the following:
  - 1. Line to Neutral: 1200 V for 480Y/277 V and 700 V for 208Y/120 V.
  - 2. Line to Ground: 1200 V for 480Y/277 V and 1200 V for 208Y/120 V.
  - 3. Line to Line: 2000 V for 480Y/277 V and 1000 V for 208Y/120 V.
- E. SCCR: Equal or exceed 200 kA.
- F. Nominal RATING: 20 kA.

### 2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Provide Arc Energy Reducing Maintenance Switch on any breaker or fusible disconnect switch which can be adjusted 1,200 A or higher per NEC 240.67 and 240.87.
- B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents. Circuit breaker types, frame sizes, and functionality shall be as required to meet the overcurrent device selectivity requirements as noted in 26 05 70 Overcurrent Protective Device Study, but as a minimum shall be:
  - 1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
  - 2. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:
    - a. Instantaneous trip.
    - b. Long- and short-time pickup levels.
    - c. Long and short time adjustments.
    - d. Ground-fault pickup level, time delay, and I squared t response.
  - 3. MCCB Features and Accessories:
    - a. Standard frame sizes, trip ratings, and number of poles.
    - b. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor material.
    - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
    - d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
- C. Insulated-Case Circuit Breaker (ICCB): 100 percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.
  - 1. Fixed circuit-breaker mounting.
  - 2. Two-step, stored-energy closing.
  - 3. Full-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:
    - a. Instantaneous trip.
    - b. Time adjustments for long- and short-time pickup.
    - c. Ground-fault pickup level, time delay, and I squared t response.

### 2.4 INSTRUMENTATION

- A. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
  - 1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
    - a. Phase Currents, Each Phase: Plus or minus 0.5 percent.
    - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 0.5 percent.
    - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 0.5 percent.
    - d. Megawatts: Plus or minus 1 percent.
    - e. Megavars: Plus or minus 1 percent.
    - f. Power Factor: Plus or minus 1 percent.
    - g. Frequency: Plus or minus 0.1 percent.
    - h. Accumulated Energy, Megawatt Hours: Plus or minus 1 percent; accumulated values unaffected by power outages up to 72 hours.

- i. Megawatt Demand: Plus or minus 1 percent; demand interval programmable from five to 60 minutes.
2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

## 2.5 IDENTIFICATION

- A. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on a photoengraved nameplate.
  1. Nameplate: At least 0.032-inch- thick anodized aluminum, located at eye level on front cover of the switchboard incoming service section.
- B. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Receive, inspect, handle, and store switchboards according to NEMA PB 2.1.
  1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's instructions.
  2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
  3. Protect from moisture, dust, dirt, and debris during storage and installation.
  4. Install temporary heating during storage per manufacturer's instructions.
- B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.
- C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work or that affect the performance of the equipment.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install switchboards and accessories according to NEMA PB 2.1.
- B. Equipment Mounting: Install switchboards on concrete base, 4-inch nominal thickness. Comply with requirements for concrete base specified in Section 03 30 00 "Cast-in-Place Concrete."
  1. Install conduits entering underneath the switchboard, entering under the vertical section where the conductors will terminate. Install with couplings flush with the concrete base. Extend 2 inches above concrete base after switchboard is anchored in place.
  2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  5. Install anchor bolts to elevations required for proper attachment to switchboards.
  6. Anchor switchboard to building structure at the top of the switchboard if required or recommended by the manufacturer.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.
- D. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.
- E. Install filler plates in unused spaces of panel-mounted sections.
- F. Install overcurrent protective devices, surge protection devices, and instrumentation.
  1. Set field-adjustable switches and circuit-breaker trip ranges.
- G. Comply with NECA 1.

### 3.3 CONNECTIONS

- A. Bond conduits entering underneath the switchboard to the equipment ground bus with a bonding conductor sized per NFPA 70.
- B. Support and secure conductors within the switchboard according to NFPA 70.
- C. Extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

### 3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."
- B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."
- C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

### 3.5 FIELD QUALITY CONTROL

- A. Perform tests and inspections with the assistance of a factory-authorized service representative.
- B. Tests and Inspections:
  - 1. Acceptance Testing:
    - a. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit. Open control and metering circuits within the switchboard, and remove neutral connection to surge protection and other electronic devices prior to insulation test. Reconnect after test.
    - b. Test continuity of each circuit.
  - 2. Test ground-fault protection of equipment for service equipment per NFPA 70.
  - 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 4. Correct malfunctioning units on-site where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  - 5. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Switchboard will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.6 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 05 70 "Overcurrent Protective Device Studies."

### 3.7 PROTECTION

- A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

### 3.8 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories.

END OF SECTION 26 24 13

## SECTION 26 24 16

### PANELBOARDS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Distribution panelboards.
  - 2. Lighting and appliance branch-circuit panelboards.

##### 1.2 DEFINITIONS

- A. ATS: Acceptance testing specification.
- B. GFCI: Ground-fault circuit interrupter.
- C. GFEP: Ground-fault equipment protection.
- D. HID: High-intensity discharge.
- E. MCCB: Molded-case circuit breaker.
- F. SPD: Surge protective device.
- G. VPR: Voltage protection rating.

##### 1.3 ACTION SUBMITTALS

- A. Submit written Short Circuit and Coordination Studies, Arc-Flash Hazard Analysis and reports, as required by Section 26 05 70 concurrently or prior to submittals required by this section.
- B. Product Data: For each type of panelboard.
  - 1. Include materials, switching and overcurrent protective devices, SPDs, accessories, and components indicated.
  - 2. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- C. Shop Drawings: For each panelboard and related equipment.
  - 1. Include dimensioned plans, elevations, sections, and details.
  - 2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.
  - 3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
  - 4. Detail bus configuration, current, and voltage ratings.
  - 5. Short-circuit current rating of panelboards and overcurrent protective devices.
  - 6. Include evidence of NRTL listing for series rating of installed devices.
  - 7. Include evidence of NRTL listing for SPD as installed in panelboard.
  - 8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  - 9. Include wiring diagrams for power, signal, and control wiring.
  - 10. Key interlock scheme drawing and sequence of operations.
  - 11. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graph paper; include selectable ranges for each type of overcurrent protective device. Include an Internet link for electronic access to downloadable PDF of the coordination curves.

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Panelboard Schedules: For installation in panelboards

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
  - 1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
  - 2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Keys: Two spares for each type of panelboard cabinet lock.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: ISO 9001 or ISO 9002 certified.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Handle and prepare panelboards for installation according to NEMA PB 1.

1.9 FIELD CONDITIONS

- A. Environmental Limitations:
  - 1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not exceeding 23 deg F to plus 104 deg F.
- B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
  - 1. Ambient temperatures within limits specified.
- C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
  - 1. Notify Owner no fewer than seven (7) days in advance of proposed interruption of electric service.
  - 2. Do not proceed with interruption of electric service without Owner's written permission.
  - 3. Comply with NFPA 70E.

1.10 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace panelboards that fail in materials or workmanship within specified warranty period.
  - 1. Panelboard Warranty Period: 18 months from date of Substantial Completion.
- B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace SPD that fails in materials or workmanship within specified warranty period.
  - 1. SPD Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS**

2.1 PANELBOARDS COMMON REQUIREMENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. ABB (Electrification Products Division).
  - 2. Eaton.
  - 3. Schneider Electric USA (Square D).
  - 4. Siemens Industry, Inc., Energy Management Division
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NEMA PB 1.
- E. Comply with NFPA 70.
- F. Enclosures: Flush and Surface-mounted, dead-front cabinets.
  - 1. Rated for environmental conditions at installed location.
    - a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
    - b. Outdoor Locations: NEMA 250, Type 3R.
    - c. Wet or Damp Indoor Locations: NEMA 250, Type 4.
  - 2. Height: 84 inches maximum.
  - 3. Finishes:
    - a. Panels and Trim: Steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
    - b. Back Boxes: Galvanized steel.
- G. Incoming Mains:
  - 1. Location: Convertible between top and bottom.
  - 2. Main Breaker: Main lug interiors up to 400 amperes shall be field convertible to main breaker.
- H. Phase, Neutral, and Ground Buses:
  - 1. Material: Hard-drawn copper, 98 percent conductivity.
    - a. Plating shall run entire length of bus.
    - b. Bus shall be fully rated the entire length.
  - 2. Interiors shall be factory assembled into a unit. Replacing switching and protective devices shall not disturb adjacent units or require removing the main bus connectors.
  - 3. Equipment Ground Bus: Adequate for feeder and branch circuit equipment grounding conductors; bonded to box.
  - 4. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
  - 5. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure. Do not mount neutral bus in gutter.
  - 6. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and listed and labeled by an NRTL acceptable to authority having jurisdiction, as suitable for nonlinear loads in electronic-grade panelboards and others designated on Drawings. Connectors shall be sized for double-sized or parallel conductors as indicated on Drawings. Do not mount neutral bus in gutter.
- I. Conductor Connectors: Suitable for use with conductor material and sizes.
  - 1. Material: Hard-drawn copper, 98 percent conductivity.
  - 2. Terminations shall allow use of 75 deg C rated conductors without derating.
  - 3. Size: Lugs suitable for indicated conductor sizes, with additional gutter space, if required, for larger conductors.
  - 4. Main and Neutral Lugs: Mechanical type, with a lug on the neutral bar for each pole in the panelboard.
  - 5. Ground Lugs and Bus-Configured Terminators: Mechanical type, with a lug on the bar for each pole in the panelboard.
  - 6. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
- J. NRTL Label: Panelboards shall be labeled by an NRTL acceptable to authority having jurisdiction for use as service equipment with one or more main service disconnecting and overcurrent protective devices. Panelboards or load centers shall have meter enclosures, wiring, connections, and other provisions for utility metering. Coordinate with utility company for exact requirements.
- K. Future Devices: Panelboards shall have mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
  - 1. Future spaces: number as indicated in panelboard schedules on the drawings.
- L. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed by an NRTL for 100 percent interrupting capacity.
  - 1. Panelboards and overcurrent protective devices rated 240 V or less shall have short-circuit ratings as shown on Drawings, but not less than 10,000 A rms symmetrical.
  - 2. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V shall have short-circuit ratings as shown on Drawings, but not less than 14,000 A rms symmetrical.

- M. Provide factory installed integral SPDs in Panelboards which serve emergency systems (NEC 700), and as indicated on the drawings.
- 2.2 PERFORMANCE REQUIREMENTS
- A. Surge Suppression: Factory installed as an integral part of indicated panelboards, complying with UL 1449 SPD Type 2.
- 2.3 POWER PANELBOARDS
- A. Panelboards: NEMA PB 1, distribution type.
  - B. Mains: as indicated on plans.
  - C. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers or Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
  - D. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers or Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
- 2.4 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS
- A. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.
  - B. Mains: as indicated on plans.
  - C. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.
  - D. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.
- 2.5 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES
- A. MCCB: Comply with UL 489, with interrupting capacity to meet available fault currents. Circuit breaker types, frame sizes, and functionality shall be as required to meet the overcurrent device selectivity requirements as noted in 26 05 70 Overcurrent Protective Device Study, but not less than as noted below:
    - 1. Thermal-Magnetic Circuit Breakers:
      - a. Inverse time-current element for low-level overloads.
      - b. Instantaneous magnetic trip element for short circuits.
      - c. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
    - 2. Electronic Trip Circuit Breakers:
      - a. RMS sensing.
      - b. Field-replaceable rating plug or electronic trip.
      - c. Digital display of settings, trip targets, and indicated metering displays.
      - d. Multi-button keypad to access programmable functions and monitored data.
      - e. Ten-event, trip-history log. Each trip event shall be recorded with type, phase, and magnitude of fault that caused the trip.
      - f. Integral test jack for connection to portable test set or laptop computer.
      - g. Field-Adjustable Settings:
        - 1) Instantaneous trip.
        - 2) Long- and short-time pickup levels.
        - 3) Long and short time adjustments.
        - 4) Ground-fault pickup level, time delay, and I squared T response.
    - 3. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6-mA trip).
    - 4. Subfeed Circuit Breakers: Vertically mounted.
    - 5. MCCB Features and Accessories:
      - a. Standard frame sizes, trip ratings, and number of poles.
      - b. Breaker handle indicates tripped status.
      - c. UL listed for reverse connection without restrictive line or load ratings.
      - d. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor materials.
      - e. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and HID lighting circuits.
      - f. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.

- g. Rating Plugs: Three-pole breakers with ampere ratings greater than 150 amperes shall have interchangeable rating plugs or electronic adjustable trip units.
- h. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
- i. Multipole units enclosed in a single housing with a single handle.
- j. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in off position.

## 2.6 IDENTIFICATION

- A. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles shall be located on the interior of the panelboard door.
- B. Breaker Labels: Faceplate shall list current rating, UL and IEC certification standards, and AIC rating.
- C. Circuit Directory: Computer-generated circuit directory inside panelboard door mounted in metal frame with transparent plastic protective cover.
  - 1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.
- B. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.
- C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.
- D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Comply with NECA 1.
- C. Install panelboards and accessories according to NEMA PB 1.1.
- D. Equipment Mounting:
  - 1. Install floor panelboards on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
  - 2. Attach panelboard to the vertical finished or structural surface behind the panelboard.
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
- F. Mount top of trim 90 inches above finished floor unless otherwise indicated.
- G. Mount panelboard cabinet plumb and rigid without distortion of box.
- H. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- I. Mount surface-mounted panelboards to steel slotted supports 1-1/4 inch in depth. Orient steel slotted supports vertically.
- J. Install overcurrent protective devices and controllers not already factory installed.
  - 1. Set field-adjustable, circuit-breaker trip ranges.
  - 2. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver per manufacturer's written instructions.

- K. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.
- L. Install filler plates in unused spaces.

### 3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with requirements in Section 26 05 53 "Identification for Electrical Systems."
- B. Create a directory to indicate installed circuit loads; incorporate Owner's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.
- C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."
- D. Device Nameplates: Label each branch circuit device in power panelboards with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."
- E. Install warning signs complying with requirements in Section 26 05 53 "Identification for Electrical Systems" identifying source of remote circuit.

### 3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Acceptance Testing Preparation:
  - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
  - 2. Test continuity of each circuit.
- C. Tests and Inspections:
  - 1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers and low-voltage surge arrestors stated in NETA ATS, Paragraph 7.6 Circuit Breakers. Perform optional tests. Certify compliance with test parameters.
  - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
- D. Panelboards will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results, with comparisons of the two scans. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.5 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 05 70 "Overcurrent Protective Device Studies."

### 3.6 PROTECTION

- A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION 26 24 16

## SECTION 26 27 26

### WIRING DEVICES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Tamper-Resistant receptacles, 125 V, 20 A.
  - 2. GFCI receptacles, 125 V, 20 A.
  - 3. USB receptacles, 125 V, 20A
  - 4. Twist-locking receptacles.
  - 5. Cord Reel
  - 6. Toggle switches, 120/277 V, 20 A.
  - 7. Wall plates.

##### 1.2 DEFINITIONS

- A. AFCI: Arc-fault circuit interrupter.
- B. BAS: Building automation system.
- C. EMI: Electromagnetic interference.
- D. GFCI: Ground-fault circuit interrupter.
- E. Pigtail: Short lead used to connect a device to a branch-circuit conductor.
- F. RFI: Radio-frequency interference.
- G. SPD: Surge protective device.

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

##### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing-label warnings and instruction manuals that include labeling conditions.

#### PART 2 - PRODUCTS

##### 2.1 GENERAL WIRING-DEVICE REQUIREMENTS

- A. Wiring Devices, Components, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- B. Comply with NFPA 70.
- C. RoHS compliant.
- D. Comply with NEMA WD 1.
- E. Devices that are manufactured for use with modular plug-in connectors may be substituted under the following conditions:
  - 1. Connectors shall comply with UL 2459 and shall be made with stranding building wire.
  - 2. Devices shall comply with requirements in this Section.
- F. Devices for Owner-Furnished Equipment:
  - 1. Receptacles: Match plug configurations.
  - 2. Cord and Plug Sets: Match equipment requirements.
- G. Device Color:
  - 1. Wiring Devices Connected to Normal Power System: Gray unless otherwise indicated or required by NFPA 70 or device listing. Wiring Devices in Auditorium: Black
  - 2. Isolated-Ground Receptacles: Orange.

- H. Source Limitations: Obtain each type of wiring device and associated wall plate from single source from single manufacturer.
  - I. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:
    - 1. Cooper Wiring Devices; a division of Cooper Industries, Inc. (Cooper).
    - 2. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
    - 3. Leviton Mfg. Company Inc. (Leviton).
    - 4. Pass & Seymour/Legrand; Wiring Devices & Accessories (Pass & Seymour).
- 2.2 STANDARD-GRADE RECEPTACLES, 125 V, 20 A
- A. Isolated-Ground Duplex Receptacles, 125 V, 20 A
    - 1. Description: Straight blade; equipment grounding contacts shall be connected only to green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Isolation shall be integral to receptacle construction and not dependent on removable parts. Two pole, three wire, and self-grounding.
    - 2. Configuration: NEMA WD 6, Configuration 5-20R.
    - 3. Standards: Comply with UL 498 and FS W-C-596.
  - B. Tamper-Resistant Duplex Receptacles, 125 V, 20 A
    - 1. Description: Two pole, three wire, and self-grounding. Integral shutters that operate only when a plug is inserted in the receptacle.
    - 2. Configuration: NEMA WD 6, Configuration 5-20R.
    - 3. Standards: Comply with UL 498 and FS W-C-596.
    - 4. Products: Subject to compliance with the requirement, provide one of the following:
      - a. Cooper TRBR20
      - b. Hubbell BR20TR
      - c. Leviton TBR20
      - d. Legrand/P&S TR5362
    - 5. Marking: Listed and labeled as complying with NFPA 70, "Tamper-Resistant Receptacles" Article.
- 2.3 GFCI RECEPTACLES, 125 V, 20 A
- A. Tamper-Resistant Duplex GFCI Receptacles, 125 V, 20:
    - 1. Provide tamper resistant versions of the straight blade receptacles series specified above.
    - 2. Description: Integral GFCI with "Test" and "Reset" buttons and LED indicator light. Two pole, three wire, and self-grounding. Integral shutters that operate only when a plug is inserted in the receptacle.
    - 3. Configuration: NEMA WD 6, Configuration 5-20R.
    - 4. Type: Feed through.
    - 5. Standards: Comply with UL 498, UL 943 Class A, and FS W-C-596.
    - 6. Marking: Listed and labeled as complying with NFPA 70, "Tamper-Resistant Receptacles" Article.
- 2.4 USB RECEPTACLES
- A. Tamper-Resistant Duplex and USB Charging Receptacles:
    - 1. Description: Two pole, three wire, and self-grounding. Integral shutters that operate only when a plug is inserted in the receptacle. Square face.
    - 2. Line Voltage Receptacles: Two pole, three wire, and self-grounding; NEMA WD 6, Configuration 5-20R.
    - 3. USB Receptacles: (1) USB Type A and (1) USB Type C; 5 V dc, and 2.1 A per receptacle (minimum).
    - 4. Standards: Comply with UL 498, UL 1310, USB 3.0 devices, and FS W-C-596.
    - 5. Products: Subject to compliance with the requirements, basis-of-design:
      - a. Leviton T5832
    - 6. Marking: Listed and labeled as complying with NFPA 70, "Tamper-Resistant Receptacles" Article.
- 2.5 TWIST-LOCKING RECEPTACLES
- A. Twist-Lock, Single Receptacles: 120 V, 250 V, or 277V; 20-60 A:
    - 1. Configuration: NEMA WD 6, Configuration as noted on Drawings
    - 2. Standards: Comply with UL 498.

## 2.6 CORD REELS

- A. Description: Industrial grade, retracting cord reel. 25-foot cord minimum SJO cord, 12 AWG, 3 conductor (ground). White cord reel housing. Duplex GFCI type receptacle in yellow aluminum outlet box.
  - 1. Hubbell HBLI25123GF20
- B. Manufacturers: Basis of Design is Hubbell. Acceptable manufacturer is Daniel Woodhead.
- C. 5-foot power supply cord and NEMA 5-15P plug, Hubbell #HBL5366C.
- D. External Cable Grip: Woven wire-mesh type made of high-strength, galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector . Kellems grip for strain relief, Hubbell #07401135.
- E. Adjustable stop.
- F. Standards: Comply with FS W-C-596.

## 2.7 TOGGLE SWITCHES, 120/277 V, 20 A

- A. Single-Pole Switches, 120/277 V, 20 A:
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Cooper: CSB120
    - b. Hubbell: CSB120
    - c. Leviton: 1221-2
    - d. Pass & Seymour: CSB20AC1
  - 2. Standards: Comply with UL 20 and FS W-S-896.
- B. Three-Way Switches, 120/277 V, 20 A:
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Cooper: CSB320
    - b. Hubbell: CSB320
    - c. Leviton: 1223-2
    - d. Pass & Seymour: CSB20AC3
  - 2. Comply with UL 20 and FS W-S-896.

## 2.8 WALL PLATES

- A. Single Source: Obtain wall plates from same manufacturer of wiring devices.
- B. Single and combination types shall match corresponding wiring devices.
  - 1. Plate-Securing Screws: Metal with head color to match plate finish.
  - 2. Material for Finished and Unfinished Spaces: 0.035-inch- thick, satin-finished, Type 302 stainless steel.
  - 3. Material for Finished Auditorium Spaces: Smooth, high impact thermoplastic.
- C. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with Type 3R, weather-resistant, die-cast aluminum with lockable in-use cover. Extra large covers are not acceptable.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Comply with NECA 1, including mounting heights listed in that standard, unless otherwise indicated.
- B. Coordination with Other Trades:
  - 1. Protect installed devices and their boxes. Do not place wall finish materials over device boxes, and do not cut holes for boxes with routers that are guided by riding against outside of boxes.
  - 2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
  - 3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
  - 4. Install wiring devices after all wall preparation, including painting, is complete.
- C. Conductors:
  - 1. Do not strip insulation from conductors until right before they are spliced or terminated on devices.
  - 2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.

3. The length of free conductors at outlets for devices shall comply with NFPA 70, Article 300, without pigtails.
  4. Existing Conductors:
    - a. Cut back and pigtail, or replace all damaged conductors.
    - b. Straighten conductors that remain and remove corrosion and foreign matter.
    - c. Pigtailing existing conductors is permitted, provided the outlet box is large enough.
  - D. Device Installation:
    1. Replace devices that have been in temporary use during construction and that were installed before building finishing operations were complete.
    2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
    3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
    4. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.
    5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, two-thirds to three-fourths of the way around terminal screw.
    6. Use a torque screwdriver when a torque is recommended or required by manufacturer.
    7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
    8. Tighten unused terminal screws on the device.
    9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device-mounting screws in yokes, allowing metal-to-metal contact.
  - E. Receptacle Orientation:
    1. Install ground pin of vertically mounted receptacles down, and on horizontally mounted receptacles to the left.
      - a. In existing buildings, match the configuration of existing devices.
  - F. Tamper Resistant Receptacles: Provide as required by the current adopted NEC 406.12. regardless of how receptacles are indicated on the drawings.
  - G. Wet locations: Provide weatherproof cover plates at exterior and interior wet locations as required by the current adopted NEC whether indicated as such on the drawings or not, in addition to those devices that are specifically denoted on the drawings with a "R" or "WP" to receive weatherproof covers
  - H. Maintenance Receptacles for HVAC equipment: whether denoted on the drawing or not, provide accessible 125V, 20A, duplex GFCI receptacle located within 25 feet of HVAC equipment per current adopted NEC. Connect to 20 amp general purpose circuit
  - I. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.
  - J. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical. Group adjacent switches under single, multigang wall plates.
- 3.2 GFCI RECEPTACLES
- A. Install non-feed-through GFCI receptacles where protection of downstream receptacles is not required.
  - B. Provide GFCI receptacles or GFCI breaker as required by NEC 210.8 at the following locations whether denoted on the drawings or not:
    1. Within 6-feet of the outside edge of a sink or other "wet location" applications unless exception is applicable by the most current adopted NEC.
    2. Restrooms, locker rooms, and bathing/showering areas
    3. food service preparation areas and/or kitchen areas
    4. Laundry areas
    5. Outdoors, including mechanical rooftop units unless exception is applicable by the most current adopted NEC.
    6. Garages and maintenance areas where electrical portable tools are used.
    7. Electric water coolers
    8. Vending machines
    9. Other locations as required by the current adopted edition of the NEC
- 3.3 IDENTIFICATION
- A. Comply with Section 26 05 53 "Identification for Electrical Systems."

3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
  - 1. Test Instruments: Use instruments that comply with UL 1436.
  - 2. Test Instrument for Receptacles: Digital wiring analyzer with digital readout or illuminated digital-display indicators of measurement.
- B. Tests for Receptacles:
  - 1. Line Voltage: Acceptable range is 105 to 132 V.
  - 2. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
  - 3. Using the test plug, verify that the device and its outlet box are securely mounted.
  - 4. Tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault-current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.
- C. Wiring device will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION 26 27 26

## SECTION 26 28 13

### FUSES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
1. Cartridge fuses rated 600 V ac and less for use in the following:
    - a. Control circuits.
    - b. Enclosed controllers.
    - c. Enclosed switches.

##### 1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:
1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
    - a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
    - b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
  2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
  3. Current-limitation curves for fuses with current-limiting characteristics.
  4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
  5. Fuse sizes for elevator feeders and elevator disconnect switches.

##### 1.3 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 77 00 "Closeout Procedures," include the following:
1. Ambient temperature adjustment information.
  2. Current-limitation curves for fuses with current-limiting characteristics.
  3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse used on the Project.
  4. Coordination charts and tables and related data.

##### 1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

##### 1.5 FIELD CONDITIONS

#### PART 2 - PRODUCTS

##### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bussmann by Eaton
  2. Littelfuse
  3. Mersen
- B. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.

2.2 CARTRIDGE FUSES

- A. Characteristics: NEMA FU 1, current-limiting, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.
  - 1. Type RK-1: 600-V, zero- to 600-A rating, 200 kAIC, time delay.
  - 2. Type CC: 600-V, zero- to 30-A rating, 200 Kaic, time delay.
  - 3. Type J: 600-V, zero- to 600-A rating, 200 kAIC, time delay.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NEMA FU 1 for cartridge fuses.
- D. Comply with NFPA 70.
- E. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

**PART 3 - EXECUTION**

3.1 EXAMINATION

- A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.
- B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.
- C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

- A. Cartridge Fuses:
  - 1. Motor Branch Circuits: Class RK1, time delay.
  - 2. Large Motor Branch (601-4000 A): Class L, time delay.
  - 3. Power Electronics Circuits: Class J, high speed.
  - 4. Other Branch Circuits: Class J, time delay.
  - 5. Control Transformer Circuits: Class CC, time delay, control transformer duty.
  - 6. Provide open-fuse indicator fuses or fuse covers with open fuse indication.

3.3 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

3.4 IDENTIFICATION

- A. Install labels complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems" and indicating fuse replacement information inside of door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION 26 28 13

**SECTION 26 28 16**  
**DISCONNECT SWITCHES**

**PART 1 - GENERAL**

1.1 SUMMARY

- A. Section Includes:
  - 1. Fusible switches.
  - 2. Nonfusible switches.
  - 3. Motor-rated toggle switches.
  - 4. Elevator Disconnect
  - 5. Enclosures.

1.2 DEFINITIONS

- A. NC: Normally closed.
- B. NO: Normally open.
- C. SPDT: Single pole, double throw.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of enclosed disconnect switch, accessory, and component indicated. Include nameplate ratings, dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
  - 1. Enclosure types and details for types other than NEMA 250, Type 1.
  - 2. Current and voltage ratings.
  - 3. Short-circuit current ratings (interrupting and withstand, as appropriate).
  - 4. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data:
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Manufacturer's written instructions for testing and adjusting enclosed disconnect switches to include in emergency, operation, and maintenance manuals.
    - b. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Provide in PDF electronic format.
- B. Warranty documents.

1.5 FIELD CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
  - 1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.

1.6 WARRANTY

- A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace components that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Greater than one (1) year from date of Substantial Completion.
    - a. If the manufacturer's warranty commences upon the date materials are delivered, then the manufacturer's warranty period must be at least two (2) years to meet the requirement stated above.

## **PART 2 - PRODUCTS**

### **2.1 GENERAL REQUIREMENTS**

- A. Source Limitations: Obtain enclosed disconnect switches, overcurrent protective devices, components, and accessories, within same product category, from single manufacturer.
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed disconnect switches, including clearances between enclosures, and adjacent surfaces and other items. Comply with maximum dimensions, if indicated, and required workspace clearances and actual space available at mounting location.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- D. Comply with NFPA 70.

### **2.2 MANUFACTURERS**

- A. Subject to compliance with requirements, provide products by one of the following manufacturers:
  - 1. ABB (Electrification Products Division).
  - 2. Eaton Electrical Inc.
  - 3. Schneider Electric USA (Square D).
  - 4. Siemens Industry, Inc., Energy Management Division.

### **2.3 FUSIBLE SWITCHES**

- A. Type HD, Heavy Duty:
  - 1. Single Throw: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses. Lockable handle with capability to accept three padlocks and interlocked with cover in closed position.
- B. Voltage Rating, Ampere Rating, and Quantity of Poles: Refer to the Drawings.
- C. Fuse Type, Rating, and Quantities: Refer to the Drawings.
- D. Accessories:
  - 1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
  - 2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors. Provide for each application in which the feeder contains a grounded conductor (neutral wire).
  - 3. Lugs: Mechanical type, suitable for number, size, and conductor material.

### **2.4 NONFUSIBLE SWITCHES**

- A. Type HD, Heavy Duty:
  - 1. Single Throw: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks and interlocked with cover in closed position.
- B. Voltage Rating, Ampere Rating, and Quantity of Poles: Refer to the Drawings.
- C. Accessories:
  - 1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
  - 2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors. Provide for each application in which the feeder contains a grounded conductor (neutral wire).
  - 3. Lugs: Mechanical type, suitable for number, size, and conductor material.

### **2.5 MOTOR-RATED TOGGLE SWITCHES**

- A. Motor-Starting Switches (without motor overload protection): "Quick-make, quick-break" heavy-duty toggle; non-fusible.
  - 1. Lockable in the off position.
  - 2. Factory markings indicating whether unit is off or on.
  - 3. Ratings: 600-V ac, 30-A.
  - 4. Quantity of Poles: As required or as indicated on the Drawings.
  - 5. Surface-mounted in unfinished spaces.
  - 6. Flush-mounted with stainless steel faceplate in finished spaces.

7. Red Pilot light: To be included if indicated on the Drawings.

## 2.6 ELEVATOR DISCONNECT

- A. Manufacturers:
  1. ABB (Electrification Products Division).
  2. Eaton Electrical Inc. (Bussman)
  3. Schneider Electric USA (Square D).
  4. Siemens Industry, Inc., Energy Management Division.
- B. Elevator Control Switch: Provide Elevator Control Switch in a single NEMA enclosure with all necessary relay(s), control transformer, and other options (as listed below), and as shown on drawings. The Elevator Control Switch shall have an ampere rating as shown on the Contract Drawings and shall include a horsepower rated fusible switch with shunt trip capabilities. The amp rating of the switch shall be based upon elevator manufacturer requirements and utilize Class J Fuses (provided separately).
  1. It shall include as an accessory, a 100VA control power transformer with primary and secondary fuses. The primary voltage rating shall be 480 VAC with a 120 VAC secondary.
  2. It shall contain an isolation relay (3PDT, 10 amps, 120V). The coil of the isolation relay shall be 120 VAC.
  3. A normally open dry contact shall be provided by the Fire Alarm Safety System to energize the isolation relay and activate the shunt trip solenoid (140VA inrush at 120V).
  4. The module shall contain the following options?
    - a. Key to Test Switch
    - b. "ON" Pilot Light (Green, Red, or White)
    - c. Isolated Full Capacity Neutral Lug
    - d. 1P NC Mechanically Interlocked Auxiliary Contact
    - e. Fire Alarm Voltage Monitoring Relay as required to comply with NFPA 72
    - f. NEMA 1 Enclosure (optional 12, 3R, or 4)

## 2.7 ENCLOSURES

- A. UL 489, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.
- B. Enclosure Environmental Rating Applications:
  1. Indoor, Dry and Clean Locations: NEMA 250, Type 1.
  2. Outdoor Locations: NEMA 250, Type 3R, galvanized steel.
  3. Indoor Wet or Damp Locations: NEMA 250, Type 4, stainless steel.
- C. Enclosure Finish:
  1. Type 1, Steel: The enclosure shall be finished with gray baked enamel paint, electrodeposited on cleaned, phosphatized steel.
  2. Types 1, 3R, 12, Galvanized Steel: The enclosure shall be finished with gray baked enamel paint, electrodeposited on cleaned, phosphatized galvanized steel.
  3. Type 1, 4-4X, Stainless Steel: A brush finish on Type 304 stainless steel.
- D. Conduit Entry: NEMA 250 Types 4, 4X, and 12 enclosures shall contain no knockouts. NEMA 250 Types 7 and 9 enclosures shall be provided with threaded conduit openings in both end-walls.
- E. Operating Mechanism:
  1. NEMA 250 Type 1: The operating handle shall be externally operable with the operating mechanism being an integral part of the box, not the cover.
  2. NEMA 250 Type 3R: The operating handle shall be directly operable through the dead front trim of the enclosure.
  3. NEMA 250 Type 4, 4X stainless steel, 12, or 12K shall have a dual cover interlock mechanism to prevent unintentional opening of the enclosure cover when the disconnect is in the closed position (ON) and to prevent closing the circuit (ON) when the enclosure cover is open.
  4. The cover interlock mechanism shall have an externally operated override. The override shall not permanently disable the interlock mechanism, which shall return to the locked position once the override is released. The tool used to override the cover interlock mechanism shall not be required to enter the enclosure in order to override the interlock.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine elements and surfaces to receive enclosed disconnect switches for compliance with installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
  - 1. Commencement of work shall indicate Installer's acceptance of the areas and conditions as satisfactory.

#### **3.2 INSTALLATION**

- A. Coordinate layout and installation of disconnect switches, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Install individual wall-mounted disconnect switches with tops at uniform height unless otherwise indicated.
- C. Temporary Lifting Provisions: Remove temporary lifting of eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Install fuses in fusible devices.
- E. Comply with NFPA 70 and NECA 1.

#### **3.3 IDENTIFICATION**

- A. Comply with requirements in Section 26 05 53 "Identification for Electrical Systems."
  - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
  - 2. Label each enclosure with engraved metal or laminated-plastic nameplate.

#### **3.4 FIELD QUALITY CONTROL**

- A. Perform Tests and Inspections:
  - 1. Visual and Mechanical Inspection:
    - a. Inspect physical and mechanical condition.
    - b. Inspect anchorage, alignment, grounding, and clearances.
    - c. Verify that the unit is clean.
    - d. Verify blade alignment, blade penetration, travel stops, and mechanical operation.
    - e. Verify that fuse sizes and types match the Specifications and Drawings.
    - f. Verify that each fuse has adequate mechanical support and contact integrity.
    - g. Inspect bolted electrical connections for high resistance using one of the two following methods:
      - 1) Use a low-resistance ohmmeter.
        - a) Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
      - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with the manufacturer's published data or NETA ATS Table 100.12.
        - a) Bolt-torque levels shall be in accordance with manufacturer's published data. In the absence of the manufacturer's published data, use NETA ATS Table 100.12.
    - h. Verify that operation and sequencing of interlocking systems is as described in the Specifications and shown on the Drawings.
    - i. Verify correct phase barrier installation.
    - j. Verify lubrication of moving current-carrying parts and moving and sliding surfaces.
  - 2. Electrical Tests:
    - a. Perform resistance measurements through bolted connections with a low-resistance ohmmeter. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.
    - b. Measure contact resistance across each switchblade fuseholder. Drop values shall not exceed the high level of the manufacturer's published data. If manufacturer's published data are not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of the lowest value.

- c. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Apply voltage in accordance with manufacturer's published data. In the absence of manufacturer's published data, use Table 100.1 from the NETA ATS. Investigate values of insulation resistance less than those published in Table 100.1 or as recommended in manufacturer's published data.
    - d. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
    - e. Perform ground fault test according to NETA ATS 7.14 "Ground Fault Protection Systems, Low-Voltage."
  - B. Disconnect switches will be considered defective if they do not pass tests and inspections.
- 3.5 ADJUSTING
- A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by the manufacturer.

END OF SECTION 26 28 16

**SECTION 26 28 17**

**COMPANY SWITCHES**

**PART 1 - GENERAL**

**1.1 ACTION SUBMITTALS**

- A. Submittal shall include data sheet identifying the following:
  - 1. Circuit breaker type and overcurrent protection rating
  - 2. SCCR rating
  - 3. Line connection lug sizes
  - 4. Load connection type, quantity and size
  - 5. Enclosure construction and dimensions
  - 6. Listings and compliance data
  - 7. Mounting and installation details
- B. Manufacturer shall furnish with the submittal and with each unit delivered an equipment manual that details the installation, operation and maintenance instructions for the specified unit.

**1.2 CLOSEOUT SUBMITTALS**

- A. Provide warranty information
- B. Provide test reports.

**1.3 LABELING**

- A. Switches shall be provided with permanently attached circuit identification labels as show on drawings.
- B. Note: coordinate specific labeling with QT specialist or Owner as applicable.

**1.4 FACTORY TESTING**

- A. All equipment shall be thoroughly tested in Manufacturer's shop prior to shipment to insure mechanical and electrical integrity.
- B. Equipment shall be subjected to a factory dielectric strength (hipot) test in accordance with IEEE 4 or IEC 60950 to verify integrity of insulation and proper conductor clearances.

**1.5 WARRANTY**

- A. Contractor shall assure that this equipment is provided free of defects in materials and workmanship and shall provide a warranty under this contract for a period of one (1) year from the date of final acceptance by the Owner.
- B. During the warranty period, repair or replacement of defective materials and/or repair of faulty workmanship shall be provided, at no cost to the Owner, within ten (10) days of written notice of the defect(s).

**1.6 QUALITY ASSURANCE**

- A. Switch manufacturer shall have been continuously engaged in the production of theatrical wiring devices for at least ten (10) years.
- B. Comply with NFPA 70.
- C. Comply with NECA's "Standard of Installation."

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Subject to compliance with requirements, provide products by one of the following:
  - 1. Electronic Theatre Controls (ETC)
    - a. Address: 3031 Pleasant View Road, Middleton, WI 53562
    - b. Contact: Sylvia Sinclair (midwest)
    - c. Email: sylvia.sinclair@etcconnect.com
    - d. Contact: Joe DiNardo (east)
    - e. Email: joe.dinardo@etcconnect.com
    - f. Contact: Rob Raff (southeast)
    - g. Email: rob.raff@etcconnect.com
    - h. Contact: Nick Wurzel (southwest)
    - i. Email: nick.wurzel@etcconnect.com j. Phone: (800) 688-4116
  - 2. ESL Power Systems, Inc.
    - a. Address: 2800 Palisades Drive, Corona, CA 92880
    - b. Contact: John Chaney
    - c. Email: jchaney@eslpwr.com d. Phone: (800) 922-4188
  - 3. SSRC
    - a. Address: 170 Fortis Drive, Duncan, SC 29334
    - b. Contact: Aaron Clark
    - c. Email: aclark@ssrconline.com d. Phone: (864) 848-9770
  - 4. Stagecraft Industries, Inc.
    - a. Address: 5051 North Lagoon Avenue, Portland, Oregon 97217
    - b. Contact: Ted Ross
    - c. Email: tedr@stagecraftindustries.com d. Phone: (503) 286-1600
  - 5. Union Connector
    - a. Address: 40 Dale Street, West Babylon, NY 11704
    - b. Contact: Ray Wolpert
    - c. Email: rayw@unionconnector.com d. Phone: (631) 753-9550

**2.2 CONSTRUCTION:**

- A. Enclosure:
  - 1. NEMA Type 1 dead-front panelboard enclosure, unless otherwise specified or required to meet environmental conditions of installed location. Enclosure shall be UL listed as Service Entrance Equipment, and shall be identified as such with permanent labeling.
  - 2. Enclosure shall consist of powder-coated finish, minimum 14 gauge steel, with following maximum dimensions:
  - 3. ETC and SSRC switches are larger than others. For space restricted projects, consider smaller maxima listed to side for all non-ETC/SSRC devices:

Amps	Height	Width	Depth
60-100A	46" [37"]	21"	10"
200-400A	72" [45"]	29" [24"]	12" [10"]
600A	48"	24"	12"
800A	48"	24"	12"

- 4. Enclosure shall contain minimum (4) mounting tabs for surface mounting.
- 5. Enclosure shall contain hinged door to provide access to load bus lugs within the connection chamber. Door shall be secured with panel latches that can be padlocked. Opening of this door shall result in shunt-trip of the circuit breaker.
- 6. Bottom of enclosure shall contain hinged flap or grommated slot for load cable access. For exterior applications with NEMA 3R enclosures, this access shall be protected with rubber sweeps.
- 7. Top panel shall be blank to permit Contractor connection of line service conduit or wireway.

B. Electrical:

1. Main circuit breaker shall be UL listed molded case type, rated for 100% current load as scheduled on drawings, and shall have a shunt-trip mechanism with micro-switch at connection chamber access door. Breaker shall have a current interrupt rating of 65,000 AIC at 240 volts.
2. Circuit breaker or actuator handle shall be prominently accessible on the enclosure front panel. A locking bar or tabs shall be installed to permit padlock lockout of the circuit breaker in the 'Off' position.
3. Line service connection shall be to lugs on bus/breaker, sized for copper conductors as follows:

Amps	Phase	Neutral	Ground
60-100	#14-4/0	#4-2/0	#8-1/0
200	#1/0-300KCM	#1/0-300KCM	#4-2/0
400	(2) 250KCM	(2) 300KCM	#4-2/0
	400KCM	#2/0-600KCM	
600	(2) 400KCM	(2) 400KCM	#6-250KCM
	(2) 500KCM	(2) 500KCM	

4. Ground lug shall be bonded to enclosure.
5. Indicator lights shall be provided to indicate load voltage presence on each phase.
6. Cam-Style Load Connections, for company switches through 400A rating:
  - a. Company Switch shall be equipped with six (6) single pole cam-style quarter turn locking connectors mounted to bottom of panel, color coded to match phase/neutral/ground conductors. Arrange connectors as follows:

	Phase 1 (Black)	Phase 2 (Red)	Phase 3 (Blue)		Neutral (White)	Neutral (White)	Ground (Green)

Row 1 type:	Female	Female	Female	Female	Female	Female
-------------	--------	--------	--------	--------	--------	--------

- b. Each connector shall be rated for 400 amps at 600 volts continuous duty, and shall be listed to UL 1691. Approved manufacturer and series shall include:
    - 1) Cooper Interconnect Cam-Lok E1016 series
    - 2) Leviton Cam-Type 16 series
    - 3) Hubbell Kellums HBLFR series
  - c. Each connector shall have a spring-action protective snap cover to protect conductor from contact or debris when not in use.
  - d. Comply with NEC 300.20 as applicable where connector bodies penetrate panel enclosure. Comply with NEC 520.53 labeling requirement for sequential connect/disconnect of single pole feeder cabling.
7. Bare Wire Load Connections:
  - a. The bus bar for each phase, neutral, and ground shall be equipped with dual screw-style lugs to permit termination of bare copper feeder conductors sized from #4 to 4/0 per lug. All lugs shall accept one hex key size for tightening/loosening of lug screws.
    - 1) Exception: Switches rated at 60-100A may be equipped with single lugs per bus bar, sized for #4 to 2/0 per lug.
  - b. Provide internal strain relief bar to prevent tensioning on cable terminations. Provide 5/16"-18 minimum eyebolt secured to enclosure bottom panel (or to adjacent structure beneath panel), for tie-off of feeder cabling below enclosure. Furnish 60" length of braided nylon or poly rope, choked to eyebolt.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine elements and surfaces to receive enclosed switches for compliance with installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Comply with applicable portions of NECA 1, NEMA PB 1.1, and NEMA PB 2.1 for installation of enclosed switches.
- B. Mount individual wall-mounted switches with tops at uniform height, unless otherwise indicated.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Install switches level and plumb, in locations as indicated, according to manufacturer's written instructions.
- E. Connect switches and components to wiring system and to ground as indicated and in accordance with manufacturer instructions.
- F. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. Where manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- G. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, remove and replace with new units and retest.

#### **3.3 IDENTIFICATION**

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Section 26 05 53 "Identification for Electrical Systems."
- B. Enclosure Nameplates: Label each enclosure with engraved metal or laminated-plastic nameplate as specified in Section 26 05 53 "Identification for Electrical Systems."

#### **3.4 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Prepare for acceptance testing as follows:
  - 1. Inspect mechanical and electrical connections.
  - 2. Verify switch and relay type and labeling verification.
  - 3. Verify rating of installed fuses.
  - 4. Inspect proper installation of type, size, quantity, and arrangement of mounting or anchorage devices complying with manufacturer's certification.
- C. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:
- D. Perform the following field tests and inspections and prepare test reports:
  - 1. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.5 for switches and Section 7.6 for molded-case circuit breakers. Certify compliance with test parameters.
  - 2. Perform megohmmeter testing of feeder cabling.
  - 3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.5 CLEANING

- A. On completion of installation, vacuum dirt and debris from interiors; do not use compressed air to assist in cleaning.
- B. Inspect exposed surfaces and repair damaged finishes.

END OF SECTION 26 28 17

## SECTION 26 29 13

### FULL VOLTAGE MOTOR CONTROLLERS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Manual motor controllers.
  - 2. Enclosed full-voltage magnetic motor controllers.
  - 3. Combination full-voltage magnetic motor controllers.
  - 4. Enclosures.
  - 5. Accessories.
  - 6. Identification.

##### 1.2 DEFINITIONS

- A. BAS: Building Automation System
- B. CPT: Control power transformer.
- C. NC: Normally closed.
- D. OCPD: Overcurrent protective device.
- E. SCCR: Short-circuit current rating.
- F. SCPD: Short-circuit protective device.

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
  - 2. For each series-rated combination state the listed integrated short-circuit current (withstand) rating of SCPD and OCPDs by an NRTL acceptable to authorities having jurisdiction.

##### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For magnetic controllers to include in operation and maintenance manuals.
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Routine maintenance requirements for magnetic controllers and installed components.
    - b. Manufacturer's written instructions for setting field-adjustable overload relays.
    - c. Load-Current and Overload-Relay Heater List: Compile after motors have been installed and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
    - d. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that switch settings for motor-running overload protection suit actual motors to be protected.

##### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, cover controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers.

##### 1.6 FIELD CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
  - 1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.

2. Altitude: Not exceeding 6600 feet.

#### 1.7 WARRANTY

- A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace components that fail in materials or workmanship within specified warranty period.
  1. Warranty Period: Greater than one (1) year from date of Substantial Completion.
    - a. If the manufacturer's warranty commences upon the date materials are delivered, then the manufacturer's warranty period must be at least two (2) years to meet the requirement stated above.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- B. UL Compliance: Fabricate and label magnetic motor controllers to comply with UL 508 and UL 60947-4-1.
- C. NEMA Compliance: Fabricate motor controllers to comply with ICS 2.

#### 2.2 GENERAL REQUIREMENTS

- A. Source Limitations: Obtain enclosed disconnect switches, overcurrent protective devices, components, and accessories, within same product category, from single manufacturer.
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed disconnect switches, including clearances between enclosures, and adjacent surfaces and other items. Comply with maximum dimensions, if indicated, and required workspace clearances and actual space available at mounting location.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- D. Comply with NFPA 70.

#### 2.3 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by one of the following manufacturers:
  1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
  2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
  3. Siemens Energy & Automation, Inc.
  4. Square D; a brand of Schneider Electric.

#### 2.4 MANUAL MOTOR CONTROLLERS

- A. Motor-Starting Switches (MSS): "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.
  1. Standard: Comply with NEMA ICS 2, general purpose, Class A.
  2. Configuration: Non-reversing.
  3. Flush or surface mounting as indicated on the Drawings.
  4. Green pilot light.
- B. Fractional Horsepower Manual Controllers (FHPMC): "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.
  1. Configuration: Non-reversing.
  2. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button; bimetallic type.
  3. Green pilot light.
- C. Integral Horsepower Manual Controllers (IHPMC): "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.
  1. Configuration: Non-reversing.
  2. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button; bimetallic type.

2.5 ENCLOSED FULL-VOLTAGE MAGNETIC MOTOR CONTROLLERS

- A. Description: Across-the-line start, electrically held, for nominal system voltage of 600-V ac and less.
- B. Standard: Comply with NEMA ICS 2, general purpose, Class A.
  - 1. Configuration: Non-reversing.
- C. Contactor Coils: Pressure-encapsulated type with coil transient suppressors when indicated.
  - 1. Operating Voltage: Manufacturer's standard, unless indicated.
- D. Overload Relays:
  - 1. Thermal Overload Relays:
    - a. Inverse-time-current characteristic.
    - b. Class 10 tripping characteristic.
    - c. Heaters in each phase shall be matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
    - d. Ambient compensated.
    - e. Automatic resetting.
  - 2. Solid-State Overload Relay:
    - a. Switch or dial selectable for motor-running overload protection.
    - b. Sensors in each phase.
    - c. Class 10 tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
    - d. Class II ground-fault protection shall comply with UL 1053 to interrupt low-level ground faults. The ground-fault detection system shall include circuitry that will prevent the motor controller from tripping when the fault current exceeds the interrupting capacity of the controller. Equip with start and run delays to prevent nuisance trip on starting, and a trip indicator.

2.6 COMBINATION FULL-VOLTAGE MAGNETIC MOTOR CONTROLLER

- A. Description: Factory-assembled, combination full-voltage magnetic motor controller consisting of the enclosed controller described in this article (above), plus indicated disconnecting means, SCPD and OCPD, in a single enclosure.
- B. Fusible Disconnecting Means:
  - 1. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate indicated fuses.
  - 2. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
  - 3. Voltage Rating, Ampere Rating, and Quantity of Poles: Refer to the Drawings.
  - 4. Fuse Type, Rating, and Quantities: Refer to the Drawings.
- C. Nonfusible Disconnecting Means:
  - 1. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
  - 2. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
  - 3. Voltage Rating, Ampere Rating, and Quantity of Poles: Refer to the Drawings.

2.7 ENCLOSURES

- A. UL 489, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.
- B. The construction of the enclosures shall comply with NEMA ICS 6
- C. Enclosure Environmental Rating Applications:
  - 1. Indoor, Dry and Clean Locations: NEMA 250, Type 1.
  - 2. Outdoor Locations: NEMA 250, Type 3R, galvanized steel.
- D. Enclosure Finish:
  - 1. Type 1, Steel: The enclosure shall be finished with gray baked enamel paint, electrodeposited on cleaned, phosphatized steel.
  - 2. Types 1, 3R, 12, Galvanized Steel: The enclosure shall be finished with gray baked enamel paint, electrodeposited on cleaned, phosphatized galvanized steel.
- E. Conduit Entry: NEMA 250 Types 4, 4X, and 12 enclosures shall contain no knockouts. NEMA 250 Types 7 and 9 enclosures shall be provided with threaded conduit openings in both end-walls.
- F. Operating Mechanism:
  - 1. NEMA 250 Type 1: The operating handle shall be externally operable with the operating mechanism being an integral part of the box, not the cover.

2. NEMA 250 Type 3R: The operating handle shall be directly operable through the dead front trim of the enclosure.
3. The cover interlock mechanism shall have an externally operated override. The override shall not permanently disable the interlock mechanism, which shall return to the locked position once the override is released. The tool used to override the cover interlock mechanism shall not be required to enter the enclosure in order to override the interlock.

## 2.8 ACCESSORIES

- A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.
  1. Push Buttons, Pilot Lights, and Selector Switches: Standard duty, except as needed to match enclosure type. Heavy-duty or oil-tight where indicated in the controller schedule.
    - a. Hand-Off-Auto Selector Switches: Default accessory, unless otherwise indicated on the Drawings.
    - b. Push Buttons: As indicated on the Drawings.
    - c. Pilot Lights: As indicated on the Drawings.
  2. Lugs: Mechanical type, suitable for number, size, and conductor material.
  3. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
- B. Motor protection relays shall be with solid-state sensing circuit and isolated output contacts for hardwired connections.
  1. Phase-failure.
  2. Phase-reversal, with bicolor LED to indicate normal and fault conditions. Automatic reset when phase reversal is corrected.
  3. Under/overvoltage, operate when the circuit voltage reaches a preset value, and drop out when the operating voltage drops to a level below the preset value. Include adjustable time-delay setting.
- C. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

## 2.9 IDENTIFICATION

- A. Controller Nameplates: As described in Section 26 05 53 "Identification for Electrical Systems," fastened with corrosion-resistant screws or adhesive.
- B. Arc-Flash Warning Labels: As described in Section 26 05 70 "Overcurrent Protective Device Studies".

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for motor controllers, their relationship with the motors, and other conditions affecting performance of the Work.

### 3.2 INSTALLATION

- A. Comply with NECA 1.
- B. Wall-Mounted Controllers: Install magnetic controllers on walls with tops at uniform height indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Section 26 05 29 "Hangers and Supports for Electrical Systems" unless otherwise indicated.
- C. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- E. Setting of Overload Relays: Select and set overloads on the basis of full-load current rating as shown on motor nameplate. Adjust setting value for special motors as required by NFPA 70 for motors that are high-torque, high-efficiency, and so on.
- F. Where applicable, coordinate control wiring connections with contractor providing BAS controls.

### 3.3 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

### 3.4 FIELD QUALITY CONTROL

- A. Perform Tests and Inspections:
  - 1. Comply with the provisions of NFPA 70B, "Testing and Test Methods" Chapter.
  - 2. Visual and Mechanical Inspection:
    - a. Compare equipment nameplate data with drawings and specifications.
    - b. Inspect physical and mechanical condition.
    - c. Inspect anchorage, alignment, and grounding.
    - d. Verify the unit is clean.
    - e. Inspect contactors:
      - 1) Verify mechanical operation.
      - 2) Verify contact gap, wipe, alignment, and pressure are according to manufacturer's published data.
    - f. Motor-Running Protection:
      - 1) Verify overload element rating is correct for its application.
      - 2) If motor-running protection is provided by fuses, verify correct fuse rating.
    - g. Inspect bolted electrical connections for high resistance using one of the two following methods:
      - 1) Use a low-resistance ohmmeter. Compare bolted connection resistance values with values of similar connections. Investigate values that deviate from those of similar bolted connections by more than 50 percent of the lowest value.
      - 2) Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method according to manufacturer's published data or NETA ATS Table 100.12. Bolt-torque levels shall be according to manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS Table 100.12.
    - h. Verify appropriate lubrication on moving current-carrying parts and on moving and sliding surfaces.
  - 3. Electrical Tests:
    - a. Perform insulation-resistance tests for one minute on each pole, phase-to-phase and phase-to-ground with switch closed, and across each open pole. Insulation-resistance values shall be according to manufacturer's published data or NETA ATS Table 100.1. In the absence of manufacturer's published data, use Table 100.5. Values of insulation resistance less than those of this table or manufacturer's recommendations shall be investigated and corrected.
    - b. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.
    - c. Test motor protection devices according to manufacturer's published data.
    - d. Perform operational tests by initiating control devices.
- B. Motor controller will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### 3.5 SYSTEM FUNCTION TESTS

- A. System function tests shall prove the correct interaction of sensing, processing, and action devices. Perform system function tests after field quality control tests have been completed and all components have passed specified tests.
  - 1. Develop test parameters and perform tests for the purpose of evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
  - 2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
  - 3. Verify the correct operation of sensing devices, alarms, and indicating devices.
- B. Motor controller will be considered defective if it does not pass the system function tests and inspections.
- C. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

END OF SECTION 26 29 13

## SECTION 26 33 23

### CENTRAL BATTERY EQUIPMENT FOR EMERGENCY LIGHTING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Interruptible, fast transfer, central battery equipment.
  - 2. Enclosures.
  - 3. Optional and accessory features.
- B. General Description of Central Battery Equipment for Emergency Lighting:
  - 1. Each unit serves primarily as an emergency standby lighting power supply configured as a line-interactive system normally "off-line", as opposed to a continuous on-line system, with a fully active inverter only in emergency mode to maximize energy efficiency under normal power. Each unit shall be entirely self-contained within an enclosure, including sealed maintenance-free batteries, AC to DC rectifier, battery charger, DC to AC inverter, transistorized static transfer switch, solid-state double conversion digital signal processing and a high frequency pulse-width modulated (PWM) design harnessing the advantages of IGBTs (Insulated-Gate Bipolar Transistors). System shall provide high quality regulated and conditioned AC power to all types of lighting loads, including sensitive electronic LED lighting.

##### 1.2 DEFINITIONS

- A. DDC: Direct digital control.
- B. IBC: International Building Code.
- C. Interruptible: As used in the Section Text, an off-line, passive-standby or line-interactive, inverter-only unit, with an intentional interruption of power to the load until an internal transfer switch picks up and transfers the load to the unit's inverter and internal battery source on loss of the "normal" source, and then retransfers to the "normal" source when it is restored. Transfer time shall be "fast" (2-4 ms).
- D. LED: Light-emitting diode.
- E. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- F. NiCd: Nickel cadmium.
- G. OCPD: Overcurrent protective device.
- H. PC: Personal computer.
- I. PWM: Pulse-width modulated.
- J. TDD: Total demand (harmonic current) distortion (also listed as "THD" in catalog data by manufacturers).
- K. Uninterruptible: As used in the Section Text, an on-line, double-conversion (rectifier/inverter) unit, with no interruption of power to the load on interruption and restoration of the "normal" source.
- L. VRLA: Valve-regulated lead acid.

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type and rating of central battery equipment unit.
  - 1. Include features, performance, electrical ratings, operating characteristics, shipping and operating weights, shipping splits, and furnished options, specialties, and accessories.
  - 2. Sample Warranty: For special warranty
- B. Shop Drawings: For each type and rating of central battery equipment unit.
  - 1. Include plans, elevations, sections, and mounting details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, ventilation requirements, method of field assembly, components, and location and size of each field connection.
  - 3. Include system one-line diagram, internal and interconnecting wiring; and diagrams for power, signal, and control wiring.

4. Include elevation, details, and legends of control and indication displays.
5. Include -circuit current (withstand) rating of unit.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For central battery equipment to include in emergency, operation, and maintenance manuals.
  1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Manufacturer's written instructions for testing central battery equipment.
    - b. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
    - c. Manufacturer's written instructions for selecting and setting field-adjustable controls and status and alarm points
- B. Field quality-control reports.
- C. Performance Test Reports: Indicate test results compared with specified performance requirements.
- D. Warranty Documents: For special warranty.

#### 1.5 QUALITY ASSURANCE

- A. Comply with NFPA 70 and NFPA 101.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency acceptable to the authorities having jurisdiction and marked for intended location and application.
- C. UL Compliance: Listed and labeled under UL 924.
- D. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver equipment in fully enclosed vehicles.
- B. Store equipment in spaces having environments controlled within manufacturers' written instructions for ambient temperature and humidity conditions for non-operating equipment.

#### 1.7 FIELD CONDITIONS

- A. Product Selection for Restricted Space: Refer to Drawings to determine maximum dimensions for central battery equipment, including clearances between central battery equipment and adjacent surfaces and other items. Equipment layout and clearances are based upon the dimensions of the product regarded as the Design Basis. If an approved alternate manufacturer is provided, this contractor shall be fully responsible for ensuring that equipment dimensions and clearance requirements are compatible with the contract application and installation.

#### 1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.

#### 1.9 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace central battery equipment that fails in materials or workmanship within specified warranty period. Special warranty, applying to batteries only, applies to materials only, on a prorated basis, for period specified.
  1. Warranty Period: Include the following warranty periods, from date of Substantial Completion:
    - a. Central Battery Equipment (excluding Batteries): Two (2) years.
      - 1) If the manufacturer's warranty commences upon the date materials are delivered, then the warranty must exceed the above specified value to provide the full term calculated from the date of Substantial Completion.
    - b. Standard VRLA Batteries:
      - 1) Full Warranty: One (1) year.
      - 2) Pro Rata: Nine (9) years.

## PART 2 - PRODUCTS

### 2.1 INTERRUPTIBLE (FAST-TRANSFER) CENTRAL BATTERY EQUIPMENT

- A. Manufacturer: Subject to compliance with requirements, provide products by one of the following manufacturers:
1. Chloride Power Protection; Signify Corp.
  2. Cooper Industries, Inc. (Sure-Lites).
  3. Controlled Power Company (EON), Emerson Co.
  4. Crucial Power Products
  5. Eaton Corporation (Powerware).
  6. Emergi-Lite (Emerg-Power Systems FTC Series), Thomas & Betts.
  7. Evenlite (Lifeguard)
  8. Hubbell Lighting (Dual-Lite).
  9. Liebert.
  10. Lithonia Lighting, Acuity Brands, (IOTA).
  11. Myers Power Products, Inc.
  12. Online Power, Inc.
- B. General Requirements for Interruptible (Fast-Transfer) Central Battery Equipment:
1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  2. NRTL Compliance: Fabricate and label central battery equipment to comply with UL 924/UL 924A – Life Safety for Emergency Backup Lighting.
  3. Comply with the following codes and standards:
    - a. CSA certified per UL1778
    - b. UL 924 and CSA 22.2 No. 107.1.
    - c. FCC rules and regulations, Part 15, Subpart J, Class A
    - d. International Building Code (IBC)
    - e. NEMA PE-1
    - f. NFPA 70 (National Electrical Code)
    - g. NFPA 101 (Life Safety Code)
    - h. ANSI C62.41 (IEEE 587)
    - i. ANSI C62.42.45 (Cat. A and B)
    - j. TVSS UL1449 4th Editions - UL Standard for Safety Transient Voltage Surge Suppressors (Type 3, 4)
- C. Performance Requirements:
1. Fast-Transfer Central Battery Equipment: Passive standby (off-line) system. Automatically sense loss of normal ac supply and use a solid-state static switch to transfer load. Transfer in 2-4 ms or less from normal supply to battery-inverter supply.
  2. Automatic Operation:
    - a. Normal Conditions: Supply the load with ac power flowing from normal ac power input terminals, bypassing inverter, with battery connected in parallel via rectifier/charger output.
    - b. Abnormal Supply Conditions: If normal ac supply deviates from specified voltage, transfer switch operates and battery supplies constant, regulated ac power through the inverter to the load, with a momentary loss of power to the load.
    - c. If normal power fails, transfer switch operates and battery supplies constant, regulated ac power through the inverter to the load, with a momentary loss of power to the load.
    - d. If a fault occurs in system when being supplied by inverter and current flows in excess of the overload rating of inverter, inverter automatically protects itself against damage from overloads and short circuits by shutting down.
    - e. When normal ac power is restored at input supply terminals of unit, controls automatically retransfer the load back to the normal ac supply, with a momentary loss of power to the load. Rectifier/charger then recharges battery.
    - f. If normal power failure is prolonged (more than 90 minutes), integral low-voltage battery protective circuit disconnects battery and prevents battery from damage due to deep discharge.
    - g. If battery becomes discharged, and when normal ac supply is again available, rectifier/charger recharges battery. When battery is fully charged, rectifier/charger automatically shifts to float-charge mode.

- h. If battery is disconnected, and normal ac power is available, central battery equipment continues to supply power to the load with no degradation of its regulation of voltage and frequency of output bus.
- D. Connected Loads
- 1. Power Rating (kVA) as indicated on the Drawings.
  - 2. Load Types: Non-linear LED lighting as indicated on the Drawings.
  - 3. Unit shall be capable of meeting operating requirements for 100 percent of its specified power rating assuming 100 percent of each load type connected under this contract.
  - 4. If applicable, submittals shall include calculations and documentation of larger capacity models derated by manufacturer as necessary to achieve specified power ratings.
- E. Unit Operating Requirements:
- 1. Input AC Voltage Tolerance: Plus 10 and minus 15 percent of central battery equipment input voltage rating.
  - 2. Input Frequency Tolerance: Plus or minus 5 percent of central battery equipment frequency rating.
  - 3. Synchronizing Slew Rate: 1 Hz per second, maximum.
  - 4. Minimum Normal Off-Line Efficiency: 99 percent.
  - 5. Minimum Emergency Active On-Line Efficiency: 95 percent at full load.
  - 6. Minimum Displacement Primary-Side Power Factor: 95 percent under any load or operating condition.
  - 7. Ambient Temperature Rating (Other Than Batteries): Not less than 68 deg F and not exceeding 86 deg F.
  - 8. Ambient Temperature Rating (Batteries): Not less than 32 deg F and not exceeding 104 deg F.
  - 9. Ambient Storage Temperature Rating (Batteries): Not less than 0 deg F and not exceeding 104 deg F.
  - 10. Humidity Rating: Less than 95 percent (noncondensing).
  - 11. Altitude Rating: Not exceeding 3300 feet.
  - 12. Off-Line Overload Capability: 1.5 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
- F. Inverter and Controls Logic: Microprocessor based, isolated from all power circuits; provides complete self-diagnostics, periodic automatic testing and reporting; with alarms.
- G. Controls and Indication:
- 1. Status Indication: Door-mounted, labeled LED indicators or digital screen displaying the following conditions:
    - a. Normal power available.
    - b. Status of system.
    - c. Battery charging status.
    - d. On battery power.
    - e. System fault.
    - f. External fault.
  - 2. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
    - a. Keypad: In addition to required programming and control keys, include the following:
      - 1) Keys for METER, CONTROL, PROGRAM, and CLEAR modes.
      - 2) Security Access: Provide electronic security access to controls through identification and password with at least two levels of access: View only; and view, operate, and service.
      - 3) Control Authority: Supports at least three conditions: Off, local manual control at unit and local automatic control at unit.
    - b. Digital Display: Plain-English language messages on a digital display; provide the following historical logging information and displays:
      - 1) Real-time clock with current time and date.
      - 2) Tests and Events Logs: Record and store up to 50 tests and events.
        - a) Dates.
        - b) Times.
        - c) Durations.
        - d) Output voltage and currents.
      - 3) Alarm Logs: Record and store up to 50 alarms.
        - a) Dates.
        - b) Times.

- c) Alarm type.
    - 4) Metering Functions: Display central battery equipment metering parameters including, but not limited to, the following:
      - a) Input and output voltage (V ac) and output current (A ac).
      - b) Battery voltage (V dc) and current (A ac).
      - c) Fault or alarming status (code).
      - d) Power output (VA).
      - e) Inverter load (W).
      - f) Ambient temperature (deg F).
      - g) System run time (cumulative days).
      - h) Inverter run time (cumulative minutes).
    - 5) Alarm Functions: Digital display mounted flush in unit door and connected to display central battery equipment parameters including, but not limited to, the following:
      - a) High/low battery charge voltage.
      - b) High/low input voltage.
      - c) Battery nearing low-voltage condition.
      - d) Battery low voltage.
      - e) High ambient temperature.
      - f) Inverter fault.
      - g) Output fault.
      - h) Output overload.
  - 3. Remote Signal Interfaces:
    - a. Remote Indication Interface: Programmable (Form C) dry-circuit relay output(s) (120-V ac, 2 A) for remote indication of the following:
      - 1) Fault or status indication.
      - 2) On bypass.
      - 3) Low battery.
    - b. Communications Interface: Factory-installed hardware and software to enable a remote PC to program central battery equipment and monitor and display status and alarms.
      - 1) Network Communications Ports: Ethernet.
- H. Self-Protection and Reliability Features:
  - 1. Input transient protection by means of surge suppressors to provide protection against damage from supply voltage surges as defined in IEEE C62.45, Category B and C.
  - 2. Integral, programmable, self-diagnostic and self-test circuitry; with alarms and logging.
  - 3. Battery deep-discharge and self-discharge protection; with alarms.
  - 4. Battery self-test circuitry; with alarms and logging.
- I. Integral Input Disconnecting Means and OCPD: Thermal-magnetic circuit breaker, complying with UL 489.
  - 1. Integrated Equipment Minimum Short-Circuit Current (Withstand) Rating: Match the rating of the panelboard from which each unit is served..
- J. Inverter:
  - 1. Description: Solid-state, high frequency PWM type (10 to 15 kHz), with the following operational features:
    - a. Automatically regulate output voltage to within plus or minus 3 percent, for all load ranges and for maximum 25 percent step-load changes; regulation may increase to 8 percent for 100 percent step-load changes.
    - b. Automatically regulate output frequency to within plus or minus 1 Hz, from no load to full load, at unity power factor, over the operating range of battery voltage.
    - c. Output Voltage Waveform: Sine wave with maximum 5 percent TDD throughout battery operating-voltage range, for 100 percent linear load.
    - d. Inverter Overload Capability: 115 percent for 10 minutes; 125% for 30 seconds; 150 percent surge for 10 seconds.
    - e. Load Power Factor: 0.70 lead to 0.70 lag.
    - f. Brownout Protection: Produces rated power without draining batteries when input voltage is down to 75 percent of normal.
- K. Rectifier/Battery Charger:
  - 1. Description: Solid state, variable rate, temperature compensated; automatically maintains batteries in fully charged condition when normal power is available.
  - 2. Maximum Battery Recharge Time from Fully Discharged State: 24 hours.

3. Low-voltage disconnect circuit reduces battery discharge during extended power outages, monitors battery voltage, and disconnects inverter when battery voltage drops to no less than 85.7 percent of nominal voltage.
  - L. Batteries:
    1. Description: Standard VRLA batteries.
      - a. Capable of sustaining full-capacity output of inverter unit for the following minimum duration: 90 minutes.
    2. Battery Disconnect and OCPD: Manufacturer's standard.
  - M. Maintenance Bypass Systems:
    1. Maintenance Bypass Mode:
      - a. Internal; manual operation only; bypasses central battery equipment power circuits (inverter and static transfer switch); requires local operator selection at central battery equipment. Transfer and retransfer shall be make-before-break, without disrupting power to the load or causing system instabilities.
    2. Bypass Overload Capability: 1.5 times the base load current.
  - N. Integral Output Disconnecting Means and OCPD:
    1. Single-Output OCPD: Thermal-magnetic circuit breaker, complying with UL 489; manufacturer's standard ratings based on unit output ratings.
- 2.2 ENCLOSURES
- A. Central Battery Equipment Enclosures: NEMA 250, to comply with environmental conditions at installed location.
    1. Dry and Clean Indoor Locations: Type 1 steel cabinets with access to components through hinged doors with flush tumbler lock and latch.
    2. Finish: Manufacturer's standard baked-enamel finish over corrosion-resistant prime treatment.
- 2.3 SOURCE QUALITY CONTROL
- A. Testing: Test and inspect central battery equipment according to UL 924 and UL 1778.
  - B. Factory Tests: Test and inspect assembled central battery equipment according to UL 924 and UL 1778. Affix standards organization's label. Include the following:
    1. Functional test and demonstration of all functions, controls, indicators, sensors, and protective devices.
    2. Full-load test.
    3. Transient-load response test.
    4. Overload test.
    5. Power failure test.
  - C. Central battery equipment will be considered defective if it does not pass tests and inspections.
  - D. Prepare test and inspection reports.

### **PART 3 - EXECUTION**

- 3.1 EXAMINATION
- A. Examine areas, surfaces, and substrates to receive central battery equipment, with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.
    1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.
  - B. Examine equipment before installation. Reject equipment that is wet, moisture damaged, or mold damaged.
  - C. Examine roughing-in for electrical connections to verify actual locations of connections before installation.
  - D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Coordinate layout and installation of central battery equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Floor-Mounted Central Battery Equipment: Install central battery equipment on 4-inch nominal-thickness concrete base.
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Comply with NECA 1.
- E. Wiring Methods:
  - 1. Install conductors and cables concealed in accessible ceilings, walls, and floors where possible.
  - 2. Conceal raceway and cables except in unfinished spaces.
  - 3. Provide plenum-rated cable, where installed exposed or in open cable tray, within environmental airspaces, including plenum ceilings.
  - 4. Comply with requirements for raceways and boxes specified in Section 26 05 33 "Raceways and Boxes for Electrical Systems."
- F. Wiring within Enclosures:
  - 1. Power Wiring: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
  - 2. Control Wiring: Bundle, train, and support wiring in enclosures.

### 3.3 CONNECTIONS

- A. Connections: Interconnect system components. Make connections to supply and load circuits according to manufacturer's wiring diagrams unless otherwise indicated.
- B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
  - 1. Separately Derived Systems: Make grounding connections to grounding electrodes and bonding connections to metallic piping systems as indicated; comply with NFPA 70.
- C. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

### 3.4 IDENTIFICATION

- A. Identify central battery equipment, components, and control wiring. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."
  - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
  - 2. Label central battery equipment with engraved nameplates.
  - 3. Label each separate cabinet, for multi-cabinet units.
  - 4. Label each enclosure-mounted control and pilot device.

### 3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
- C. Acceptance Testing Preparation:
  - 1. Inspect and Test Each Component:
    - a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
    - b. Test insulation resistance for all external branch circuit, feeder, control, and alarm wiring connected to central battery equipment element and component.
    - c. Test continuity of each circuit.

- D. Tests and Inspections:
    - 1. Inspect central battery equipment, wiring, components, connections, and equipment installation. Test and adjust components and equipment.
    - 2. Test insulation resistance for all external branch circuit, feeder, control, and alarm wiring connected to central battery equipment element and component.
    - 3. Test continuity of each circuit.
    - 4. Verify that input voltages and frequencies at central battery equipment locations are within voltage and frequency limits specified in Part 2. If outside this range, notify Construction Manager before closing input OCPDs.
    - 5. Perform a load-duration test at rated voltage and rated output current to verify the correct functional operation of the unit under full-load stable operating conditions for the minimum time limits required by UL 924. Monitor and record ambient temperature and temperatures within the unit.
    - 6. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
    - 7. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
  - E. Central battery equipment will be considered defective if it does not pass tests and inspections.
  - F. Prepare test and inspection reports, including a certified report that identifies central battery equipment and describes all test results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.
- 3.6 STARTUP SERVICE
- A. Engage a factory-authorized service representative to perform startup service.
    - 1. Complete installation and startup-checks according to manufacturer's written instructions.
- 3.7 ADJUSTING
- A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
  - B. Set field-adjustable switches, auxiliary relays, and other adjustable parts.
  - C. Adjust the trip settings of thermal-magnetic circuit breakers with adjustable, instantaneous-trip elements; install fuses if not factory installed.
  - D. Set the automatic system test parameters.
  - E. Set field-adjustable, circuit-breaker trip ranges as specified in Section 26 05 70 "Overcurrent Protective Device Studies."
- 3.8 PROTECTION
- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until controllers are ready to be energized and placed into service.
  - B. Replace central battery equipment whose interiors have been exposed to water or other liquids prior to Substantial Completion.
- 3.9 DEMONSTRATION
- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain central battery equipment, and to use and reprogram microprocessor-based control, monitoring, and display functions. Video-recording may be excluded from this Section.

END OF SECTION 26 33 23

## SECTION 26 41 13

### LIGHTNING PROTECTION FOR STRUCTURES

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section includes lightning protection system for ordinary structures.

##### 1.2 ACTION SUBMITTALS

- A. Delegated Design Submittal signed and sealed by qualified electrical professional engineer.
- B. Product Data: For each type of product.
- C. Shop Drawings:
  - 1. Include layouts of the lightning protection system, with details of the components to be used in the installation.
  - 2. Include raceway locations needed for the installation of conductors.
  - 3. Details of air terminals, ground rods, ground rings, conductor supports, splices, and terminations, including concealment requirements.
  - 4. Include roof attachment details, coordinated with roof installation.
  - 5. Calculations required by UL 96A, 6 foot (1.8m) rule for bonding of metal bodies.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of roof adhesive for attaching the roof-mounted air terminal assemblies, approved by the roofing-material manufacturer.

##### 1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For lightning protection system to include in maintenance manuals.
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Dimensioned site plan showing dimensioned route of the ground loop conductor and the ground rod locations. Comply with requirements of Section 01 78 39 "Project Record Documents."
    - b. A system testing and inspection record, listing the results of inspections and ground resistance tests, as recommended by NFPA 780, Annex D.

##### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: UL-listed installer, category OWAY

#### PART 2 - PRODUCTS

##### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Heary Bros. Lightning Protection Co. Inc.
  - 2. National Lightning Protection.
  - 3. Preferred Lightning Protection.
  - 4. Thompson Lightning Protection, Inc.
  - 5. Franklin Lightning Protection

##### 2.2 PERFORMANCE REQUIREMENTS

- A. Nfpa 780 4.1.1.1.1 Structures not exceeding 75 ft (23 m) in height shall be protected with Class I materials as shown in Table 4.1.1.1.1.
- B. UL Lightning Protection Standard: Comply with UL 96A requirements for Class II buildings.

- C. Lightning Protection Components, Devices, and Accessories: Listed and labeled by a qualified testing agency as complying with UL 96, and marked for intended location and application.

## 2.3 MATERIALS

- A. Air Terminals:
  - 1. Solid Copper unless otherwise indicated.
  - 2. 1/2-inch diameter by 10 inches long minimum.
  - 3. Rounded tip.
  - 4. Threaded base support.
- B. Class 1 Main Conductors:
  - 1. Stranded Copper: 57,400 circular mils in diameter.
- C. Class II Main Conductors:
  - 1. Stranded Copper: 115,000 circular mils in diameter.
- D. Secondary Conductors:
  - 1. Stranded Copper: 26,240 circular mils in diameter.
- E. Ground Loop Conductor: Tinned copper.
- F. Ground Rods:
  - 1. Material: Copper-clad steel.
  - 2. Diameter: 3/4 inch.
  - 3. Rods shall be not less than 120 inches long.
  - 4. Sectional type, with integral threads.
- G. Conductor Splices and Connectors: Compression fittings that are installed with hydraulically operated tools, or exothermic welds, approved for use with the class type.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install lightning protection components and systems according to UL 96A.
- B. Air terminals shall be installed to extend 10" above the protected area.
- C. Install conductors with direct paths from air terminals to ground connections. Avoid bends less than 90 degrees and 8 inches in radius and narrow loops.
- D. Conceal conductors within normal view from exterior locations at grade within 200 feet of building. Comply with requirements for concealed installations in UL 96A.
  - 1. Roof penetrations required for down conductors and connections to structural-steel framework shall be made using listed through-roof fitting and connector assemblies with solid rods and appropriate roof flashings. Use materials approved by the roofing manufacturer for the purpose. Conform to the methods and materials required at roofing penetrations of the lightning protection components to ensure compatibility with the roofing specifications and warranty.
  - 2. Install conduit where necessary to comply with conductor concealment requirements.
  - 3. Air Terminals on Single-Ply Membrane Roofing: Comply with adhesive manufacturer's written instructions.
- E. Ground Ring Electrode: The conductor shall be not less than the main-size lightning conductor.

### 3.2 CONNECTIONS

- A. Aboveground concealed connections, and connections in earth or concrete, shall be done by exothermic welds or by high-compression fittings listed for the purpose.
- B. Aboveground exposed connections shall be done using the following types of connectors, listed and labeled for the purpose: exothermic weld.
- C. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
  - 1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
  - 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.

3.3 CORROSION PROTECTION

- A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.
- B. Use conductors with protective coatings where conditions would cause deterioration or corrosion of conductors.

3.4 FIELD QUALITY CONTROL

- A. Prepare test and inspection reports and certificates.

END OF SECTION 26 41 13

## SECTION 26 51 00

### LIGHTING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. LED interior lighting.
  - 2. LED exterior lighting.
  - 3. Exit lighting.
  - 4. Luminaire accessories and support components.
- B. Related Requirements:
  - 1. Section 26 09 23 "Lighting Control Systems and Devices" for automatic control of lighting, including controllers/dimmers, photoelectric relays, occupancy sensors, and multipole lighting relays and contactors.

##### 1.2 DEFINITIONS

- A. CCT: Correlated color temperature.
- B. CRI: Color Rendering Index.
- C. EPA: Effective projected area (as it relates to the wind force exerted on an object, in accordance with the standard, AASHTO LTS-6).
- D. Fixture: See "Luminaire."
- E. IP: International Protection or Ingress Protection Rating.
- F. LED: Light-emitting diode.
- G. Lumen: Measured delivered output of luminaire.
- H. Luminaire: Complete lighting unit, including light source, reflector, integral or remote driver, internal or external emergency power unit, circuitry, lens, diffuser, housing, and accessories.

##### 1.3 PRICING

- A. Lighting Quotations: Only line-item pricing for each unique fixture type will be accepted.
  - 1. Use the same luminaire designations as indicated on Drawings.
  - 2. Arrange in order of luminaire designation.
  - 3. Include the contractor's price for each individual fixture.
  - 4. Include the quantity of each unique fixture type.
  - 5. Include the total cost for each fixture type (unit cost x quantity).
  - 6. All lighting control costs to be provided in a separate section of the quotation except for integral control components provided from the fixture manufacturer.
  - 7. All labor costs to be provided in a separate section of the quotation.
  - 8. All additional hard costs associated with the lighting and lighting control systems are to be identified and provided in a separate section of the quotation.

##### 1.4 SUBSTITUTIONS

- A. Provide in accordance with provisions set out in SECTION 01 25 00 - SUBSTITUTION PROCEDURES.
- B. Additional Product Data: For each type of product where the contractor can demonstrate cost savings to the owner and/or accelerated delivery. Failure to meet these requirements and those requirements listed within the lighting documents may result in rejected substitutions.
  - 1. Use the same luminaire designations as indicated on Drawings.
  - 2. Arrange in order of luminaire designation.
  - 3. Include data on features, accessories, and finishes.
  - 4. Include physical description, profiles, and dimensions of luminaires.
  - 5. Include data on EPA, cable entrances, materials, dimensions, weight, rated design load, and ultimate strength of individual components.
  - 6. Include finishes for lighting poles and luminaire-supporting devices.

7. Include life, output (delivered lumens, CCT, TM30, and CRI), and energy-efficiency data.
8. Photometric data and adjustment factors based on laboratory tests, complying with IES LM-79 and IES LM-80.

#### 1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  1. Arrange in order of luminaire designation.
  2. Include data on features, accessories, and finishes.
  3. Include physical description, profiles, and dimensions of luminaires.
  4. Include data on EPA, cable entrances, materials, dimensions, weight, rated design load, and ultimate strength of individual components.
  5. Include finishes for lighting poles and luminaire-supporting devices.
  6. Anchor bolts.
  7. Include life, output (delivered lumens, CCT, TM30, and CRI), and energy-efficiency data.
  8. Photometric data and adjustment factors based on laboratory tests, complying with IES LM-79 and IES LM-80.
  9. Use the same luminaire designations as indicated on Drawings.
- B. Shop Drawings: For nonstandard or custom luminaires or pole-mounted luminaires.
  1. Use the same luminaire designations as indicated on Drawings.
  2. Include plans, elevations, sections, unique configurations, and mounting and attachment details.
  3. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  4. Include diagrams for power, signal, and control wiring.
  5. Include delivered lumen outputs and CCT/TM30 values.
  6. Include all information for accompanying accessories.
- C. Finish/Color Samples for Initial Selection or Verification: Provide finish/color samples of substituted luminaires upon request.

#### 1.6 maintenance material submittals

- A. Provide signed log of extra luminaires provided to the owner as Attic Stock. Luminaire quantities as follows:
  1. (2) Type BA1
  2. (1) of each Type BA2, BB1, BD1
  3. (1) of each Type RA1, RA2, RA3, RB1, RC1
  4. (1) of each Type RD1, RD2
  5. (1) of each Type RT1A, RT1B, RT2A, RT2B, RT2C
  6. (1) of each Type TS1, TS2, TS3
  7. (1) of each Type X1, X1B, X1M, X2

#### 1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For luminaires, poles, and lighting systems to include in operation and maintenance manuals.
- B. Warranty documents.

#### 1.8 QUALITY ASSURANCE

- A. Luminaire Photometric Data Testing Laboratory Qualifications:
  1. Luminaire manufacturer's laboratory that is accredited under the NVLAP for Energy Efficient Lighting Products.
  2. Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7, accredited under the NVLAP for Energy Efficient Lighting Products, and complying with the applicable IES testing standards.
- B. IESNA RP-16-05 Addendum "A": Industry-standard nomenclature and definitions of lighting terms and lighting technologies, including solid-state (LED) luminaires.
- C. UL Compliance: Comply with UL 1598 and listed for wet locations, as specified.
- D. Source Limitations:
  1. Provide luminaires from a single manufacturer for each luminaire type.
  2. Obtain poles from single manufacturer or producer.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect finishes of exposed surfaces by applying a strippable, temporary protective covering before shipping.
- B. Package aluminum poles for shipping according to ASTM B660.
- C. Store poles on decay-resistant skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.
- D. Retain factory-applied pole wrappings on poles until right before pole installation. Handle poles with web fabric straps.

1.10 WARRANTY

- A. Warranty: Manufacturer and Installer agree to repair or replace components of luminaires that fail in materials or workmanship within specified warranty period.
  - 1. Structural failures, including luminaire support components.
  - 2. Faulty operation of luminaires and accessories.
  - 3. Deterioration or corrosion of metals, metal finishes, color retention, and other materials beyond normal weathering.
- B. Luminaire and Pole Warranty Period: Greater than four (4) years from date of Substantial Completion.
  - 1. If the manufacturer's warranty commences upon the date materials are delivered, then the manufacturer's warranty period must be at least five (5) years to meet the requirement stated above.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Structural Characteristics: Comply with AASHTO LTS-6-M.
- B. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied according to AASHTO LTS-6-M.
- C. Live Load: Single load of 500 lbf distributed according to AASHTO LTS-6-M.
- D. Ice Load: Load of 3 lbf/sq. ft., applied according to AASHTO LTS-6-M for applicable areas on the Ice Load Map.
- E. Wind Load: Pressure of wind on pole and luminaire, calculated and applied according to AASHTO LTS-6-M.
- F. Strength Analysis: For each pole, multiply the actual EPA of luminaires and brackets by a factor of 1.1 to obtain the EPA to be used in pole selection strength analysis.
- G. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts unless otherwise indicated.
- H. Ambient Temperature (Indoor Lighting): 5 to 104 deg F.
- I. Exterior Temperature (Outdoor Lighting): minus 20 to plus 120 deg F (-29 to +50 deg C).
  - 1. Relative Humidity: Zero to 95 percent.
- J. Altitude: Sea level to 500 feet.

2.2 LUMINAIRE REQUIREMENTS

- A. Luminaire Types and Acceptable Manufacturers: As indicated on the Drawings. Refer to the Luminaire Schedule.
  - 1. Model numbers shall not be regarded as complete or entirely accurate. Do not order products based solely on a model number. For each luminaire type, the contractor shall reconcile its description, including options and accessories, with its intended application derived from relevant information conveyed throughout the entirety of contract documents.
  - 2. The manufacturer listed first for each luminaire type shall be regarded as the Basis of Design. Alternative products by other listed manufacturers must be at least equivalent in style, quality, features, and performance to that of the Basis of Design.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- C. Factory-Applied Labels: Comply with UL 1598. Include CCT, TM30 and CRI ratings. Locate labels where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
  - D. Recessed luminaires shall comply with NEMA LE 4.
- 2.3 LED LUMINAIRES
- A. Delivered lumen output as indicated on the Luminaire Schedule.
  - B. IESNA LM-79 compliant, latest edition.
  - C. IESNA LM-80 compliant, latest edition; 50,000 hours minimum, unless otherwise noted.
  - D. CRI, CCT, and TM30 as indicated on Luminaire Schedule in accordance with ANSI C78.377.
  - E. NEMA.SSL-1 compliant for operational characteristics and electrical safety of LED drivers and power supplies. ANSI/NEMA C82.77 compliant for maximum allowable harmonic distortion produced by power supplies/drivers.
  - F. Power Factor > 0.9, unless noted otherwise.
  - G. Total Harmonic Distortion (THD) < 20%, unless noted otherwise.
  - H. Provide integral Type 4 surge protective device (SPD) rated for 10 kA peak surge per UL 1449 standards.
- 2.4 EXIT SIGNS
- 1. General Characteristics: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.
  - 2. Internally Lighted Sign:
    - a. LED; 100,000 hours minimum rated lamp life.
- 2.5 MATERIALS
- A. Metal Parts:
    - 1. Free of burrs and sharp corners and edges.
    - 2. Sheet metal components shall be steel unless otherwise indicated.
    - 3. Form and support to prevent warping and sagging.
  - B. Steel:
    - 1. ASTM A36/A36M for carbon structural steel.
    - 2. ASTM A568/A568M for sheet steel.
    - 3. Epoxy-coated.
  - C. Stainless Steel:
    - 1. Manufacturer's standard grade.
    - 2. Manufacturer's standard type, ASTM A240/240M.
  - D. Galvanized Steel: ASTM A653/A653M.
  - E. Aluminum: ASTM B209. Corrosion-resistant.
  - F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit servicing without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during servicing and when secured in operating position. Doors shall be removable for cleaning or replacing lenses.
  - G. Acrylic Diffusers: 100 percent virgin acrylic plastic, with high resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation (UV-stabilized). Lens Thickness: At least 0.125 inch minimum, unless otherwise indicated.
  - H. Glass Lenses, Diffusers, or Globes: Annealed crystal glass, tempered Fresnel glass, unless otherwise indicated. Acrylic lenses
- 2.6 FINISHES
- A. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
  - B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- C. Finishes and Color Selections: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping.
    - 1. Finishes/colors to be selected by the Architect/Interior Designer/Lighting Designer/Engineer from the manufacturer's full range of standard finishes/colors during the review of action submittals, unless the color is specifically indicated on the Luminaire Schedule.
    - 2. If noted on the Luminaire Schedule, provide custom color matching color sample or RAL designation.
    - 3. For pole-mounted luminaires, match finish process and color of pole, unless otherwise indicated.
  - D. Factory-Applied Finish for Aluminum Luminaires and Poles: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
    - 1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
    - 2. Class I, Clear-Anodic Finish: AA-M32C22A41 (Mechanical Finish: Medium satin; Chemical Finish: Etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
  - E. Factory-Applied Finish for Steel Luminaires and Poles: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
    - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
    - 2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
  - F. Powder-Coat Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.
    - 1. Surface Preparation: Clean surfaces according to SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair powder coat bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, according to SSPC-SP 5/NACE No. 1 or SSPC-SP 8.
    - 2. Powder Coat: Comply with AAMA 2604. Electrostatic-applied powder coating; single application and cured to a minimum 2.5- to 3.5-mil dry film thickness. Coat interior and exterior of pole for equal corrosion protection
- 2.7 integral control
- A. Manufacturer of luminaires shall install integral control as specified on Interior and Exterior Luminaire Schedules. Where specified UL924 listed relay shall be factory installed for bypass of dimming and activation to 100 percent for indicated luminaires. Each luminaire shall have two connection ports for control bus. Connections shall be daisy chained from fixture to fixture. Control shall be compatible with system specified in Section 26 09 23.
    - 1. Where "WIRELESS" is indicated on luminaire schedule, provide factory installed integral control.
- 2.8 LUMINAIRE SUPPORT
- A. Comply with requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems" for channel and angle iron supports and nonmetallic channel and angle supports.
  - B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as luminaire.
  - C. Wires: ASTM A641/A641M, Class 3, soft temper, zinc-coated steel, 12-gage.
  - D. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.
  - E. Hook Hangers: Integrated assembly matched to luminaire, line voltage, and equipment with threaded attachment, cord, and locking-type plug.
- 2.9 POLES
- A. Pole Manufacturers: Subject to compliance with requirements:
    - 1. Valmont.
    - 2. WJM Poles.
    - 3. Cooper Lighting.
    - 4. Kim Lighting.
    - 5. Or same manufacturer as pole-mounted luminaire.

- B. Pole Heights: As indicated on the Drawings. Refer to the Luminaire Schedule.
- C. Concrete Base: Refer to the Drawings.
- D. Structural Characteristics: Comply with AASHTO LTS-6.
  - 1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in Part 1 "Structural Analysis Criteria for Pole Selection" Article.
  - 2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.
  - 3. The minimum EPA capacity of each pole shall exceed 200% of the total fixture head EPA value attached to each pole at 90 mph. This provides a safety factor, as well as countering long-term fatigue and/or accommodating an additional fixture head in the future.
- E. Steel Poles
  - 1. Poles: Comply with ASTM A500/A500M, Grade B carbon steel with a minimum yield of 46,000 psig; one-piece construction up to 40 feet in height with access handhole in pole wall.
    - a. Shape: As indicated on drawings
    - b. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- F. Fasteners: Stainless steel, size and type as determined by manufacturer. Corrosion-resistant items compatible with support components.
  - 1. Materials: Compatible with poles and standards as well as the substrates to which poles and standards are fastened and shall not cause galvanic action at contact points.
  - 2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dipped galvanized after fabrication unless otherwise indicated.
- G. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Section 26 05 26 "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size indicated, and accessible through handhole.
- H. Pole Accessories: Provide for each pole, unless indicated otherwise on the Drawings.
  - 1. Handhole: Oval shaped, with minimum clear opening of 2-1/2 by 5 inches, with cover secured by stainless-steel captive screws.
  - 2. Provide watertight pole cap atop each pole.
  - 3. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported load multiplied by a 5.0 safety factor.
  - 4. Base Covers: Manufacturers' standard metal units, finished same as pole, and arranged to cover pole's mounting bolts and nuts.
- I. Mounting Hardware
  - 1. Anchor Bolts: Manufactured to ASTM F1554, Grade 55 with a minimum yield strength of 55,000 psi (380 000 kPa).
    - a. Galvanizing: Hot-dipped galvanized according to ASTM A153, Class C.
    - b. Threading: Uniform National Coarse, Class 2A.
  - 2. Nuts: ASTM A563, Grade A, Heavy-Hex.
    - a. Galvanizing: Hot-dipped galvanized according to ASTM A153, Class C.
    - b. Two (2) nuts provided per anchor bolt, shipped with nuts pre-assembled to the anchor bolts.
  - 3. Washers: ASTM F436, Type 1.
    - a. Galvanizing: Hot-dipped galvanized according to ASTM A153, Class C.
    - b. Two (2) washers provided per anchor bolt.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for luminaire to verify actual locations of luminaire and electrical connections before luminaire installation.
- C. Examine walls, roofs, canopy ceilings, and overhang ceilings for suitable conditions where luminaires will be installed.

- D. Examine poles, luminaire-mounting devices, and pole accessories before installation. Components that are scratched, dented, marred, wet, moisture damaged, or visibly damaged are considered defective.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Comply with NECA 1.
- B. Comply with requirements in Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables" and Section 26 05 33 "Raceways and Boxes for Electrical Systems" for wiring connections and wiring methods.
- C. Coordinate layout and installation of luminaires with other construction. Do not modify layout or locations of luminaires without documented approval to do so, unless indicated otherwise on the Drawings.
- D. Install luminaires level, plumb, and square with ceilings and walls unless otherwise indicated.
- E. Locate cove lighting at front of cove unless otherwise indicated or directed.
- F. Located undercabinet lighting near the front of the cabinet and aimed toward the wall unless otherwise indicated.
- G. Adjust luminaires that require field adjustment or aiming to provide optimum illumination. Coordinate and confirm final adjustments with Owner and Design Team during Aiming & Focusing.
- H. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- I. Fasten luminaire to structural support.
- J. Supports:
  - 1. Sized and rated for luminaire weight.
  - 2. Able to maintain luminaire position after cleaning and servicing.
  - 3. Provide support for luminaire without causing deflection of ceiling or wall.
  - 4. Luminaire-mounting devices shall be capable of supporting a horizontal force of 100 percent of luminaire weight and a vertical force of 400 percent of luminaire weight.
- K. Flush-Mounted Luminaires:
  - 1. Secured to junction box.
  - 2. Attached to ceiling structural members at four points equally spaced around circumference of luminaire.
  - 3. Trim ring flush with finished surface.
- L. Wall-Mounted Luminaires:
  - 1. Secured to junction box.
  - 2. Attached to structural members in walls or a minimum 20-gauge or 1/8-inch thick backing plate attached to wall structural members.
  - 3. Attached using through bolts and backing plates on either side of wall as recommended by luminaire manufacturer.
  - 4. Do not attach luminaires directly to gypsum board.
- M. Suspended Luminaires:
  - 1. Pendant mount, where indicated, minimum 5/32-inch-diameter aircraft cable supports, adjustable, and quantity of supports as indicated or as recommended by luminaire manufacturer, whichever is greater.
  - 2. Mount suspended fixtures at elevations indicated on Drawings or as directed by Design Team. Provide a minimum of 12 inches of aircraft cable and power cable length hidden from view above the ceiling or within the junction box to allow for future height adjustments.
  - 3. Hook mount, where applicable.
  - 4. Rods: Where longer than 48 inches, brace to limit swinging.
  - 5. Stem-Mounted, Single-Unit Luminaires: Suspend with twin-stem hangers. Support with approved junction box and accessories that hold stem and provide damping of luminaire oscillations. Support junction box vertically to building structure using approved devices.
  - 6. Continuous Rows of Luminaires: Use tubing or stem for wiring at one point and tubing or rod or wire support as indicated for suspension for each unit length of luminaire chassis, including one at each end.
  - 7. Do not use ceiling grid as support for pendant luminaires. Connect support wires or rods to building structure.
- N. Ceiling-Grid-Mounted Luminaires:
  - 1. Secure to any required junction box.

2. Secure luminaire to the luminaire opening using approved fasteners in a minimum of four locations, spaced near corners of luminaire.
- O. Ground-Mounted luminaires:
1. Install on concrete base, per base detail in Drawings, at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified under Division 03.
- P. Pole-Mounted luminaires:
1. Where applicable, adjust photoelectric devices to prevent false operation of relay by electric light sources, favoring a north orientation.
- Q. Poles Foundations:
1. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Structural steel complying with ASTM A36/A36M and hot-dip galvanized according to ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 03 30 00 "Cast-in-Place Concrete."
  2. Pre-Cast Foundations: Factory fabricated, with structural steel complying with ASTM A36/A36M and hot-dip galvanized according to ASTM A123/A123M; and with top-plate and mounting bolts to match pole-base flange and strength required to support pole, luminaire, and accessories. Concrete, reinforcement, and formwork are specified in Section 03 30 00 "Cast-in-Place Concrete."
  3. Anchor Bolts: Install plumb using manufacturer-supplied steel or plywood template, uniformly spaced.
- R. Pole Installation:
1. Alignment: Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on pole.
  2. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features unless otherwise indicated on drawing.
    - a. Fire Hydrants and Water Piping: 60 inches.
    - b. Water, Gas, Electric, Communications, and Sewer Lines: 10 feet.
    - c. Trees: 15 feet from tree trunk.
  3. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified under Division 03.
  4. Foundation-Mounted Poles: Mount pole with leveling nuts and tighten top nuts to torque level according to pole manufacturer's written instructions.
    - a. Grout void between pole base and foundation. Use non-shrink or expanding concrete grout firmly packed to fill space.
    - b. Install base covers unless otherwise indicated.
    - c. Use a short piece of 1/2-inch diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
  5. Poles and Pole Foundations Set within Paved Areas: Install poles foundations level with surrounding paving unless a different paving material is intended to be continuous in which case locate the top of the foundation below the final paving material thickness.
  6. Poles and Pole Foundations Set Adjacent to Paved Areas/Curb: Install poles foundations 8" above finished grade. Install poles with a minimum 6-inch-wide, unpaved gap between the pole or pole foundation and the edge of the adjacent concrete slab. Fill unpaved ring with pea gravel. Insert material to a level 1-inch below top of concrete slab.
  7. Raise and set pole using web fabric slings (not chain or cable) at locations indicated by manufacturer.
- S. Pole Grounding: Comply with requirements in Section 26 05 26 "Grounding and Bonding for Electrical Systems."
1. Install grounding electrode for each pole unless otherwise indicated.
    - a. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
    - b. Install grounding conductor and conductor protector.
    - c. Ground metallic components of pole accessories and foundation.
- 3.3 CORROSION PREVENTION
- A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
- B. Steel Conduits: Comply with Section 26 05 33 "Raceways and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch-thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Inspect each installed luminaire for damage. Replace damaged luminaires and components.
- B. Perform the following tests and inspections:
  - 1. Operational Test: After installing luminaires, switches, and accessories, and after electrical circuitry has been energized, test units to confirm proper operation.
  - 2. Verify settings, programming, functions, and operation of components integral to the luminaire, whether dimming drivers, integral presence sensors, or photoelectric sensors—in addition to other control systems specified in Section 26 09 23 "Lighting Control Systems and Devices."
  - 3. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to emergency power and retransfer to normal.
  - 4. Inspect luminaires and poles for nicks, mars, dents, scratches, and other damage.
- C. Luminaire will be considered defective if it does not pass operation tests and inspections.
- D. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

3.6 STARTUP AND SYSTEMS COMMISSIONING

- A. Comply with requirements for startup and system commissioning specified in Section 26 08 00 "Commissioning of Electrical Systems."
- B. Newly installed lighting is not intended to be used for 24/7 construction and security lighting. Building lighting may be used during normal hours but must be turned off afterhours and supplemental lighting to be provided by the Contractor.
- C. AIMING & FOCUSING
  - 1. All adjustable lighting units shall be aimed, focused, locked, etc., by the Contractor under the supervision of the Lighting Designer. The Lighting Designer shall indicate the number of crews (foreman and apprentice) required. All aiming and adjusting shall be carried out after the installation is complete, including finishes and architectural/interior design elements being illuminated. All ladders, scaffolds, lift equipment, safety belts, flashlights, walkie talkie equipment, etc. required shall be furnished by the Contractor at the direction of the Lighting Designer. As aiming and adjusting is completed, locking set screws and bolts and nuts shall be tightened securely.
  - 2. Contractor shall provide before the start of aiming, all accessories that were ordered for each fixture type installed. This includes but is not limited to optics, lenses (soft focus, linear spread, etc.), louvers, snoots, barndoors, filters, etc. Contractor to organize and label all leftover components and return to owner for future use.
  - 3. Night work: Where possible, units shall be focused during the normal working day. However, where daylight interferes with seeing the full lighting effect, aiming shall be accomplished at night.
- D. CLEANING
  - 1. Thoroughly clean each installed luminaire within one month after substantial completion.

END OF SECTION 26 51 00

## SECTION 27 05 00

### COMMON WORK RESULTS FOR COMMUNICATIONS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Raceway and Boxes for Communications.
  - 2. Sleeves for pathways and cables.
  - 3. Sleeve seals.
  - 4. Grout.
  - 5. Common communications installation requirements.
  - 6. Backboxes, raceways and power for all communications systems shown on Contract Drawings.
- B. This Section includes the following types of system rough-ins:
  - 1. Audiovisual outlets.
  - 2. Combination voice/data/video outlet.
  - 3. Intercom speaker.
  - 4. Intercom volume control.
  - 5. TV receptacles.
  - 6. Wall mounted telephone.
- C. Related Sections:
  - 1. Section 26 05 33 "Raceway and Boxes for Electrical Systems" for raceway and outlet boxes.
  - 2. Section 27 51 23.50 "Educational Intercommunications and Program Systems" for raceway, boxes and backboxes.
  - 3. Section 27 41 16 "Integrated Audiovisual Systems" for raceway, outlet boxes and backboxes.

##### 1.2 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.

##### 1.3 SUBMITTALS

- A. Product Data: None.

##### 1.4 COORDINATION

- A. Coordinate installation of low voltage equipment and cabling to insure timely and accurate installation. Provide as-built drawings of rough-in and raceway routings provided under this Section.
- B. Coordinate arrangement, mounting, and support of communications equipment:
  - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
  - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
  - 3. To allow right of way for piping and conduit installed at required slope.
  - 4. So connecting pathways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- C. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- D. Coordinate location of access panels and doors for communications items that are behind finished surfaces or otherwise concealed.
- E. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 07 84 13 "Penetration Firestopping."
- F. Coordinate rough-ins with surrounding surfaces to insure flush installations. Provide clearances to walls and marker boards to accommodate width of communications devices. Provide extension rings on device boxes to accommodate tack walls and surfaces.
- G. Coordinate ducts and sleeves with structural and building systems.

1.5 MATRIX OF RESPONSIBILITY

				In Contract				NOTES

**PART 2 - PRODUCTS**

2.1 RACEWAY AND BOXES FOR COMMUNICATIONS

- A. All material and associated installation shall be as specified in appropriate Sections 26 05 33 "Raceways and Boxes for Electrical Systems" unless noted otherwise.
- B. Plaster rings or mud rings for all communications outlet boxes shall be as shallow as possible and have square corners to accommodate large devices.

2.2 SLEEVES FOR PATHWAYS AND CABLES

- A. See Section 26 05 33 "Raceways and Boxes for Electrical Systems".
- B. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends with finish bushings.

### 2.3 CABLE SUPPORTS FOR CABLE PATHWAYS

- A. Cable Supports (J-Hooks): Meets ISO/IEC 18010 and TIA-569. Steel hooks designed for communications cable support with cable retaining clip. Supports shall be capable of interlocking vertically to support multiple cable pathways. Supports shall be available in 1 inch thru 4 inch size. Supports shall be capable of attaching to beams, walls, threaded rod, and angled mounting brackets with compatible accessories.
  - 1. Provide single J-Hook cable supports from each communications cable stub-up to main cable support line or cable tray.
  - 2. Provide three (3) stacked cable supports minimum 5ft on center from individual rooms along main pathways to cable tray or serving communications room.
  - 3. Provide Erico Caddy CAT Link Series or approved equal.
- B. Cable drop-out for sleeves. Formed radius bend water-fall element designed to support cables as they enter or exit from 4 inch cable tray extension sleeves.
  - 1. Provide Panduit CWF-400 raceway attached cable drop-out.

### 2.4 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Metraflex Co.
    - d. Pipeline Seal and Insulator, Inc.
  - 2. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of pathway or cable.
  - 3. Pressure Plates: Stainless steel. Include two for each sealing element.
  - 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating or Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

### 2.5 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

## PART 3 - EXECUTION

### 3.1 COMMON REQUIREMENTS FOR COMMUNICATIONS INSTALLATION

- A. General:
  - 1. Comply with NECA 1.
  - 2. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
  - 3. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange, and install components and equipment to provide maximum possible headroom consistent with these requirements.
  - 4. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both communications' equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
  - 5. Right of Way: Give to piping systems installed at a required slope.
  - 6. Provide rough-ins as specified herein at each location where the corresponding symbol is indicated on the Drawings.
  - 7. Recessed communications raceways shall be routed directly up from the location indicated on Drawings with a sweep bend above the APC of the room served. Raceways shall not be routed underground unless indicated on the Drawings.
  - 8. Mounting heights shall be as indicated in the Symbols sheet unless otherwise indicated on the Drawings.
  - 9. Provide all raceways with protective insulation bushings at raceway terminations and with continuous pull strings. All raceways shall be installed with sweep bends.

10. Ream junction, pullbox and outlet assembly knock-outs to maintain raceways inside diameter through to box interior.
  11. Provide junction/pull boxes where indicated or required. Any pull/junction box shall not be used to change raceway routing direction. Directional changes shall be provided only with sweep bent raceway.
  12. Coordinate floor box communications raceway routing with floor box dividers to separate Class I and Class II wiring within the box.
  13. Install under slab raceway stub-ups at locations indicated on Drawing and within 2 inches of finished wall surface for exposed stub-ups. Trim raceways 8 inches above finished floor and label with location served.
  14. Provide a blank coverplate for each rough-in not utilized by date of substantial completion. Including all outlet locations along divided surface raceways.
- B. Audiovisual Outlets:
1. Provide audiovisual outlets and pathways as specified in Section 27 41 16 and shown on audiovisual sheets.
- C. Combination Voice/Data/Video Outlet (See Drawing details):
1. Provide flush 4-11/16 inch square steel box with a single-gang plaster ring for voice, data and video devices.
  2. Provide one (1) 1-1/4 inch raceway stubbed directly up into accessible ceiling space or to nearest cable tray from each backbox. Include bushings at all raceway terminations.
- D. Intercom speaker:
1. Speaker backboxes specified under Section 27 51 23.50 "Educational Intercommunications and Program Systems."
  2. Provide one (1) 3/4-inch raceway between backboxes and to above nearest accessible ceiling space or to nearest cable tray. Coordinate location with intercom installer.
- E. Intercom volume control:
1. Provide flush 4-inch square steel box with a single-gang plaster ring for volume control device.
  2. Provide one (1) 3/4-inch raceway stubbed directly up into accessible ceiling space or to nearest cable tray from each backbox. Include bushings at all raceway terminations.
- 3.2 TV OUTLETS:
- A. Provide flush 4-11/16 inch square steel box with a single-gang plaster ring for wall-mounted TV devices.
1. Provide one (1) 1-inch raceway stubbed up into accessible ceiling space from each backbox. Include bushings at all raceway terminations.
- B. Wall Mounted Telephone (See Drawing details):
1. Provide flush single-gang backbox with a single-gang plaster ring for wall-mounted telephone locations.
  2. Provide a 3/4-inch raceway stubbed up into accessible ceiling space or to nearest cable tray from each backbox. Include bushings at all raceway terminations.
- 3.3 SLEEVE INSTALLATION FOR COMMUNICATIONS PENETRATIONS
- A. General:
1. Communications penetrations occur when pathways, cables, wireways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
  2. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
  3. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
  4. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
  5. Cut sleeves to length for mounting flush with both surfaces of walls unless sleeves are shown across inaccessible ceiling or meeting cable tray.
  6. Seal space outside of sleeves with grout for penetrations of concrete and masonry
    - a. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
  7. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 07 92 00 "Joint Sealants".

8. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pathway and cable penetrations. Install sleeves and seal pathway and cable penetration sleeves with removable firestop materials. Comply with requirements in Section 07 84 13 "Penetration Firestopping."
  9. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work. See architectural detail.
  10. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
  11. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between pathway or cable and sleeve for installing mechanical sleeve seals.
  12. Sleeves for communications cabling (from Classrooms, Offices, etc.): Where sleeves meet cable tray, install sleeves above cable tray and within 12 inches of cable tray side.
  13. Sleeves for cable tray extension shall be stacked and located within two (2) inches vertically of cable tray. Align sleeves directly in line with cable tray. Sleeves shall not extend horizontally more than 2 inches beyond the width of the cable tray. See detail on drawings.
  14. Where sleeves penetrate a wall with one side having exposed structure, sleeves shall be placed above the elevation of the bottom of steel. Where a roof deck elevation change occurs, sleeve height shall vary and be installed above the elevation of bottom of steel on both sides of wall.
- B. Sleeves: Provide communication sleeves where needed to provide a route from each system rough-in to the nearest communication closet and as noted below. Provide additional sleeves for intercom cabling. These sleeves not shown on drawings. Each group of sleeves shall be located to minimize the length of cabling to serve the associated devices in each room or area. Provide the quantity and size of sleeves as defined below and as indicated in locations specified on Drawing:
1. Rooms with five or less system device rough-ins: Two (2) 2-inch sleeves.
  2. Rooms with six to ten systems device rough-ins: Three (3) 2-inch sleeves.
  3. Rooms with eleven to fifteen system device rough-ins: Four (4) 2-inch sleeves.
- C. Cable Tray Sleeves: Provide sleeves where cable tray passes thru rated walls or provides access into communication rooms or provide other fire protection means as specified. The quantity of sleeves shall be such that the sum of adding 40 percent of the area of each sleeve shall equal or exceed an area equal to 40 percent of the cross sectional area of the cable tray.
1. Provide cable drop-out on each sleeve extending into communications room.
- 3.4 SLEEVE-SEAL INSTALLATION
- A. Install to seal exterior wall penetrations.
  - B. Use type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- 3.5 FIRESTOPPING
- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for communications installations to restore original fire-resistance rating of assembly. Utilize non-hardening putty or pillows to allow removal and installation. Firestopping materials and installation requirements are specified in Section 07 84 13 "Penetration Firestopping."

END OF SECTION 27 05 00

SECTION 27 05 28

PATHWAYS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
  - 1. Metal conduits and fittings.
  - 2. Nonmetallic conduits and fittings.
  - 3. Optical-fiber-cable pathways and fittings.
  - 4. Metal wireways and auxiliary gutters.
  - 5. Nonmetallic wireways and auxiliary gutters.
  - 6. Surface pathways.
  - 7. Boxes, enclosures, and cabinets.
- B. Related Sections:
  - 1. Section 26 05 33 "Raceways and Boxes for Electrical Systems" for floor boxes

1.2 DEFINITIONS

- A. ARC: Aluminum rigid conduit.
- B. GRC: Galvanized rigid steel conduit.
- C. IMC: Intermediate metal conduit.

1.3 ACTION SUBMITTALS

- A. Product Data: For surface pathways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
- B. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Pathway routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
  - 1. Structural members in paths of pathway groups with common supports.
  - 2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.
- B. Qualification Data: For professional engineer.
- C. Seismic Qualification Certificates: For pathway racks, enclosures, cabinets, equipment racks and their mounting provisions, including those for internal components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.
  - 4. Detailed description of conduit support devices and interconnections on which certification is based and their installation requirements.
- D. Source quality-control reports.

## PART 2 - PRODUCTS

### 2.1 METAL CONDUITS AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by and not limited to, the following:
1. AFC Cable Systems, Inc.
  2. Allied Tube & Conduit; a Tyco International Ltd. Co.
  3. Alpha Wire Company.
  4. Anamet Electrical, Inc.
  5. Electri-Flex Company.
  6. O-Z/Gedney; a brand of EGS Electrical Group.
  7. Picoma Industries; Subsidiary of Mueller Water Products, Inc.
  8. Republic Conduit.
  9. Southwire Company.
  10. Thomas & Betts Corporation.
  11. Western Tube and Conduit Corporation.
  12. Wheatland Tube Company; a division of John Maneely Company.
- B. General Requirements for Metal Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  2. Comply with TIA-569.
- C. GRC: Comply with ANSI C80.1 and UL 6.
- D. ARC: Comply with ANSI C80.5 and UL 6A.
- E. IMC: Comply with ANSI C80.6 and UL 1242.
- F. EMT: Comply with ANSI C80.3 and UL 797.
- G. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.
1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886 and NFPA 70.
  2. Fittings for EMT:
    - a. Material: Steel.
    - b. Type: Setscrew or compression.
  3. Expansion Fittings: PVC or steel to match conduit type, complying with UL-467, rated for environmental conditions where installed, and including flexible external bonding jumper.
  4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch, with overlapping sleeves protecting threaded joints.
- H. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

### 2.2 NONMETALLIC CONDUITS AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements provide products by the following manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. AFC Cable Systems, Inc.
  2. Allied Tube & Conduit; a Tyco International Ltd. Co.
  3. Anamet Electrical, Inc.
  4. Arnco Corporation.
  5. CANTEX Inc.
  6. CertainTeed Corp.
  7. Condux International, Inc.
  8. Electri-Flex Company.
  9. Kraloy.
  10. Lamson & Sessions; Carlon Electrical Products.
  11. Niedax-Kleinhuis USA, Inc.
  12. RACO; a Hubbell company.
  13. Thomas & Betts Corporation.
- B. General Requirements for Nonmetallic Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  2. Comply with TIA-569.

- C. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
- D. Rigid HDPE: Comply with UL 651A.
- E. Continuous HDPE: Comply with UL 651B.
- F. RTRC: Comply with UL 1684A and NEMA TC 14.
- G. Fittings for RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
- H. Solvent cements and adhesive primers shall have a VOC content of 510 and 550 g/L or less, respectively, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

### 2.3 METAL WIREWAYS AND AUXILIARY GUTTERS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Cooper B-Line, Inc.
  - 2. Hoffman; a Pentair company.
  - 3. Mono-Systems, Inc.
  - 4. Square D; a brand of Schneider Electric.
- B. Description: Sheet metal, complying with UL 870 and NEMA 250, Type 3R unless otherwise indicated, and sized according to NFPA 70.
  - 1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 2. Comply with TIA-569.
- C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers: Hinged type or Screw-cover type unless otherwise indicated.
- E. Finish: Manufacturer's standard enamel finish.

### 2.4 SURFACE PATHWAYS

- A. General Requirements for Surface Pathways:
  - 1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 2. Comply with TIA-569.
- B. Surface Metal Pathways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Mono-Systems, Inc.
    - b. Panduit Corp.
    - c. Wiremold / Legrand.

### 2.5 BOXES, ENCLOSURES, AND CABINETS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Cooper Technologies Company; Cooper Crouse-Hinds.
  - 2. EGS/Appleton Electric.
  - 3. Erickson Electrical Equipment Company.
  - 4. Hoffman; a Pentair company.
  - 5. Hubbell Incorporated; Killark Division.
  - 6. Lamson & Sessions; Carlon Electrical Products.
  - 7. Mono-Systems, Inc.
  - 8. O-Z/Gedney; a brand of EGS Electrical Group.
  - 9. RACO; a Hubbell company.
  - 10. Spring City Electrical Manufacturing Company.
  - 11. Thomas & Betts Corporation.
  - 12. Wiremold / Legrand.

- B. General Requirements for Boxes, Enclosures, and Cabinets:
  - 1. Comply with TIA-569.
  - 2. Boxes, enclosures and cabinets installed in wet locations shall be listed for use in wet locations.
- C. Sheet-Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.
- D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.
- E. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
- F. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- G. Gangable boxes are prohibited.
- H. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.
- I. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 3R with continuous-hinge cover with flush latch unless otherwise indicated.
  - 1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.

### PART 3 - EXECUTION

#### 3.1 PATHWAY APPLICATION

- A. Outdoors: Apply pathway products as specified below unless otherwise indicated:
  - 1. Exposed Conduit: GRC and IMC.
  - 2. Underground Conduit: RNC, Type EPC-40-PVC.
  - 3. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R Type 4.
- B. Indoors: Apply pathway products as specified below unless otherwise indicated:
  - 1. Exposed, Not Subject to Physical Damage: EMT.
  - 2. Exposed, Not Subject to Severe Physical Damage: EMT.
  - 3. Exposed and Subject to Severe Physical Damage: GRC or IMC. Pathway locations include the following:
    - a. Loading dock.
    - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    - c. Mechanical rooms.
    - d. Gymnasiums
  - 4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
  - 5. Damp or Wet Locations: GRC.
  - 6. Pathways for Optical-Fiber or Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical-fiber-cable pathway, Plenum-type, communications-cable pathway EMT.
  - 7. Pathways for Optical-Fiber or Communications-Cable Risers in Vertical Shafts EMT.
  - 8. Boxes and Enclosures: NEMA 250 Type 1, except use NEMA 250 Type 4 in institutional and commercial kitchens and damp or wet locations.
- C. Minimum Pathway Size, unless noted otherwise: 1-inch trade size. Minimum size for optical-fiber cables is 1 ¼-inch.
- D. Pathway Fittings: Compatible with pathways and suitable for use and location.
  - 1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
  - 2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
  - 3. EMT: Use setscrew or compression, steel fittings. Comply with NEMA FB 2.10.
- E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
- F. Install surface pathways only where indicated on Drawings.
- G. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F.

#### 3.2 INSTALLATION

- A. Comply with NECA 1, NECA 101, and TIA-569 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum pathways. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.

- B. Keep pathways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and below steam piping.
- C. Complete pathway installation before starting conductor installation.
- D. Comply with requirements in Section 26 05 29 "Hangers and Supports for Electrical Systems" for hangers and supports.
- E. Arrange stub-ups so curved portions of bends are not visible above finished slab.
- F. Install no more than the equivalent of two 90-degree bends in any pathway run. Support within 12 inches of changes in direction. Utilize long radius ells for all optical-fiber cables.
- G. Conceal conduit and EMT within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
- H. Support conduit within 12 inches of enclosures to which attached.
- I. Pathways Embedded in Slabs:
  - 1. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum 10-foot intervals.
  - 2. Arrange pathways to cross building expansion joints at right angles with expansion fittings.
  - 3. Arrange pathways to keep a minimum of 2 inches of concrete cover in all directions.
  - 4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
  - 5. Change from ENT to GRC before rising above floor.
- J. Stub-ups to Above Recessed Ceilings:
  - 1. Use EMT, IMC, or RMC for pathways.
  - 2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.
- K. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.
- L. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.
- M. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.
- N. Cut conduit perpendicular to the length. For conduits of 2-inch trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.
- O. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200-lbtensile strength. Leave at least 12 inches of slack at each end of pull wire. Cap underground pathways designated as spare above grade alongside pathways in use.
- P. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid, and flexible, as follows:
  - 1. 1-Inch Trade Size and Smaller: Install pathways in maximum lengths of 50 feet.
  - 2. 1 1/4-Inch Trade Size and Larger: Install pathways in maximum lengths of 75 feet.
  - 3. Install with a maximum of two 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.
- Q. Install pathway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway sealing fittings according to NFPA 70.
- R. Install devices to seal pathway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:
  - 1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
  - 2. Where an underground service pathway enters a building or structure.
  - 3. Where otherwise required by NFPA 70.
- S. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.

- T. Expansion-Joint Fittings:
    - 1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet. Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F and that has straight-run length that exceeds 100 feet.
    - 2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
      - a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
      - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
      - c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
      - d. Attics: 135 deg F temperature change.
    - 3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
    - 4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
    - 5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
  - U. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
  - V. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block and install box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
  - W. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
  - X. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
  - Y. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
  - Z. Set metal floor boxes level and flush with finished floor surface.
  - AA. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.
- 3.3 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR COMMUNICATIONS PENETRATIONS
- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 27 05 44 "Sleeves and Sleeve Seals for Communications Pathways and Cabling."
- 3.4 FIRESTOPPING
- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 07 84 13 "Penetration Firestopping."
- 3.5 PROTECTION
- A. Protect coatings, finishes, and cabinets from damage or deterioration.
    - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
    - 2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 27 05 28

## SECTION 27 11 00

### COMMUNICATIONS EQUIPMENT ROOM FITTINGS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Telecommunications mounting elements.
  - 2. Backboards.
  - 3. Telecommunications equipment racks and cabinets.
  - 4. Telecommunications service entrance pathways.
  - 5. Grounding.
- B. Related Requirements:
  - 1. Division 27 Section "Communications Backbone Cabling" for voice and data cabling associated with system panels and devices.
  - 2. Division 27 Section "Communications Horizontal Cabling" for voice and data cabling associated with system panels and devices.

##### 1.2 DEFINITIONS

- A. Basket Cable Tray: A fabricated structure consisting of wire mesh bottom and side rails.
- B. BICSI: Building Industry Consulting Service International.
- C. Channel Cable Tray: A fabricated structure consisting of a one-piece, ventilated-bottom or solid-bottom channel not exceeding 6 inches (152 mm) in width.
- D. Ladder Cable Tray: A fabricated structure consisting of two longitudinal side rails connected by individual transverse members (rungs).
- E. LAN: Local area network.
- F. RCDD: Registered Communications Distribution Designer.
- G. Solid-Bottom or Nonventilated Cable Tray: A fabricated structure consisting of a bottom without ventilation openings within integral or separate longitudinal side rails.
- H. Trough or Ventilated Cable Tray: A fabricated structure consisting of integral or separate longitudinal rails and a bottom having openings sufficient for the passage of air and using 75 percent or less of the plan area of the surface to support cables.

##### 1.3 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Floor-mounted cabinets and cable pathways shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

##### 1.4 SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for equipment racks and cabinets. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For communications equipment room fittings. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Equipment Racks and Cabinets: Include workspace requirements and access for cable connections.
  - 3. Grounding: Indicate location of grounding bus bar and its mounting detail showing standoff insulators and wall mounting brackets.

- C. Qualification Data: For Installer(s), and qualified layout technician, installation supervisor, and field inspector.
- D. Seismic Qualification Certificates: For floor-mounted cabinets, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions. Base certification on the maximum number of components capable of being mounted in each rack type. Identify components on which certification is based.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
  - 4.

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Cabling installer must have personnel certified by BICSI on staff.
  - 1. Layout Responsibility: Preparation of Shop Drawings shall be under the direct supervision of RCDD.
  - 2. Installation Supervision: Installation shall be under the direct supervision of Registered Technician or Level 2, who shall be present at all times when Work of this Section is performed at Project site.
  - 3. Field Inspector: Currently registered by BICSI as RCDD or Commercial Installer, Level 2, to perform the on-site inspection.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Telecommunications Pathways and Spaces: Comply with TIA-569.
- D. Grounding: Comply with TIA-607.

#### 1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install equipment frames and cable trays until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and work above ceilings is complete.

#### 1.7 COORDINATION

- A. Coordinate layout and installation of communications equipment with Owner's telecommunications and LAN equipment and service suppliers. Coordinate service entrance arrangement with local exchange carrier.
  - 1. Meet jointly with telecommunications and LAN equipment suppliers, local exchange carrier representatives, and Owner to exchange information and agree on details of equipment arrangements and installation interfaces.
  - 2. Record agreements reached in meetings and distribute them to other participants.
  - 3. Adjust arrangements and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize arrangement and space requirements of telephone switch and LAN equipment.
  - 4. Adjust arrangements and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in the equipment room.
- B. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

### **PART 2 - PRODUCTS**

#### 2.1 PATHWAYS

- A. General Requirements: Comply with TIA-569.
- B. Cable Support: NRTL labeled. Cable support brackets shall be designed to prevent degradation of cable performance and pinch points that could damage cable. Cable tie slots fasten cable ties to brackets.
  - 1. Comply with NFPA 70 and UL 2043 for fire-resistant and low-smoke-producing characteristics.
  - 2. Support brackets with cable tie slots for fastening cable ties to brackets.
  - 3. Lacing bars, spools, J-hooks, and D-rings.

4. Straps and other devices.
  - C. Cable Trays:
    1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Chatsworth.
      - b. Cooper B-Line, Inc.
      - c. Snake Tray
    2. Cable Tray Materials: Metal, suitable for indoors and protected against corrosion by hot dip galvanizing, anodizing or power coating (no electro-galvanized tray shall be used in equipment rooms).
      - a. Basket Cable Trays: 24 inch by 6 inch, unless noted otherwise on drawings. Wire mesh spacing shall not exceed 2 by 4 inches (50 by 100 mm).
      - b. Cable Ladder: 18 inches (455 mm) wide, and a rung spacing of 6 inches (150 mm), unless noted otherwise on drawings.
      - c. Channel Cable Trays: One-piece construction, aluminum, nominally 6 inches (150 mm) wide, unless otherwise noted on drawings. Solid bottom.
  - D. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems." Flexible metal conduit shall not be used.
    1. Outlet boxes shall be 4 11/16 square by 2 1/2 inches deep, with plaster, tile or surface "ring" to suit installation.
- 2.2 BACKBOARDS
- A. Backboards: Plywood, fire-retardant treated, A-C, 3/4 by 48 by 96 inches (19 by 1220 by 2440 mm). Comply with requirements for plywood backing panels specified in Division 06 Section "Rough Carpentry." Mount A side facing the room and paint to match Wall Finish Schedule, after field verification of "fire Retardant" stamps.
- 2.3 EQUIPMENT FRAMES
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    1. Chatsworth Products.
    2. Cooper B-Line, Inc.
    3. Middle Atlantic
  - B. General Frame Requirements:
    1. Distribution Frames: Freestanding and wall-mounting, modular-steel units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
    2. Module Dimension: Width compatible with EIA 310 standard, 19-inch (480-mm) panel mounting.
    3. Finish: Manufacturer's standard, baked-polyester powder coat.
  - C. Floor-Mounted "Relay" Racks: Modular-type, steel or aluminum construction.
    1. Two vertical 6" cable managers with hinged covers and horizontal cable management channels, top and bottom cable troughs, grounding lug, and two power strips.
    2. Baked-polyester powder coat finish.
      - a. CPI 55053-703 2 post rack
      - b. CPI 35521-703 6" vertical mangers
      - c. CPI EO-1001-C basic vertical PDU
  - D. Modular Wall Cabinets:
    1. Wall mounting.
    2. Steel or aluminum construction.
    3. Treated to resist corrosion.
    4. Lockable front doors.
    5. Louvered side panels.
    6. Cable access provisions top and bottom.
    7. Grounding lug.
    8. Side-mounted, 250-cfm (118-L/s) fan.
    9. Power strip.
    10. All cabinets keyed alike.
      - a. CPI 12419-748 Cube-iT wall cabinet.
      - b. CPI 40972-001 Fan (2).
      - c. CPI 12816-705.
  - E. Cable Management for Equipment Frames:
    1. Metal, with integral wire retaining fingers.

2. Baked-polyester powder coat finish.
3. Vertical cable management panels shall have front and rear channels, with hinged covers.
4. Provide horizontal crossover cable managers as indicated on drawings, or not less than 6-2RU managers per rack and cabinet.
  - a. CPI 35522-703 8" vertical mangers.
  - b. CPI 35441-702 2U manager.

#### 2.4 GROUNDING

- A. Comply with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems." for grounding conductors and connectors.
- B. Telecommunications Main Bus Bar:
  1. Connectors: Mechanical type, cast silicon bronze, exothermic or solderless 2-hole, 2-crimp compression wire terminals, with long-barrel(2-crimp), two-bolt connection to ground bus bar.
  2. Ground Bus Bar: Copper, minimum 1/4 inch thick by 4 inches wide (6 mm thick by 100 mm wide) with 9/32-inch (7.14-mm) holes spaced 1-1/8 inches (28 mm) apart.
  3. Stand-Off Insulators: Comply with UL 891 for use in switchboards, 600 V. Lexan or PVC, impulse tested at 5000 V.
- C. Comply with TIA-607.

#### 2.5 LABELING

- A. Comply with TIA-606 and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

### **PART 3 - EXECUTION**

#### 3.1 ENTRANCE FACILITIES

- A. Contact telecommunications service provider and arrange for installation of demarcation point, protected entrance terminals, and a housing when so directed by service provider.
- B. Install underground, buried, and/or aerial pathways, where indicated on drawings, complying with recommendations in TIA-569, "Entrance Facilities" Article.

#### 3.2 INSTALLATION

- A. Comply with NECA 1.
- B. Comply with BICSI TDMM for layout and installation of communications equipment rooms.
- C. Cable Trays: Comply with NEMA VE 2 and TIA-569-7.
- D. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

#### 3.3 FIRESTOPPING

- A. Comply with requirements in Division 07 Section "Penetration Firestopping." Comply with TIA-569, Annex A, "Firestopping."
- B. Comply with BICSI TDMM, "Firestopping Systems" Article.

#### 3.4 GROUNDING

- A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. Comply with TIA-607.
- C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least 2-inch (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.
- D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.
  1. Bond the shield of shielded cable to the grounding bus bar in communications rooms and spaces.

3.5 IDENTIFICATION

- A. Identify system components, wiring, and cabling complying with TIA-606. Comply with requirements in Division 26 Section "Identification for Electrical Systems." Comply with requirements in Division 09 Section "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
- B. See Division 27 Section "Communications Horizontal Cabling" for additional identification requirements. See Evaluations for discussion of TIA standard as it applies to this Section. Paint and label colors for equipment identification shall comply with TIA-606 for Class 4 level of administration including optional identification requirements of this standard.
- C. Labels shall be preprinted or computer-printed type.

END OF SECTION 27 11 00

## SECTION 27 13 00

### COMMUNICATIONS BACKBONE CABLING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Pathways.
  - 2. UTP cable.
  - 3. 8.7/125-micrometer, optical fiber cabling.
  - 4. Cable connecting hardware, patch panels, and cross-connects.
  - 5. Cabling identification products.

##### 1.2 DEFINITIONS

- A. BICSI: Building Industry Consulting Service International.
- B. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
- C. EMI: Electromagnetic interference.
- D. IDC: Insulation displacement connector.
- E. LAN: Local area network.
- F. RCDD: Registered Communications Distribution Designer.
- G. UTP: Unshielded twisted pair.

##### 1.3 BACKBONE CABLING DESCRIPTION

- A. Backbone cabling system shall provide interconnections between communications equipment rooms, main terminal space, and entrance facilities in the telecommunications cabling system structure. Cabling system consists of backbone cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for backbone-to-backbone cross-connection.
- B. Backbone cabling cross-connects may be located in communications equipment rooms or at entrance facilities. Bridged taps and splitters shall not be used as part of backbone cabling.

##### 1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Backbone cabling system shall comply with transmission standards in TIA-568-D.1, when tested according to test procedures of this standard.

##### 1.5 SUBMITTALS

- A. Product Data: For each type of product indicated.
  - 1. For coaxial cable, include the following installation data for each type used:
    - a. Nominal OD.
    - b. Minimum bending radius.
    - c. Maximum pulling tension.
- B. Shop Drawings:
  - 1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
  - 2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
  - 3. Cabling administration drawings and printouts.
  - 4. Wiring diagrams to show typical wiring schematics including the following:
    - a. Cross-connects.
    - b. Patch panels.
    - c. Patch cords.
  - 5. Cross-connects and patch panels. Detail mounting assemblies and show elevations and physical relationship between the installed components.

6. Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:
    - a. Vertical and horizontal offsets and transitions.
    - b. Clearances for access above and to side of cable trays.
    - c. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
    - d. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.
  - C. Qualification Data: For Installer, qualified layout technician, installation supervisor, and field inspector.
  - D. Source quality-control reports.
  - E. Field quality-control reports.
  - F. Maintenance Data: For splices and connectors to include in maintenance manuals.
  - G. Software and Firmware Operational Documentation:
    1. Software operating and upgrade manuals.
    2. Program Software Backup: On magnetic media or compact disk, complete with data files.
    3. Device address list.
    4. Printout of software application and graphic screens.
- 1.6 QUALITY ASSURANCE
- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
    1. Layout Responsibility: Preparation of Shop Drawings and Cabling Administration Drawings, and field testing program development by an RCDD.
    2. Installation Supervision: Installation shall be under the direct supervision of Registered Technician or Level 2 Installer, who shall be present at all times when Work of this Section is performed at Project site.
    3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.
  - B. Testing Agency Qualifications: An NRTL.
    1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.
  - C. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    1. Flame-Spread Index: 25 or less.
    2. Smoke-Developed Index: 50 or less.
  - D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - E. Telecommunications Pathways and Spaces: Comply with TIA-569.
  - F. Grounding: Comply with TIA-607.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Test cables upon receipt at Project site.
    1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical loss test set.
    2. Test optical fiber cable while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector, including the loss value of each. Retain test data and include the record in maintenance data.
    3. Test each pair of UTP cable for open and short circuits.
- 1.8 PROJECT CONDITIONS
- A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- 1.9 COORDINATION
- A. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.

1.10 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Patch-Panel Units: One of each type.
  - 2. Connecting Blocks: One of each type.

**PART 2 - PRODUCTS**

2.1 PATHWAYS

- A. General Requirements: Comply with TIA-569.
- B. Cable Support: NRTL labeled for support of Category 6A cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.
  - 1. Support brackets with cable tie slots for fastening cable ties to brackets.
  - 2. Lacing bars, spools, J-hooks, and D-rings.
  - 3. Straps and other devices.
- C. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems." Flexible metal conduit shall not be used.
  - 1. Pull boxes shall be arranged for straight pulls only, no pull box shall be used as a turning point for the cable run.

2.2 UTP CABLE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Berk-Tek
  - 2. CommScope, Inc.
  - 3. Superior Essex Inc.
- B. Description: 100-ohm, pair count as indicated on the drawings UTP, formed into 25-pair binder groups covered with a gray thermoplastic jacket.
  - 1. Comply with ICEA S-90-661 for mechanical properties.
  - 2. Comply with TIA-568-D.1 for performance specifications.
  - 3. Comply with TIA-568-D.2, Category 5e.
  - 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:
    - a. Communications, Riser Rated: Type CMP.

2.3 UTP CABLE HARDWARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Leviton Voice & Data Division.
  - 2. CommScope, Inc.
  - 3. Panduit Corp.
- B. General Requirements for Cable Connecting Hardware: Comply with TIA-568-B.2, IDC type, with modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of same category or higher.
- C. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between cables.
  - 1. Number of Terminals per Field: One for each conductor in assigned cables.
- D. Patch Panel: Modular panels housing multiple-numbered jack units with IDC-type connectors at each jack for permanent termination of pair groups of installed cables.
  - 1. Number of Jacks per Field: One for each four-pair UTP cable indicated or conductor group of indicated cables, plus spares and blank positions to suit a future expansion or 25%.
- E. Jacks and Jack Assemblies: Modular, color-coded, eight-position modular receptacle units with integral IDC-type terminals.

- F. Patch Cords: Factory-made, 4-pair cables in 36-inch (900-mm) and 48-inch (1200-mm) lengths, 50% each; terminated with 8-position modular plug at each end, total quantity to match the installed quantity of jacks.
  - 1. Patch cords shall be factory manufactured, have bend-relief-compliant boots and color-coded icons to ensure Category 6A performance. Patch cords shall have latch guards to protect against snagging.
  - 2. Patch cords shall be color-coded cables and boots for circuit identification.

#### 2.4 OPTICAL FIBER CABLE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Berk-Tek
  - 2. CommScope, Inc.
  - 3. Corning Cable Systems.
  - 4. Hitachi Industries.
- B. Description: Single mode, 8.7/125-micrometer, type OS2, fiber count as indicted on the drawings, nonconductive, tight buffer, optical fiber cable.
  - 1. Comply with ICEA S-83-596 for mechanical properties.
  - 2. Comply with TIA-568-D.3 for performance specifications.
  - 3. Comply with TIA-492AAAA-A for detailed specifications.
  - 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:
    - a. Riser Rated, Nonconductive: Type OFNP, complying with UL 1666.
  - 5. Maximum Attenuation: 0.40 dB/km at 1310 nm; 0.30 dB/km at 1550 nm.
- C. Jacket:
  - 1. Jacket Color:
  - 2. Yellow for 8.7/125-micrometer cable.
  - 3. Cable cordage jacket, fiber, unit, and group color shall be according to TIA-598-C.
  - 4. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches (1000 mm).

#### 2.5 OPTICAL FIBER CABLE HARDWARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Corning Cable Systems.
  - 2. Leviton
  - 3. CommScope, Inc.
- B. Cross-Connects and Patch Panels: Modular panels housing multiple-numbered, duplex cable connectors.
  - 1. Number of Connectors per Field: One for each fiber of cable or cables assigned to field, plus spares and blank positions adequate to suit 25% expansion.
- C. Patch Cords: Factory-made, dual-fiber cables in 36-inch (900-mm) lengths.
- D. Cable Connecting Hardware:
  - 1. Comply with Fiber Optical Connector Intermate ability Standards (FOCIS) specifications of TIA-604-2, TIA-604-3-A, and TIA-604-12. Comply with TIA-568-D.3.
  - 2. Quick-connect, simplex and duplex, Type LC; as required to match active equipment (both contractor furnished and owner furnished) connectors. Insertion loss not more than 0.75 dB.
  - 3. Type SFF connectors may be used in termination racks, panels, and equipment packages.

### PART 3 - EXECUTION

#### 3.1 WIRING METHODS

- A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces, in attics, where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.
  - 1. Install plenum cable in environmental air spaces, including plenum ceilings.
  - 2. Comply with requirements for raceways and boxes specified in Division 26 Section "Raceway and Boxes for Electrical Systems."

- B. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible. Protect backbone cables in Inner-Duct or conduit for their entire runs between equipment/technology rooms and closets.
- C. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

### 3.2 INSTALLATION OF PATHWAYS

- A. Cable Trays: Comply with NEMA VE 2 and TIA-569.
- B. Comply with requirements for demarcation point, pathways, cabinets, and racks specified in Division 27 Section "Communications Equipment Room Fittings." Drawings indicate general arrangement of pathways and fittings.
- C. Comply with TIA-569 for pull-box sizing and length of conduit and number of bends between pull points.
- D. Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.
- E. Install manufactured conduit sweeps and long-radius elbows whenever possible.
- F. Pathway Installation in Communications Equipment Rooms:
  - 1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
  - 2. Install cable trays to route cables if conduits cannot be located in these positions.
  - 3. Secure conduits to backboard when entering room from overhead.
  - 4. Extend conduits 3 inches (76 mm) above finished floor.
  - 5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

### 3.3 INSTALLATION OF CABLES

- A. Comply with NECA 1.
- B. General Requirements for Cabling:
  - 1. Comply with TIA-568-D.1.
  - 2. Comply with BICSI ITSIM, "Cable Termination Practices."
  - 3. Install 110-style IDC termination hardware unless otherwise indicated.
  - 4. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
  - 5. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
  - 6. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
  - 7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Use lacing bars and distribution spools.
  - 8. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
  - 9. Cold-Weather Installation: Bring cable to room temperature before de-reeling. Heat lamps shall not be used for heating.
  - 10. In the communications equipment room, install a 10-foot- (3-m-) long service loop on each cable.
  - 11. Pulling Cable: Comply with BICSI ITSIM, "Pulling Cable." Monitor cable pull tensions.
- C. UTP Cable Installation:
  - 1. Comply with TIA-568-D.2.
  - 2. Do not untwist UTP cables more than 1/2 inch (12 mm) from the point of termination to maintain cable geometry.
- D. Optical Fiber Cable Installation:
  - 1. Comply with TIA-568-D.3.
  - 2. Cable may be terminated on connecting hardware that is rack or cabinet mounted.

- E. Open-Cable Installation:
    - 1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
    - 2. Suspend UTP cable not in a wireway or pathway, a minimum of 8 inches (200 mm) above ceilings by cable supports not more than 60 inches (1524 mm) apart.
    - 3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.
  - F. Installation of Cable Routed Exposed under Raised Floors:
    - 1. Install plenum-rated cable only.
    - 2. Install cabling after the flooring system has been installed in raised floor areas.
    - 3. Coil cable 6 feet (1800 mm) long not less than 12 inches (300 mm) in diameter below each feed point.
  - G. Group connecting hardware for cables into separate logical fields.
  - H. Separation from EMI Sources:
    - 1. Comply with BICSI TDMM and TIA-569 recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
    - 2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
      - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
      - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).
      - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (610 mm).
    - 3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
      - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
      - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
      - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).
    - 4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
      - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
      - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (76 mm).
      - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).
    - 5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches (1200 mm).
    - 6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).
- 3.4 FIRESTOPPING
- A. Comply with requirements in Division 07 Section "Penetration Firestopping." Comply with TIA-569, Annex A, "Firestopping."
  - B. Comply with BICSI TDMM, "Firestopping Systems" Article.
- 3.5 GROUNDING
- A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
  - B. Comply with TIA-607.
  - C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least 2-inch (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.
  - D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.
- 3.6 IDENTIFICATION
- A. Identify system components, wiring, and cabling complying with TIA-606. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
    - 1. Administration Class: 4.
    - 2. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.

- B. Comply with requirements in Division 09 Section "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
- C. See Division 27 Section "Communications Horizontal Cabling" for additional identification requirements. See Evaluations for discussion about TIA standard as it applies to this Section. Paint and label colors for equipment identification shall comply with TIA-606 for Class 4 level of administration including optional identification requirements of this standard.
- D. Comply with requirements in Division 27 Section "Communications Horizontal Cabling" for cable and asset management software.
- E. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.
- F. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, backbone pathways and cables, entrance pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.
- G. Cable and Wire Identification:
  - 1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
  - 2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
  - 3. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
    - a. Individually number wiring conductors connected to terminal strips and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device with name and number of particular device as shown.
    - b. Label each unit and field within distribution racks and frames.
  - 4. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.
- H. Labels shall be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA 606, for the following:
  - 1. Cables use flexible vinyl or polyester that flexes as cables are bent.

### 3.7 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
  - 1. Visually inspect UTP and optical fiber jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments and inspect cabling connections for compliance with TIA-568-D.1.
  - 2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
  - 3. Test UTP copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.
    - a. Test instruments shall meet or exceed applicable requirements in TIA-568-D.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
  - 4. Optical Fiber Cable Tests:
    - a. Test instruments shall meet or exceed applicable requirements in TIA-568-D.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    - b. Link End-to-End Attenuation Tests:
      - 1) Horizontal and multimode backbone link measurements: Test at 850 or 1300 nm in 1 direction according to TIA-526-14-A, Method B, One Reference Jumper.
      - 2) Attenuation test results for backbone links shall be less than 2.0 dB. Attenuation test results shall be less than that calculated according to equation in TIA-568-D.1.

- C. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.
- D. Remove and replace cabling where test results indicate that they do not comply with specified requirements.
- E. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

END OF SECTION 27 13 00

## SECTION 27 15 00

### COMMUNICATIONS HORIZONTAL CABLING

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Pathways.
  - 2. UTP cable. Category 6A
  - 3. UTP cable. Category 6
  - 4. Cable connecting hardware, patch panels, and cross-connects.
  - 5. Telecommunications outlet/connectors.
  - 6. Cabling system identification products.
  - 7. Cable management system.
- B. Related Sections:
  - 1. Division 27 Section "Communications Backbone Cabling" for voice and data cabling associated with system panels and devices.
  - 2. Division 28 Section "Conductors and Cables for Electronic Safety and Security" for voice and data cabling associated with system panels and devices.

##### 1.2 DEFINITIONS

- A. Basket Cable Tray: A fabricated structure consisting of wire mesh bottom and side rails.
- B. BICSI: Building Industry Consulting Service International.
- C. Channel Cable Tray: A fabricated structure consisting of a one-piece, ventilated-bottom or solid-bottom channel.
- D. Consolidation Point: A location for interconnection between horizontal cables extending from building pathways and horizontal cables extending into furniture pathways.
- E. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
- F. EMI: Electromagnetic interference.
- G. IDC: Insulation displacement connector.
- H. Ladder Cable Tray: A fabricated structure consisting of two longitudinal side rails connected by individual transverse members (rungs).
- I. LAN: Local area network.
- J. MUTOA: Multiuser telecommunications outlet assembly, a grouping in one location of several telecommunications outlets/connectors.
- K. Outlet/Connectors: A connecting device in the work area on which horizontal cable or outlet cable terminates.
- L. RCDD: Registered Communications Distribution Designer.
- M. Solid-Bottom or Nonventilated Cable Tray: A fabricated structure consisting of longitudinal side rails and a bottom without ventilation openings.
- N. Trough or Ventilated Cable Tray: A fabricated structure consisting of longitudinal side rails and a bottom having openings for the passage of air.
- O. UTP: Unshielded twisted pair.

### 1.3 HORIZONTAL CABLING DESCRIPTION

- A. Horizontal cable and its connecting hardware provide the means of transporting signals between the telecommunications outlet/connector and the horizontal cross-connect located in the communications equipment room. This cabling and its connecting hardware are called "permanent link," a term that is used in the testing protocols.
  - 1. TIA-568-B.1 requires that a minimum of two telecommunications outlet/connectors be installed for each work area.
  - 2. Horizontal cabling shall contain no more than one transition point or consolidation point between the horizontal cross-connect and the telecommunications outlet/connector.
  - 3. Bridged taps and splices shall not be installed in the horizontal cabling.
  - 4. Splitters shall not be installed as part of the optical fiber cabling.
- B. A work area is approximately 100 sq. ft. (9.3 sq. m) and includes the components that extend from the telecommunications outlet/connectors to the station equipment.
- C. The maximum allowable horizontal cable length is 295 feet (90 m). This maximum allowable length does not include an allowance for the length of 16 feet (4.9 m) to the workstation equipment. The maximum allowable length does not include an allowance for the length of 16 feet (4.9 m) in the horizontal cross-connect.

### 1.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Horizontal cabling system shall comply with transmission standards in TIA-568-B.1, when tested according to test procedures of this standard.

### 1.5 SUBMITTALS

- A. Product Data: For each type of product indicated.
  - 1. For coaxial cable, include the following installation data for each type used:
    - a. Nominal OD.
    - b. Minimum bending radius.
    - c. Maximum pulling tension.
- B. Shop Drawings:
  - 1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
  - 2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
  - 3. Cabling administration drawings and printouts.
  - 4. Wiring diagrams to show typical wiring schematics, including the following:
    - a. Cross-connects.
    - b. Patch panels.
    - c. Patch cords.
  - 5. Cross-connects and patch panels. Detail mounting assemblies and show elevations and physical relationship between the installed components.
  - 6. Cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:
    - a. Vertical and horizontal offsets and transitions.
    - b. Clearances for access above and to side of cable trays.
    - c. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
    - d. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.
- C. Samples: For workstation outlets, jacks, jack assemblies, in specified finish, one for each size and outlet configuration complete in faceplates for color selection and review of technical features.
- D. Qualification Data: For Installer, and qualified layout technician, installation supervisor, and field inspector.
- E. Source quality-control reports.
- F. Field quality-control reports.
- G. Maintenance Data: For splices and connectors to include in maintenance manuals.
- H. Software and Firmware Operational Documentation:
  - 1. Software operating and upgrade manuals.
  - 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
  - 3. Device address list.

4. Printout of software application and graphic screens.

#### 1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
  1. Layout Responsibility: Preparation of Shop Drawings, Cabling Administration Drawings, and field-testing program development by an RCDD.
  2. Installation Supervision: Installation shall be under the direct supervision of Registered Technician or Level 2 Installer, who shall be present at all times when Work of this Section is performed at Project site.
  3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.
- B. Testing Agency Qualifications: An NRTL.
  1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.
  2. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  3. Flame-Spread Index: 25 or less.
  4. Smoke-Developed Index: 50 or less.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Telecommunications Pathways and Spaces: Comply with TIA-569.
- E. Grounding: Comply with TIA-607.

#### 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Test cables upon receipt at Project site.
  1. Test optical fiber cables to determine the continuity of the strand end to end. Use optical loss test set.
  2. Test optical fiber cables while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector, including the loss value of each. Retain test data and include the record in maintenance data.
  3. Test each pair of UTP cable for open and short circuits.

#### 1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

#### 1.9 COORDINATION

- A. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.
- B. Coordinate telecommunications outlet/connector locations with location of power receptacles at each work area.

#### 1.10 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. Patch-Panel Units: One of each type.
  2. Connecting Blocks: One of each type.
  3. Device Plates: One of each type.

## PART 2 - PRODUCTS

#### 2.1 PATHWAYS

- A. General Requirements: Comply with TIA-569.

- B. Cable Support: NRTL labeled for support of Category 6A cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.
  - 1. Support brackets with cable tie slots for fastening cable ties to brackets.
  - 2. Lacing bars, spools, J-hooks, and D-rings.
  - 3. Straps and other devices.
- C. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems." Flexible metal conduit shall not be used.
  - 1. Outlet boxes shall be no smaller than 4 11/16-inch square, and 2-1/2-inches (64 mm) deep, with appropriate plaster/tile/surface ring to suit the box installation.

## 2.2 UTP CABLE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Berk-Tek
  - 2. Superior Essex, Inc.
  - 3. Hitachi Industries.
- B. Category 6A: 100-ohm, 4-pair UTP covered with a blue thermoplastic jacket.
  - 1. Comply with ICEA S-90-661 for mechanical properties.
  - 2. Comply with TIA-568 for performance specifications.
  - 3. Comply with TIA-568, Category 6A.
  - 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:
    - a. Communications, Plenum Rated: Type CMP or MPP, complying with NFPA 262.
    - b. Berk-Tek Lanmark SST
    - c. Superior Essex 10Gain XP+
- C. Category 6: 100-ohm, 4-pair UTP covered with a blue thermoplastic jacket.
  - 1. Comply with ICEA S-90-661 for mechanical properties.
  - 2. Comply with TIA-568 for performance specifications.
  - 3. Comply with TIA-568, Category 6.
  - 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:
    - a. Communications, Plenum Rated: Type CMP or MPP, complying with NFPA 262.
    - b. Berk-Tek Lanmark-6
    - c. Superior Essex

## 2.3 UTP CABLE HARDWARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Leviton Voice & Data Division.
  - 2. Legrand Ortronics,
  - 3. Panduit Corp.
- B. General Requirements for Twisted Pair Cable Hardware:
  - 1. Comply with the performance requirements of Category 6A or Category 6 as appropriate.
  - 2. Comply with TIA-568-D.2, IDC type, with modules designed for punch-down caps or tools.
  - 3. Cables shall be terminated with connecting hardware of same category or higher.
- C. Source Limitations: Obtain twisted pair cable hardware from single source from single manufacturer.
- D. Patch Panel: Modular panels housing numbered jack units with IDC-type connectors at each jack location for permanent termination of pair groups of installed cables.
  - 1. Features:
    - a. Labeling areas adjacent to conductors.
    - b. Replaceable connectors.
    - c. Angled panel with 48 ports.
  - 2. Construction: 16-gauge steel and mountable on 19-inch equipment racks.
  - 3. Number of Jacks per Field: One for each four-pair cable indicated.
- E. Patch Cords: Factory-made, four-pair cables 50% 3' and 50% 5' at MDF rack and 100 % 10' at end point; terminated with an eight-position modular plug at each end.
  - 1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure performance. Patch cords shall have latch guards to protect against snagging.
  - 2. Patch cords shall have color-coded boots for circuit identification.
  - 3. Provide both sizes per each port/cable installed.

4. Category 6A White 3', 5' & 10' as noted above. Provide additional colors as required by owner.
  - F. Plugs and Plug Assemblies:
    1. Male; eight-position; color-coded modular telecommunications connector designed for termination of a single four-pair, 100-ohm, unshielded or shielded twisted pair cable.
    2. Standard: Comply with TIA-568-D.2.
    3. Marked to indicate transmission performance.
  - G. Jacks and Jack Assemblies:
    1. Female; eight-position; modular; fixed telecommunications connector designed for termination of a single four-pair, 100-ohm, unshielded or shielded twisted pair cable.
    2. Designed to snap-in to a patch panel or faceplate.
    3. Standard: Comply with TIA-568-D.2.
    4. Marked to indicate transmission performance.
    5. White in color to match plate.
    6. All under floor outlet locations shall be supplied with shutters or covers for dust and dirt protection.
  - H. Faceplate:
    1. Two-port or four-port, vertical single gang faceplates designed to mount to single gang wall boxes.
    2. Plastic Faceplate: High-impact plastic. White in color.
    3. For use with snap-in jacks accommodating any combination of twisted pair, optical fiber, and coaxial work area cords.
      - a. Flush mounting jacks.
        - 1) Leviton 42080-2WL 2 port, 42080-4WL 4 port or equivalent by other manufacturers.
      - b. Furniture Bezel (Confirm furniture manufacturer with Architect).
      - c. Surface box:
        - 1) Leviton 4S089-2WP 2 port WAP box with drop wire kit Leviton 49223-CBC or equivalent by other manufacturers.
      - d. Stainless Steel wall phone plate:
        - 1) Leviton 4108-1SP or equivalent by other manufacturers.
      - e. Blanks White to match plate in all unused ports
  - I. Legend:
    1. Machine printed, in the field, using adhesive-tape label.
    2. Snap-in, clear-label covers and machine-printed paper inserts.
- 2.4 TELECOMMUNICATIONS OUTLET/CONNECTORS
- A. Jacks: 100-ohm, balanced, twisted-pair connector; four-pair, eight-position modular. Comply with TIA-568-B.1.
  - B. Workstation Outlets: Number of ports as indicated on the drawings; connector assemblies mounted in faceplate(s) as indicated on the drawings.
    1. Faceplates: Stainless Steel (painted, brushed, or polished), brass, or high-impact plastic, to match the electrical devices in the same area. Coordinate color with Division 26 Section "Wiring Devices."
    2. For use with snap-in jacks accommodating any combination of UTP, optical fiber, and coaxial work area cords.
      - a. Flush mounting jacks, positioning the cord at a 45-degree angle.
    3. Legend: Factory labeled by silk-screening or engraving for stainless steel and brass faceplates.
    4. Legend: Snap-in, clear-label covers and machine-printed paper inserts for plastic faceplates.
- 2.5 GROUNDING
- A. Comply with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.
  - B. Comply with TIA-607.
- 2.6 IDENTIFICATION PRODUCTS
- A. Comply with TIA-606-C and UL 969 for labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
  - B. Comply with requirements in Division 26 Section "Identification for Electrical Systems."

## 2.7 CABLE MANAGEMENT SYSTEM

- A. Description: Computer-based cable management system, in tabular form in Microsoft Excel or other file format approved by the Owner.
- B. Document physical characteristics by recording the network, TIA details, and connections between equipment and cable.
- C. Information shall be presented in spreadsheet format, schematic plans, or technical drawings.
  - 1. Microsoft Visio Professional or AutoCAD drawing software shall be used as drawing and schematic plans software.
- D. Data shall correlate and correspond to the following testing and recording devices:
  - 1. Direct upload tests from circuit testing instrument into the personal computer.

## 2.8 SOURCE QUALITY CONTROL

- A. Factory test UTP and optical fiber cables on reels according to TIA-568-B.1.
- B. Factory test UTP cables according to TIA-568-B.2.
- C. Factory test multimode optical fiber cables according to TIA-526-14-A and TIA-568-B.3.
- D. Factory-sweep test coaxial cables at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response, or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results.
- E. Cable will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

## PART 3 - EXECUTION

### 3.1 WIRING METHODS

- A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters, except in accessible ceiling spaces, in attics, where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.
  - 1. Install plenum cable in environmental air spaces, including plenum ceilings.
  - 2. Comply with requirements for raceways and boxes specified in Division 26 Section "Raceway and Boxes for Electrical Systems."
- B. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- C. Wiring within Enclosures: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

### 3.2 INSTALLATION OF PATHWAYS

- A. Cable Trays: Comply with NEMA VE 2 and TIA-569-7.
- B. Comply with requirements for demarcation point, pathways, cabinets, and racks specified in Division 27 Section "Communications Equipment Room Fittings." Drawings indicate general arrangement of pathways and fittings.
- C. Comply with TIA-569 for pull-box sizing and length of conduit and number of bends between pull points.
- D. Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.
- E. Install manufactured conduit sweeps and long-radius elbows whenever possible.
- F. Pathway Installation in Communications Equipment Rooms:
  - 1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
  - 2. Install cable trays to route cables if conduits cannot be located in these positions.
  - 3. Secure conduits to backboard when entering room from overhead.
  - 4. Extend conduits 3 inches (76 mm) above finished floor.
  - 5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

### 3.3 INSTALLATION OF CABLES

- A. Comply with NECA 1.
- B. General Requirements for Cabling:
  - 1. Comply with TIA-568-B.1.
  - 2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
  - 3. Install 110-style IDC termination hardware unless otherwise indicated.
  - 4. MUTOA shall not be used as a cross-connect point.
  - 5. Consolidation points may be used only for making a direct connection to telecommunications outlet/connectors:
    - a. Do not use consolidation point as a cross-connect point, as a patch connection, or for direct connection to workstation equipment.
    - b. Locate consolidation points for UTP at least 49 feet (15 m) from communications equipment room.
  - 6. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
  - 7. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
  - 8. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
  - 9. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
  - 10. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
  - 11. Cold-Weather Installation: Bring cable to room temperature before de-reeling. Heat lamps shall not be used for heating.
  - 12. In the communications equipment room, install a 10-foot- (3-m-) long service loop and at the "Workstation" end provide a 3-foot (1-m) service loop.
  - 13. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- C. UTP CABLE TERMINATION PRACTICES
  - 1. Insulation Displacement Contact (IDC) connectors shall be used and installed per the manufactures' recommendations.
  - 2. Strip back only as much cable jacket as required to terminate.
  - 3. Preserve wire-pair twists as closely as possible to point of termination (0.5" maximum) to keep signal impairment to a minimum.
  - 4. Avoid twisting cable jacket during installation.
  - 5. Take care to ensure all data UTP wiring devices are designed for T568B wiring, T568A devices use a different pair assignment and should not be mixed.
  - 6. Data and Telephone Cable UTP T568B, Identical to AT&T 258A and WECO, Pin/Pair Assignments (All
    - 7. RJ-45 modular jacks):
      - a. Line/Pair: Color:
      - b. Rx 2 White/Orange Band
      - c. Rx 2 Orange
      - d. Tx 3 White/Green Band
      - e. Rx 1 Blue
      - f. Tx 1 White/Blue Band
      - g. Rx 3 Green
      - h. Tx 4 White/Brown Band
      - i. Rx 4 Brown
- D. UTP Cable Installation:
  - 1. Comply with TIA-568-B.2.
  - 2. Do not untwist UTP cables more than 1/2 inch (12 mm) from the point of termination to maintain cable geometry.
- E. Open-Cable Installation:
  - 1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.

2. Suspend UTP cable not in a wireway or pathway a minimum of 8 inches (200 mm) above ceilings by cable supports not more than 60 inches (1524 mm) apart.
  3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.
- F. Installation of Cable Routed Exposed under Raised Floors:
1. Install plenum-rated cable only.
  2. Install cabling after the flooring system has been installed in raised floor areas.
  3. Coil cable 6 feet (1800 mm) long not less than 12 inches (300 mm) in diameter below each feed point.
- G. Outdoor Coaxial Cable Installation:
1. Install outdoor connections in enclosures complying with NEMA 250, Type 4X. Install corrosion-resistant connectors with properly designed O-rings to keep out moisture.
  2. Attach antenna lead-in cable to support structure at intervals not exceeding 36 inches (915 mm).
- H. Group connecting hardware for cables into separate logical fields.
- I. Separation from EMI Sources:
1. Comply with BICSI TDMM and TIA-569 for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
  2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
    - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
    - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).
    - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (610 mm).
  3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
    - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
    - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
    - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).
  4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
    - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
    - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (76 mm).
    - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).
  5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches (1200 mm).
  6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).
- J. COLOR-CODING
1. Provide color-coded horizontal cabling jackets, jack insert faces in wall plates, patch panels, and patch cords. Patch panels are to be separated with grouped patch panels for each designated color and use (blue only in the data patch panels, white only in the voice patch panels, etc.):
    - a. Blue Data (General use Computer Ethernet network)
    - b. White Telephone (voice, VoIP Ethernet network)
    - c. Orange Wireless Access Point
  2. Provide color-coded patch cords as follows:
    - a. Blue Data (General use Computer Ethernet network)
    - b. White Telephone (voice, VoIP Ethernet network)
    - c. Orange Wireless Access Point
- K. FIBER OPTIC SYSTEM COLOR CODING
1. A. Each type of fiber optic cabling shall feature distinctively colored labeling and jumper connectors:
    - a. Any Single Mode cabling and jumper connectors shall be Yellow.
    - b. Any Multi Mode cabling and jumper connectors shall be Aqua.
- L. CABLE RUN DESIGNATOR LABELING SCHEME
1. Each patch panel jack, wall plate jack, terminal cabinet connector, both ends of each cable run and on the ceiling grid bar at jack locations that are concealed above a drop ceiling shall be labeled with a cable scheme run designator machine printed labels installed according to EIA/TIA 606 standards. All labeling shall conform to industry standards and best practices.
  2. Labeling types and scheme shall be verified and coordinated with the Owner prior to any installation.
  3. Contractor to submit labeling scheme to Engineer and Owner for approval prior to installation.

- M. DATA/TELEPHONE CABLING PLANS
1. Provide adjacent to the equipment rack in each MDF and IDF a plan view of all building areas covered by the equipment closet meeting the following requirements:
    - a. Framed and secured to the wall and plan covered with clear acrylic panel.
    - b. Size to clearly show all required information.
    - c. "YOU ARE HERE" indicator with arrow.
    - d. Room names and numbers. Verify with Owner.
    - e. Show each device with symbol and identification address number as designated by owner.
    - f. Symbol legend.
    - g. True north arrow
    - h. Scale indicator
- N. DATA/DESK TELEPHONE STATION WALL PLATES AND JACK INSERTS
1. Provide single or multiple jack modular wall plates where shown on plans or required. The number next to symbol on plans indicates the quantity of data lines/jacks at that location, single outlets are not numbered. Where a desk telephone jack (D/#) is designated on plans the faceplate to include a telephone jack along with the data jacks. Each data or telephone jack shall be terminated and mounted in a suitable faceplate for all wall, enclosure, millwork, floor box, modular furniture, etc. locations. All terminations shall be made per the manufacturers' instructions. Jack type to match colors above. Refer to System Schedule on plan for part numbers and additional information.
  2. Use a single gang faceplate with label window for all standard wall outlets, use NEMA duplex or Decora style frames as required for floor boxes, surface raceway, etc. Refer to System Schedule on plan for part numbers and additional information.
- O. EMERGENCY SERVICE/VOICE LINES
1. Provide connectivity for emergency service/voice lines from the MDF, one line to each elevator phone and 911 emergency telephone, two lines to each alarm system digital communicator (DC).
- 3.4 FIRESTOPPING
- A. Comply with requirements in Division 07 Section "Penetration Firestopping."
  - B. Comply with TIA-569, Annex A, "Firestopping."
  - C. Comply with BICSI TDMM, "Firestopping Systems" Article.
- 3.5 GROUNDING
- A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
  - B. Comply with TIA-607.
- 3.6 IDENTIFICATION
- A. Match existing site labeling scheme.
    1. Administration Class: 4.
    2. Color-code cross-connect fields. Apply colors to voice and data service backboards, connections, covers, and labels.
  - B. Using cable management system software specified in Part 2, develop Cabling Administration Drawings for system identification, testing, and management. Use unique, alphanumeric designation for each cable and label cable, jacks, connectors, and terminals to which it connects with same designation. At completion, cable and asset management software shall reflect as-built conditions.
  - C. Comply with requirements in Division 09 Section "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
  - D. Paint and label colors for equipment identification shall comply with TIA-606-C for Class 4 level of administration, including optional identification requirements of this standard.
  - E. Cable Schedule: Post in prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.
  - F. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA-606-C. Furnish electronic record of all drawings, in software and format selected by Owner.

- G. Cable and Wire Identification:
    - 1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
    - 2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
    - 3. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
      - a. Individually number wiring conductors connected to terminal strips and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device shall be identified with name and number of particular device as shown.
      - b. Label each unit and field within distribution racks and frames.
    - 4. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label
  - H. Labels shall be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA-606-C.
    - 1. Cables use flexible vinyl or polyester that flex as cables are bent.
- 3.7 FIELD QUALITY CONTROL
- A. Perform tests and inspections.
  - B. Tests and Inspections:
    - 1. Visually inspect UTP and optical fiber cable jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments and inspect cabling connections for compliance with TIA-568-B.1.
    - 2. Visually confirm specified Category marking of outlets, cover plates, outlet/connectors, and patch panels.
    - 3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
    - 4. Test UTP backbone copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.
      - a. Test instruments shall meet or exceed applicable requirements in TIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    - 5. UTP Performance Tests:
      - a. Test for each outlet and MUTOA. Perform the following tests according to TIA-568-B.1 and TIA-568-B.2:
        - 1) Wire map.
        - 2) Length (physical vs. electrical, and length requirements).
        - 3) Insertion loss.
        - 4) Near-end crosstalk (NEXT) loss.
        - 5) Power sum near-end crosstalk (PSNEXT) loss.
        - 6) Equal-level far-end crosstalk (ELFEXT).
        - 7) Power sum equal-level far-end crosstalk (PSELFEXT).
        - 8) Return loss.
        - 9) Propagation delay.
        - 10) Delay skew.
    - 6. Optical Fiber Cable Performance Tests: Perform optical fiber end-to-end link tests according to TIA-568-B.1 and TIA-568-B.3.
    - 7. Final Verification Tests: Perform verification tests for UTP and optical fiber systems after the complete communications cabling and workstation outlet/connectors are installed.
      - a. Voice Tests: These tests assume that dial tone service has been installed. Connect to the network interface device at the demarcation point. Go off-hook and listen and receive a dial tone. If a test number is available, make and receive a local, long distance, and digital subscription line telephone call.
      - b. Data Tests: These tests assume the Information Technology Staff has a network installed and is available to assist with testing. Connect to the network interface device at the demarcation point. Log onto the network to ensure proper connection to the network.
  - C. Document data for each measurement. Data for submittals shall be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.

- D. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.8 DEMONSTRATION

- A. Train Owner's maintenance personnel in cable-plant management operations, including changing signal pathways for different workstations, rerouting signals in failed cables, and keeping records of cabling assignments and revisions when extending wiring to establish new workstation outlets.

END OF SECTION 27 15 00

SECTION 27 4116  
INTEGRATED AUDIOVISUAL SYSTEMS

PART 1 - GENERAL

1.1 GENERAL NOTES

- A. Audiovisual System Designer herein shall be referred to as architect.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the contract including instructions to Bidders, General and Supplementary Conditions and Division 1 Specifications Sections apply to the work of this Section.
- B. ANSI-Infocomm standards (10:2013) Audiovisual Systems Performance Verification
- C. AVIXA S601.01:201X Energy Management for Audiovisual Systems (revises ANSI/INFOCOMM 4:2012)
- D. AVIXA F501.01:2015 (Formerly INFOCOMM F501.01:2015) Cable Labeling for Audiovisual Systems
- E. AVIXA V201.01:201X Projected Image System Contrast Ratio (replaces 3M: 2011)
- F. AVIXA A102.01.2017 (Formerly A103.01:2017 Audio Coverage Uniformity in Listener Area
- G. ANSI/AVIXA D401.01:201X Standard Guide for Audiovisual Systems Design and Coordination Processes (replace 2M: 2010)
- H. AVIXA F502.01:201X Rack Building for Audiovisual Systems
- I. AES 67-2018
- J. 2010 ADA Standards for Accessible Design

1.3 RELATED WORK SPECIFIED ELSEWHERE

- A. Power, and all conduits for both power and low voltage, shall be furnished and installed by Electrical Contractor. All back boxes to be furnished and installed by Electrical Contractor as indicated in the Schedule of Responsibility on drawing TA0.01 unless otherwise noted.
- B. Coordination with the Electrical Contractor is required to assure correct audiovisual conduit routing, audiovisual back box locations, and technical power circuit locations as specified in Division 26 – Electrical.
- C. Requirements and materials that apply to the work of others related to audiovisual systems are listed here to define and establish audiovisual system requirements. Coordinate the work of this section with the work of other sections as required in order to maintain satisfactory progress of the work of other sections. Refer to schedule of responsibility on TA0.01, UON.

1.4 WORK OF THIS SECTION

- A. This section covers all audiovisual (AV) systems as described for *Crandall ISD Performing Arts Center*. The objective is to provide professional systems, installed, acceptance tested, and ready to use.

- B. This written specification and the large format TA series drawings shall be collectively referred to herein as the Contract Documents. System features that show up in one part may not be shown in others. In the case of conflict between written specifications and drawings, Contractor must seek written clarification from the Architect. In the event the Contractor fails to obtain such written clarification, the interpretation of the Architect will prevail. Where conflict exists with other specifications concerning such work or materials, this specification takes precedence unless otherwise approved in writing by the owner.
- C. This section includes all labor, materials, equipment, and services necessary to furnish and install the Audiovisual System in Crandall ISD Performing Arts Center in Crandall, Texas as shown on the drawings, including but not limited to the following:
  - 1. System components
  - 2. “
  - 3. Etc.

#### 1.5 PROJECT CONDITIONS

- A. All dimensions and equipment locations shall be verified in the field prior to fabrication by the Audiovisual Contractor, who shall make at least one (1) visit to the job site prior to preparation of shop drawings.
- B. Coordinate conduit placement, routing, and separation with the Electrical Contractor to ensure proper installation.
- C. No claims for additional compensation shall be allowed due to the Audiovisual Contractor's misunderstanding of the work involved or lack of a thorough investigation of the job site.

#### 1.6 CONTRACTOR RESPONSIBILITY

- A. It shall be the responsibility of the Audiovisual Contractor to furnish and install equipment complete in all respects and to furnish and install any additional equipment required to fulfill the intent of the Contract Documents regardless of whether or not such items are herein specified or indicated without claim for additional payment or costs.
- B. The work specified herein shall be accomplished by a single Audiovisual Contractor who has complete responsibility for the systems described. The Audiovisual Contractor is required to have five (5) years' experience with systems of similar size and scope in professional performing arts centers.
- C. The Audiovisual Contractor shall be responsible for coordinating with other trades a complete and suitable installation of electrical isolation equipment to meet the intent of this specification.
- D. No electrical equipment (except approved equipment) shall be located within the Acoustically Sensitive Spaces or installed on walls common to Acoustically Sensitive Spaces (Refer to Part 1 Paragraph 10). The Audiovisual Contractor shall report all discrepancies between this requirement and the Contract Documents to the Architect and Electrical Engineer prior to installation of such equipment.

#### 1.7 DESIGN INTENT

- A. The Audiovisual Contractor shall furnish and install Infrastructure and Major Equipment for system including but not limited to wire, cable, equipment racks, wiring devices, and listed Major Equipment. Infrastructure, Major Equipment, and installation of Infrastructure and Major Equipment shall be bid as one portion of the project.
- B. The Audiovisual Contractor shall furnish line item pricing for Infrastructure and Major Equipment List written in this specification.

#### 1.8 FUNCTIONAL REQUIREMENTS

This report provides a narrative description of the basis of design for the audiovisual systems in the new Performing Arts Center, at Crandall High School in Crandall, Texas. The descriptions included are based on our understanding of the program as relayed to us during workshop and phone conversations with the Crandall production staff, administrative team, faculty, and design teams.

## CODE REQUIREMENTS

This document provides for preliminary design intent for all audiovisual systems within the facility. As the project continues through the design and construction process, this project will be governed by applicable local, national, and international building codes, State of Texas Building Codes, ANSI Standard, ADA Standards for Accessible Design (2010), as well as AVIXA/INFOCOMM, and AES standards for audiovisual system design & installation, including but not limited to the following:

- ANSI/INFOCOMM standards (10:2013) Audiovisual Systems Performance Verification
- AVIXA S601.01:201X Energy Management for Audiovisual Systems (revises ANSI/INFOCOMM 4:2012)
- AVIXA F501.01:2015 (Formerly INFOCOMM F501.01:2015) Cable Labeling for Audiovisual Systems
- AVIXA V201.01:201X Projected Image System Contrast Ratio (replaces 3M:2011)
- AVIXA A102.01.2017 (Formerly A103.01:2017 Audio Coverage Uniformity in Listener Area
- ANSI/AVIXA D401.01:201X Standard Guide for Audiovisual Systems Design and Coordination Processes (replace 2M: 2010)
- AVIXA F502.01:201X Rack Building for Audiovisual Systems
- AES 67-2018
- Americans with Disabilities Act (ADA), 2010

## DESIGN NARRATIVE

### 1 - FACILITY WIDE SYSTEMS

---

#### Isolated Power for AV systems

All audio and video systems are powered by a separate audio & video technical power system to ensure noise-free operation. The power is fed from a dedicated transformer and all associated outlets utilize isolated ground wires and hospital-grade outlets. This system is used only for audio and video equipment. The Isolated Power System also includes a 100A stage disconnect (company switch) in the Main Theater to facilitate outside events, and 30amp 3-phase receptacles for accommodate smaller scale supplemental power needs. Design of system and location of transformer to be coordinated with the electrical engineer.

#### Performance Audio/Video Network

The Performing Arts Center (PAC) shall feature an IP based audio & video transport system, allowing staff & users a flexible and efficient approach to routing media feeds, for both production and back-of-house use. The system is designed to minimize the number of physical patches necessary for efficient operation, allowing more ease of use and higher operational efficiency by the users. The system uses a series of video input and output devices that connect to dedicated AV network switches. Interconnections are made through control software, digitally connecting or disconnecting feeds from and to any performance space within the center. The AV Networks can be selectively connected to Crandall ISD Enterprise Networks, for specific streaming need, or for periodic, scheduled firmware updates to equipment.

The AV network systems consists of three (3) independent groupings of infrastructure and equipment: audio over IP primary and secondary (Dante), and control/intercom/AVoverIP. During general, day-to-day operation, all network infrastructure for audiovisual systems is isolated from other networks (enterprise, lighting, building systems, etc), however select connection to the outside world, or allowing internet access to the network can be coordinated with the enterprise networks.

- Basis of design manufacturers for sitewide equipment and digital signal processing can include:
  - DSP – QSYS
  - Networking – Netgear AV
  - Control Systems - QSYS

#### Rack Room

A rack room is included for the main AV system racks feeding the theater and FOH/BOH systems. This room is adjacent to the theater, and contains supplemental mechanical equipment to maintain a consistent, cool environment for the AV equipment. This room may also contain the Performance Lighting control racks.

#### Digital Signage

Public displays are distributed within the Public Spaces to inform, engage, and solicit visitors, as well as serve direct presentation and show-relay need for events. These displays are located in locations for subtle, yet maximum impact to students and patrons, welcoming them to, and guiding them through the events taking place in the Building.

#### Portable Equipment

Facilities for the Performing Arts contain a great deal of portable equipment for performance & educational AV use in the various spaces. Much of this equipment is quite similar in nature and operation. Portable equipment is intended to be assigned to specific areas/rooms, however the operation of the facility relies on the sharing of certain types of equipment when areas/disciplines/halls are not in simultaneous use. This is done to provide the most efficient portable equipment solution for the PAC, and limit the amount of doubling up required. Examples of the shared equipment is: microphones, portable loudspeakers, intercom belt packs, portable cables, stands, AV accessories.

## 2 – PUBLIC SPACE + ARTS INSTRUCTION LABS

---

#### Lobby

Lobbies for performance spaces include monitoring capability (audio and video) to the respective performance hall, along with house manager page abilities. Video displays for digital signage, and latecomer show-relay are positioned adjacent to each performance space. Each lobby also contains an installed wireless system, allowing for simple presentations to take place within the public realm.

#### Front-of-House Support

The front-of-house support spaces have production intercom capabilities and selectable program and page feeds from the performance venues, allowing staff to monitor and communicate with backstage and stage management personnel as required. Designated front-of-house support spaces are as follows:

- Box Office & Box Office Manager's Office

#### Band and Percussion Rehearsal Rooms

The Rehearsal Rooms serve primarily as spaces for large musical group instruction and rehearsal. High-fidelity loudspeakers provide audio playback of pre-recorded material. A projector and screen are provided for instructional video presentations. Local recording capabilities are included, via ceiling mounted microphones, allowing the instructor to make quick recordings of rehearsals for immediate playback or archival purposes, as well as connect to the recording control room. Control of the AV systems is achieved via touch-panels, located on the wall, and the instructor position.

#### Scenic dock

The building dock contains loudspeakers for audio show relay of the performance space. Local volume controls are included, with a priority-page override system, allowing the stage manager announcement to be heard, regardless of the volume control position.

## 3 – PERFORMANCE SPACE

---

#### Main Theater

The Main Theater of the PAC is a 800 seat proscenium/end-stage performance space with stage house, serving primarily theatre/spoken word performance and presentation style events. The hall accommodates unamplified and amplified music, as well as theatre reinforcement (for musical theater) and sound effects. Equipment and functionality included:

- Performance Audio system, providing support for audio reinforcement of music performance, and reinforcement of theatre productions and conceptual sound effects. The system consists of primary loudspeakers deployed in an “Left/Center/Right” arrangement, hanging from the proscenium reflector. Supplemental loudspeakers are provided to extend the frequency response of the primary speakers, or as fill loudspeakers for imaging purposes. Surround loudspeakers within the hall are to be replaced, and assigned for patching purposes. Facilities production panels are located throughout the stage allowing connection of equipment to the system, including microphones and other input devices, stage monitors, and specialty network devices. Facilities production panels are also added to locations currently without connectivity. Control is achieved from a digital mixing console (with Dante backbone) located at the existing mix position at the rear of the audience chamber. Basis of design manufacturers can include:
  - Loudspeakers – d&b audiotechnic A-Series constant-curve line-source array; d&b subwoofers, front-fills, and delay loudspeakers.
  - Amplifiers – d&b audiotechnic for performance loudspeakers; QSC for patching amps
  - Digital Mixing System – Allen & Heath Avantis series
- Performance Video Projection System – A motorized roll-down projection screen and video projector shall be provided for presentation use. To accommodate the flexible video deployment as required per production or event, connection points for coaxial and category cable (AVoverIP) video are provided throughout the space, with specific connectivity for presentation positions from the stage. Basis of design manufacturers can include:
  - Projector – Barco or Christie – WUXGA or 4K.
  - Screen – Draper
- Support Systems –
  - Assistive listening systems, which transmits the acoustic stage (via room microphone) or console feed sound over a radio frequency to receivers used by the hearing impaired, is included. Alternative use of the system is to broadcast additional languages, or provide audio description for the sight impaired and shall include a two-channel system for this reason. Basis of design – Listen Technologies or Williams Sound
  - Production Intercom - 2-channels of analog, party-line style intercom are provided for this room (Clear-Com).
  - Video/Audio Show Relay – a fixed PTZ camera and room microphone are installed to provide show relay to front-of-house and back-of-house support spaces.
  - Stage Management Systems – a portable stage manager station consisting of two portable rack cases is included, for flexible, ADA compliant deployment to designated areas backstage, in control rooms, or within the house for tech rehearsal purposes. The stage manager station includes an intercom remote station and microphone for back-of-house paging. Additionally, a touchpanel in the station allows control over camera feeds and chimes, and show-relay mutes. The second rack case includes dual displays, allowing the stage manager to view the color PTZ camera view and an additional source.
- Loose Equipment – Wired microphones, DI boxes, cables, stands, portable loudspeakers and monitor wedges appropriate to the program are provided.

#### Dressing Rooms

The Dressing/Changing rooms and production support spaces are intended as support spaces for the main theater. These rooms shall contain loudspeakers for audio show relay of the performance space. Local volume controls are included, with a priority-page override system, allowing the stage manager announcement to be heard, regardless of the volume control position.

Basis of Design – Show Relay Loudspeakers – QSYS or JBL

### 1.9 SCOPE OF WORK

- A. Furnish shop drawings and receive approval, prior to fabrication and installation.
- B. Furnish all materials and labor and any engineering services to supply a complete and professionally installed system in working order as described herein. Labor furnished shall be specialized and experienced in audiovisual system installation.
- C. Furnish and install all wire and cable called out in the Contract Documents.
- D. Coordinate all back box locations with the Electrical Contractor and appropriate general trades.

- E. Furnish any additional items, not specifically mentioned herein, to meet system requirements as specified, without claim for additional payment. Such items may include but are not limited to hardware, transformers, line/distribution amplifiers and other devices for proper installation, interface, isolation, or gain structure.
- F. Perform initial adjustments and verification tests. Submit verification test report to the Architect five days prior to commissioning.
- G. Participate in acceptance testing and perform final adjustments utilizing Audiovisual contractor furnished test equipment and project engineers.
- H. Furnish and participate in user training.
- I. Furnish system documentation including copies of all relevant drawings and equipment manuals in compliance with the Contract Documents.
- J. Furnish maintenance services for the specified period from the date of acceptance.
- K. Guarantee all new equipment, software, hardware, components, and workmanship for the specified period from the date of acceptance.
- L. Refer to drawing TA0.01 Audiovisual General Notes for the Schedule of Responsibility.

#### 1.10 SUBMITTALS

- A. Pre-bid Submittals:
  - 1. Contractors must pre-qualify in order to bid on this project. Contractors must provide proof of the following qualifications and certifications and evidence of experience in similar audio and/or video installations. Submit listed qualifications to Architect for review ten (10) days prior to submission of a bid. Late submittal will result in exclusion from bid.
    - a. Credential for project manager, project engineer, and lead installer which must include NICET, EST, and/or CTS-I certifications.
    - b. Proof of the AV Contractor's membership in NSCA or AVIXA (Audiovisual and Integrated Experience Association). Indicate current AVSP level.
    - c. Proof that the AV Contractor has been continuously engaged in the installation and service of AV equipment for at least five (5) years in systems of similar size, scope, and project type.
    - d. Proof that the AV Contractor holds current certifications necessary to perform Graphic User Interface Programming and Configuration.
  - 2. The following AV Contractor have been pre-qualified to bid on this project:
    - a. Electro Acoustic  
685 John B. Sias Memorial Parkway, Ste. 705  
Fort Worth, TX 76134  
(817) 924-2756  
Contact: Luke Jordan  
ljordan@eavi.com
    - b. Professional Audio Designs  
11629 W Dearbourn Avenue  
Wauwatosa, WI 53226  
(414) 476-1011  
Contact: Kim Leonard  
kim@proaudiodesigns.com
    - c. Solotech  
1717 Diplomacy Row  
Orlando, FL 32809  
(702) 614-8882  
Contact: Aaron Beck  
Aaron.beck@solotech.com
    - d. Clair Global Integration  
3327 Ambrose Avenue

Nashville, TN 37207  
(717) 626-4000  
Contact: Joe Bunting / Phillip DiPaula  
jbunting@clairglobal.com  
pdipaula@clairglobal.com

B. Bid Submittals:

1. Contractors shall examine all drawings and read all divisions of this specification in order to avoid omissions and duplications and to ensure a complete job. No allowances shall be made for failure to read and understand the Contract Documents. Discrepancies between drawings and the specifications or obvious omissions shall be referred to the Architect prior to the bid date. Where discrepancies occur and pre-bid instructions have not been obtained, the Contractor agrees to abide by the Architect's decisions.
2. Bid proposals shall include all work and all equipment as specified, as well as any additional equipment and materials not listed here, to be used in assembling the system to fulfill the design intent.
3. The bid submittal shall include the following:
  - a. Infrastructure and Major Equipment List and installation bid.
  - b. Major Equipment List line item pricing.
    - 1) Installation costs for General Equipment including hardware and labor shall be furnished.
    - 2) Pricing shall include in-bound freight, shipping, and all delivery charges.

C. Shop Drawings Submittals:

1. Within thirty (30) days of contract award, submit four (4) copies of detailed shop drawings to the Architect for approval. All shop drawings shall be marked with the related drawing number when submitted.
2. System installation and fabrication shall not begin without written approval from the Architect.
3. Review of shop drawings shall not constitute final approval of system function. Said review does not in any way relieve the Contractor from the responsibility of furnishing material or performing work as required by the Contract Documents.
4. Failure of the Contractor to submit shop drawings in ample time for the evaluation shall not entitle the contractor to an extension of contract time, and no claim for extension by reason of such default will be allowed.
5. At a minimum, shop drawings shall include:
  - a. Table of Contents
  - b. Itemized list of all equipment and materials to be used in assembling the system.
  - c. Catalog cut sheet or data sheet for each listed item.
  - d. One-line Signal Flow diagrams for all sound reinforcement systems, visual systems, and auxiliary systems showing point to point wiring interconnections of all equipment with wire run numbers and patch bay designations. Show all transformers, switches, relays, control circuits, and modifications to equipment. Show all equipment items which are required for realization of the functions described herein.
  - e. Complete lists of all wire run numbers along with the termination location of each end of each wire run.
  - f. Schematic diagrams for any custom circuitry and all typical connections between audio lines, patch bays, visual system lines and rack mounted equipment.
  - g. Drawings of all items which are to be custom fabricated or modified. Drawing shall be in scale suitable for fabrication. They shall show materials, finishes, hardware, back boxes, connectors, and panel/control markings. Submit samples of lettering/label size and typeface to be employed on custom plates, panels, and other equipment.
  - h. Submit samples of custom work, finishes, or other materials as required by the Architect to verify appearance and quality. All costs for shipping samples shall be the responsibility of the Contractor.
  - i. Full size drawings illustrating the physical layout and labeling of patch bays.
  - j. Mechanical drawings of all assemblies, major and sub-assemblies, racks, cabinets, and enclosures, indicating provisions for proper cable management, power management, and thermal management.

- k. Mechanical drawings showing all proposed mounting details of all major equipment (e.g. loudspeakers, cameras, projectors, video displays, projection screens), and associated rigging and interface with adjacent architecture.
  - l. Vibration and noise control information shall be included and coordinated with the Electrical Contractor.
  - m. Conduit Routing Plan, to be coordinated with electrical contractor prior to cable pull.
  - n. Cabling schedule providing information as detailed in AVIXA (formerly known as Infocomm) Standard F501.01:2015 to be coordinated with the Architect and Owner prior to cable pull and termination.
6. The above listed drawings shall be produced on AutoCAD 2004 min. or similar computer drafting program. Scans or photocopies of the Contract Documents are not acceptable.
  7. The use of electronic files from other sources (e.g. Architect's backgrounds, Architect's drawings, vendor-supplied panel drawings) shall not absolve the Contractor of the responsibility for ensuring that the Shop Drawings represent a completely engineered coordinated system. The Contractor has final responsibility for providing systems that conform to all requirements in the Contract Documents.
  8. The Contractor shall review Electrical Contractor shop drawings for all vibration and noise control equipment and systems information.
  9. Proposed Touch Panel Graphical User Interface (GUI) layouts shall be submitted for approval prior to the commencement of control system programming.
- D. Substitutions:
1. Substitutions shall be submitted as per the General Conditions of the Contract Documents.
  2. The proposed substitutes must be equivalent or superior to the specified products in quality, performance, construction, function, conformance to system objectives and not affect system functionality, signal type, distribution, and features.
  3. All substitutions must receive the express written consent of the Architect and Owner.
  4. The Architect reserves the right to substitute new products which become available subsequent to the issuance of the Contract Documents, provided that:
    - a. The contractor has not yet purchased the originally specified equipment.
    - b. The substitute equipment shall not materially increase the Contractor's cost.

#### 1.11 JOB CONDITIONS

- A. Keep the job adequately staffed at all times. Unless illness, loss of personnel, or other circumstances beyond the control of the Contractor intervene, keep the same individual charge throughout.
- B. Cooperate with all appropriate parties in order to achieve well-coordinated progress with overall construction completion schedule and satisfactory results.
- C. Watch for conflicts with work of other contractors on the job and execute, without fair claim for extra payment, moderate moves or changes as are necessary to accommodate other equipment or to preserve acoustic or visual performance, symmetry, and pleasing appearance.
- D. Immediately report to the Architect any design or installation irregularities, particularly architectural elements that interfere with the intended coverage angles of loudspeakers, camera, or projection equipment, so that appropriate action may be taken.
- E. Perform any and all cutting, patching, and painting for proper and finished installation of the system and repair any damage done as a result of such installation.
- F. Audiovisual System work areas are to be maintained in a clean and orderly condition. Clean up and dispose of trash from all audiovisual system work areas.

#### 1.12 ACOUSTICALLY SENSITIVE SPACES

- A. The following areas have been designated as "Acoustically Sensitive Spaces":
  1. Control Rooms
  2. Amplifier Rack Rooms
  3. Electrical Equipment Spaces

4. Mechanical Equipment Spaces

- B. An acoustically sensitive space is defined as a room or space, which requires special construction consideration to meet room acoustic, acoustic isolation, and noise control or vibration control requirements.
- C. All conduit runs penetrating acoustically sensitive spaces shall have both ends sealed by means of removable closed cell neoprene foam after all cables have been run to prevent sound transmission from adjacent spaces.
- D. All audiovisual wiring devices in acoustically sensitive spaces shall have a gasket sealing the faceplate to the back box to prevent sound transmission from adjacent spaces.

1.13 DELIVERY AND HANDLING

- A. The Audiovisual Contractor shall coordinate delivery and installation of all equipment with the Construction Manager and/or Electrical Contractor.
- B. If required by the Construction Manager or Electrical Contractor, audiovisual equipment shall be delivered in a minimum of three (3) separate shipments that shall include:
  - 1. Shipment #1: All items in which conduit is terminated which includes back boxes, wiring device faceplates with receptacles, projection screen cases, etc.
  - 2. Shipment #2: All items which require structural backing such as rigging components, monitor and projector mounts, etc.
  - 3. Shipment #3: All items that are not required until the building/area of work is secure and ready for electronic equipment. This shall include equipment racks, wiring device face plates, portable equipment, etc.
- C. Audiovisual Contractor shall deliver all material to the job site suitably crated, packed, and protected and bearing the label and the nomenclature of the product(s) found in each carton or crate.

1.14 QUALITY ASSURANCE

- A. Parts listed shall be complete and equipment furnished shall conform to manufacturer's specifications.
- B. All materials shall be new and shall conform to the applicable provisions of Underwriter's Laboratories (ULEQ) and American Standards Association (ASA).
- C. Procure and pay for all permits, licenses, and inspections, and observe any requirements stipulated therein. Conform in all trades with all local regulations and codes.
- D. Comply with federal, state, and local labor regulations and applicable union regulations.
- E. Installation shall conform to the latest federal, state, and local electrical safety codes of authorities having jurisdiction. Where conflict exists, the most stringent code or regulation shall apply.

1.15 GUARANTEE AND SERVICE

- A. The Audiovisual system shall conform to all applicable code requirements and shall be in conformance with industry standards of operation and practice.
- B. All new systems and components shall be guaranteed free of defects in materials and workmanship for a period of one (1) year from the date of acceptance and shall be repaired or replaced within forty-eight (48) hours following report of such defects by the owner.
- C. Installation of relocated existing equipment shall be guaranteed free of defects in materials and workmanship for a period of one (1) year from the date of acceptance and shall be repaired or replaced within forty-eight (48) hours following report of such defects by the owner.

- D. All audiovisual system software updates shall be automatically issued to the Owner free of charge during the warranty period.
- E. The Contractor shall be available on call and on eight (8) hour notice during the first month following acceptance of the system, to assist the Owner's representatives in any problems which may arise during the initial period of operation.
- F. The Contractor shall provide same day response to service requests, via 24/7 phone support.
- G. If during guarantee period any component is out of service for more than seven (7) consecutive days due to unavailability of parts or service, the contractor shall furnish and install identical new component. If an identical component is not available, the contractor will substitute equivalent equipment with written approval of the owner.
- H. During the course of the guarantee period, the Contractor shall provide a minimum of three (3) service visits to the site for inspection and adjustment of equipment and programming. Contractor shall submit proposed schedule for these visits and shall notify Owner and Architect in writing at least one (1) month in advance of each visit.

#### 1.16 INSURANCE

- A. All equipment and materials shall be fully insured against loss or damage up until acceptance of the system by the Owner or until the Owner relieves the Contractor in writing of this responsibility, whichever is earlier.

### PART 2 - EQUIPMENT

#### 2.1 GENERAL

- A. Whenever any equipment is specified by manufacturer and model number, it is for the purposes of establishing a standard of quality, performance, construction, and function.
- B. All materials and equipment shall be new and of the latest design or model offered for sale by the manufacturer.
- C. Equipment models furnished shall operate at the required AC line voltage (i.e. 120 Volts) and frequency (i.e. 60 Hz)
- D. Contractor shall furnish at minimum, quantities as indicated in the Contract Documents as required for complete installation.
- E. Audiovisual Wire and Cable:
  - 1. Approved manufacturers:
    - a. Belden
    - b. Berk-Tek
    - c. Liberty
    - d. Crestron
    - e. Extron
    - f. West-Penn
  - 2. All wire numbers listed in the Contract Documents are Belden unless otherwise noted.
  - 3. Where required, install plenum rated cable listed and labeled for plenum installation.
- F. Electrical Wire and Cable (including ground conductors)
  - 1. Where conflict exists with any codes or ordinances, such codes and ordinances shall take precedence.
  - 2. Where conflict exists with Electrical Specifications, the higher standard or more stringent requirement shall apply.

- G. Wiring Devices:
1. Specifications – Duplex Receptacles
    - a. Grade: Specification, Hubbel IG5362 or equal
    - b. Type: NEMA 5-20R
    - c. Color: Orange
  2. Specifications – Plug Mold
    - a. Grade: Wiremold V/G 2000 Series or equal
    - b. Size: As specified or required.
  3. Specifications – Outlet Strips
    - a. Grade: UL Listed, Wiremold or equal.
    - b. Size: As specified or required.
  4. Approved Manufacturers:
    - a. Waber
    - b. Wiremold
    - c. Hubbell
    - d. Bryant
    - e. GE
    - f. Leviton
- H. Electrical Plates and Panels:
1. Specifications – Rack mount panels
    - a. Material: 11-gauge steel or 1/8" aluminum, minimum thickness.
    - b. Finish: Black or to match adjacent equipment.
    - c. Size: 19" wide, standard EIA mounting hole spacing, height as specified or required.
  2. Specifications – Back Box Enclosures
    - a. Material: Code grade steel.
    - b. Finish: Black or Galvanized.
    - c. Size: As specified or required.
  3. Specifications – Plug Box and Termination Panels
    - a. Material: 11-gauge steel or 1/8" aluminum, minimum thickness.
    - b. Finish: Black (unless otherwise noted by the Architect).
  4. Any and all recessed face plates shall have a minimum 3/4" reveal beyond the back box to hide the intersection between the wall material and the back box excluding standard decora-style plates.
  5. Approved Manufacturers:
    - a. Hoffman
    - b. Whirlwind
    - c. Pro-Co
    - d. Wireworks.
- I. Any equipment to be located outdoors or in damp locations must carry a NEMA 3R rating and be labeled accordingly.
- J. Audio Transformers:
1. All transformers shall be selected for proper installation and load of the circuits as required by as-built conditions and per manufacturer's recommendations.
- K. Control System Programming:
1. All control system programming, installation, testing, and debugging to be performed by a manufacturer certified programmer, supplied either directly by the AV Contractor staff or via a manufacturer authorized and certified independent programmer.
  2. AV Contractor shall furnish complete control system programming, including all source code and on-site coordination, testing, and debugging.
  3. AV Contractor shall furnish all programming of control system equipment including:
    - a. Nightly system shut down.
    - b. Janitorial/Off-hour maintenance control.
    - c. Emergency Life/Safety override.
    - d. TBD
  4. In rooms where a volume control system and digital signal processor (DSP) exist, the control system shall be programmed such that:

- a. The appropriate preset on the DSP system and display system shall be selected based on that activity taking place.
    5. Provisions for control from a computer via web interface (e.g. XPanel) shall be included.
    6. Control system programming shall accommodate future addition of touch panels and mobile applications (e.g. Crestron Mobile Pro) for Apple iPhone/iPad and Android devices.
    7. AV Contractor to schedule meeting with owner and Architect to review control system functionality and operational requirements prior to the commencement of work.
  - L. Intelligent Building Technology (IBT) Integration:
    1. Coordinate with the Building Automation System (BAS) programmer to gather the appropriate protocols, addressing, and systems.
    2. Coordinate with the manufacturer of the IBT system to obtain proper configuration of IBT equipment and components.
    3. Create a dashboard for display of building energy management information including these components at minimum:
      - a. xxx
  - M. Audio DSP System:
    1. Audio Inputs
      - a. All system audio inputs shall be programmed with limiters.
      - b. It shall be possible to matrix any input to any output within the system.
    2. Audio Outputs:
      - a. All audio outputs shall be programmed with high pass filters, parametric equalization, delay, and limiters.
      - b. It shall be possible to matrix any input to any output within the system.
    3. Assistive Listening or Hearing Assistance System (HA):
      - a. HA shall receive the same signal as being heard via the loudspeakers.
      - b. HA shall be set up in accordance with ADA requirements.
    4. The DSP software shall be installed on the digital audio work station (DAW) specified in the Major Equipment List.
  - N. Equipment furnished shall be that specified herein.
  - O. Detailed performance specifications shall be those published by the manufacture effective on the date of this document for all equipment specified herein.
  - P. The AV Contractor shall verify all projection screen dimensions, surface type, and frame style with the Contract Documents and submit the information with the required shop drawings for approval by the architect prior to ordering any material. Failure to coordinate screen information shall not result in additional costs to the Owner.
  - Q. The AV Contractor shall verify all projector lenses for appropriate focal length and intended image size with the Contract Documents, based on field measurements of actual throw distance. Failure to coordinate lens information shall not result in additional costs to the Owner.
  - R. All miscellaneous materials including brackets, pole extensions, mounting hardware, electrical connectors, and other items to properly install the equipment specified shall be included as part of this project whether it is listed or not.
  - S. Existing structural mounting to be reused as conditions permit.
  - T. If required, Cost Reduction and/or Value Engineering shall be conducted by the Architect and Owner based on final bid amounts.
- 2.2 MAJOR EQUIPMENT
- A. Vendor Quotes:

1. Contractor shall be responsible to coordinate with owner to verify manufacturer financial program is appropriate in regards to equipment for this project, as well as the associated soft costs and miscellaneous hardware and cabling costs. The following Vendor Quotes are included on this project:
- B. Major Equipment List:
  1. The major equipment list itemizes system components and their quantities to provide the systems as shown in the contract documents. It is the responsibility of the contractor to provide any additional accessories, patch cabling, interfaces, and other miscellaneous equipment not described herein to provide a working system as called out in the functional requirements section of this specification (1.7), unless otherwise noted as owner furnished or future equipment. For items not given specific quantities in these documents, it is the responsibility of the contractor to verify those quantities with the owner and architect prior to system installation.
  2. Refer to Attachment 27 41 16 Schedule A for the Major Equipment List

### PART 3 - EXECUTION

#### 3.1 INSTALLATION OF SYSTEMS

- A. Locate all apparatus requiring adjustments, cleaning, or similar attention so that it will be accessible for such attention. Equipment racks shall be positioned to permit full access for operation and service.
- B. Furnish and install brackets, braces, and supports. Minimum fastening or support safety factor shall be at least five (5). Design shall be approved by the Architect.
- C. All supporting structures supplied by the Contractor not having standard factory paint finish shall be painted. Paint specifications shall be supplied by the architect or indicated herein.
- D. Provide custom color or finish for any equipment or materials supplied which are exposed to public view. Color and finish of all such equipment or materials shall be approved in writing by the Architect. This does not exclude equipment or materials where standard colors or finishes may be specified herein.
- E. Finish of blank panels and custom assembly panels shall match adjacent equipment panels.
- F. Switches, connectors, jacks, receptacles, outlets, cables, and cable terminations shall be logically and permanently marked. Custom panel nomenclature shall be engraved, etched, or screened. Markings for these items are detailed in the contract documents to ensure consistency and clarity. Verify any changes in working type size and/or placement with the Architect prior to marking.
- G. The equipment specified herein is designed to operate in environments of normal humidity, dust, and temperature. Protect equipment and related wiring where extreme environmental conditions can occur.
- H. Coordinate with millwork fabricator for installation of audiovisual equipment into credenzas, lecterns, etcetera.
- I. Review and coordinate Graphic User Interface Control System appearance and functionality:
  1. Crestron DigitalMedia© System: The DigitalMedia© systems shall be installed, configured, and tested by a DMC-E certified technician and/or engineer, in accordance with the guidelines set forth in the Crestron HD-DTDS Specification.
  2. AMX AV Control System: AV Control system shall be installed, configured, and tested by an ACE-P certified technician and/or engineer, in accordance with the guidelines set forth in the AMX Solutions Master program. The Resource Management Suite shall be installed, configured and tested by a ACE-RMS certified technician and/or engineer, in accordance with the guidelines set forth in the AMX Solutions Master program.

3. Extron Certified Associate professional license for basic Extron Systems. An Extron Control Professional Certification shall be required for Graphic User Interface (GUI) requiring customized GUI Design.

### 3.2 CONDUIT

- A. Review and coordinate audio installation with the Electrical Contractor to ensure proper operation of the audio system.
- B. All wiring shall be in conduit unless authorized by the Architect, approved by the Architect in writing, and permitted by code. Exceptions are short runs at equipment terminations where there is no means of connecting conduit to the equipment.
- C. Where installed exposed, conduits shall be parallel with or at right angles to walls or ceiling and /or follow surface contours and shall be supported from walls or ceilings by means of approved clamps or hangers. Conduit connections to equipment racks shall be insulated.
- D. Minimum size conduit shall be trade size  $\frac{3}{4}$ ". All conduits shall be sized for maximum 40% fill or less if required by code.
- E. Conduits carrying high voltage or high amperage wiring serving equipment subject to abrupt start-up and possible slapping of wiring within conduit shall not pass through Acoustically Sensitive Spaces.
- F. Conduits connected to dimmer racks or to transformers shall not pass directly into Acoustically Sensitive Spaces. Conduits connected to dimmer racks or transformers shall not penetrate walls, floors, or slabs of Acoustically Sensitive Spaces within thirty (30) feet of those equipment room walls or slabs. All penetrations in the path of conduits within thirty (30) feet of electrical rooms containing dimmer racks or transformers shall be resilient penetrations.
- G. Large numbers of conduits penetrating walls of Acoustically Sensitive Spaces shall be individually sleeved and shall pass through walls, floors, slabs, and ceilings perpendicularly.
- H. Conduits shall not be installed to connect or contact rigidly other non-electrical equipment or building systems which are vibration isolated.
- I. Coordinate all conduit sizes, locations, and quantities with the Electrical Contractor to provide proper routing, signal separation, and wire group type. Failure to do so shall not allow for additional compensation. Provide a conduit routing plan for approval by the Architect prior to installation. Routing plan shall include intended sizes, separation, and cable fill chart.
- J. Existing conduit and cabling infrastructure to be reused is to be done so to the maximum extent possible without compromising audiovisual system performance.

### 3.3 RESILIENT PENETRATIONS OF WALLS AND SLABS

- A. All conduit and cable penetrations shall be sleeved, packed, and caulked airtight to form a resilient penetration at the following locations:
  1. Mechanical Equipment Rooms
  2. Electrical and Dimmer Equipment Rooms
  3. Acoustically Sensitive Spaces
  4. Rooms with Acoustically Isolated Construction.
- B. Openings shall be oversized and sleeved to provide an inner diameter of one (1) to two (2) inches greater than the outside diameter of the duct or pipe. The conduit shall be centered in the opening and shall not rigidly contact the wall, floor, or ceiling. The resulting gap shall be packed with glass fiber packing material and foam rod. The gap shall be caulked to an airtight seal using permanently flexile acoustical sealant.

- C. Acoustical sleeves may be used in lieu of resilient penetrations described above. Multiple conduit penetrations may be constructed following the detail for multiple penetrations identified in the Contract Documents.

### 3.4 ELECTRICAL POWER

- A. Review and coordinate electrical power system installation including grounding with the Electrical Contractor to ensure proper operation of the audiovisual system.
- B. Verify that All AC power circuits designated for audio equipment are wired with the correct polarity and ground. Report in writing any discrepancies found to the Architect for corrective action.
  - 1. Provide distribution of electrical power within the equipment racks with a minimum of one space AC receptacle for each four (4) in use per branch circuit.
  - 2. The Electrical Contractor shall ensure that all audio grounding does not intersect with any building ground except at earth.

### 3.5 STEEL SUPPORTS

- A. Fabricate and install any supports so that the installation does not weaken or overload the building structure. Do not impose the weight of equipment or fixtures on supports provided for other trades or systems. No drilling or cutting of concrete beams, joists, or structural steel, nor welding to structural steel, shall be permitted except as authorized in writing by the Architect.

### 3.6 SEISMIC RESTRAINTS

- A. All hanging or free-standing equipment and cabinets furnished, including but not limited to racks, loudspeakers, projection screens, and mounts shall be secured to substantial building structures. The equipment described herein shall resist seismic acceleration in any direction up to a limit of the greater of 1.0G or the limit prescribed by the local governing codes.
- B. Loudspeaker hanging details, rack bracing, and other seismic restraints may not be shown on the Contract Documents. The Contractor is responsible for development of these drawings to be submitted and approved by the Structural Engineer.

### 3.7 BOXES

- A. With the exception of portable equipment, all boxes, conduits, cabinets, equipment, and wiring shall be held in place and the mounting shall be plumb and square.
- B. All boxes shall be securely mounted to building structure. All boxes shall be installed so that wiring contained in them is accessible. Install blanking devices or threaded plugs in all unused holes.
- C. Wiring groups and circuits shall be isolated as indicated herein. Common pull or junction boxes are not permitted except as authorized in writing by the Architect.
- D. Clean all box interiors prior to installing plates, panels, or covers.

### 3.8 WIRING METHODS AND PRACTICES

- A. Furnish and install all audiovisual wire and cable ensuring proper pulling tension, bend radius, quantities, types, lengths, routing, wire group separation, and identification.
- B. Spare wire runs of each group and type shall be pulled to each termination location. The number of spares shall be ten (10) percent of those in actual use or one, whichever is greater
- C. Splicing of cables is not permitted between terminations of specified equipment.

- D. Do not pull wire or cable through any box fitting or enclosures where change of raceway alignment or direction occurs; do not bend conductors to less than recommended radius. Employ temporary guides, sheaves, and rollers to protect cables from excess tension, abrasion, or damaging bending during installation.
- E. Use wire pulling lubricants and pulling tensions in accordance with the wire and cable manufacturer's recommendations.
- F. All wires shall be permanently identified at each wire end by marking with adhesive on crimp-on markers and a chart kept of each wire's function. This applies to wire within a rack assembly as well as wire running in conduit.
- G. Wire ends shall be wrapped with appropriate heat shrink tubing. Each shield or drain wire shall be covered with heat shrink to avoid unintentional connections.
- H. Use ring or tongue lugs on all barrier strip terminals. Do not exceed two (2) lugs per terminal. Use crimping tools that are designed for the application or solder. Do not cut strands from conductors to fit lug terminals. Spare terminal blocks, equivalent to ten percent (10%) of those in actual use shall be furnished.
- I. Form in an orderly manner all conductors in enclosures and boxes, wire ways, and wiring troughs, furnishing circuit and conductor identification. Tie using tie wraps of appropriate size and type. Limit spacing between ties to twelve (12) inches and furnish and install circuit and conductor identification at least once in each enclosure.
- J. When the audiovisual cables are pulled, leave a five-foot (5') tail at each end to all field locations and a fifteen-foot (15') tail at all equipment rack locations. Temporary labels shall be applied at both ends of each cable. Permanent labels shall be applied when the cables are cut back and terminated.
- K. All labeling of audiovisual cables shall comply with AVIXA F501.01:2015 (Formerly INFOCOMM F501.01:2015) Cable Labeling for Audiovisual Systems Standard.
- L. . The numbering system used in compliance with this standard shall be verified with the owner prior to implementation. A schedule of all cabling and its labels shall be provided to the owner and Architect for review prior to pulling and termination of cables.

### 3.9 GROUNDING

- A. Audiovisual system wiring shall conform to the following procedures:
  - 1. Audio equipment AC ground pins shall connect to AC ground.
  - 2. Audio equipment chassis shall connect to rack frames.
  - 3. Audio rack frames shall connect to AC ground bus in panel board by means of #2 gauge (minimum) conductor
  - 4. Audio shields between AC powered pieces of equipment shall be connected to ground at one end only. Terminate capacitance as required.
  - 5. Audio signal paths between AC powered pieces of equipment shall be connected using balanced lines and/or transformer isolation as required.
  - 6. No unbalanced signal paths may be connected to patch bays.
  - 7. Isolate all audiovisual system wiring from racks, back boxes, and conduit.
  - 8. Isolate all audiovisual system racks from conduit and other conductive surfaces. Use insulated bushings for conduit connections and a dielectric plinth between racks and conductive flooring.
  - 9. AC isolated ground system shall be isolated from all other facility grounds.
- B. All metallic conduit, boxes, and enclosures shall be grounded in accordance with the current National Electric Code (NEC).
- C. Metallic enclosures containing active equipment shall be grounded with due regard for the minimization of electrical noise. This may include the provisions of grounding conductors separate from AC ground.

### 3.10 EQUIPMENT RACKS

- A. The equipment racks shall be considered as custom assemblies and shall be assembled, wired, and tested in the Contractor's shop. Final assembly of racks shall take place on site after transportation but will conform to the same test results achieved in the shop.
- B. Placement of equipment in equipment racks, as shown in the drawings, is for maximum operator convenience. The insertion of additional equipment not indicated herein or any changes of placement of the equipment must be indicated in writing to the architect before assembly.
- C. Racks shall be installed plumb and square without twists in the frame or variations in level between adjacent racks.
- D. All wire, cable, terminal blocks, rack mounted equipment, and active slots of card frame systems shall be clearly and logically labeled as to their function, circuit, or system. Labeling on manufactured equipment shall be by engraved plastic laminate or by thermal printer on adhesive tape, with white lettering on black background or dark background that is similar to panel finish.
- E. Provide stiffeners to custom panels to prevent panel deformation during normal plugging or switching operations.
- F. All field termination shall enter the rack via a bulkhead panel(s) mounted to the rear-rails of the equipment rack.
- G. All wires and cable used in assembling custom panels and equipment racks shall be formed into harnesses which are tied and supported in accordance with accepted engineering practice.
- H. Harnessed cables shall be combed straight, tie wrapped every eight (8) to twelve (12) inches, and attached to the structure as necessary. Each cable that breaks out from the harness for a termination shall be provided with ample service loop to permit equipment removal from the racks without disconnecting.
- I. Harnessed cables shall be formed in either a vertical or horizontal relationship to equipment, controls components, or terminations.
- J. Cables shields shall be connected to the isolated ground system with due regard for the ground loops.
- K. All system components and related wiring shall be located with due regard from the minimization of induced electromagnetic and electrostatic noise, for the minimization of wiring length, for proper ventilation, and to provide reasonable safety and convenience of the operator.
- L. All rack mounted equipment with front panel controls, shall be furnished with security covers to avoid tampering with preset levels. If specific security covers are not included in the equipment list, the Contractor will furnish the manufacturers suitable alternate.
- M. Every device shall be installed with regard for proper polarity. Absolute polarity shall be maintained through the entire audio chain.

### 3.11 INITIAL ADJUSTMENT

- A. Verify all circuits and extensions for correct connection, continuity, and polarity. Absolute polarity shall be maintained between all points in the system.
- B. Connector polarity shall be maintained except for terminations at equipment manufactured to other standards. Verify that polarity connections are consistent throughout the system.
- C. Verify that the audio system is operational and the system gain structure is within the recommendations of major component manufacturers.

- D. Verify that the all video sources (cameras, players, etc.) and that all video destinations (Projectors, displays, recorders, etc.) are sending and receiving video signals. EDID parameters for all digital video devices shall be reviewed with the owner to verify resolution requirements at all video output devices. Confirm all equipment managed by the audiovisual control system can receive and send control signal as applicable, and that all control parameters and functionality as requested by the owner in the meeting prior to the beginning of work identified in section 2.1.K.9 of this specification have been implemented.

### 3.12 VERIFICATION TESTS

- A. Confirm that each individual wire and cable run has been labeled and documented in compliance with AVIXA F501.01:2015 (Formerly INFOCOMM F501.01:2015).
- B. Confirm that all system outputs are free of spurious signals including oscillations and radio frequency signals. Contractor shall furnish a wide band oscilloscope in order to verify this condition.
- C. Confirm that the system is free of audible clicks, pops, hums, and other noises when any operating control is activated, with or without an input signal
- D. For all audio and video lines, confirm:
  - 1. Proper circuits appear at each termination location.
  - 2. Proper circuits appear at each jack bay location.
  - 3. Continuity of all conductors.
  - 4. Proper polarity is maintained.
  - 5. Absence of shorts between conductors within each circuit.
  - 6. Absence of shorts between circuit conductors and conduit.
- E. Confirm that the loudspeakers and mountings are free of buzzes and rattles when the speaker is swept with sine wave tones over its rated bandwidth at one-half (1/2) its maximum rated power.
- F. For all permanently mounted loudspeaker terminations, furnish impedance measurement of each pair of loudspeaker lines with all loudspeakers connected and all amplifiers disconnected. These measurements shall be documented in a table listing impedance for each third octave from 20 Hz to 20 kHz and shall be accurate to the nearest 0.1Ω.
- G. For each installed data network cable or fiber optic cable, verify that performance conforms to the relevant TIA/EIA specifications.
- H. For all electronic devices mounted in racks and connected to patch bays confirm:
  - 1. Every audio input and output is balanced.
  - 2. Proper polarity is maintained throughout the entire audio signal path.
- I. Confirm that there are no short circuits between the neutral and isolated ground conductors for each clean power circuit.
- J. Confirm every input and output for video system including:
  - 1. Proper signal to displays.
  - 2. Proper sync to playback and recording equipment.

### 3.13 VERIFICATION TEST REPORT

- A. Submit five (5) copies of a written report detailing the results of Initial Adjustments and Verification Test including all relevant drawings, charts, test instrument data and photographs. This report shall be completed and submitted to the Architect for review a minimum of five (5) days prior to Acceptance Testing and final tuning. With this report, submit written certification that the installation conforms to the requirements stated herein, is complete in all respects, and is ready for inspection, testing, and tuning.

### 3.14 ACCEPTANCE TESTING

- A. Acceptance Testing shall be performed by the Architect during a period designated by the Architect. Contractor shall furnish a minimum of two (2) technicians for the acceptance testing period.
- B. All systems shall be compliant with AVIXA ( standard 1M:2009 Uniform Distributed Audio Standard as applicable.
- C. The minimum time required for Acceptance Testing is two (2) working days of dedicated quiet. Coordinate this time period so that free access, work lighting, and electrical power are available on site.
- D. The AV Contractor shall bear any costs incurred for additional Architect's time and expenses due to failure to have the system functioning in accordance with specification requirements at the time scheduled for Architect's Acceptance Testing and Tuning.
- E. Ensure that audiovisual areas are in a clean and orderly condition ready for Acceptance Testing.
- F. At the time of Acceptance Testing, submit one (1) copy of the operation and maintenance manual to the Architect (refer to Paragraph 3.15).
- G. Furnish test equipment meeting the following minimum specifications on site, at all times during the Acceptance Testing. Prior to Acceptance Testing, provide the Architect with a listing of the equipment model numbers and their software versions (if applicable) to be made available.
  - 1. Oscilloscope: 1GHz bandwidth sensitivity – 1mV/cm
  - 2. Digital Multi-meter: 1% accuracy
  - 3. Function Generator: 1GHz bandwidth, distortion <1%
  - 4. Real Time Analyzer: 1/3 octave with microphone.
  - 5. Pink Noise Source: 20 Hz – 20 kHz
  - 6. Impedance Sweep Meter: 20 Hz – 1 kHz range, 1 $\Omega$  - 50 $\Omega$ .
  - 7. Polarity Checker: Microphone level, Line Level, and Loudspeaker Level.
  - 8. NTSC bar graphs and other test patterns for video verification.
  - 9. Ultra High definition (4K60) Video test generator with VGA, DVI, HDMI 2.0, SDI, and 3G-HDSI outputs
- H. Be prepared to verify the performance of any portion of the system by demonstrations, listening, and viewing tests, and instrumented measurements.
- I. Make additional mechanical and electrical adjustments within the scope of the work which may be deemed necessary by the Architect as a result of the Acceptance Test. This may include realigning and re-aiming of video or audio systems, changes in system gain structures, grounding, filtering, or interfaces.
- J. Final acceptance will be contingent upon issuance by the Architect of a letter of acceptance stating that the work has been completed and is in accordance with the Contract Documents. The warranty period will begin upon issuance of said letter.

### 3.15 SYSTEM DOCUMENTATION

- A. Within fifteen (15) days of the Acceptance Testing, prepare and submit five (5) neatly bound copies of the operations and maintenance manuals to the Owner. Manuals shall be placed in an orderly fashion into a three-ring binder with spine labels indicating contents. These copies are in addition to the one (1) copy furnished to the Architect during Acceptance Testing.
- B. Manual shall include but not be limited to the following:
  - 1. Table of contents
  - 2. Written Guarantee and Service Policy
  - 3. Basic power on/off and operational procedures.
  - 4. All Available manufacturer's operation and service literature for each major system component
  - 5. A one-line signal flow diagram with all cable runs and patch points identified by alphanumeric characters

6. A copy of the Verification Test Report
  7. Two (2) copies of as-built conduit riser diagram obtained from the Electrical Contractor
  8. A copy of the final tuning settings as furnished by the Architect
  9. Electronic versions of all documents included in the manual and electronic back up of all software, firmware, and files to restore initial install presets for all applicable devices copied on to (2) USB storage devices.
- C. Furnish a framed copy of the as-built signal flow diagram to be mounted in the **TBD**. This diagram shall have all cable runs and patch points identified by alphanumeric characters.

### 3.16 TRAINING

- A. The AV Contractor shall provide up to forty-eight (48) hours instruction in the safe and proper operation of the equipment, in particular the audio DSP, sound console, and control systems, to the owner's designated representatives.
1. AV Contractor shall schedule instruction with the Owner's designated representatives.
  2. Instruction shall not necessarily follow immediately after the system commissioning.
  3. Instruction shall be independent of the system check-out and activation. Duration of system commissioning shall not affect the length of instruction time.
  4. Instruction, at Owners discretion, may occur in multiple time blocks of less than eight (8) hours each.
  5. AV Contractor shall be responsible for making and furnishing video documentation of instruction for future viewing to the Owner. Video documentation can be requested by the owner up to the entire (48) hours of instruction as detailed in this section, and shall be furnished to the owner as individual .mp4 files per training session. Files shall be labeled by the contractor indicating the date of training and a brief description of the content of the video. All files shall be furnished to the owner on a USB storage device provided by the contractor.

## SECTION 27 51 24

### EDUCATIONAL INTERCOM AND PROGRAM SYSTEMS

#### PART 1 - GENERAL

##### 1.1 GENERAL

- A. Section includes microprocessor-switched, IP-based telephone/intercommunications and program systems with the following components:
  - 1. Telephone system interface.
  - 2. Administrative control consoles.
  - 3. Emergency intercom call switches.
  - 4. Volume control stations.
  - 5. Amplifiers.
  - 6. IP-based loudspeakers/speaker microphones.
  - 7. Wire-guards.
- B. Related Requirements:
  - 1. Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables".
  - 2. Section 26 05 33 "Raceways and Boxes for Electrical Systems".
- C. Provide completely functional and turnkey integration with Owner-provided telephone system for communications and control. Coordinate interface with Owner's telephone system provider.
- D. System shall include connection to a national time standard synchronized programmable master clock or same internet source utilized by the system program clock system.
- E. Include complete interface with audio program playback equipment.
- F. System shall include three (3) administrative consoles. Locate one (1) in the main office, one (1) at the intercom rack, and one (1) at a location to be determined by the Owner.
- G. Include line level audio and relay interface between intercom system and each public address/sound reinforcement audio systems for priority muting.
- H. Provide complete system design, installation, programming, commissioning, and testing.

##### 1.2 DELEGATED DESIGN AND IMPLEMENTATION

- A. Contractor shall provide the complete system design and its implementation in accordance with the Contract Documents. Refer to Action Submittals for project-specific design documentation required.
- B. Include all hardware, firmware, software, programming, electric power, cabling pathways/raceways/supports, electrical boxes, cabling, and all system components to be supplied and installed for a complete and functional turnkey system—without exception. To achieve this, this contractor and subcontractors shall be responsible under this contract for determining—prior to submitting bid—existing equipment/field conditions, complete requirements for new work and the delineation of all work amongst qualified installers and technicians necessary for a fully functional and professional installation.

##### 1.3 DEFINITIONS

- A. DHCP: Dynamic Host Configuration Protocol
- B. FXO: Foreign eXchange Office
- C. H.323: Audio and Video Protocol
- D. IP: Internet Protocol
- E. IP Speaker: All-in-one IP-enabled network speaker or an analog speaker with remote IP adapter interface, amplification, and PoE connectivity.
- F. LAN: Local Area Network
- G. PoE: Power-over-Ethernet
- H. SIP: Session Initiation Protocol
- I. UTP: Unshielded Twisted Pair cabling

#### 1.4 ACTION SUBMITTALS

- A. Delegated Design Submittal: For items listed below, indicate compliance with performance requirements and design criteria, including analysis data.
  - 1. Cabling diagrams and network topology, including fiber optic.
  - 2. Speaker sound level output at each location.
  - 3. Amplifier locations and output.
  - 4. Quantities, types, and locations of PoE switches and patch panels.
  - 5. Battery sizing calculations.
  - 6. Voltage drop calculations.
- B. Product Data: For each type of product.
- C. Shop Drawings:
  - 1. Include plans, elevations, sections, and mounting details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Include scaled drawings for administrative console arrangement of built-in equipment.
  - 4. Include diagrams for power, signal, and control wiring.
    - a. Identify terminals to facilitate installation, operation, and maintenance.
    - b. Single-line diagram showing interconnection of components.
    - c. Cabling routings, pathways, raceways, conduits, supports, and sleeves.
- D. Qualification Data: For Installer and testing agency.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For educational intercommunications and program systems to include in operation and maintenance manuals. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
  - 1. A record of final matching transformer-tap settings and signal ground-resistance measurement certified by Installer.
  - 2. A record of Owner's equipment-programming option decisions.
  - 3. Plans, drawn to scale, indicating location, designation, and connection of intercommunications system components.
- B. Software and Firmware Operational Documentation:
  - 1. Software operating and upgrade manuals.
  - 2. Program Software Backup: On USB media or compact disk, complete with data files.
  - 3. Device address list.
  - 4. Printout of software application and graphic screens.
- C. Field quality-control reports.
- D. Warranty Documents: For special warranty.

#### 1.6 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
- B. Testing Agency Qualifications: Qualified agency, with the experience and capability to conduct testing indicated.
  - 1. Testing Agency's Field Supervisor: Certified by NICET as Audio Systems Level II or Level III Technician.
  - 2. The contracting firm shall have full-service facility located within 2 hours driving time of project location and shall be a fully equipped service organization capable of providing full maintenance and service of the installed system within 24 hours of notification.
- C. Source Limitations: Obtain educational intercommunications and program systems from single source from single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for location and application.
- E. Comply with NFPA 70.
- F. Underwriters Laboratories, Inc.:
  - 1. UL 486A-91: Wire connectors and soldering lugs for use with copper conductors.
  - 2. UL 1449-85: Transient voltage surge suppressers.
  - 3. Comply with UL 1863.

4. Comply with UL listing WYQQ UL 1459.
  - G. Electronics Industries Association:
    1. EIA 568-91: Commercial Building Telecommunications Wiring Standard.
    2. EIA-160: Sound Systems.
    3. EIA-299A: Loudspeakers, Dynamic Magnetic Structures and Impedance.
    4. EIA-310A: Racks, Panels and Associated Equipment.
    5. SE-101-A: Amplifier for Sound Equipment.
  - H. Federal Communications Commission:
    1. FCC Regulations, Part 15, Title 47, and Part 68.
  - I. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for location and application.
  - J. Weather-Resistant Equipment: Listed and labeled by an NRTL for duty outdoors or in damp locations.
  - K. This contract shall include all hardware, firmware, software, programming, electric power, cabling pathways/raceways, electrical boxes, cabling, outside plant (if applicable), and all system components to be supplied and installed for a complete and functional turnkey system—without exception. To achieve this, this contractor and subcontractors shall be responsible under this contract for determining—prior to submitting bids—any existing equipment or field conditions as applicable, complete requirements for new work and the delineation of all work amongst qualified installers and technicians necessary for a fully functional and professional installation.
- 1.7 WARRANTY
- A. All products specified in this Section shall be provided with a special warranty in which the manufacturer agrees to repair or replace products provided under this contract that fail in materials or workmanship within the specified warranty period.
    1. Special Extended Warranty Period: Shall exceed four (4) years starting from the date of Substantial Completion.
      - a. If the manufacturer's warranty commences upon the date materials are delivered, then the manufacturer's warranty period shall be at least five (5) years to meet the requirement stated above.
    2. Make available a service contract offering to Owner to continue factory authorized service of this system. All labor and materials shall be provided at no expense to the Owner during other-than-normal working hours.
    3. Warranty requirements shall include furnishing and installing all software upgrades issued by the manufacturer during the warranty period.
- 1.8 COORDINATION
- A. Coordinate layout and installation of ceiling-mounted speaker microphones and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.
  - B. Coordinate human interface with VoIP phone system and handsets provide by Owner.
  - C. Coordinate interface with fire alarm notification system. School intercom speakers shall be muted whenever audio signals and messaging notifications are being broadcast over the fire alarm speakers.
  - D. Coordinate with the Division-26 electrical contractor and the Division-27 telecom contractor providing horizontal/ backbone cabling/hardware/racks to accommodate intercom system equipment/components and to provide fiber/copper cabling infrastructure as needed. This contractor (providing the school intercom system) may utilize up to 4RU of rack space available in the lower portion of one IT equipment rack located in each IDF telecom room to accommodate distributed intercom cabling and electronic hardware. This contractor shall provide a dedicated equipment rack for the school intercom headend equipment in the main MDF telecom room.
  - E. This intercom system may utilize a single spare LAN backbone fiber-optic pair and one (1) connection to the Owner's LAN for programming purposes only. Coordinate such provisions directly with Owner's information technology manager. In all other respects, this system shall function independently of Owner-supplied network equipment and servers. Provide all necessary system equipment and components for a complete and functional system.

## PART 2 - PRODUCTS

### 2.1 SYSTEM MANUFACTURER

- A. Subject to compliance with all requirements, provide system components, equipment, and products by one of the following:
1. Bogen Communications, Inc.
  2. Rauland-Borg Corporation
  3. Telecor, Inc.

### 2.2 SYSTEM DESCRIPTION

- A. Equipment: Modular type using solid-state components, fully rated for continuous duty unless otherwise indicated. Select equipment for normal operation on input power usually supplied at 110 to 130 V, 60 Hz in a satisfactory manner without the requirement of any external power conditioning equipment. Comply with UL 813.
- B. Expansion Capability: Increase number of stations in the future by 25 percent above those indicated without adding any internal or external components or main trunk cable conductors.
1. System features including time tone scheduling shall be modifiable via software. Time schedules shall be programmable via software installed on Owner's designated computer. System programming shall be available from any connection on the Owner's network. System shall provide minimum 8 separate schedules with up to 256 events.
  2. Provide amplifier system for paging and public address throughout the facility for up to 240 remote stations/speaker locations. The system shall support two (2) channels of audio program material, with the program source being an AM/FM tuner. System shall have additional inputs to accommodate Owner-furnished media players mounted in same equipment rack as AM/FM tuner.
  3. Provide capability and programming for up to four (4) distinct zones of paging.
- C. Integration: Coordinate features and select components to form an integrated system. Match components and interconnections for optimum performance of specified functions.
- D. Local Area Network: The system will utilize a LAN for the connectivity of all devices and components within the facility for the transmission of electronic data. The LAN will be an expansion to the existing or a separate standalone structure in support of the intercommunication system as dictated by the project design documents.
- E. Features and Functions:
1. Audio program to classrooms.
  2. Automatic pre-announce and privacy tones.
  3. Priority emergency paging, as well as all-call paging.
  4. Hands-free intercom speaker communication.
  5. Manual and automatic electronic gain control VOX circuitry on intercom speakers to maintain constant speech and adjust to background noise levels.
  6. Ability to control up to eight relays both manually and through timed functions.
  7. Receive capability from up to six (6) sense inputs that are field programmable for emergency functions.
    - a. Provide fully functional tornado alarm feature in this contract.
  8. All programmable functions to be saved in battery-backed ram to prevent loss in a power failure condition.
  9. Classroom IP speakers and Owner-provided telephones are to operate independently and simultaneously to provide two simultaneous paths of Voice Communications to each classroom and other areas as designated. When using the telephone for voice communications it must still be possible to call that location via the intercom speaker(s) at that location.
- F. Special Features and Functions:
1. System shall enable remote emergency communications via telephone communications. With proper system security authorization, the Owner shall be capable of remotely calling into the system to access security emergency public address features.
  2. Provide "March-to-Music" feature. Coordinate with Owner prior to bidding.

## 2.3 FUNCTIONAL DESCRIPTION OF IP-BASED TELEPHONE/INTERCOMMUNICATION SYSTEMS

### A. Integrated central system with the following:

1. Direct-dial, full duplex private telephone communications between all locations equipped with Owner-provided telephones and IP-addressable speaker-microphone. Call initiation among administrative consoles and between administrative consoles and remote stations by dialing station's number on a 12-digit keypad.
2. Sixteen (16) channels for unrestricted simultaneous communications.
3. Initial system operation with up to three (3) administrative consoles and 240 stations, expandable to 720 stations.
4. Direct-dial, two-way amplified voice intercommunication between administrative console telephones and remote stations without use of press-to-talk or talk-listen switches.
5. Automatic queuing for intercommunication channels, with automatic call waiting.
6. Call transfer among administrative consoles.
7. Display of selected station and answering calling station by pressing a single "response button."
8. Simultaneous communication with other stations on system by dialing a designated number on a 12-digit keypad.
9. Automatic gain control to ensure constant intercom speech level.
10. Simultaneous distribution of emergency announcements to all locations equipped with speakers by dialing a predetermined code number.
11. User-selectable facility for providing selected Owner-provided telephone stations with dial tone for external telephone calls.
12. Assignment of speaker locations within any one or more of four (4) all-call zones for zone paging or time signal reception.
13. Digital readout displays on which up to three incoming calls are displayed with additional calls stored for subsequent display.
14. Off-site diagnostics to monitor system functions, operations, and faults through a serial data port on central-control station.
15. Control of simultaneous distribution of program material to various combinations of remote stations or groups by using keypad to control sources and distribute programs.
16. User-programmable features include the following:
  - a. Station calling by room number.
  - b. Room station call-in priority levels.
  - c. Audible signal schedule functions.
  - d. Schedule characteristics of audible signals.
  - e. Call-in tone characteristic.
  - f. Precedence among administrative consoles as destinations for incoming calls from room stations.
  - g. Grouping rooms and speakers into zones for paging and program distribution purposes.
17. Telephone interconnect shall be capable of accepting H.323, SIP, and FXO type protocols and include the following features:
  - a. Direct connection to central office trunk lines with initial system wiring for two (2) trunk lines.
  - b. Routing of outside trunk lines for "attendant answer incoming" and "direct inward line" functions.
  - c. Station programming for access to outside trunk lines to be any of the following:
    - 1) Totally unrestricted access.
    - 2) Restricted access.
    - 3) No access.
  - d. System programming to allow or disallow local prefixes, and to authorize access for as many as three area codes.
  - e. Discriminating ringing for identifying internal and outside calls.
  - f. Circular hunting for outside trunks to prevent excess usage of any one trunk.
  - g. Direct connection of a single trunk to designated Owner-provided telephone with transfer to attendant if unanswered.
  - h. Call parking allowing paged party to remotely pick up outside call from any station.
  - i. Night-answer mode to allow one or all of the following:
    - 1) Incoming call transferred to predetermined extension.
    - 2) Tone transmitted to speakers to notify key personnel to answer Owner-provided telephone.
    - 3) Dial tone to remote stations to allow answering call from all locations.
  - j. Call control console to perform as follows:
    - 1) Identify, answer, and route incoming outside calls, with reminder and recall features.

- 2) Directly access outside trunk lines.
  - 3) Hold, park, and transfer calls.
  - 4) Screen outside calls.
  - k. Capable of placing outside call.
  - l. Ability to transfer calls.
  - m. Call forwarding functions.
  - n. Paging and emergency call placement.
  - o. Speed-dial programming.
  - p. Programmable restrictive functions.
  - q. Communicating hands free.
  - r. Calling administrative console by actuating call switch.
  - s. Returning a busy signal to indicate that station is already in use.
- B. IP Speakers: Free of noise and distortion during operation and when in standby mode.
- 2.4 TELEPHONE SYSTEM INTERFACE
- A. Provide interface for PBX system integration by zone. This system must be integrated with the Owner-provided telephone system. All necessary additional intercom system components shall be included in this contract.
- 2.5 ADMISTRATIVE CONTROL CONSOLE
- A. Microprocessor-based instrument to process outside and internal calls with a 12-digit keypad selector.
- B. 20-character alphanumeric display for the following:
- 1. Simultaneous display of up to three calling stations plus last station dialed.
  - 2. Display of calls in order received with emergency calls taking precedence on the display.
  - 3. Review of calls stored in groups of four.
  - 4. Display of prompt messages to assist in system operation.
- C. Programmable Keys: Minimum of 20 with LED indicators for ringing/busy status; programmable for trunk and operator functions.
- D. Transfer Button: Calls to busy extensions and unanswered calls automatically returned to call control console.
- E. Hold Button: With reminder feature every 30 seconds for parked calls or calls placed on hold.
- F. Release Button: For use with parked calls or calls placed on hold.
- G. Page Button: For engaging system paging functions.
- H. Programmable for night answer, remote answer, and remote pickup features.
- I. Programmable for distribution of emergency announcements, all-page announcements, zone-page announcements, and emergency/evacuation alert.
- J. Central-Control Cabinet Equipment: Central switching equipment, central office adapter module, line link modules, power supplies, chassis adapters, and other switching and control devices required for trunk and internal conversation channels and control functions.
- K. Enclosure: Galvanized steel with minimum depth.
- L. 12-Digit Keypad: Input device to initiate calls and commands.
- M. Volume Control: Regulates incoming-call volume.
- N. Tone Annunciation: Momentary audible tone signal announces incoming calls.
- O. LED Annunciation: Identifies calling stations and stations in use. Lamp remains on until call is answered.
- P. Speaker Microphone: Transmits intercom voice signals when used via a voice-operated switch.
- Q. Faceplate: Stainless steel or anodized aluminum with tamperproof mounting screws.
- R. Enclosure: Two-gang galvanized steel with minimum depth.
- S. Speaker: Minimum axial sensitivity shall be 91 dB at one meter, with 1-W input. Voice coil shall be not less than minimum; permanent magnet.
- T. Tone Annunciation: Recurring momentary tone indicates incoming calls.
- U. Call Switch: Mount on faceplate. Permits calls to administrative console.

- V. Privacy Switch: Mount on faceplate. When in on position, switch prevents transmission of sound from remote station to system; when in off position, without further switch manipulation, response can be made to incoming calls.

## 2.6 EMERGENCY INTERCOM CALL SWITCHES

- A. Enclosure:
  - 1. Single-gang box, flush-mount, unless otherwise indicated.
  - 2. Stainless-steel faceplate or anodized aluminum with tamperproof screws.
  - 3. Engraved label on faceplate: "Emergency Call".
- B. Call Switch:
  - 1. Red rocker switch or button.
  - 2. Momentary contact signals system that an emergency call has been placed.
- C. Privacy Switch: Prevents transmission of sound signals from station to system.
- D. Volume Control: Operated by screwdriver blade through a hole in faceplate to adjust output level of associated speaker.

## 2.7 ALL-CALL AMPLIFIER

- A. Output Power: 70-V balanced line. 80 percent of the sum of wattage settings of connected for each station and speaker connected in all-call mode of operation, plus an allowance for future stations.
- B. Total Harmonic Distortion: Less than 5 percent at rated output power with load equivalent to quantity of stations connected in all-call mode of operation.
- C. Minimum Signal-to-Noise Ratio: 60 dB, at rated output.
- D. Frequency Response: Within plus or minus 2 dB from 50 to 12,000 Hz.
- E. Output Regulation: Maintains output level within 2 dB from full to no load.
- F. Input Sensitivity: Compatible with administrative console and central equipment so amplifier delivers full-rated output with sound-pressure level of less than 10 dynes/sq. cm impinging on administrative console, speaker microphones, or handset transmitters.
- G. Amplifier Protection: Prevents damage from shorted or open output.

## 2.8 INTERCOMMUNICATION AMPLIFIER

- A. Minimum Output Power: 15 W; adequate for all functions.
- B. Total Harmonic Distortion: Less than 5 percent at rated output power with load equivalent to one station connected to output terminals.
- C. Minimum Signal-to-Noise Ratio: 50 dB, at rated output.
- D. Frequency Response: Within plus or minus 3 dB from 70 to 10,000 Hz.
- E. Output Regulation: Maintains output level within 2 dB from full to no load.
- F. Input Sensitivity: Matched to input circuit and to provide full-rated output with sound-pressure level of less than 10 dynes/sq. cm impinging on microphones in administrative console, speaker microphones, or handset transmitters.
- G. Amplifier Protection: Prevents damage from shorted or open output.

## 2.9 PAGING AMPLIFIER

- A. Input Voltage: 120-V ac, 60 Hz.
- B. Frequency Response: Within plus or minus 3 dB from 60 to 10,000 Hz.
- C. Minimum Signal-to-Noise Ratio: 60 dB, at rated output.
- D. Total Harmonic Distortion: Less than 3 percent at rated output power from 70 to 12,000 Hz.
- E. Output Regulation: Less than 2 dB from full to no load.
- F. Controls: On-off, input levels, and low-cut filter.
- G. Input Sensitivity: Matched to input circuit and to provide full-rated output with sound-pressure level of less than 10 dynes/sq. cm impinging on speaker microphones or handset transmitters.
- H. Amplifier Protection: Prevents damage from shorted or open output.

2.10 CONE-TYPE LOUDSPEAKERS/SPEAKER MICROPHONES

- A. IP speaker, 2' x 2' class UL Listed speaker assembly designed for flush lay-in installation in suspended ceiling tile grid, where applicable. Provide conventional round speaker and baffle if installed in gypsum board ceiling or exposed structural ceiling. Provide square back-box enclosure for surface- or pendant-mount applications (exposed structural ceilings).
- B. PoE 802.3af enabled with RJ45 connectors. Configurable via web access, with onboard programmable control relay.
- C. Minimum Axial Sensitivity: 91 dB at one meter, with 1-W input.
- D. Frequency Response: Within plus or minus 3 dB from 70 to 15,000 Hz.
- E. Coil Size: 8 inches with 1-inch voice coil and minimum 5-oz. ceramic magnet.
- F. Minimum Dispersion Angle: 100 degrees.
- G. Line Transformer: Maximum insertion loss of 0.5 dB, power rating equal to speaker rating, and at least four level taps.
- H. Enclosures: Steel housings or back boxes, acoustically dampened, with front face of at least 0.0478-inch steel and whole assembly rust proofed and factory primed, complete with mounting assembly and suitable for surface ceiling, flush ceiling, pendant or wall mounting; with relief of back pressure.
- I. Baffle: For flush speakers, minimum thickness of 0.032-inch aluminum with textured white finish.
- J. High-impact or high-abuse applications as indicated on the Drawings: Vandal-Proof, High-Strength Baffle: For flush or surface-mounted speakers as applicable, self-aging cast aluminum with tensile strength of 44,000 psi, 0.025-inch minimum thickness; countersunk heat-treated alloy mounting screws; and textured white epoxy finish.

2.11 HORN-TYPE LOUDSPEAKERS/SPEAKER MICROPHONES

- A. IP Speaker shall be all-metal, high-impact high-abuse weatherproof design, complete with universal mounting brackets.
- B. PoE 802.3af enabled with RJ45 connectors. Configurable via web access, with onboard programmable control relay.
- C. Wideband G.722 codec support for HD Voice.
- D. Auto-provisioning (i.e., TFTP, FTP, HTTP, HTTPS). Also supported: TLS & SRTP (secure SIP signaling and media), SIP over TCP (allows increased packet size over UDP), DNS SRV Record, and CDP/LLDP automatic VLAN assignment. SNMP supervision or via the Algo 8300 Controller. Internal memory of 1GB for uploading custom WAV files or recorded messages.
- E. Frequency Response: Within plus or minus 3 dB from 275 to 14,000 Hz.
- F. Minimum Power Rating of Driver: 15 W, continuous.
- G. Minimum Dispersion Angle: 110 degrees.
- H. Line Transformer: Maximum insertion loss of 0.5 dB, power rating equal to speaker rating, and at least four level taps.

2.12 IP ADDRESSABLE MODULES

- A. Modules utilized for the operation of the intercommunication and paging functions.
  - 1. POE 802.3af compliant.
  - 2. Support DHCP.
  - 3. RJ45 connectivity.
- B. Speaker Modules:
  - 1. Interface with speaker and multiple call switches.
  - 2. Capable of providing privacy function for speaker/microphone when activated.
  - 3. Rated for installation within air plenum spaces.

2.13 VOLUME CONTROL STATIONS

- A. Flush wall-mounted auto-transformer type with brushed stainless faceplate with black control knob and indicating digits. Ten step attenuation plus open position. Insertion loss less than 0.5 dB. Designed for IP speaker and/or 25V and 70V lines, if applicable.

2.14 TUNER/RECEIVER

- A. Approved Manufacturers:
  - 1. Marantz
  - 2. Denon
  - 3. Tascam
  - 4. (or intercom manufacturer label)
- B. Provide a rack mounted, AM/FM Digital Tuner operating on 120 VAC. The AM section shall be tunable over a range of 530 to 1610 Hz. The FM section shall be tunable over a range of 87.5 to 108MHz. The tuner shall have seek-and-scan, 20 preset station and digital readout. A CD player, if required, will be furnished by Owner.
  - 1. The system shall be able to receive external audio source input via the following methods:
    - a. USB – Type A
    - b. USB – Type C
    - c. 3.5mm audio jack
    - d. Bluetooth
    - e. SD Card
- C. Supply and install roof-mounted high-definition AM/FM antenna with lead-in cables, lightning arrestors, weatherhead, splitters, etc. Coordinate installation with Division 26 contractor and roofing contractor. Provide one of the following or approved equivalent:
  - 1. Shakespeare 5420-XT (Galaxy Little Giant)
  - 2. Pixel AFHD-4 (by DX Engineering)

2.15 EQUIPMENT RACK/CABINET

- A. Install all sound system components in a floor equipment cabinet assembly. Intercom system punch down blocks shall be provided on a nearby wall or located in the cabinet if so equipped. Provide blank panels as necessary to cover excess space. Cabinet shall include space for the intercom system UPS.
  - 1. Provide a dedicated rack in the main headend room for equipment associated only with this system. This equipment rack shall be enclosed, ventilated, and equivalent to Lowell model LER-4427LRD.

2.16 ELECTRICAL PROVISIONS

- A. Power Supply: Separately fused, 110-volt AC circuit fused with a circuit breaker of 20 amps.
- B. Power Strip: Protect the AC supply with a Tripp-Lite Model ISOBAR (IB) 2.0 AC outlet strip or equivalent by Geist, APC, Eaton, or Liebert.
- C. Grounding: The sound equipment shall be grounded to a unified building ground/bonding conductor consisting of #6 AWG insulated copper wire routed in conduit.
- D. Standby Power: UPS as described in this Section.

2.17 UNINTERRUPTIBLE POWER SUPPLY (UPS)

- A. The UPS units shall be rack mounted within the intercom racks to protect the intercom master equipment. Unit shall be rated for 2200 VA minimum with a full load run time of 5 minutes with internal battery and contain at least six (6) outlets for equipment protection.
  - 1. Acceptable Manufacturers:
    - a. American Power Conversion (APC)
    - b. Eaton Corporation
    - c. Geist Manufacturing
    - d. Liebert Corporation
  - 2. Design Basis: APC Smart UPS SMT Series.
  - 3. Provide in quantities required to fully support system.
  - 4. Provide rack mounting adapters as required.
  - 5. Provide UL listed, 6 ft NEMA 5-20 extension cable to input of UPS to allow mounting in bottom of rack and connection to runway mounted receptacle.

2.18 CONDUCTORS AND CABLES

- A. General Conductors:
  - 1. Jacketed, twisted pair and twisted multi-pair as required by manufacturer, untinned solid copper. Sizes as recommended by system manufacturer, but no smaller than No. 20 AWG.
  - 2. Insulation: Thermoplastic, not less than 1/32 inchthick.

3. Shielding: For speaker-microphone leads and elsewhere as recommended by manufacturer; No. 34 AWG, tinned, soft-copper strands formed into a braid or equivalent foil.
    - a. Minimum Shielding Coverage on Conductors: 60 percent.
  - B. Category 5 UTP Cabling:
    1. Jacket Color: White.
    2. Type CMP, complying with NFPA 262.
    3. NRTL, UL 444, NFPA 70.
  - C. Plenum Cable: Listed and labeled for plenum installation.
- 2.19 RACEWAYS
- A. Educational Intercommunication and Program System Raceways and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems."
  - B. Outlet boxes shall be not less than 2 inches wide, 3 inches high, and 2-1/2 inches deep.
  - C. Flexible metal conduit is prohibited.

### **PART 3 - EXECUTION**

#### **3.1 EXISTING CONDITIONS AND COORDINATION**

- A. Interruption of Existing Educational Intercom and Program System: Do not interrupt existing systems unless permitted under the following conditions:
  1. Notify Construction Manager and Owner no fewer than two days in advance of proposed interruption of systems. Coordinate with Owner the maximum allowable duration of each service interruption.
  2. Do not proceed with interruption of systems without Construction Manager's and the Owner's permission.

#### **3.2 WIRING METHODS**

- A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters, and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.
  1. Install all cabling within raceways, unless located above accessible grid ceilings.
  2. Install plenum cable in environmental air spaces, including plenum ceilings.
  3. Comply with requirements for raceways and boxes specified in Division 26 Section "Raceway and Boxes for Electrical Systems."
- B. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- C. Wiring within Enclosures: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

#### **3.3 INSTALLATION OF RACEWAYS**

- A. Comply with requirements for raceways and boxes specified in Division 26 Section "Raceway and Boxes for Electrical Systems."
- B. Install manufactured conduit sweeps and long-radius elbows whenever possible.

#### **3.4 INSTALLATION OF CABLES**

- A. Comply with NECA 1.
- B. General Requirements:
  1. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at outlets and terminals.
  2. Splices, Taps, and Terminations: Arrange on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Cables may not be spliced.
  3. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
  4. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

5. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
  6. Cold-Weather Installation: Bring cable to room temperature before de-reeling. Heat lamps shall not be used.
- C. Open-Cable Installation:
1. Install cabling with horizontal and vertical cable guides in telecommunication spaces with terminating hardware and interconnection equipment.
  2. Suspend cable not in a wireway or pathway a minimum of 8 inches above ceiling by cable supports not more than 60 inches apart.
  3. Cable shall not be run through structural members or be in contact with pipes, ducts, or other potentially damaging items.
- D. Separation of Wires: Separate speaker-microphone, line-level, speaker-level, and power wiring runs. Install in separate raceways or, where exposed or in same enclosure, separate conductors at least 12 inches apart for speaker microphones and adjacent parallel power and telephone wiring. Separate other intercommunication equipment conductors as recommended by equipment manufacturer.
- E. Refer to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables" for additional wiring requirements.

### 3.5 INSTALLATION

- A. Match input and output impedances and signal levels at signal interfaces. Provide matching networks where required.
- B. Identification of Conductors and Cables: Color-code conductors and apply wire and cable marking tape to designate wires and cables so they identify media in coordination with system wiring diagrams.
- C. Weatherproof Equipment: For units that are mounted outdoors, in damp locations, or where exposed to weather, install consistent with requirements of weatherproof rating.
- D. Circuiting of IP speakers for zone paging shall be per classroom, per groups for zone communications, per grade level, per corridor, and per functional workspace. Coordinate with Owner as needed for options as well as programming.
- E. Furnish and install wall-mounted volume controls where indicated on the drawings.
- F. Connect intercom system, including all-call amplifiers to UPS mounted in bottom of rack.
- G. Connect intercom system to Owner's PBX telephone/VoIP system. Install two (2) communications pathways between intercom and telephone system. Determine complete requirements prior to bidding.
- H. Connect intercom system to Owner's LAN network and install class program/bell schedule software on Owner's computers. Coordinate connectivity to LAN with Owner's IT department/director.
- I. Connect to national time standard synchronized programmable master clock or same internet source utilized by the system program clock system.
- J. Install line level audio and relay interface between intercom system and each public address/sound reinforcement audio systems for priority muting.
- K. Coordinate with fire alarm system interface to mute intercom system during an emergency notification alarm.
- L. Coordinate means of activating programmed tornado alarm directly with the Owner's representative.
- M. Connect to audio program playback located in rack and controlled from administrative consoles.

### 3.6 GROUNDING

- A. Ground cable shields and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
- B. Signal Ground Terminal: Locate at main equipment cabinet. Isolate from power system and equipment grounding.
- C. Connect intercom components to rack and bond rack to signal ground terminal with No. 6 AWG minimum green copper conductor. Remove all paint and foreign matter from contact surfaces before bonding ground lugs.
- D. Refer to Division 26 Section "Grounding and Bonding for Electrical Systems".

### 3.7 SYSTEM PROGRAMMING

- A. Programming: Fully brief Owner on available programming options. Record Owner's decisions and set up initial system program. Prepare a written record of decisions, implementation methodology, and a record documents report.
- B. System programming shall reflect actual room numbers and names (which are not the same as those shown on construction document floor plans). Coordinate with and obtain final approved list from the Architect/Owner.

### 3.8 FIELD QUALITY CONTROL

- A. Testing Agency: [Engage] [Owner will engage] a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Tests and Inspections:
  - 1. Schedule tests with at least seven days' advance notice of test performance.
  - 2. After installing educational intercommunications and program systems and after electrical circuitry has been energized, test for compliance with requirements.
  - 3. Operational Test: Test originating station-to-station, all-call, and page messages at each intercommunication station. Verify proper routing and volume levels and that system is free of noise and distortion. Test each available message path from each station on system.
  - 4. Frequency Response Test: Determine frequency response of two transmission paths, including all-call and paging, by transmitting and recording audio tones. Minimum acceptable performance is within 3 dB from 150 to 2500 Hz.
  - 5. Signal-to-Noise Ratio Test: Measure signal-to-noise ratio of complete system at normal gain settings as follows:
    - a. Disconnect speaker microphone and replace it in the circuit with a signal generator using a 1000-Hz signal. Measure signal-to-noise ratio at speakers.
    - b. Repeat test for three speaker microphones, and each administrative console microphone, and for each separately controlled zone of paging loudspeakers.
    - c. Minimum acceptable ratio is 45 dB.
  - 6. Distortion Test: Measure distortion at normal gain settings and rated power. Feed signals at frequencies of 150, 200, 400, 1000, and 2500 Hz into each intercom, paging, and all-call amplifier. For each frequency, measure distortion in the paging and all-call amplifier outputs. Maximum acceptable distortion at any frequency is 5 percent total harmonics.
  - 7. Acoustic Coverage Test: Feed pink noise into system using octaves centered at 500 and 4000 Hz. Use sound-level meter with octave-band filters to measure level at five locations in each paging zone. Maximum permissible variation in level is plus or minus 3 dB; in levels between adjacent zones, plus or minus 5 dB.
  - 8. Power Output Test: Measure electrical power output of each paging amplifier at normal gain settings of 150, 1000, and 2500 Hz. Maximum variation in power output at these frequencies is plus or minus 3 dB.
  - 9. Signal Ground Test: Measure and report ground resistance at system signal ground. Comply with testing requirements in Section 27 05 26 "Grounding and Bonding for Communications Systems."
- D. Inspection: Verify that units and controls are properly labeled and that interconnecting wires and terminals are identified. Prepare a list of final tap settings of paging and independent room speaker-line matching transformers.
- E. Educational intercommunications and program systems will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

### 3.9 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service and initial system programming.
  - 1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
  - 2. Complete installation and startup-checks according to manufacturer's written instructions.
  - 3. Assist with PBX integration to ensure interconnection and proper intercom system isolation and ensure intercom system integrity.

3.10 ADJUSTING

- A. On-Site Assistance: Engage a factory-authorized service representative to provide on-site assistance in adjusting sound levels, resetting transformer taps, and adjusting controls to meet occupancy conditions.
- B. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three (3) visits to Project during other-than-normal occupancy hours for this purpose.
  - 1. Include a minimum of 6 hours of on-site labor designated for this purpose plus all necessary travel time.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain the educational intercommunications and program systems.
  - 1. Train Owner's maintenance personnel on programming equipment for starting up and shutting down, troubleshooting, servicing, and maintaining the system and equipment.
  - 2. Conduct a total of seven (7) hours (minimum) of on-site training as specified in instructions to Owner's employees in Division 01 Section "Demonstration and Training." Training shall be divided into two (2) separate sessions (to occur on two separate days if requested by Owner. The first session shall provide two (2) hours of basic training. The second session shall provide five (5) hours of in-depth training. Coordinate training content/agenda, dates, and times directly with Owner.

END OF SECTION 27 51 24

## SECTION 28 05 00

### COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Electronic safety and security equipment coordination and installation.
  - 2. Raceway and Boxes for Electronic Safety and Security.
  - 3. Sleeves for pathways and cables.
  - 4. Sleeve seals.
  - 5. Grout.
  - 6. Common electronic safety and security installation requirements.
  - 7. Backboxes, raceways and power for all electronic safety and security system devices shown on Contract Drawings.
- B. This Section includes the following types of system rough-ins:
  - 1. Security equipped doors and frames.
  - 2. Closed circuit video cameras.
  - 3. Card readers.
- C. Related Sections:
  - 1. Section 07 84 13 "Penetration Firestopping" for firestopping materials and installation at penetrations through walls, ceilings, and other fire-rated elements.
  - 2. Section 08 71 00 "Door Hardware" for electrified door hardware.
  - 3. Section 08 31 13 "Access Doors and Frames."
  - 4. Section 26 05 33 "Raceway and Boxes for Electrical Systems" for raceway and outlet boxes.
  - 5. Section 27 05 36 "Cable Trays for Communications" for cable tray systems.
  - 6. Section 28 46 00 "Fire Detection and Alarm Systems" for raceway, boxes and backboxes.

##### 1.2 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. NBR: Acrylonitrile-butadiene rubber.

##### 1.3 SUBMITTALS

- A. Product Data: None

##### 1.4 COORDINATION

- A. Coordinate arrangement, mounting, and support of electronic safety and security equipment:
  - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
  - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
  - 3. To allow right of way for piping and conduit installed at required slope.
  - 4. To assure connecting pathways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate backbox, outlet box and power requirements with electronic safety and security equipment.
- C. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- D. Coordinate location of access panels and doors for electronic safety and security items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."
- E. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 07 84 13 "Penetration Firestopping."

- F. Coordinate rough-ins with surrounding surfaces to insure flush installations. Provide extension rings on device boxes to accommodate tack walls and surfaces.
- G. Coordinate ducts and sleeves with structural elements.

## **PART 2 - PRODUCTS**

### **2.1 RACEWAY AND BOXES FOR ELECTRONIC SAFETY AND SECURITY**

- A. All material and associated installation shall be as specified in appropriate Section 26 05 33 "Raceways and Boxes for Electrical Systems."

### **2.2 SLEEVES FOR PATHWAYS AND CABLES**

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

### **2.3 CABLE SUPPORTS FOR CABLE PATHWAYS**

- A. Cable Supports (J-Hooks): Meets ISO/IEC 18010 and TIA-569-B. Steel hooks designed for communications cable support with cable retaining clip. Supports shall be capable of interlocking vertically to support multiple cable pathways. Supports shall be available in 1 inch thru 4 inch size. Supports shall be capable of attaching to beams, walls, threaded rod, and angled mounting brackets with compatible accessories.
  - 1. Provide single J-Hook cable supports from each communications cable stub-up to main cable support line or cable tray.
  - 2. Provide three (3) stacked cable supports minimum 5ft on center from individual rooms along main pathways to cable tray or serving communications room.
  - 3. Provide Erico Caddy CAT Link Series or approved equal.

### **2.4 SLEEVE SEALS**

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Metraflex Co.
    - d. Pipeline Seal and Insulator, Inc.
  - 2. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of pathway or cable.
  - 3. Pressure Plates: Stainless steel. Include two for each sealing element.
  - 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating or stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

### **2.5 GROUT**

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

## **PART 3 - EXECUTION**

### **3.1 COMMON REQUIREMENTS FOR ELECTRONIC SAFETY AND SECURITY INSTALLATION**

- A. General:
  - 1. Comply with NECA 1.
  - 2. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
  - 3. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

4. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both communications' equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
  5. Right of Way: Give to piping systems installed at a required slope.
  6. Provide rough-ins as specified herein at each location where the corresponding symbol is indicated on the Drawings.
  7. Mounting heights shall be as indicated in the Mounting Height Schedule unless otherwise indicated on the Drawings.
  8. Provide all raceways with protective insulation bushings at raceway termination.
  9. Provide junction/pull boxes at locations indicated or required.
  10. Flexible type raceways shall be secured and terminated in a double-gang box above accessible ceiling.
  11. Provide a blank coverplate for each rough-in not utilized by date of substantial completion.
- B. Security Equipped Doors and Frames:
1. See Contract Drawing details for specifications.
  2. Provide infrastructure per detail at all exterior doors and at interior doors at locations indicated on drawings.
- C. Closed circuit video cameras:
1. For exterior wall-mounted in precast, or metal panel walls: Provide flush 3-1/2" deep, single-gang box at locations indicated. Provide box support behind metal panel for camera mounting.
  2. For interior wall mounted or ceiling mounted non-accessible ceiling: Provide flush double-gang box with single-gang extension ring at locations indicated.
  3. Provide one (1) 3/4-inch raceway to nearest accessible ceiling. Include bushings at all raceway terminations.
- D. Card reader Outlets:
1. Provide flush single-gang box with single-gang extension ring at locations indicated.
  2. Provide one (1) 3/4-inch raceway stubbed out to nearest accessible ceiling. Include bushings at all raceway terminations.
  3. Coordinate installation with finished surfaces for flush installation.
- 3.2 SLEEVE INSTALLATION FOR ELECTRONIC SAFETY AND SECURITY PENETRATIONS
- A. General:
1. Electronic safety and security penetrations occur when raceways, pathways, cables, wireways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
  2. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
  3. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
  4. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
  5. Cut sleeves to length for mounting flush with both surfaces of walls.
  6. Seal space outside of sleeves with grout for penetrations of concrete and masonry
    - a. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
  7. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants."
  8. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pathway and cable penetrations. Install sleeves and seal pathway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."
  9. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.
  10. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
  11. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between pathway or cable and sleeve for installing mechanical sleeve seals.

12. Where sleeves penetrate a wall with one side having exposed structure, sleeves shall be placed above the elevation of the bottom of steel. Where a roof deck elevation change occurs, sleeve height shall vary and be install above the elevation of bottom of steel on both sides of wall.
  - B. Sleeves: Provide sleeves for electronic safety and security cabling. These sleeves not shown on drawings. Each group of sleeves shall be located to minimize the length of cabling to serve the associated devices in each room or area. Provide the quantity and size of sleeves as defined:
    1. Rooms with two or less systems device rough-ins: One (1) 1-inch sleeves.
    2. Rooms with three to five systems device rough-ins: Two (2) 1-inch sleeves.
    3. Rooms with six or more systems device rough-ins: Two (2) 2-inch sleeves.
- 3.3 SLEEVE-SEAL INSTALLATION
- A. Install to seal exterior wall penetrations.
  - B. Use type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- 3.4 FIRESTOPPING
- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for communications installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Section 07 84 13 "Penetration Firestopping."

END OF SECTION 28 05 00

## SECTION 28 05 13

### CONDUCTORS AND CABLES FOR ELECTRONIC SAFETY AND SECURITY

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Lock power.
  - 2. Card reader.
  - 3. Door contact.
  - 4. Request to Exit.
  - 5. Network cabling.
  - 6. RS-485 cabling.
  - 7. Identification products.
- B. Related Sections:
  - 1. Section 07 84 13 "Penetration Firestopping" for firestopping materials and installation at penetrations through walls, ceilings, and other fire-rated elements.
  - 2. Section 08 71 00 "Door Hardware" for electrified door hardware.
  - 3. Section 28 13 00 "Access Control" for access control system and video
  - 4. Section 28 46 00 "Fire Detection and Alarm Systems" for fire alarm cables and conductors

##### 1.2 DEFINITIONS

- A. BICSI: Building Industry Consulting Service International.
- B. EMI: Electromagnetic interference.
- C. IDC: Insulation displacement connector.
- D. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.
- E. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).
- F. RCDD: Registered Communications Distribution Designer.

##### 1.3 INFORMATIONAL SUBMITTALS

- A. Qualification Data: If requested, for qualified layout technician, installation supervisor, and field inspector.
- B. Source quality-control reports.
- C. Field quality-control reports.

##### 1.4 FIELD CONDITIONS

- A. Do not install conductors and cables that are wet, moisture damaged, or mold damaged.
  - 1. Indications that wire and cables are wet or moisture damaged include, but are not limited to, discoloration and sagging of factory packing materials.
- B. Environmental Limitations: Do not deliver or install UTP, optical fiber, and coaxial cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

#### PART 2 - PRODUCTS

- 2.1 Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - A. Belden.
  - B. General Cable.
  - C. West Penn Wire.

- D. Windy City Wire.

## 2.2 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame-Spread Index: 25 or less.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 2.3 CABLES

- A. General Cable Requirements: Comply with requirements in Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables" and as recommended by system manufacturer for integration requirement. Provide composite cable, CMP rated jacket with the following cable components. Provide additional individual cables to doors with multiple devices of the same type. Minimum 16 AWG conductors for lock power. Increase conductor gauge with distance per manufacturers recommendation.
- B. Lock Power:
1. Four conductor, No. 16 AWG, stranded (7x30) tinned copper conductors.
  2. Low smoke polyvinyl chloride insulation.
  3. Aluminum foil-polyester tape shield with 100 percent shield coverage.
  4. Fluorinated ethylene propylene jacket.
  5. Conductors are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
  6. Flame Resistance: Comply with NFPA 262.
  7. Color: Gray.
  8. Belden 6202UE or approved equal.
- C. Card Reader:
1. Three (3) twisted pair, shielded, No. 22 AWG, stranded (7x30) tinned copper conductors.
  2. FEP – Fluorinated Ethylene Propylene insulation.
  3. Aluminum foil-polyester tape shield with 100 percent shield coverage.
  4. Fluorinated ethylene propylene jacket.
  5. No. 24 AWG stranded (7x32) tinned copper drain wire.
  6. Flame Resistance: Comply with NFPA 262
  7. Color: Orange.
  8. Belden 6504FE or approved equal.
- D. Door Contact:
1. Two conductor, No. 22 AWG, stranded (7x30) tinned copper conductors.
  2. Low smoke polyvinyl chloride insulation.
  3. Fluorinated ethylene propylene jacket.
  4. Flame Resistance: Comply with NFPA 262.
  5. Color: White.
  6. Belden 6500FE or approved equal.
- E. Request to Exit:
1. Four conductor, No. 22 AWG, stranded (7x30) tinned copper conductors.
  2. Low smoke polyvinyl chloride insulation.
  3. Fluorinated ethylene propylene jacket.
  4. Flame Resistance: Comply with NFPA 262.
  5. Belden 6502FE or approved equal.
- F. Network Cabling:
1. Comply with requirements in Section 27 15 00 "Communications Cabling".
- G. RS485 Cabling:
1. Two Conductor twisted pair, No. 24 AWG, stranded (7x32) tinned copper conductors.
  2. FEP – Fluorinated Ethylene Propylene insulation.
  3. Aluminum foil-polyester tape shield with 100 percent shield coverage.
  4. Fluorinated ethylene propylene jacket.
  5. No. 24 AWG, stranded (7x32) tinned copper drain wire.
  6. Flame Resistance: Comply with NFPA 262
  7. Color: Orange.
  8. Belden 6640FD or approved equal.

## 2.4 IDENTIFICATION PRODUCTS

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - 1. Brady Worldwide, Inc.
  - 2. HellermannTyton North America.
  - 3. Panduit Corp.
- B. Comply with UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

## 2.5 SOURCE QUALITY CONTROL

- A. Factory test UTP and optical fiber cables on reels according to TIA/EIA-568-C.1.
- B. Factory test UTP cables according to TIA/EIA-568-C.2.
- C. Factory test multimode optical fiber cables according to TIA-526-14-A and TIA/EIA-568-C.3.
- D. Cable will be considered defective if it does not pass tests and inspections.

## PART 3 - EXECUTION

### 3.1 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements in Section 28 05 00 "Common Work for Electronic Safety and Security" for installation of supports for cables.

### 3.2 WIRING METHOD

- A. Install wiring in conduits, except above accessible ceilings.
  - 1. Minimum conduit size shall be ¾-inch. Control and data transmission wiring shall not share conduit with other building wiring systems.
  - 2. Comply with requirements in Section 28 05 00 "Common Work Results for Electronic Safety and Security."
- B. Install cable, concealed in cable tray above accessible ceilings, when possible.
- C. Install cable using cable supports (J-hooks) between cable tray and stub-ups above accessible ceilings. Route cables parallel and perpendicular to building structure.
- D. Wiring within Enclosures:
  - 1. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
  - 2. Install lacing bars and distribution spools.
  - 3. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer.
  - 4. Install conductors parallel with or at right angles to sides and back of enclosure.
  - 5. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with intrusion system to terminal blocks.
  - 6. Mark each terminal according to system's wiring diagrams.
  - 7. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

### 3.3 INSTALLATION OF CONDUCTORS AND CABLES

- A. Comply with NECA 1.
- B. Conductors: Size according to system manufacturer's written instructions unless otherwise indicated.
- C. General Requirements for Cabling:
  - 1. Comply with TIA/EIA-568-B.1.
  - 2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
  - 3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
  - 4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
  - 5. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.

6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
  7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
  8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- D. UTP Cable Installation: Install using techniques, practices, and methods that are consistent with Category 6 rating of components and that ensure Category 6 performance of completed and linked signal paths, end to end.
1. Comply with TIA/EIA-568.
  2. Install 110-style IDC termination hardware unless otherwise indicated.
  3. Do not untwist UTP cables more than 1/2 inch from the point of termination to maintain cable geometry.
- E. Open-Cable Installation:
1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
  2. Suspend copper cable not in a wireway or pathway a minimum of 8 inches above ceilings by cable supports not more than 60 inches apart.
  3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.
- F. Separation from EMI Sources:
1. Comply with BICSI TDMM and TIA-569 recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
  2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
    - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches.
    - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches.
    - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches.
  3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
    - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches.
    - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches.
    - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches.
  4. Separation between cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
    - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
    - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches.
    - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches.
  5. Separation between Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches.
  6. Separation between Cables and Fluorescent Fixtures: A minimum of 5 inches.
- 3.4 POWER AND CONTROL-CIRCUIT CONDUCTORS
- A. Install according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables" unless otherwise indicated.
- B. Minimum Conductor Sizes:
1. Class 1 remote-control and signal circuits, No. 14 AWG.
  2. Class 2 low-energy, remote-control and signal circuits, No. 16 AWG.
  3. Class 3 low-energy, remote-control, alarm and signal circuits, No. 12 AWG.
- 3.5 CONNECTIONS
- A. Comply with requirements in Division 28 Section "Access Control" for connecting, terminating, and identifying wires and cables.
- 3.6 FIRESTOPPING
- A. Comply with requirements in Section 07 84 13 "Penetration Firestopping."
- B. Comply with TIA-569, "Firestopping" Annex A.

- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

### 3.7 GROUNDING

- A. For communications wiring, comply with TIA-607 and with BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. For low-voltage wiring and cabling, comply with requirements in Section 26 05 26 "Grounding and Bonding for Electrical Systems."

### 3.8 IDENTIFICATION

- A. Identify system components, wiring, and cabling complying with TIA/EIA-606. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

### 3.9 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections:
  - 1. Visually inspect UTP and optical fiber cable jacket materials for NRTL certification markings. Inspect cabling terminations to confirm color-coding for pin assignments and inspect cabling connections to confirm compliance with TIA/EIA-568-B.1.
  - 2. Visually inspect cable placement, cable termination, grounding and bonding, equipment, and patch cords, and labeling of all components.
  - 3. Test UTP cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross connection.
    - a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-C. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
- C. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

END OF SECTION 28 05 13

## SECTION 28 46 3100

### FIRE-DETECTION AND ALARM SYSTEMS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Fire-alarm control unit.
  - 2. Manual fire-alarm pull stations.
  - 3. System smoke detectors.
  - 4. System heat detectors.
  - 5. Duct smoke detectors
  - 6. Fire alarm notification appliances.
  - 7. Remote device location-indicating lights.
  - 8. Addressable interface device.
  - 9. Digital alarm communicator transmitter.
  - 10. Device guards.
- B. Related Sections:
  - 1. Section 08 71 00 "Door Hardware."
  - 2. Section 21 10 00 "Water-Based Fire Suppression Systems."
  - 3. Section 23 33 00 "Air Duct Accessories" for smoke dampers and combination fire/smoke dampers.
  - 4. Section 26 05 53 "Identification for Electrical Systems."
  - 5. Section 26 05 33 "Raceway and Boxes for Electrical Systems."
  - 6. Section 28 05 00 "Common Work Results for Electronic Safety and Security."
- C. Included in this Section is the connection of the fire alarm system to common ducted mechanical units for shutdown upon activation of duct mounted detection on supplying mechanical unit.
- D. Included in this Section is the required connection and activation of smoke and fire smoke dampers. Method shall vary by location and be compliant with the International Building Code, the International Mechanical Code, the National Electrical Code, the National Fire Protection Association code and the Authorities having Jurisdiction.
- E. The work of this Section shall be performed by one supplying contractor who takes responsibility for the testing, Field Quality Control and overall completion of the work specified in the Contract Documents including submittals to authorities having jurisdiction.

##### 1.2 DEFINITIONS

- A. AHJ: Authorities having jurisdiction
- B. DACT: Digital Alarm Communicator Transmitter.
- C. FACP: Fire Alarm Control Panel.
- D. FAA: Fire Alarm Annunciator Panel.
- E. LED: Light-emitting diode.
- F. NAC: Notification appliance circuit
- G. NICET: National Institute for Certification in Engineering Technologies.
- H. SLC: Single Line Circuit

##### 1.3 SYSTEM DESCRIPTION

- A. Noncoded, UL-certified, addressable system with automatic sensitivity control of smoke detectors and multiplexed signal transmission, dedicated to fire-alarm service only.
- B. Audible Alarm Indication: By sounding of voice alarm messages on loudspeakers for annunciation in areas specified.
- C. Visual Alarm Indication: By xenon-strobe-type units. Units visible from a common point shall be synchronized.

1.4 SUBMITTALS

- A. General Submittal Requirements:
  - 1. Submittals shall be approved by authorities having jurisdiction prior to submitting them to Architect/Engineer.
  - 2. Shop Drawings shall be prepared by persons with the following qualifications:
    - a. Trained and certified by manufacturer in fire-alarm system design.
    - b. NICET-certified fire-alarm technician, Level III minimum.
- B. Submittals shall be combined into the fewest possible submittals, as opposed to each portion being submitted separately.
- C. Product Data: For each type of product indicated. Where more than one model or option of product is presented on data sheet, provided model and all options shall be clearly identified. Product data sheet order shall match materials list.
- D. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72.
  - 2. Complete materials list indicating quantity, model number and description of each item. Model numbers shall match factory listed model on product data sheets.
  - 3. Include voltage drop calculations for notification appliance circuits, including spare capacity.
  - 4. Include battery-size calculations for all panels.
  - 5. Include performance parameters and installation details for each detector, verifying that each detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
  - 6. Include grounding schematic, amplifier power calculation, and single-line connection diagram.
  - 7. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of conduits. Include candela ratings and voice/alarm wattage tap settings on drawings. Submitted plans shall match scale of original contract plans provided by Architect/Engineer.
  - 8. Wiring diagrams from manufacturer differentiating clearly between factory- and field-installed wiring. Include diagrams for equipment and for system with all terminals and interconnections identified. Make all diagrams specific to this Project and distinguish between field and factory wiring.
  - 9. Provide a physical layout diagram of FACP showing location of each sub assembly within the FACP. Label sub assemblies with model number and indicate function or purpose.
- E. Qualification Data: For qualified Installer.
- F. Abbreviated operating instructions for mounting at the FACP and FAA.
- G. Submit Fire Alarm Record of Completion and a signed copy of delivery receipt for materials as specified in Extra Materials section below with quantity, description and line-item listing of products.
- H. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
  - 1. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
  - 2. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
  - 3. Record copy of site-specific software, including all passwords and access codes.
  - 4. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:
    - a. Frequency of testing of installed components.
    - b. Frequency of inspection of installed components.
    - c. Requirements and recommendations related to results of maintenance.
    - d. Manufacturer's user training manuals.
  - 5. Manufacturer's required maintenance related to system warranty requirements.
  - 6. Abbreviated operating instructions for mounting at fire-alarm control unit.
  - 7. Software and Firmware Operational Documentation:
    - a. Program Software Backup: On USB drive, complete with data files and a listing of passwords required for full access.
    - b. Device address list.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project. Installation shall be by personnel certified by NICET or licensed by the State of Texas Fire Marshall to sell, install and service commercial fire alarms in accordance with Texas Insurance Code.
- B. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Compliance with Local Requirements: Comply with the applicable building code, local ordinances, and regulations, and the requirements of the authorities having jurisdiction.
- E. The Owner may investigate, as they deem necessary, to determine the ability of the proposed Contractor to perform the work. The proposed Contractor shall furnish to the Owner with any information or data requested for this purpose.
- F. The Owner reserves the right to reject the proposal of any Contractor who is unqualified, has previously failed to perform properly, or complete on time, contracts of a similar nature.
- G. Provide 30 percent spare capacity on each detection, auxiliary device, annunciation, and notification circuit. Each addressable loop shall have the spare capacity for each class of device (detection and auxiliary modules) to allow the addition of devices without adding homerun cabling or hardware to the FACP.

1.6 EXTRA MATERIALS

- A. Furnish spare materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Strobe and Speaker/Strobe Units: Quantity: Two (2) of each type installed.
  - 2. Smoke Detectors: Quantity: Two (2) for photoelectric type.
  - 3. Detector Bases: Quantity: Two (2).
  - 4. Fuses: Two (2) of each type installed in the system.
- B. Include a list of extra materials—confirmed and signed by Owner’s representative—in the Operation and Maintenance Manuals.

1.7 WARRANTY

- A. Manufacturer’s Warranty: Manufacturer agrees to repair or replace fire alarm system equipment and components that fail because of defects in materials or workmanship within specified warranty period.
  - 1. Special Extended Warranty Period: Shall exceed four (4) years starting from the date of Substantial Completion.
    - a. If the manufacturer’s warranty commences upon the date that materials are delivered, then the manufacturer’s warranty period shall be at least five (5) years to meet the requirement stated above.
  - 2. Warranty requirements shall include furnishing and installing all software upgrades issued by the manufacturer during the warranty period.
  - 3. Warranty shall cover repair or replacement of such parts determined defective upon inspection, including the full cost of related materials and labor. Additionally, there shall be no expense to the owner due to “other-than-normal” working hours.
    - a. Warranty shall not cover any labor expended or materials used to repair any equipment without manufacturer’s prior written authorization.
    - b. Warranty does not cover any product or part of a product subject to accident, negligence, alteration, abuse or misuse. Warranty does not cover any accessories or parts not supplied under this contract.
  - 4. System shall be included into Owner’s existing service agreement for regular or ongoing factory-authorized service of the installed system.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements by the following manufacturer, no exceptions:
1. Farenhyt by Honeywell

### **2.2 SYSTEMS OPERATIONAL DESCRIPTION**

- A. Fire-alarm signal initiation shall be by one or more of the following devices and systems:
1. Manual stations.
  2. Heat detectors.
  3. Smoke detectors.
  4. Duct smoke detectors.
  5. Automatic sprinkler system water flow.
  6. Fire-extinguishing system operation.
- B. Fire-alarm signal shall initiate the following actions:
1. Continuously operate alarm notification appliances.
  2. Identify alarm at fire-alarm control unit and remote annunciators.
  3. Transmit an alarm signal to the remote alarm receiving station.
  4. Release fire and smoke doors held open by magnetic door holders, unless otherwise noted on drawings for release only on local detection.
  5. Activate voice/alarm communication system.
  6. Shutdown supply and return fans of designated air conditioning systems upon activation of local detection.
  7. Close smoke dampers in air ducts of designated air-conditioning duct systems upon activation of local detection.
  8. Record events in the system memory.
  9. Monitor Emergency Responder Radio System status
- C. Supervisory signal initiation shall be by one or more of the following devices and actions:
1. Valve supervisory switch.
- D. System trouble signal initiation shall be by one or more of the following devices and actions:
1. Open circuits, shorts, and grounds in designated circuits.
  2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
  3. Loss of primary power at fire-alarm control unit.
  4. Ground or a single break in fire-alarm control unit internal circuits.
  5. Abnormal ac voltage at fire-alarm control unit.
  6. Break in standby battery circuitry.
  7. Failure of battery charging.
  8. Abnormal position of any switch at fire-alarm control unit or annunciator.
  9. Smoke Detector range exceeded or malfunction indication.
  10. Low-air-pressure switch operation on a dry-pipe or preaction sprinkler system.
- E. System Trouble and Supervisory Signal Actions: A Trouble or Supervisory, audible, and visible signal indication at the FACP and annunciators. Initiate transmission of system Trouble or Supervisory signal to remote central station.

### **2.3 FIRE-ALARM CONTROL UNIT**

- A. Control Unit Basis-of-Design: Farenhyt IFP-2100ECS
- B. General Requirements for Fire-Alarm Control Unit:
1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864 and listed and labeled by an NRTL.
    - a. System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
    - b. Include a real-time clock for time annotation of events on the event recorder.
  2. Addressable initiation devices that communicate device identity and status.
    - a. Smoke sensors shall additionally communicate sensitivity setting and allow for adjustment of sensitivity at fire-alarm control unit.
    - b. Temperature sensors shall additionally test for and communicate the sensitivity range of the device.
  3. Addressable control circuits for operation of mechanical equipment.

- C. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.
    - 1. Annunciator and Display: Liquid-crystal type, 4 inch, 160x120 (1/4 VGA), minimum.
    - 2. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters.
  - D. Auxiliary Controls: For testing purposes, a disconnect module or multi-function switch with visual identification via LCD or LED shall be provided to activate/disable the following relays along with giving a trouble signal until switched back to normal position:
    - 1. Mechanical units fan shutdown.
    - 2. Door release, including coiling doors and shutters.
    - 3. Damper release.
    - 4. Audible Annunciation.
    - 5. Kitchen hood Shunt-trip.
  - E. Circuits:
    - 1. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class B.
      - a. Initiating Device Circuits: Style B.
      - b. Notification Appliance Circuits: Style Y.
      - c. Signaling Line Circuits: Style 4.
  - F. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke barrier walls shall be connected to fire-alarm system. Includes coiling doors and shutters.
  - G. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory.
  - H. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station. Transmit device class or group to remote receiving station.
  - I. Voice/Alarm Signaling Service: Central emergency communication system with microphones, preamplifiers, amplifiers, and tone generators provided as an integral special module that is part of fire-alarm control unit.
    - 1. Automatic, simultaneous transmission of announcements or for manual transmission of announcements by use of the central-control. Amplifiers shall comply with UL 1711 and be listed by an NRTL.
      - a. Programmable tone and message sequence selection.
      - b. Standard digitally recorded messages for "Evacuation" and "All Clear."
      - c. Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification appliance circuits of fire-alarm control unit.
    - 2. Status Annunciator: Indicate the status of voice/alarm speaker zone.
  - J. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory and digital alarm communicator transmitters shall be powered by 24-V dc source.
    - 1. Alarm current draw of entire fire-alarm panel shall not exceed 85 percent of the power-supply module rating.
  - K. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
    - 1. Batteries: Sealed, valve-regulated, recombinant lead acid.
  - L. Instructions: Computer printout mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.
- 2.4 INTERNET AND CELLULAR ALARM COMMUNICATOR
- A. The fire alarm control panel internal communicator allows for system status reporting to a UL Central Station as well as for local and remote up/downloading of system operating options, event history and detector sensitivity.

- B. Provide IP and/or cellular communication to a UL Central Station as required by the Owner. The Owner shall select the monitoring service, remote supervising station, or central station and be responsible for connections and monthly monitoring costs. For central station service, the installation shall be certificated or placarded by the selected central station.
- C. Communications to the Central Station shall transmit alarm, supervisory and trouble signals descriptively as defined in NFPA 72 and the AHJ, with the correct addressable device designation, identification, and location. Alarms shall not be permitted to be transmitted as a general alarm or zone condition.
- D. IP communication works over an Ethernet 10/100 Base network connection. All equipment used for the IP connection (such as a router, switch, etc.) must be powered from an un-switched branch circuit with UPS standby power.
- E. IP and cellular communication transmission shall utilize the Honeywell commercial fire communicator model HWF2-COM with metal enclosure and keylock. The HWF2-COM is an IP and cellular option for commercial fire alarm control panels and shall be NFPA 72 compliant for sole, primary, and backup communicator and programmed to operate per UL864 requirements. The communicator shall be installed per manufacturer's written instructions.
- F. The HWF2-COM shall be installed in the same room and within twenty-feet of the fire alarm control panel. The cellular provider model to be determined by the greater signal strength on site. When required provide an external antenna for signal strength optimization. Installation of the external antenna shall be per manufacturer's instruction and shall consist of the following:
  - 1. Fifty-foot antenna cable model 7626-50HC.
  - 2. 3dBA gain antenna model CELL-ANT3DB.
  - 3. SMA to N adapter model WA7626-CA.
- G. The fire alarm contractor shall provide all activation circuits and the communicator shall be ready for programming by the monitoring provider selected by the Owner. The fire alarm contractor shall coordinate with and provide all necessary information to the representative of the service provider selected by the Owner.
- H. Surge protectors for Ethernet network runs rated up to Category 6A and operating at up to 10-Gigabit data rates. Each module shall protect up all four pairs using hybrid design multi-stage SAD technology which shall automatically reset to protect against multiple surges, Ethernet surge protectors shall be
- I. Ditek DTK-CAT6A series as follows:
  - 1. DTK-110RJC6A with 110 to RJ-45 connections.
  - 2. DTK-110C6A with 110 to 110 connections.

## 2.5 NETWORK GRADE CABLING FOR DIGITAL COMMUNICATOR SERVICE

- A. Provide two parallel runs of Ethernet network grade cabling as required to support the digital communicator systems in this specification section. Category listing of the cable shall be by the Owner's and/or the Facility's current Network Standards. Extend from the drop location inside the digital communicator panel to the building Telco Demarcation Point/Main Distribution Frame location and terminate at each end in a surface mount block. Coordinate Telco or Data termination location with the owner prior to installation. Cable runs shall be tested to industry standards to verify performance.

## 2.6 FIRE ALARM FLOOR PLAN MAP

- A. Provide adjacent to the fire alarm control panel a plan view of all building areas covered by the fire alarm system meeting the following requirements:
  - 1. Framed and secured to the wall and plan covered with clear acrylic panel, SpaceAge Electronics Inc. model SSU52003 Display Frame or equivalent.
  - 2. Size plan to clearly show all required information.
  - 3. Orient building to place the entry nearest to control panel at the bottom of plan.
  - 4. "YOU ARE HERE" indicator with arrow.
  - 5. Logical alarm zones.
  - 6. Room names and numbers. (Verify with Owner)
  - 7. Show each initiating device with symbol and identification number programmed in the panel. Do not show audio/visual devices.
  - 8. Symbol legend.
  - 9. True north arrow.
  - 10. Scale indicator.

2.7 SUPPLEMENTARY NOTIFICATION APPLIANCE CIRCUIT PANELS

- A. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Notification appliances shall be powered by 24-V dc source.
  - 1. Alarm current draw of each notification appliance circuit shall not exceed 85 percent of the power supply circuit rating.
- B. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
- C. Units shall be activated and monitored by addressable modules connected to fire alarm control panel. Connection to FACP notification circuits shall not be permitted. Connection shall support disabling the audible notification separate from the visual notification.

2.8 MANUAL FIRE-ALARM BOXES

- A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
  - 1. Double-action mechanism requiring two actions to initiate an alarm, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
  - 2. Station Reset: Key operated switch.

2.9 SYSTEM SMOKE DETECTORS

- A. Photoelectric Smoke Detectors:
  - 1. Comply with UL 268; operating at 24-V dc, nominal.
  - 2. Detectors shall be two-wire type.
  - 3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
  - 4. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
  - 5. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
  - 6. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status.
  - 7. Remote Control: Unless otherwise indicated, detectors shall be addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by fire-alarm control unit.
    - a. Rate-of-rise temperature characteristic shall be selectable at fire-alarm control unit for 15 or 20 deg F (8 or 11 deg C) per minute.
    - b. Fixed-temperature sensing shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg F (57 or 68 deg C).
    - c. Provide multiple levels of detection sensitivity for each sensor.
  - 8. Relays associated with smoke detectors for door hold-open or damper release shall be addressable type for control from the FACP thru the auxiliary switches. Relay bases activated only by local detector shall not be accepted. Devices shall be grouped according to type and not be combined.
  - 9. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
  - 10. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
    - a. Primary status.
    - b. Device type.
    - c. Present average value.
    - d. Present sensitivity selected.
    - e. Sensor range (normal, dirty, etc.).

2.10 COMBINATION CARBON MONOXIDE/SMOKE DETECTORS

- A. Provide as required by National, state and local codes, analog spot type intelligent combination smoke and carbon monoxide detector with sounder base. Farenhyt model IDP-FIRE-CO Advanced Multi-Criteria Fire/CO Detector with B200S sounder base, or equivalent.

- B. The CO detector shall be ANSI/UL 2075 Third Edition Listed and installed in accordance with IBC/IFC Section 915 and NFPA 720 requirements.
- C. Each carbon monoxide and smoke detector shall be attached to a SLC and set to a distinct address and internal identification code, which the control panel shall use to identify the location, status, and type of device.
- D. The detectors shall provide dual alarm and power/status LEDs. Status LEDs shall flash under normal conditions, indicating that the detector is operational and in regular communication with the control panel.
- E. The CO sounder base shall share the address of the addressable CO detector and shall function as a single station local audible alert only when CO is detected. The audible CO alert signal shall be a Code-4/TC4 (temporal-four) audible pattern as designated by the NFPA for CO warning.
- F. Each sounder base requires 24VDC resettable power and shall be resettable from the FACP.
- G. The detector shall also provide a maintenance alert feature whereby the detector shall initiate a trouble condition should the units' sensitivity approach the outside limits of the normal sensitivity window.
- H. Except for temporary testing, detectors shall not be installed until the building is ready for occupancy and cleaned as dust free as possible.
- I. Each detector head shall be labeled in a visible area with its device hardware address utilizing self-laminating, flexible vinyl film, non-smear, machine printed labels.
- J. Required CO detector coverage to be provided as follows:
  - 1. Classrooms.

#### 2.11 DUCT SMOKE DETECTORS

- A. Description: Photoelectric type, duct-mounted smoke detector
- B. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
- C. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
  - 1. Primary status.
  - 2. Device type.
  - 3. Present average value.
  - 4. Present sensitivity selected.
  - 5. Sensor range (normal, dirty, etc.).
- D. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
- E. Each sensor shall have multiple levels of detection sensitivity.
- F. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
- G. Relay Fan Shutdown: Fully programmable relay rated to interrupt fan motor-control circuit. Supervised control relay must be located within three (3) feet of the fan controller.
- H. Relays associated with duct smoke detectors for mechanical unit shutdown or damper release shall be addressable type for control from the FACP thru the auxiliary switches.

#### 2.12 HEAT DETECTORS

- A. General Requirements for Heat Detectors: Comply with UL 521.
- B. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F or a rate of rise that exceeds 15 deg F per minute unless otherwise indicated.
  - 1. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
  - 2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.13 NOTIFICATION APPLIANCES

- A. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated and with screw terminals for system connections.
  - 1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated and with screw terminals for system connections.
- B. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch-(25-mm-) high letters on the lens.
  - 1. Rated Light Output:
    - a. 15/30/75/110 cd, selectable in the field.
    - b. Set candela value as indicated on the Drawings with rating visible from the exterior of the device.
  - 2. Provide weatherproof visual device where indicated.
    - a. Device to be Wheelock, Inc. #RSSWP Series or approved equal
  - 3. Mounting: Wall mounted unless otherwise indicated.
  - 4. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
  - 5. Flashing shall be in a temporal pattern, synchronized with other units.
  - 6. Strobe Leads: Factory connected to screw terminals.
  - 7. Mounting Faceplate: Factory finished, red.
- C. Voice Notification Appliances:
  - 1. Appliances shall be UL listed and shall be listed and labeled by an NRTL.
  - 2. High-Range Units: Rated 2 to 15 W.
  - 3. Low-Range Units: Rated 1/4 to 2 W.
  - 4. Mounting: Semi-recessed.
  - 5. Sound Output: 84 dBA (UL 464, 24VAC) minimum. Unit shall have an integral switch to select high or low dBA level (low setting reduces output by 6 dBA).
  - 6. Combination devices consist of factory-combined, audible, and visual alarm units in a single mounting assembly.
  - 7. Ceiling mounted units shall be red and have a round, semi-recessed housing for ceiling installation. The word "FIRE" is engraved in minimum 1-inch (25-mm) high red letters on the face.

2.14 MAGNETIC DOOR HOLDERS

- A. Door hold opens furnished by Division 8.

2.15 REMOTE DEVICE LOCATION-INDICATING LIGHTS.

- A. Description: An LED-indicating light in the vicinity of each sprinkler water-flow switch and valve tamper switches denotes the associated individual device is in an abnormal or trouble mode. Lamp is flush mounted in a single gang wall plate. A red, laminated, phenolic-resin identification plate at the indicating light identifies, in engraved white letters, the room where the valve is located or the protected spaces downstream from the water-flow switch. Monitor modules shall have an individual LED indicator for each flow switch and each valve tamper switch.
- B. Description: An LED-indicating light in the vicinity of a duct detector located above an accessible ceiling or as indicated on the drawings. The LED indicates when the associated device is in an alarm or trouble mode. Lamp is flush mounted in ceiling tile below detector if applicable, otherwise wall mounted. Provide with magnetic test switch and label with unit and area served.

2.16 REMOTE ANNUNCIATOR

- A. Description: Annunciator display and functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
- B. Mounting: Flush cabinet, NEMA 250, Type 1.
- C. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals. Provide two-step drill switch.
- D. Voice Annunciation: Provide microphone and controls for voice annunciation at main panel locations. FAA Display, controls and microphone shall be housed in a common enclosure.

- E. Instructions: Provide instruction and orientation plan identical to that for the FACP except instructions are to be specific to the operation and location of the annunciator panel.

#### 2.17 ADDRESSABLE INTERFACE DEVICE

- A. Description: Microelectronic monitor module, NRTL listed for use in providing a system address for alarm-initiating devices for wired applications with normally open contacts.
- B. Integral Relay: Capable of providing a direct signal to elevator controller to initiate elevator recall, to circuit-breaker shunt trip for power shutdown, mechanical unit shutdown, door release, or other functions indicated.

#### 2.18 DIGITAL ALARM COMMUNICATOR TRANSMITTER

- A. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.
- B. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture two telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on either line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.
- C. DACT shall be integral to the FACP.
- D. Local functions and display at the digital alarm communicator transmitter shall include the following:
  - 1. Verification that both telephone lines are available.
  - 2. Programming device.
  - 3. LED display.
  - 4. Manual test report function and manual transmission clear indication.
  - 5. Communications failure with the central station or fire-alarm control unit.
- E. Digital data transmission shall include the following:
  - 1. Group or class of the alarm-initiating device.
  - 2. Group or class of the supervisory signal.
  - 3. Group or class of the trouble-initiating device.
  - 4. Loss of ac supply or loss of power.
  - 5. Low battery.
  - 6. Abnormal test signal.
  - 7. Communication bus failure.
- F. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.

#### 2.19 SURGE PROTECTION

- A. A. Each incoming 120VAC power circuit shall be provided with an electrical surge protection module. Provide one for each fire alarm control unit, this shall include every fire alarm control panel, digital communicator, signal power expander and any other 120VAC powered fire alarm control units. Each power circuit surge protector module shall be Ditek DTK-120SRD or equivalent.
- B. B. Surge protection shall be provided for all exterior devices, communications service or antenna entrance connections, and for each circuit that connects one building to another (i.e. any other portion of a building complex not under one continuous roof) at both entry/exit points to prevent damage to equipment. Each surge protector shall be UL listed and mounted in a standard grounded metallic electric box or equipment backboard with a separate ground wire ran directly to the ground bus bar or equipment panel ground stud, do not daisy chain ground wires.

#### 2.20 DEVICE GUARDS

- A. Manual Fire Alarm Pull Covers: Clear polyshield hinged cover to prevent stations from accidental operation. Provide a cover for all pull stations shown on contract drawings.
  - 1. Manufacturer: Safety Technology Inc., #STI-1200 series or approved equal.

#### 2.21 CONDUCTORS AND CABLES

- A. Fire Alarm Wire and Cable: Complying with NFPA 70, Article 760.
  - 1. Signaling Line Circuits: Twisted, shielded pair.

2. Non-Power-Limited Circuits: Solid-copper conductors, 600-V, 75 deg C.
  - a. Low-Voltage Circuits: No. 16 AWG, minimum.
  - b. Line-Voltage Circuits: No. 12 AWG, minimum.
3. Color: Red.

### **PART 3 - EXECUTION**

#### **3.1 EQUIPMENT INSTALLATION**

- A. Comply with NFPA 72 for installation of fire-alarm equipment.
- B. Coordinate backbox requirements with Division 26. All devices shall be installed within backboxes properly attached to building structure.
- C. Install wall-mounted equipment, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.
- D. Smoke- or Heat-Detector Spacing:
  1. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
  2. Locate ceiling-mounted detectors not less than 4 inches (100 mm) from a side wall to the near edge.
  3. Wall Mounted: Locate detectors at least 4 inches (10 mm), but not more than 12 inches (300 mm), below the ceiling.
  4. HVAC: Locate detectors not closer than 3 feet (1 m) from air-supply diffuser or return-air opening.
  5. Lighting Fixtures: Locate detectors not closer than 12 inches (300 mm) from any part of a lighting fixture.
  6. Speakers: Locate detectors not closer than 24 inches (600 mm) from intercom or sound reinforcement speakers.
- E. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.
- F. Install duct smoke detector in the supply or return duct of units supplying greater than 2000 cfm per local AHJ requirements. Install duct smoke detectors in the supply and return duct of units supplying greater than 15,000 cfm.
- G. Heat Detectors in Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location.
- H. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.
- I. Audible Alarm-Indicating Devices: Install not less than 6 inches (150 mm) below the ceiling. Install bells and horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille. Combine audible and visual alarms at the same location into a single unit.
- J. Visible Alarm-Indicating Devices: Install at least 6 inches (150 mm) below the ceiling. Install synchronization module in circuits of devices visible from a common point.
- K. Device Location-Indicating Lights: Locate in public space near the device they monitor.
- L. Fire-Alarm Control Unit: Recess mounted, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.
- M. Annunciator: Install with top of panel not more than 60 inches (1524 mm) above the finished floor.
- N. Fire Alarm Power Circuit Breakers: Provide red breaker or with red lockable handle or cover with FIRE ALARM indicated for each fire alarm panel or power supply panel. Identify circuit in red on panel cover. Identify electrical circuit and location of disconnect with engraved label on front of each fire alarm panel.
- O. Provide detection in all areas where remote power, control and communication devices are located.
- P. Water-Flow Detectors and Valve Supervisory Switches: Connect discrete monitor for each sprinkler valve flow switch required to be supervised. Connect discrete monitor for each valve tamper switches located at fire riser.
- Q. Devices mounted shall completely cover outlet box and any gaps around device. Install matching backplate to cover existing area or paint area to match surrounding surface. Install adapter rings for surface mounted devices.

- R. Duct detectors shall be provided by Division 28. Comply with NFPA 72 and NFPA 90A.
- S. Install addressable relay modules at each controlled door for door hold-open release on local detector alarm and auxiliary control switches.
- T. Install interface to building elevator controls for recall, notification, power monitoring and shutdown.
- U. Smoke and Fire/Smoke Dampers: Provided by Division 23 and associated duct detectors provided under Division 28. Devices connected by Division 26. Provide interlock relay control wiring to interface Fire Alarm system to damper motors. Coordinate power and control wire routine to shut dampers.
- V. Connect addressable relay module at each sound system to initiate muting of system during activation of fire alarm system.
- W. Install protective covers over all manual fire alarm pulls.

### 3.2 CONNECTIONS

- A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Section 08 71 00 "Door Hardware." Connect hardware and devices to fire-alarm system.
  - 1. Verify that hardware and devices are NRTL listed for use with fire-alarm system in this Section before making connections.
- B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 3 feet (1 m) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
  - 1. Smoke dampers in air ducts of designated air-conditioning duct systems.
  - 2. Alarm initiating connection to activate shunt trip power at kitchen hoods.
  - 3. Valve Supervisory Switches: Connect monitor for valve tamper switches located at fire riser.
  - 4. Supervisory connections at elevator shunt trip breaker.
  - 5. Alarm initiating connection to activate shunt trip power at elevator.
  - 6. Supervisory connections at fire suppression control panels.
  - 7. Water-flow Detectors: Connect discrete monitor for each sprinkler valve flow switch required to be supervised.
- C. Line Seizure: Route two category 6A four-pair cables in 3/4 inch raceway directly to telephone entrance demarcation. Make connection to two telephone CO lines for automatic reporting to Remote Central Station. Wire CO lines directly from demarcation point to fire alarm panel and return lines to demarcation point for connection to internal communications equipment. Coordinate and verify line seizure wiring with telephone system provider.
- D. Make connections to Distributed Antenna System as required in IBC.

### 3.3 WIRING METHODS

- A. Wiring Method: Install cables in raceways per Division 26.

### 3.4 INSTALLATION OF BOXES AND RACEWAYS

- A. Comply with requirements in Section 26 05 33 "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.

### 3.5 INSTALLATION OF CABLES

- A. Comply with NECA 1.
- B. General Requirements:
  - 1. Fire alarm cabling in all exposed areas shall be installed in conduit per Section 26 05 33 "Raceway and Boxes for Electrical Systems".
  - 2. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at outlets and terminals.
  - 3. Splices, Taps, and Terminations: Arrange on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Cables may not be spliced.
  - 4. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii.
  - 5. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.

6. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used.

- C. Separation of Wires: Install in separate raceways from all other building cabling.

### 3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."
- B. Install framed instructions in a location visible from fire-alarm control unit and remote annunciators.
- C. Label each device with system address. Label shall be machine printed, clear adhesive tape with high contrast lettering of sufficient size to be easily readable without the use of a ladder.
- D. Identify modules and relays as to purpose or unit served.

### 3.7 GROUNDING

- A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

### 3.8 FIELD QUALITY CONTROL

- A. Field tests shall be witnessed by authorities having jurisdiction.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Tests and Inspections:
  1. Visual Inspection: Conduct visual inspection prior to testing.
    - a. Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
    - b. Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
  2. System Testing: Comply with "Test Methods" Table in the "Testing" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
  3. Complete Voice Intelligibility Testing per NFPA 72.
  4. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
  5. Test audible appliances for the private operating mode according to manufacturer's written instructions.
  6. Test visible appliances for the public operating mode according to manufacturer's written instructions.
  7. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
- D. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.
- E. Fire-alarm system will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

### 3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fire-alarm system.

END OF SECTION 28 46 00

## SECTION 31 00 00 EARTHWORK

### PART 1 - GENERAL

#### 1.1. RELATED DOCUMENTS

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1. General Requirements, and the Drawings are collectively applicable to this Section.

#### 1.2. SUMMARY

- A. Section Includes:
  - 1. Excavating, filling, backfilling, grading, and compacting of earth at the site.
  - 2. Preparation of building pad to limits shown on plans.
  - 3. Provide and stockpile topsoil on site.
  - 4. Dewatering excavations.
- B. Related Sections:
  - 1. Section 01 45 16 – CONTRACTOR'S QUALITY CONTROL
  - 2. Section 31 10 00 – SITE CLEARING

#### 1.3. REFERENCES

- A. American Society for Testing and Materials (ASTM):
  - 1. ASTM D 698 Tests Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures, Using 5.5-lb. Hammer and 12-in. Drop.
  - 2. ANSI/ASTM D2922 - Density of Soil in Place by the Nuclear Methods.

#### 1.4. SUBMITTALS

- A. Submit in accordance with SECTION 01 30 00 – ADMINISTRATIVE REQUIREMENTS.
- B. Samples: Submit a one-gallon sample and material analysis results of imported topsoil from a testing laboratory indicating compliance with these specifications. Any topsoil delivered to the site which does not comply with the approved sample shall be re-tested at the Contractor's expense and replaced.
- C. Test Reports:
  - 1. Submit copies of test reports in accordance with SECTION 01 45 16 – CONTRACTOR'S QUALITY CONTROL.
  - 2. Compaction Tests: Submit copies of compaction test reports.

#### 1.5. QUALITY ASSURANCE

- A. Laboratory Control: On site or Imported topsoil, if required, shall be inspected and tested by an independent testing laboratory.
  - 1. Testing laboratory shall make tests of the soil from the selected source to determine that it meets the specified requirements for select fill and imported topsoil.

#### 1.6. PROJECT CONDITIONS

- A. Temporary Sheeting: Shore and sheet excavations to protect utilities and to prevent cave-in. Maintain sheeting secure until permanent construction is in place. Remove sheeting as excavations are backfilled.
- B. Drainage: Provide for adequate surface drainage during construction to keep the site free of surface water without creating a nuisance in adjacent areas.
- C. Pumping: Keep the excavations free of water at all times by pumping or other means. This shall be the responsibility of the Contractor regardless of the cause, source, or nature of the water.
- D. Protection:
  - 1. Property: Protect adjoining property, including improvements out-side the limits of the work. Protect walks, curbs, and paving from damage by heavy equipment and trucks.
  - 2. Protect benchmarks.
  - 3. Protect above and below grade utilities which are to remain.
  - 4. Protect excavations by shoring, bracing, sheet piling, underpinning, or other methods required to prevent cave-in or loose soil from falling into excavation. Monitor shoring system and surrounding

ground surface during construction to detect movement. If movement becomes significant, take contingency steps to brace excavation and adjacent utility lines.

## **PART 2 - PRODUCTS**

### **2.1 SOIL MATERIALS**

- A. Topsoil
  - 1. Strip topsoil from limits of grading areas, clean of grass, roots, rock and debris to a depth of 6", and stockpile for placement on all landscape and "open space" areas. Contractor shall investigate the site to his satisfaction to determine if suitable material is available on site to meet the specification for topsoil.
  - 2. Refer to landscape architect plans and specifications for additional topsoil requirements.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Establish extent of excavation by area and elevation; designate and identify datum elevation.
- B. Set required lines and grades using a licensed surveyor.
- C. Maintain benchmarks, monuments and other reference points.

### **3.2 PREPARATION**

- A. Before starting excavation, establish location and extent of underground utilities occurring in work area.
- B. Notify utility companies sufficiently in advance to remove and relocate lines which are in way of excavation.
- C. Maintain, reroute or extend as required, existing utility lines to remain which pass through work area.
- D. Protect and support utility services uncovered by excavation.
- E. Remove abandoned utility service lines from areas of excavation; cap, plug or seal such lines and identify at grade.
- F. Accurately locate and record abandoned and active utility lines rerouted or extended on Project Record Documents.
- G. Upon discovery of unknown utility or concealed condition, discontinue affected work and notify Architect.
- H. Remove grass, weeds, roots and other vegetation from areas to be excavated, filled and graded. Fill stump holes and like small excavations with suitable material placed in lifts and thoroughly tamped.
- I. Scarify the subgrade soil of pavement areas to a minimum depth of 6 inches, recompact to a minimum of 95% Standard Proctor (ASTM D698) and to a moisture content between -1% to +3% of optimum.

### **3.3 EXCAVATION**

- A. General: Excavate to the lines, grades and sections shown on the drawings. Allow space for the construction of forms. All excavation shall be unclassified as required regardless of the condition or type of material encountered, including rock.
  - 1. Cut areas accurately to the indicated cross-sections and grades. Take care to prevent excavation below the grades indicated. Any bottoms and slopes that are undercut shall be backfilled with earth fill and compacted.
  - 2. Finish the excavating required for graded areas and building pad to a tolerance of one inch above or below the rough grade.
  - 3. Remove underground obstructions except for piping and conduit which shall be handled as specified in SECTION 01 11 00 - SUMMARY OF WORK.
- B. Over cut planting and lawn areas to allow a layer of topsoil not less than 6" thick.
- C. Maintain excavations to drain and be free of excess water. Ponding of water on site will not be permitted.
- D. Exercise extreme care in grading around existing trees. Do not disturb existing grades around existing trees except as otherwise noted. When excavation through roots is necessary, and after review by Landscape Architect, perform by hand and cut roots with sharp axe, prune trees to compensate for root loss.
- E. Fill over-excavated areas under structure bearing surfaces in accordance with Architect's direction.
- F. Do not allow construction equipment to create "pumping" of soils.

- G. Stockpile excavated clean fill for reuse where directed. Remove excess or unsuitable excavated fill from site.
- H. Over excavate existing soils in saturated conditions. Stockpile wet material. Allow drying out to take place. Mix stockpiled materials with relatively dry onsite material before recompacting.
- I. After stripping and performing necessary cuts, excavate fire lanes to an elevation that is at least 1 foot below the pavement subgrade.

### 3.4 WASTING

- A. Surplus excavated material not suitable or required for embankment fill and backfill shall be wasted off site.

### 3.5 FILL AND BACKFILL

- A. Filling: Construct compacted fills to the lines, grades and sections shown on the drawings.
  - 1. Complete stripping and wasting operations in advance of fill construction. Proof roll, compact, and establish moisture content.
  - 2. Deposit and mix fill material in horizontal layers not more than 8" deep, loose measurement. Manipulate each layer until the material is uniformly mixed and pulverized.
  - 3. Fill material shall have moisture content and compaction per Geotechnical Report. If fill is too wet, dry by aeration to achieve desired moisture content. If fill is too dry, add water and mix in by blading and discing to achieve desired moisture content.
  - 4. Exercise care to prevent movement or breakage of walls, trenches, and pipe during filling and compaction. Place fill near such items by means of light equipment and tamp with pneumatic or hand tampers.
  - 5. Proof roll exposed subgrade in building and paving areas with heavily loaded dump truck (25 ton minimum) or similar acceptable construction equipment, to detect unsuitable soil conditions. Commence proof rolling operations after a suitable period of dry weather to avoid degrading acceptable subgrade surfaces. Make four passes over each section with proof rolling equipment, with the last two perpendicular to the first two.
  - 6. Cut out soft areas of subgrade not readily capable of in- situ compaction. Backfill and compact to density equal to requirements for subsequent backfill material.
- B. Backfilling: Construct compacted fill against and around concrete beams below finish grade.
  - 1. Verify areas to be backfilled are free of debris, snow, ice or water, and ground surfaces are not frozen.
  - 2. Do not backfill until underground construction has been inspected, tested and approved, forms removed, and the excavations cleaned of trash and debris.
  - 3. Bring backfill to required grades by depositing material in horizontal layers not more than 8" deep, loose measurement.
  - 4. Site backfill systematically, as early as possible, to allow maximum time for natural settlement. Do not backfill over porous, wet or spongy subgrade surfaces.
  - 5. Maintain optimum moisture content of backfill materials to attain required compaction density.
  - 6. Make gradual changes in grade. Blend slopes into level areas.

### 3.6 COMPACTION

- A. Compact each layer of earth fill and backfill to the compaction and density specified.
  - 1. Scarify the subgrade soil of pavement areas to a minimum depth of 6 inches, recompact to 93%-98% Standard Proctor (ASTM D698) and to a moisture content between +2% and +6% above optimum for clayey soils with PI equal to or greater than 25. Scarify the subgrade soil of pavement areas to a minimum depth of 6 inches, recompact to a minimum of 95% Standard Proctor (ASTM D698) and to a moisture content between -1% and +3% above optimum for clayey soils with PI less than 25.
  - 2. Equipment for compacting shall be sheeps foot and rubber tired rollers or other compactors capable of obtaining the required density. Compact the fill with power tampers and by hand in areas not accessible to rollers.
  - 3. Compact each layer of fill to the density listed below as a function of the location and depth. The required density in each case is indicated as a percentage of the maximum dry unit weight determined using the standard compaction test ASTM D 698.
    - a. Material under paving (PI $\geq$ 25) ----- 93%-98%.
    - b. Material under paving (PI $<$ 25) ----- 95% min.
    - c. Material under lawn areas (PI $\geq$ 25) ----- 93%-98%.
    - d. Material under lawn areas (PI $<$ 25) ----- 95% min.
    - e. Material under building----- Per Geotechnical Report

### 3.7 GRADING

- A. Site Grading: Shape and finish earthwork to bring the site to the finish grades and elevations shown on the drawings.
  - 1. Establish grades by means of grade stakes placed at corners of units, at abrupt changes of grade, and elsewhere as may be required.
  - 2. Rough grade for paving, and site improvements to the subgrade elevations required. Soft and unstable material which will not readily compact when rolled or tamped shall be removed and the resulting depressions filled with stable material and re-compacted.
  - 3. Finish grade to the finish contours and spot grades shown. Extend cuts and fills to feather out beyond the last finish contour or spot grade shown. Grade to uniform levels and slopes between points for which elevations are given, round off abrupt changes in elevation, and finish off smoothly. Finish grades shall slope away from the building in all directions to assure proper drainage.
  - 4. Execute erosion control measures in accordance with the Erosion Control Plan.
- B. Grading Around Trees: Where grading is required within the branch spread of trees that are to remain, perform the work as follows:
  - 1. When trenching occurs, the tree roots shall not be cut but the trench shall be tunneled under or around the roots by hand digging.
  - 2. When the existing grade at a tree is below the new finished grade, and fill not exceeding 6" is required, clean washed gravel graded from 1" to 2" size shall be placed directly around the tree trunk. The gravel shall extend out from trunk on all sides a minimum of 18" and finish approximately 2" above the finished grade at the tree. Install gravel before earth fill is placed.
  - 3. Trees in areas where the new finished grade is to be lowered shall have re-grading work done by hand to elevation as indicated. Existing grades immediately surrounding the trunk shall not be altered except at the direction of the Architect.

### 3.8 PROTECTION, CLEAN-UP AND EXCESS MATERIALS

- A. Protect grades from construction and weather damage, washing, erosion and rutting, and repair such damage that occurs.
- B. Correct any settlement below established grades to prevent ponding of water.
- C. At locations where concrete or other foreign matter has penetrated or been mixed with earth, remove damaged earth and replace with clean material.
- D. Remove excess stockpiled material, debris, waste, and other material from site and leave work in clean finished condition for final acceptance. Contractor is responsible for disposal of debris and excess materials.

### 3.9 FIELD QUALITY CONTROL

- A. Compaction Tests: Field density testing shall be performed by an Independent Testing Laboratory.
  - 7. Testing laboratory shall make one in place density test for each 5,000 sq. ft. of area per lift in general site and paving areas and one test per 100 linear feet of drive lanes, but in no case less than two tests to ensure that the specified density is obtained. In sidewalk areas, laboratory shall make one in place density test per 100 linear feet.
  - 8. The cost of the full-time inspection service shall be per Specification SECTION 01 4516 – CONTRACTOR'S QUALITY CONTROL.

### 3.10 CONSTRUCTION STAKING

- A. All drives must be staked using the profiles provided in the plans in addition to the grading and dimensional control plans. The contractor shall stake all vertical curves and points of grade break in order to achieve a smooth and uniform grade throughout. Verify all grades and elevations to confirm that ADA parking spaces, walks and ramps are per plans.

**END OF SECTION**

## SECTION 31 10 00

### SITE CLEARING

#### PART 1 - GENERAL

##### 1.1. RELATED DOCUMENTS

- A. Provisions established within the General and Supply General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

##### 1.2. SUMMARY

- A. Section Includes: Clearing the site of vegetation, site improvements and obstructions to make way for new work.
- B. Related Sections
  - 1. Section 31 00 00 - EARTHWORK.

##### 1.3. PROJECT CONDITIONS

- A. Existing Conditions: Site is generally vacant with native vegetation. Contractor shall visit the site and verify the nature and extent of clearing work required.
- B. Protection: Contractor shall be responsible for the protection of adjoining property and improvements outside the limits of the work. Protect paving and utilities from damage by equipment and trucks.
- C. It shall be the responsibility of the Contractor to obtain a temporary water meter and temporary sanitary sewer facilities for use during construction.
- D. Contractor shall exercise care during operations to confine dust to the immediate work area and shall employ dust control measures to ensure adequate dust control throughout demolition and construction operations.

##### 1.4. REGULATORY REQUIREMENTS

- A. Conform to applicable building code for disposal of debris.
- B. Coordinate clearing Work with previous owner and utility companies.
- C. Conform to applicable portions of OSHA, including 1926.604.

#### PART 2 - PRODUCTS

Not Applicable.

#### PART 3 - EXECUTION

##### 3.1 PREPARATION

- A. Verify that existing plant life and features designated to remain are tagged or identified
- B. Locate and identify all paving and utilities intended to remain. Contractor shall field verify and coordinate with Owner and respective facility owner the location and depth of existing active facilities/ utility lines within the construction limits and shall protect all such facilities from damage during construction operations. Damage to existing facilities to remain shall be repaired at the Contractor's expense for re-establishing the facilities to their pre-damaged condition.

##### 3.2 PERFORMANCE

- A. Clearing:
  - 1. Remove trees, shrubs and other vegetation from within the area of the site where new construction is to be placed. Grub out roots to a depth of at least 18 inches below natural grade
  - 2. Dig out and remove buried obstructions to a depth of 24 inches below natural grade or 24 inches below the intended excavation elevation, whichever is lower. (Refer to landscape architect's plans and specifications)
  - 3. Remove existing trash, debris and abandoned facilities, which are to be removed from the site.
  - 4. Refer to SECTION 01 11 00 - SUMMARY OF WORK for handling of piping and conduit encountered below grade.
  - 5. Clear undergrowth and deadwood, without disturbing subsoil.
  - 6. Burning debris on site is not permitted.
  - 7. Remove debris, rock, fences, and extracted plant life from site.

- B. Reference landscape plans and specifications for limits for tree removal and pruning/trimming limits.
- C. Disposal:
  - 1. Clean up and remove from the site the stumps, logs, broken paving, rubble and debris resulting from the clearing and grubbing operations.
  - 2. Remove all traces of demolished items from the site work area and rough grade all areas that have been disturbed.
  - 3. Material to be wasted shall be legally disposed of off site, at no additional cost to Owner.
  - 4. Burning of combustible materials on the site will not be permitted.

### **3.3 TOPSOIL EXCAVATION**

- A. Excavate topsoil from areas to be further excavated, re-landscaped, or regraded.
- B. Stockpile in a preapproved area on or near the site. Install erosion control around perimeter of stockpile.
- C. Reference landscape architectural plans and specifications for additional top soil requirements.

**END OF SECTION**

## SECTION 31 23 33

### TRENCHING AND BACKFILLING

#### PART 1 - GENERAL

##### 1.1. RELATED DOCUMENTS

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

##### 1.2. SUMMARY

- A. Work Included:
  - 1. Excavation for piped utility material.
  - 2. Provide necessary sheeting, shoring, and bracing.
  - 3. Comply with Federal, State, and local trench safety requirements.
  - 4. Prepare trench bottom with appropriate materials.
  - 5. Dewater excavation as required.
  - 6. Place and compact granular beds, as required, and backfill.
- B. Related Work Specified in Other Sections
  - 1. Section 31 00 00 – EARTHWORK
  - 2. Section 31 10 00 – SITE CLEARING
  - 3. Section 33 30 00 – SANITARY SEWERAGE UTILITIES
  - 4. Section 33 40 00 – STORM DRAINAGE UTILITIES

##### 1.3. PRECAUTIONS

- A. Contractor shall determine the exact location of all utilities prior to construction.
- B. Notify all utility companies when necessary to disturb existing facilities and abide by their requirements for repairing and replacing.
- C. Protect all vegetation and other features to remain.
- D. Protect all benchmarks and survey points.

##### 1.4. COORDINATION

- A. Where the specifications conflict with the City/County Water and Sewer Specification and City/County Standard Details for water and sewer construction, the Details and Specifications shall govern in that order.

#### PART 2 - PRODUCTS

##### 2.1. BEDDING AND BACKFILL MATERIALS (ASTM D2487)

- A. Reference Sitework Details and City/County Standard Specifications. Reference site drainage plan and NCTCOG Specification for storm drainage.

#### PART 3 - EXECUTION

##### 3.1. PREPARATION

- A. Install barriers and other devices to protect areas adjacent to construction and to provide for public safety.
- B. Protect and maintain all benchmarks and other survey points.

##### 3.2. EXCAVATION TRENCHES

- A. Perform in such a manner as to form a suitable trench in which to place the pipe and so as to cause the least inconvenience to the public.
- B. Maximum width at the crown of the pipe shall be sixteen (16") inches plus the bell diameter of the pipe, unless approved specifically by the engineer due to unusual bracing and shoring requirements. The minimum width at the crown at the pipe shall be one foot plus the pipe bell diameter.
- C. Cut pavement along neat straight lines with either a pavement breaker or pavement saw.

- D. Trench Depth: For water lines - sufficient to provide minimum cover of 42 inches over the top of the pipe; for sewer lines and storm drain lines - as shown on the plans or as specified.
  - E. Align trench as shown on the plans unless a change is necessary to miss an unforeseen obstruction. Should such a change be necessary, the as-built information shall be provided to the engineer and it shall be approved by the engineer.
  - F. For water pipe, the trench shall be cut six (6") inches below the bottom of the pipe. The pipe shall be embedded in six (6") inches of granular material all around.
  - G. For sewer pipe, excavate six (6") inches below the bottom of pipe and fill the bottom of the trench with crushed stone or as specified by the City/County Standard Water & Sewer Specifications.
  - H. Trenches for storm drainage pipe shall be excavated and backfilled as shown on the plans.
  - I. When unsuitable soil is encountered at the trench bottom, remove it to a depth required to assure support of the pipeline and backfill to the proper grade with coarse aggregate AASHTO M-43, Size No. 2 or 3.
  - J. Remove rock encountered in trench excavation to a depth of six (6") inches below the bottom of the pipe barrel, backfill with an approved material, and compact to uniformly support the pipe. In no cases shall solid rock exist within six (6") inches of the finished pipeline.
  - K. When rock borings or soundings are provided, they are for information only and do not guarantee existing conditions. Make such investigations as deemed necessary to determine existing conditions. All trench excavation shall be considered "unclassified excavation", with no additional compensation.
- 3.3. SHEETING, SHORING AND BRACING
- A. All trench excavation shall be in accordance with OSHA Regulations and Texas State law.
- 3.4. USE OF EXPLOSIVES
- A. The use of explosives on this project is strictly prohibited.
- 3.5. DISPOSAL OF EXCAVATED MATERIAL
- A. All excess excavated material that cannot be used, or is not suitable, shall be disposed of in a manner acceptable to the Architect, at no additional cost to owner.
- 3.6. UNAUTHORIZED EXCAVATION
- A. No excavation outside or below the proposed lines and grades shown on the plans shall be provided unless approved by the Architect / Engineer.
  - B. Backfill areas of unauthorized excavation with the type material necessary (earth, rock or concrete) to ensure the stability of the structure or construction involved.
- 3.7. REMOVAL OF WATER
- A. Keep excavated areas free of water while work is in progress.
  - B. Take particular precautions to prevent the displacement of structures or pipelines as a result of accumulated water.
  - C. Discharge from dewatering activities shall not be made to any sanitary sewer system unless approved by the system operator.
- 3.8. OBSTRUCTIONS
- A. Obstructions shown on the plans are for information only and do not guarantee their exact locations nor that other obstructions are not present. The contractor shall determine and verify the exact location of all obstructions and utilities prior to construction.
  - B. When utilities or obstructions are not shown on the plans but are present off the roadway at the location of the proposed pipeline route, the contractor may request to relocate the pipeline at no additional cost to the Owner in the roadway if necessary to avoid disturbing the utility or obstructions.
  - E. Exercise due care in excavating adjacent to existing obstructions and do not disturb same.
  - D. In the event obstructions are disturbed, repair or replace as quickly as possible to the condition existing prior to their disturbance. The repair or replacement shall be at no cost to the Owner.

- E. If desired by the utility company, pay for the repair or replacement work performed by the forces of the utility company or other appropriate party.
  - F. If replacement or repair of disturbed obstructions is not performed after a reasonable period of time, the Owner may have the necessary work done and deduct the cost of same from payments to the contractor.
- 3.9. STORM SEWER BEDDING
- A. Bedding for RCP/HDPE storm sewers shall be as specified in Section 501.6, 504 and 504.2.1 thru 504.2.3 of Standard Specifications for Public Works Construction, NCTCOG and site details.
- 3.10. GRAVITY SANITARY SEWER BEDDING
- A. Always maintain proper grade and alignment during the bedding and tamping process.
    - 1. Any pipe dislodged during this process shall be replaced by the contractor at his expense.
    - 2. Dig bell holes to assure uniform support of the pipe.
    - 3. All bedding shall be tamped to a minimum of 95% maximum dry density.
  - B. Bedding for PVC Sewers:
    - 1. Refer to Sitework Details and Standard Water and Sewer Specifications.
    - 2. Lay sewer line on six inch (6") bed of crushed stone. Place granular material to a point twelve inches (12") above top of pipe.
- 3.11. BEDDING FOR WATER LINES
- A. The water line shall be bedded on six (6") inches of granular material in accordance with City/County Water and Sewer Specifications. Compact granular material to a point six inches (6") above the top of pipe.
  - B. Dig bell holes to assure uniform support throughout the entire length of pipe.
- 3.12. INITIAL BACKFILLING
- A. Do not begin backfilling before checking/inspecting the grade and alignment of the pipe, the bedding of the pipe, and the joints between the pipe. If backfill material is placed over the pipe before an inspection is made, reopen the trench in order for an inspection to be made.
  - B. Perform backfilling by hand, together with tamping, until fill has progressed to the top of specified embedment above the pipe.
    - 1. Deposit appropriate material free from lumps, clods, frozen material or stones in layers approximately eight (8") inches thick.
    - 2. Compact by hand, or with manually operated machine tampers actuated by compressed air or other suitable means.
    - 3. Use tamps and machines of a suitable type which do not crush or otherwise damage the pipe.
- 3.13. FINAL BACKFILLING
- A. After placement of the granular embedment material has been achieved, perform final backfilling depending upon the location of the work and danger from subsequent settlement.
  - B. Backfilling beneath existing or proposed driveways, streets, sidewalks, parking areas or any paved area:
    - 1. Backfill trenches per Geotechnical Report.
    - 2. Carefully deposit in uniform layers, not to exceed six (6") inches thick.
    - 3. Compact each layer by rolling, ramming and tamping with tools suitable for that purpose in such a manner so as to not disturb the pipe.
    - 4. At 200' intervals in the trench, clay check dams shall be installed to inhibit the piping of surface and/or subsurface water. The contractor shall compact full depth two foot (2') clay check dams at each location the trench enters or exits a pavement.
    - 5. Jetting or ponding of native material backfill will not be allowed.
- 3.14. FIELD QUALITY CONTROL
- A. Compaction Tests: Field density testing of the completed trench backfill shall be performed by an Independent Testing Laboratory.
    - 1. The Laboratory shall make one density test for each 150 linear feet of trench, with a minimum of 1 test per lift.

**END OF SECTION**

## SECTION 313116

### TERMITE CONTROL

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Soil treatment.

##### 1.2 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

##### 1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components, and profiles for termite control products.
  - 2. Include the EPA-Registered Label for termiticide products.

##### 1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Product Certificates: For each type of termite control product.
- C. Soil Treatment Application Report: After application of termiticide is completed, submit report for Owner's records and include the following:
  - 1. Date and time of application.
  - 2. Moisture content of soil before application.
  - 3. Termiticide brand name and manufacturer.
  - 4. Quantity of undiluted termiticide used.
  - 5. Dilutions, methods, volumes used, and rates of application.
  - 6. Areas of application.
  - 7. Water source for application.
- D. Sample Warranties: For special warranties.

##### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A specialist who is licensed according to regulations of authorities having jurisdiction to apply termite control treatment and products in jurisdiction where Project is located and who employs workers trained and approved by manufacturer to install manufacturer's products.

##### 1.6 FIELD CONDITIONS

- A. Soil Treatment:
  - 1. Environmental Limitations: To ensure penetration, do not treat soil that is water saturated or frozen. Do not treat soil while precipitation is occurring. Comply with requirements of the EPA-Registered Label and requirements of authorities having jurisdiction.
  - 2. Related Work: Coordinate soil treatment application with excavating, filling, grading, and concreting operations. Treat soil under footings, grade beams, and ground-supported slabs before construction.

##### 1.7 WARRANTY

- A. Soil Treatment Special Warranty: Manufacturer's standard form, signed by Applicator and Contractor, certifying that termite control work consisting of applied soil termiticide treatment will prevent infestation of subterranean termites, including Formosan termites (*Coptotermes formosanus*). If subterranean termite activity or damage is discovered during warranty period, re-treat soil and repair or replace damage caused by termite infestation.
  - 1. Warranty Period: Five years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Source Limitations: Obtain termite control products from single source from single manufacturer.

### **2.2 SOIL TREATMENT**

- A. Termiticide: EPA-Registered termiticide acceptable to authorities having jurisdiction, in an aqueous solution formulated to prevent termite infestation.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. BASF Corporation, Agricultural Products; Termidor.
    - b. Bayer Environmental Science; Premise 75.
  - 2. Service Life of Treatment: Soil treatment termiticide that is effective for not less than five years against infestation of subterranean termites.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for moisture content of soil per termiticide label, interfaces with earthwork, slab and foundation work, landscaping, utility installation, and other conditions affecting performance of termite control.
- B. Proceed with application only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. General: Prepare work areas according to the requirements of authorities having jurisdiction and according to manufacturer's written instructions before beginning application and installation of termite control treatment(s). Remove extraneous sources of wood cellulose and other edible materials, such as wood debris, tree stumps and roots, stakes, formwork, and construction waste wood from soil within and around foundations.
- B. Soil Treatment Preparation: Remove foreign matter and impermeable soil materials that could decrease treatment effectiveness on areas to be treated. Loosen, rake, and level soil to be treated, except previously compacted areas under slabs and footings. Termiticides may be applied before placing compacted fill under slabs if recommended in writing by termiticide manufacturer.
  - 1. Fit filling hose connected to water source at the site with a backflow preventer, according to requirements of authorities having jurisdiction.

### **3.3 APPLYING SOIL TREATMENT**

- A. Application: Mix soil treatment termiticide solution to a uniform consistency. Distribute treatment uniformly. Apply treatment at the product's EPA-Registered Label volume and rate for maximum specified concentration of termiticide to the following so that a continuous horizontal and vertical termiticidal barrier or treated zone is established around and under building construction.
  - 1. Slabs-on-Grade and Basement Slabs: Under ground-supported slab construction, including footings, building slabs, and attached slabs as an overall treatment. Treat soil materials before concrete footings and slabs are placed.
  - 2. Foundations: Soil adjacent to and along the entire inside perimeter of foundation walls; along both sides of interior partition walls; around plumbing pipes and electric conduit penetrating the slab; around interior column footers, piers, and chimney bases; and along the entire outside perimeter, from grade to bottom of footing.
  - 3. Crawlspace: Soil under and adjacent to foundations. Treat adjacent areas, including around entrance platform, porches, and equipment bases. Apply overall treatment only where attached concrete platform and porches are on fill or ground.
  - 4. Masonry: Treat voids.
  - 5. Penetrations: At expansion joints, control joints, and areas where slabs and below-grade walls will be penetrated.
- B. Post warning signs in areas of application.
- C. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities following application.

3.4 PROTECTION

- A. Avoid disturbance of treated soil after application. Keep off treated areas until completely dry.
- B. Protect termiticide solution dispersed in treated soils and fills from being diluted by exposure to water spillage or weather until ground-supported slabs are installed. Use waterproof barrier according to EPA-Registered Label instructions.

3.5 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of termite-control-treatment Installer. Include quarterly maintenance as required for proper performance according to the product's EPA-Registered Label and manufacturer's written instructions. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
- B. Continuing Maintenance Proposal: Provide from termite-control-treatment Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.
  - 1. Include annual inspection for termite activity and effectiveness of termite treatment according to manufacturer's written instructions.

**END OF SECTION**

## SECTION 31 32 00

### SOIL STABILIZATION

#### PART 1 - GENERAL

##### 1.1 RELATED DOCUMENTS

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

##### 1.2 SUMMARY

- A. Section Includes: In-place lime treatment to stabilize the subgrade under concrete and asphaltic concrete pavement, and concrete walks, which parallel drives.
- B. Related Sections:
  - 1. Section 01 45 29 – TESTING AGENCY SERVICES
  - 2. Section 31 00 00 – EARTHWORK
  - 3. Section 32 13 13 – CONCRETE PAVING

##### 1.3 REFERENCES

- A. American Society for Testing and Materials (ASTM):
  - 1. ASTM D698-91 - Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lb/ft<sup>3</sup>).
- B. Geotechnical Report ALPHA No. G240443
- C. TxDOT - Standard Specifications for Construction of Highways, Streets and Bridges, Texas Dept. of Highways and Public Transportation, as amended.

#### PART 2 - PRODUCTS

##### 2.1 MATERIALS

- A. Lime - Stabilization for Paving Subgrade
  - 1. Per TxDOT Item 260.
- B. Soil: Upper 6" of the material in-place after the subgrade has been established, compacted, and shaped.
- C. Lime: Hydrated lime made from "high calcium" type limestone with an unhydrated lime content a minimum of 8% by weight at 36 lbs per square yard for a treated depth of 6". Waste lime will not be acceptable.

##### 2.2 EQUIPMENT

- A. Distributor truck or tank equipped with agitator to maintain a uniform mixture of lime and water.

#### PART 3 - EXECUTION

##### 3.1 PREPARATION

- A. Ensure that surfaces have been brought to approximate rough grades (plus or minus 0.10 feet). In areas of 6 inch pavement, loosen and pulverize soil to a depth of 6 inches below bottom of designated paving or slab areas, including a distance of 24" outside perimeter of paving and 24" past sidewalk per the plans.
- A. General: It is the primary requirement to secure a completed 6" (in areas of 6" pavement) deep subgrade of treated material containing a uniform lime mixture, free of loose areas, of uniform density and moisture content, well bound for its full depth and with a smooth surface suitable for placing subsequent paving and slabs. Construction methods and equipment shall comply to TxDOT Item 260.
- B. Scarification: Excavate and scarify the material to be treated down to the secondary grade (proposed bottom of lime treatment). Wet or unstable material below the secondary grade shall be corrected by scarifying, adding lime and compacting to uniform stability. Then spread the excavated and scarified material to the desired cross-section. Full depth of treatment shall be 6 inches in areas of 6 inch pavement and full width shall be the entire area to be paved between points and lines located a minimum of 24" beyond pavement edges and 24" beyond sidewalk edge or per the plans, whichever is greater.

- C. Placing Lime: Add lime to the scarified material in an amount equal to 36 lbs per sq. yd. of 6" depth. Apply lime mixed with water to form a slurry. Spread lime only on that area where mixing operations can be completed during the same working day.
- D. Mixing: Mix the soil and lime thoroughly with suitable road mixers or other approved equipment until a homogeneous, friable mixture is obtained free from clods and lumps. Aerate or sprinkle the mixture as necessary to secure the optimum moisture content. Necessary optimum moisture content shall be above optimum.
- E. Curing: Allow the mixture to cure for a period of from 48 to 72 hours. During the curing period keep the material moist. During this time, the section shall not be opened to vehicular traffic.
- F. Final Mixing: After the required curing time, mix the material uniformly with a rotary mixer to reduce the size of the particles so that 100% will pass a 1-3/4" sieve and 60% will pass a No. 4 sieve.
- G. Compacting: Sprinkle the mixture as required and compact by rolling and tamping to a minimum of 95% standard density, ASTM D698, and at a moisture content above optimum. Correct irregularities and weak spots by scarifying, adding or removing material, and re-shaping and re-compacting. Maintain the surface of the subgrade smooth, free from undulations and ruts, and to the established lines and grades.

### 3.2 FIELD QUALITY CONTROL

- A. Compaction Tests: Field density testing of the completed stabilized subgrade under paving shall be performed by an Independent Testing Laboratory.
  - 1. The Laboratory shall make one density test for each 5,000 sq. ft. of stabilized subgrade in paving areas and one test per 100 liner feet of drives to ensure that the specified density is obtained.

**END OF SECTION**

## SECTION 31 63 29

### DRILLED CONCRETE PIERS AND SHAFTS

#### PART 1 - GENERAL

##### 1.1 SUMMARY

- A. Section Includes:
  - 1. Dry-installed drilled piers.

##### 1.2 UNIT PRICES

- A. Drilled Piers: Actual net volume of drilled piers in place and approved. Actual length, shaft diameter, cable, may vary, to coincide with elevations where satisfactory bearing strata are encountered. These dimensions may also vary with actual bearing value of bearing strata determined by an independent testing and inspecting agency. Adjustments are made on net variation of total quantities, based on design dimensions for shafts.
  - 1. Base bids on indicated number of drilled piers and, for each pier, the design length from top elevation to bottom of shaft.
  - 2. Unit prices include labor, materials, tools, equipment, and incidentals required for excavation, trimming, shoring, casings, dewatering, reinforcement, concrete fill, testing and inspecting, and other items for complete drilled-pier installation.
- B. Rock Measurement: Volume of rock actually removed, measured in original position, but not to exceed outside dimensions of drilled piers cast against rock. Unit prices for rock excavation include replacement with approved materials.
- C. Trial Drilled Pier: Same unit price as indicated for drilled pier, including backfilling.

##### 1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review methods and procedures related to drilled piers including, but not limited to, the following:
    - a. Review geotechnical report.
    - b. Discuss existing utilities and subsurface conditions.
    - c. Review coordination with temporary controls and protections.
    - d. Review measurement and payment of unit prices.

##### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Design Mixtures: For each concrete mixture. Submit alternative design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
  - 1. Indicate amounts of mixing water to be withheld for later addition at Project site.
- C. Shop Drawings: For concrete reinforcement, detailing fabricating, bending, supporting, and placing.

##### 1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer
- B. Welding certificates.
- C. Material Certificates: From manufacturer, for the following:
  - 1. Cementitious materials.
  - 2. Admixtures.
  - 3. Steel reinforcement and accessories.
- D. Material Test Reports: For each material below, by a qualified testing agency:
  - 1. Aggregates:
- E. Field quality-control reports.

##### 1.6 CLOSEOUT SUBMITTALS

- A. Record drawings.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer that has specialized in drilled-pier work.
- B. Testing Agency Qualifications: Qualified according to ASTM C1077, ASTM D3740, and ASTM E329 for testing indicated.
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

1.8 TRIAL DRILLED PIER

- A. Trial Drilled Pier: Construct trial drilled pier of diameter and depth and at location indicated or, if not indicated, of same diameter and depth as largest drilled piers, located at least three diameters clear of permanent drilled piers, to demonstrate Installer's construction methods, equipment, standards of workmanship, and tolerances.
  - 1. Install reinforcement, fill with concrete, remove temporary casings, and terminate trial drilled pier 24 inches below subgrade and leave in place.
  - 2. Install casing if required, excavate rock socket, and place slurry, as required for permanent drilled piers.
  - 3. If Architect determines that trial drilled pier does not comply with requirements, excavate for and cast another until it is accepted.

1.9 FIELD CONDITIONS

- A. Existing Utilities: Locate existing underground utilities before excavating drilled piers. If utilities are to remain in place, provide protection from damage during drilled-pier operations.
  - 1. Should uncharted or incorrectly charted piping or other utilities be encountered during excavation, adapt drilling procedure if necessary to prevent damage to utilities. Cooperate with Owner and utility companies in keeping services and facilities in operation without interruption. Repair damaged utilities to satisfaction of utility owner.
- B. Interruption of Existing Utilities: Do not interrupt any utility to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
  - 1. Notify Architect and Owner no fewer than two days in advance of proposed interruption of utility.
  - 2. Do not proceed with interruption of utility without Owner's written permission.
- C. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by geotechnical engineer. Owner is not responsible for interpretations or conclusions drawn from this data.
  - 1. Make additional test borings and conduct other exploratory operations necessary for drilled piers.
- D. Survey Work: Engage a qualified land surveyor or professional engineer to perform surveys, layouts, and measurements for drilled piers. Before excavating, lay out each drilled pier to lines and levels required. Record actual measurements of each drilled pier's location, shaft diameter, bottom and top elevations, deviations from specified tolerances, and other specified data.
  - 1. Record and maintain information pertinent to each drilled pier and indicate on record Drawings. Cooperate with Owner's testing and inspecting agency to provide data for required reports.

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

- A. Drilled-Pier Standard: Comply with ACI 336.1 except as modified in this Section.

2.2 STEEL REINFORCEMENT

- A. Reinforcing Bars: ASTM A615/A615M, Grade 60, deformed.
- B. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A706M, deformed.
- C. Plain and Deformed Steel Wire: ASTM A1064/A1064M,.
- D. Joint Dowel Bars: ASTM A615/A615M, Grade 60, plain. Cut bars true to length with ends square and free of burrs.

## 2.3 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of same type, brand, and source, throughout Project:
  - 1. Portland Cement: ASTM C150/C150M, Type I/II.
    - a. Fly Ash: ASTM C618, Class C.
    - b. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.
  - 2. Blended Hydraulic Cement: ASTM C595/C595M, cement.
- B. Normal-Weight Aggregate: ASTM C33/C33M, graded,
  - 1. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
- C. Water: ASTM C94/C94M
- D. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
  - 1. Water-Reducing Admixture: ASTM C494/C494M, Type A.
  - 2. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
  - 3. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
  - 4. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.
  - 5. .
- E. Sand-Cement Grout: Portland cement, ASTM C150/C150M, Type II; clean natural sand, ASTM C404; and water to result in grout with a minimum 28-day compressive strength of 1000 psi, of consistency required for application.

## 2.4 STEEL CASINGS

- A. Steel Pipe Casings: ASTM A283/A283M, Grade C, or ASTM A36/A36M, carbon-steel plate, with joints full-penetration welded according to AWS D1.1/D1.1M.
- B. Corrugated-Steel Pipe Casings: ASTM A929/A929M, steel sheet, zinc coated.
- C. Liners: Comply with ACI 336.1.

## 2.5 CONCRETE MIXTURES

- A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
- B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement according to ACI 301 limits as if concrete were exposed to deicing chemicals.
- C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.
- D. Proportion normal-weight concrete mixture as follows:
  - 1. Compressive Strength (28 Days): per Drawings.
  - 2. Maximum Water-Cementitious Materials Ratio: per Drawings.
  - 3. Minimum Slump: Capable of maintaining the following slump until completion of placement:
    - a. 4 inches for dry, uncased, or permanent-cased drilling method.
    - b. 6 inches for temporary-casing drilling method.
    - c. 7 inches for slurry displacement method.
  - 4. Air Content: Do not air entrain concrete.

## 2.6 REINFORCEMENT FABRICATION

- A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

## 2.7 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C94/C94M, and furnish batch ticket information.
  - 1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, vibration, and other hazards created by drilled-pier operations.

#### **3.2 EXCAVATION**

- A. **Unclassified Excavation:** Excavate to bearing elevations regardless of character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions.
  - 1. **Obstructions:** Unclassified excavation may include removal of unanticipated boulders, concrete, masonry, or other subsurface obstructions. No changes in the Contract Sum or the Contract Time are authorized for removal of obstructions.
  - 2. **Obstructions:** Unclassified excavated materials may include removal of unanticipated boulders, concrete, masonry, or other subsurface obstructions. Payment for removing obstructions that cannot be removed by conventional augers fitted with soil or rock teeth, drilling buckets, or underreaming tools attached to drilling equipment of size, power, torque, and downthrust necessary for the Work is according to Contract provisions for changes in the Work.
- B. **Classified Excavation:** Excavation is classified as standard excavation, special excavation, and obstruction removal and includes excavation to bearing elevations as follows:
  - 1. **Standard excavation** includes excavation accomplished with conventional augers fitted with soil or rock teeth, drilling buckets, or underreaming tools attached to drilling equipment of size, power, torque, and downthrust necessary for the Work.
  - 2. **Special excavation** includes excavation that requires special equipment or procedures where drilled-pier excavation equipment used in standard excavation, operating at maximum power, torque, and downthrust, cannot advance the shaft.
    - a. Special excavation requires use of special rock augers, core barrels, air tools, blasting, or other methods of hand excavation.
    - b. Earth seams, rock fragments, and voids included in rock excavation area are considered rock for full volume of shaft from initial contact with rock.
  - 3. **Obstructions:** Payment for removing unanticipated boulders, concrete, masonry, or other subsurface obstructions that cannot be removed by conventional augers fitted with soil or rock teeth, drilling buckets, or underreaming tools attached to drilling equipment of size, power, torque, and downthrust necessary for the Work is according to Contract provisions for changes in the Work.
- C. Prevent surface water from entering excavated shafts. Conduct water to site drainage facilities.
- D. Excavate shafts for drilled piers to indicated elevations. Remove loose material from bottom of excavation.
  - 1. Excavate bottom of drilled piers to level plane within 1:12 tolerance.
  - 2. Remove water from excavated shafts before concreting.
  - 3. Excavate rock sockets of dimensions indicated.
  - 4. Cut series of grooves about perimeter of shaft to height from bottom of shaft, vertical spacing, and dimensions indicated.
- E. Notify and allow testing and inspecting agency to test and inspect bottom of excavation. If unsuitable bearing stratum is encountered, make adjustments to drilled piers as determined by Architect.
  - 1. Do not excavate shafts deeper than elevations indicated unless approved by Architect.
  - 2. Payment for additional authorized excavation is according to Contract provisions for changes in the Work.
- F. **End-Bearing Drilled Piers:** Probe with auger to a depth below bearing elevation, equal to diameter of the bearing area of drilled pier. Determine whether voids, clay seams, or solution channels exist.
  - 1. Test first three drilled piers and one of every six drilled piers thereafter.
  - 2. Fill augur-probe holes with grout.
- G. Excavate shafts for closely spaced drilled piers and for drilled piers occurring in fragile or sand strata only after adjacent drilled piers are filled with concrete and allowed to set.
- H. **Temporary Casings:** If required, install watertight steel casings of sufficient length and thickness to prevent water seepage into shaft; to withstand compressive, displacement, and withdrawal stresses; and to maintain stability of shaft walls.
  - 1. Remove temporary casings, maintained in plumb position, during concrete placement and before initial set of concrete.

- I. Tolerances: Construct drilled piers to remain within ACI 336.1 tolerances.
  - 1. If location or out-of-plumb tolerances are exceeded, provide corrective construction. Submit corrective construction proposals to Architect for review before proceeding.

### 3.3 STEEL REINFORCEMENT INSTALLATION

- A. Comply with recommendations in CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- B. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy bond with concrete.
- C. Fabricate and install reinforcing cages symmetrically about axis of shafts in a single unit.
- D. Accurately position, support, and secure reinforcement against displacement during concreting. Maintain minimum cover over reinforcement.
- E. Use templates to set anchor bolts, leveling plates, and other accessories furnished in work of other Sections. Provide blocking and holding devices to maintain required position during final concrete placement.
- F. Protect exposed ends of extended reinforcement, dowels, or anchor bolts from mechanical damage and exposure to weather.

### 3.4 CONCRETE PLACEMENT

- A. Place concrete in continuous operation and without segregation immediately after inspection and approval of shaft by a qualified testing agency.
  - 1. Construct a construction joint if concrete placement is delayed more than one hour. Level top surface of concrete and insert joint dowel bars. Before placing remainder of concrete, clean surface laitance, roughen, and slush concrete with commercial bonding agent or with sand-cement grout mixed at ratio of 1:1.
- B. Dry Method: Place concrete to fall vertically down the center of drilled pier without striking sides of shaft or steel reinforcement.
  - 1. Where concrete cannot be directed down shaft without striking reinforcement, place concrete with chutes, tremies, or pumps.
  - 2. Vibrate top 60 inches of concrete.
- C. Coordinate withdrawal of temporary casings with concrete placement to maintain at least a 60-inch head of concrete above bottom of casing.
  - 1. Vibrate top 60 inches of concrete after withdrawal of temporary casing.
- D. Screed concrete at cutoff elevation level and apply scoured, rough finish. Where cutoff elevation is above the ground elevation, form top section above grade and extend shaft to required elevation.
- E. Protect concrete work, according to ACI 301, from frost, freezing, or low temperatures that could cause physical damage or reduced strength.
  - 1. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
  - 2. Do not use calcium chloride, salt, or other mineral-containing antifreeze agents or chemical accelerators.
- F. If hot-weather conditions exist that would seriously impair quality and strength of concrete, place concrete according to ACI 301 to maintain delivered temperature of concrete at no more than 90 deg F.
  - 1. Place concrete immediately on delivery. Keep exposed concrete surfaces and formed shaft extensions moist by fog sprays, wet burlap, or other effective means for a minimum of seven days.

### 3.5 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
  - 1. Drilled piers.
  - 2. Excavation.
  - 3. Concrete.
  - 4. Steel reinforcement welding.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

- C. Drilled-Pier Tests and Inspections: For each drilled pier, before concrete placement.
  - 1. Soil Testing: Bottom elevations, bearing capacities, and lengths of drilled piers indicated have been estimated from available soil data. Actual elevations and drilled-pier lengths and bearing capacities are determined by testing and inspecting agency. Final evaluations and approval of data are determined by Architect.
    - a. Bearing Stratum Tests: Testing agency takes undisturbed rock core samples from drilled-pier bottoms; tests each sample for compression, moisture content, and density; and reports results and evaluations.
- D. Concrete Tests and Inspections: ASTM C172/C172M except modified for slump to comply with ASTM C94/C94M.
  - 1. Slump: ASTM C143/C143M; one test at point of placement for each compressive-strength test but no fewer than one test for each concrete load.
  - 2. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 deg F and below and 80 deg F and above, and one test for each set of compressive-strength specimens.
  - 3. Compression Test Specimens: ASTM C31/C31M; one set of four standard cylinders for each compressive-strength test unless otherwise indicated. Mold and store cylinders for laboratory-cured test specimens unless field-cured test specimens are required.
  - 4. Compressive-Strength Tests: ASTM C39/C39M; one set for each drilled pier but not more than one set for each truck load. Test one specimen at seven days, test two specimens at 28 days, and retain one specimen in reserve for later testing if required.
  - 5. If frequency of testing provides fewer than five strength tests for a given class of concrete, conduct tests from at least five randomly selected batches or from each batch if fewer than five are used.
  - 6. If strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor is to evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
  - 7. Strength of each concrete mixture is satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
  - 8. Report test results in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. List Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests in reports of compressive-strength tests.
  - 9. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but not be used as sole basis for approval or rejection of concrete.
  - 10. Additional Tests: Testing and inspecting agency to make additional tests of concrete if test results indicate that slump, compressive strengths, or other requirements have not been met, as directed by Architect.
    - a. Continuous coring of drilled piers may be required, at Contractor's expense, if temporary casings have not been withdrawn within specified time limits or if observations of placement operations indicate deficient concrete quality, presence of voids, segregation, or other possible defects.
  - 11. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
  - 12. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.
- E. An excavation, concrete, or a drilled pier will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports for each drilled pier as follows:
  - 1. Actual top and bottom elevations.
  - 2. Actual drilled-pier diameter at top and bottom.
  - 3. Top of rock elevation.
  - 4. Description of soil materials.
  - 5. Description, location, and dimensions of obstructions.
  - 6. Final top centerline location and deviations from requirements.
  - 7. Variation of shaft from plumb.
  - 8. Shaft excavating method.
  - 9. Design and tested bearing capacity of bottom.
  - 10. Depth of rock socket.
  - 11. Levelness of bottom and adequacy of cleanout.

12. Properties of slurry and slurry test results at time of slurry placement and at time of concrete placement.
13. Ground-water conditions and water-infiltration rate, depth, and pumping.
14. Description, purpose, length, wall thickness, diameter, tip, and top and bottom elevations of temporary or permanent casings. Include anchorage and sealing methods used and condition and weather tightness of splices if any.
15. Description of soil or water movement, sidewall stability, loss of ground, and means of control.
16. Date and time of starting and completing excavation.
17. Inspection report.
18. Condition of reinforcing steel and splices.
19. Position of reinforcing steel.
20. Concrete placing method, including elevation of consolidation and delays.
21. Elevation of concrete during removal of casings.
22. Locations of construction joints.
23. Concrete volume.
24. Concrete testing results.
25. Remarks, unusual conditions encountered, and deviations from requirements.
- 26.

3.6 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property.

END OF SECTION 31 63 29

**SECTION 32 13 13**  
**CONCRETE PAVING**

**PART 1 - GENERAL**

1.1 RELATED DOCUMENTS

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

1.2 SUMMARY

- A. Section Includes: New concrete walks, curbs and gutters, paving, approaches, and other concrete flatwork outside the building.
- B. Related Sections:
  - 1. Section 31 00 00 - EARTHWORK

1.3 REFERENCES

- A. ACI 304 - Recommended Practice for Measuring, Mixing, Transporting, and Placing Concrete.
- B. ACI 305 - Recommended Practices for Hot Weather Concreting.
- C. ACI 306 Recommended Practices for Cold Weather Concreting.
- D. ANSI/ASTM D1751 - Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction.
- E. ANSI/ASTM D1752 - Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.
- F. ASTM C309, Type II – Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.
- G. NCTCOG - Standard Specifications for Public Works Construction.

1.4 QUALITY ASSURANCE

- A. Perform work in accordance with ACI 301.
- B. Obtain materials from same source throughout.
- C. City Standards: Street sidewalks, curbs and gutters, and approaches shall be constructed to meet or exceed the requirements of the City standard specifications (or NCTCOG) where the City standards are applicable.

1.5 SUBMITTALS

- A. Product Data: Submit concrete mix designs in accordance with SECTION 01 33 23 - SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES.
- B. Include data on joint filler, admixtures and curing compounds.
- C. Submit manufacturer's instructions under provisions of SECTION 01 33 23 - SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES.
- D. Confirm proposed joint layout shown on plans; submit revised layout for approval prior to starting work.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Do not place pavement when base surface or ambient temperature is less than 40 degrees F, or if base surface is wet or frozen.

**PART 2 - PRODUCTS**

2.1 MATERIALS

- A. Portland Cements: ASTM C 150, Type I, domestic manufacture.
- B. Fly Ash: ASTM C 618, Class F or C.
- C. Fine Aggregate: ASTM C 33, washed sand with a fineness modulus of between 2.50-3.00.

- D. Coarse Aggregate: ASTM C 33, clean crushed stone or washed gravel. The nominal maximum particle size shall not exceed 1/5 of the narrowest dimension between forms or 3/4 of the minimum clear spacing between reinforcing bars.
  - E. Admixture: ASTM C 494, Types "A", "D" and "E", water reducing, chloride-free admixture.
  - F. Air-Entraining Admixture: ASTM C260, certified by manufacturer to be compatible with other required admixtures.
  - G. Water: ASTM C 94, Clean and potable.
  - H. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.
  - I. Formwork:
    - 1. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, smooth exposed surfaces.
    - 2. Use flexible or curved forms for curves of a radius 100 feet or less.
    - 3. Use forms of size and strength to resist movement during concrete placement.
    - 4. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.
  - J. Reinforcement:
    - 1. Reinforcement Bars: ASTM A 615, Grade 60, deformed.
    - 2. Joint Dowel Bars: Plain steel bars, ASTM A 615, Grade 60. Cut bars true to length with ends square and free of burrs. Provide with closed sleeves at one end to allow one inch movement.
    - 3. Tie Bars: ASTM A 615, Grade 60, deformed.
    - 4. Bar Supports: chairs for spacing, supporting, and fastening reinforcement bars, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from plastic to support bars at the proper depth per the details.
  - K. Concrete shall meet the requirements specified in plans and specification. Paving and shall be 6 sack of cement content per cubic yard with a minimum compressive strength of 3500 psi at 28 days and 3500 psi at 28 days for flatwork. (Entrained Air: 4-6%, Slump: 4-6 inches, Fly Ash Replacement – 20% max).
  - L. Expansion Joint Filler:
    - 1. ASTM D 1751 preformed strips of asphalt saturated cane fiberboard for joints in standard finished flatwork (walks, curbs and gutters).
    - 2. ASTM D 1752, Type I preformed strips of elastic sponge rubber compound for joints to be caulked with sealant and joints in architectural concrete flatwork.
    - 3. The use of redwood expansion joints is prohibited.
  - M. Type SL Silicone Sealant for Concrete and Asphalt: Single-component, low-modulus, neutral-curing, self-leveling silicone sealant complying with ASTM D 5893 for Type SL.  
Product manufacturer; one of the following:
    - Crafco Inc.; RoadSaver Silicone SL.
    - Dow; DOWSIL 890-SL
  - N. Joint Sealant Backer Rod:
    - 1. Provide joint-sealant backer materials that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by joint-sealant manufacturer based on field experience and laboratory testing.
    - 2. Round Backer Rods for Cold-Applied Sealants: ASTM D 5249, Type 3, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.
- 2.2 MIXING AND DELIVERY
- A. Measurement of concrete materials, mixing, and delivery of fresh concrete to the project shall meet the requirements of ASTM C 94. Transit-mixed concrete supplier shall have a plant with sufficient capacity and transportation facilities to assure continuous delivery at the rate required.
  - B. Mix concrete in accordance with ASTM C94, Alternative No. 2, or ACI 304.
  - C. Deliver concrete in accordance with ASTM C94.
  - D. Select proportions for normal weight concrete in accordance with ACI 301 Method 1. Mix not less than one minute after materials are in mixer.
  - E. Do not transport or use concrete after 90 minutes has expired from time of initial mixing.

### **PART 3 - EXECUTION**

#### **3.1 INSPECTION**

- A. Verify compacted subgrade is ready to support paving and imposed loads, free of frost, smooth and properly compacted.
- B. Verify gradients and elevations of base are correct, and proper drainage has been provided so that water does not stand in the area to receive paving.
- C. Beginning of installation means acceptance of existing conditions.

#### **3.2 PREPARATION**

- A. Moisten base to minimize absorption of water from fresh concrete.
- B. Notify Architect, Owner, and testing laboratory, minimum 24 hours prior to commencement of concreting operations.
- C. Grade Control: Establish and maintain the lines and grades for concrete site work items by means of line and grade stakes. Complete any fine grading required to prepare the subgrade. Maintain the finished subgrade cushions in a satisfactory condition.

#### **3.3 INSERTS AND ACCESSORIES**

- A. Make provisions for installation of inserts, accessories, anchors, and sleeves.

#### **3.4 INSTALLATION**

- A. Forming: Set forms to lines and grades, and brace and secure to withstand wet concrete without deflection or leakage. Stake forms securely in position with joints keyed to prevent relative displacement. Clean and oil forms each time they are used. Refer to Section 03 11 00 for additional installation requirements.
  - 1. Walks surfaces shall be crowned or sloped to drain:
    - a. 4" thick
    - b. 6" thick
  - 2. Curbs and Gutters: As detailed.
  - 3. Paving, Drive Approaches: Thicken edges as required.
    - a. 7" thick
- B. Reinforcing: Install reinforcing to meet the requirements of SECTION 03 20 00 - CONCRETE REINFORCEMENT. Where reinforcement is not specifically detailed, reinforce pavement with #3 rebars at 18" o.c. each way. Reinforcement for fire lane paving shall be #3 bars at 18" o.c. each way.
- C. Concrete: Place concrete to meet the requirements of SECTION 03 30 00 - CAST-IN-PLACE CONCRETE.
  - 1. Place concrete in accordance with ACI 301 and 304. Deposit concrete so that specified slab thickness will be obtained with use of a vibratory screed and finishing operations. Minimize handling to prevent segregation. Consolidate concrete by suitable means to prevent formation of voids or honeycombs. Exercise care to prevent disturbance of forms and reinforcing and damage to vapor retarder. Place concrete to lines and levels shown, properly sloped to drain into adjacent yard areas or drainage structures. Concrete shall be placed using a walk behind screed machine (Magic Screed). In addition, a backpack vibrator shall be used. A minimum of two (2) screed machines and backpack vibrators shall be present during all concrete pours. The surface shall be troweled and edged with a steel trowel and then broomed to obtain a smooth, uniform brush finish.
  - 2. Hot Weather Placement: ACI 305.
  - 3. Cold Weather Placement: ACI 306.
  - 4. Ensure reinforcement, inserts, embedded parts, and formed joints are not disturbed during concrete placement.
  - 5. Place concrete continuously between predetermined construction joints. Do not break or interrupt successive pours such that cold joints occur.
  - 6. The Contractor shall not back over the steel at anytime while pouring concrete. Construction sequencing efforts shall be utilized in order to successfully make each concrete pour. If necessary, the Contractor shall utilize concrete pumping to perform the work.

- D. Expansion Joints: Locate expansion joints around fixed objects within or abutting concrete, and at intervals of not more than 35 ft. o.c. along walks and curbs and 150 ft. o.c. along drive and parking paving unless otherwise shown on the plans.
1. Install preformed filler with the top edge approximately 1/4" below the finished concrete surface to leave a neat, straight joint.
  2. Joints shall be 1/2" wide unless specifically dimensioned otherwise on the drawings. Joint edges shall be rounded with an edging tool.
  3. There shall be no connection by reinforcement or keyway across expansion joints. Joints shall be held in alignment with sleeved, smooth dowels where required.
  4. The use of redwood expansion joints is prohibited.
- E. Scoring:
1. Saw cut walks, approaches, and paving using an abrasive or diamond blade. Cut joint width shall be 1/8" and depth shall be 1/4" deep at walks and 1/3 slab thickness at approaches and paving. Cutting of joints must be done as soon as concrete surface is firm enough not to be torn or damaged by the blade (within 4 to 12 hours), and before random shrinkage cracks can form in the concrete slab.
    - a. Score walks at approximately 5-foot intervals each way.
    - b. Score curbs and curbs and gutters to match adjacent paving joints.
    - c. Score approaches and paving at 15 foot maximum intervals each way or as shown.
- F. Standard Finishing: Strike slabs off true by double screeding to the required level at or below the elevations and grades shown on the drawings. Set edge forms and screed strips accurately to produce the designated elevations and contours.
1. Walks: Float with wood floats to true planes with no coarse aggregate visible. Hand trowel to produce smooth surfaces. Brush surfaces with a soft fiber brush to produce a uniformly striated finish. Edge concrete surfaces with a rounded edging tool.
  2. Curbs and gutters: All curbs shall hand formed and finished. Cross brush surfaces with a soft fiber brush to produce a fine brush finish.
  3. Approaches: Screed and float to a monolithic medium float finish and belt with a canvas belt to produce a herringbone texture finish.
    - a. Curb Ramps: Provide tooled grooves with chemical staining of concrete as detailed (if required).
- G. Curing:
1. Cure concrete 7 days. Coat exposed surfaces with curing compound, white pigmented for paving and clear for flatwork, and protect surfaces from pedestrian and vehicular traffic during the curing period. Damaged areas shall be re-sprayed. Curing compound shall conform to the specifications of ASTM C309, Type 2.
  2. Removing Forms: Forms shall remain in place for at least 12 hours after concrete has been placed and finished. Remove forms without damaging the concrete. Bars and heavy tools shall not be used to pry against the concrete in removing the forms. Repair all honey combs. Backfill all curbs.
- 3.5 FIELD QUALITY CONTROL
- A. Concrete Tests: Testing and acceptance of concrete shall meet the requirements specified in the plans and specifications and by the geotechnical firm.
- B. Grade and Smoothness Tests:
1. Plan Grade: Finished surface of the flatwork shall not vary more than 0.04 ft. above or below the plan grade or elevation. Finished surfaces of abutting pavement and walks shall coincide at their juncture. Where a new pavement or walk abuts an existing surface, transition pavement or walk strip shall be installed.
  2. Surface Smoothness: Finished surface of the flatwork shall have no abrupt changes of more than 1/8" and shall not deviate from the testing edge of a 12 ft. straight edge more than 1/4" plus or minus tolerance. Flow line of gutters shall not deviate from the testing edge of a 10 ft. straight edge more than 1/8" plus or minus tolerance.
- C. Concrete Cracking:
- Contractor is responsible for controlling all concrete cracking.
1. Pavement: If more than one (1) crack per panel occurs, the Contractor may be required to remove and replace the panel as directed by the Engineer or Owner.
  2. Sidewalk and Flatwork: Where cracking occurs, Contractor to remove and replace entire panel.

3.6 CLEANING

- A. Remove debris, scraps, surplus materials, tools and equipment from the premises upon completion of the work. Clean concrete droppings from walks and curbs. Leave the graded areas free of debris and rubble.

3.7 PROTECTION

- A. Immediately after placement, protect concrete under provisions of SECTION 01 50 00 – CONSTRUCTION FACILITIES AND TEMPORARY CONTROLS from premature drying, excessive hot or cold temperatures, and mechanical injury.
- B. The pavement shall be closed to all traffic, including vehicles of the Contractor, until the concrete is at least 7 days old or has attained a minimum average of 3,500 psi compressive strength. Repair any damage to the pavement prior to the acceptance by Owner at no additional cost to the Owner. This does not relieve the Contractor from the normal liabilities, and maintenance responsibilities, implied or otherwise, for the pavement or other items.

**END OF SECTION**

## SECTION 32 17 23

### PAVEMENT MARKINGS

#### PART 1 - GENERAL

##### 1.1 RELATED DOCUMENTS

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

##### 1.2 SUMMARY

- A. Section Includes: Pavement marking on Portland Cement Concrete Pavement.
- B. Related Sections:
  - 1. Section 32 13 13 - CONCRETE PAVING

##### 1.3 REFERENCES

- A. Federal Specification (FS):
  - 1. FS - TT P 1952F Paint, Traffic, and Airfield Marking, Waterborne.

##### 1.4 PROJECT CONDITIONS

- A. Environmental Requirements Apply paint when ambient temperature is 50°F. or above, and relative humidity is below 85%.

##### 1.5 QUALITY ASSURANCE

- A. Installer: Shall have a minimum of 2 years experience in the layout and striping of parking lots.
- B. Job Conditions: Do not apply marking paint when weather is foggy or rainy, or ambient or pavement temperatures are below 40 degrees F., nor when such conditions are anticipated during eight hours after application.

##### 1.6 SUBMITTALS

- A. Submit manufacturer's product data and installation instructions.
- B. Substitutions: Submit in accordance with SECTION 01 60 00 - PRODUCT REQUIREMENTS.

#### PART 2 - PRODUCTS

##### 2.1 MATERIALS

- A. Traffic Paint: Fed. Spec. TT-P-1952F, alkyd-chlorinated rubber-chlorinated paraffin marking paint. Striping colors per plans and City requirements. Provide Premium Chlorinated Rubber Base Paint as manufactured by Sherwin Williams or approved equivalent.
- B. Cleaning Solvent: VM & P Naphtha.

##### 2.2 EQUIPMENT

- A. Applicators: Hand-operated push type marking machine or conventional airless spray equipment with guide lines and templates.

#### PART 3 - EXECUTION

##### 3.1 PREPARATION

- A. Surface Conditions: Clean and dry free from dirt, loose paint, oil, grease, wax, and other contaminants.
  - 1. Asphalt Surfaces: Allow asphaltic concrete to cure a minimum of 48 hours prior to application of marking paint.
- B. Equipment Condition: Clean previously used paint and solvent from application equipment, using VM & P Naphtha.
- C. Paint: Stir contents thoroughly from bottom of container. Do not thin paint.

- D. Locate markings as indicated on Drawings. Provide qualified technician to supervise equipment and application of markings. Lay out markings using guide lines, templates and forms.
  - E. Allow paving to cure before painting as required by manufacturer of traffic paint.
  - F. Allow protective coating to cure a minimum of 48 hours prior to application of traffic paint.
- 3.2 APPLICATION
- A. Using approved equipment, apply paint to a minimum thickness of 15 mils. Stripes shall be 4" wide. Marking edges of stripes and symbols shall be sharply outlined.

**END OF SECTION**

## SECTION 32 19 00

### WALK, ROAD, AND PARKING APPURTENANCES

#### PART 1 - GENERAL

##### 1.1 RELATED DOCUMENTS

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

##### 1.2 WORK INCLUDED

- B. Provide and install handicapped parking signs and traffic directional signs.

##### 1.3 REFERENCES

- A. American Society for Testing and Materials (ASTM):
  1. ASTM A591 Steel Sheet, Cold-Rolled, Electrolytic Zinc- Coated.
  2. ASTM B209 Aluminum and Aluminum-Alloy Sheet and Plate.
  3. ASTM C33 Concrete Aggregates
  4. ASTM C150 Portland Cement

- B. AASHTO M268

##### 1.4 SUBMITTALS

- A. Product Data: Submit in accordance with SECTION 01 33 23 - SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES. Include catalog, cuts of each type of sign and manufacturer's installation instructions.

##### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle signs in accordance with SECTION 01 60 00 – PRODUCT REQUIREMENTS and in manufacturer's cartons. Store off ground on planking. Cover with non-staining plastic.

##### 1.6 PROJECT CONDITIONS

- A. Coordinate installation of signs with work of other trades.
- B. Location of signs shall be in accordance with City and State requirements. Signs shall be positioned not to conflict with automobile or pedestrian traffic.

#### PART 2 - PRODUCTS

##### 2.01 ACCEPTABLE MANUFACTURER

- A. Site signs: As manufactured by Sa So (Sargent Sowell, Inc.) 525 N. Great SW Pkwy, Arlington, Texas, 76011 (phone 972-647 4911), or approved equivalent.

##### 2.2 MATERIALS

- A. Sign Materials: Aluminum Sheets: ASTM B 209, alloy 6061 T6, degreased and etched, 0.080" thickness. Sign faces shall be fully reflectorized with material conforming to AASHTO M268.
- B. Bolts, Nuts, Washers, and Clamps: Cadmium or galvanized steel. Bolts shall be a minimum of 5/16" in diameter. Clamps shall be two-piece assemblies of at least 14-gage steel or shall be an adjustable steel strap bracket.
- C. Posts: Standard galvanized steel pipe 2-3/8" in diameter and weighing not less than 2 lbs. per linear foot.
- D. Concrete: Provide concrete consisting of Portland cement (ASTM C150), aggregates (ASTM C33), and clean water. Mix materials to obtain concrete with a minimum 28-day compressive strength of 2500 psi, using at least 4 sacks of cement per cubic yard, 1 inch maximum size aggregate, maximum 3" slump, and 2% to 4% entrained air.

##### 2.3 SITE SIGNS

- A. General: Site signs shall be of the quality manufactured by Sa-So and are listed by Sa-So catalog numbers for convenience in identification.

- B. Accessible Parking Signs: Reflective .080 Aluminum.
- C. Accessible Loading Zone Sign: Reflective .080 Aluminum.
- D. Traffic Signs: Reflective sheeting per details.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Excavation: Drill holes of the size indicated for posts. Excavate holes to the depths indicated. Remove excess concrete and excavated soil from the site.
- B. Setting Posts:
  - 1. Remove all loose and foreign materials from sides and bottoms of holes, and moisten soil prior to placing concrete. Center and align posts in holes.
  - 2. Place concrete around posts in a continuous pour, and vibrate or tamp for consolidation. Check each post for vertical and top alignment, and hold in position during placement and finishing operations. Trowel finish tops of footings, and slope or dome to direct water away from posts.
- C. Attach signs to posts with bolts, washers, nuts and clamps.
- D. Clean exposed sign faces and galvanized surfaces, and leave free of defects. Use no abrasives. Leave pavement and graded area clean and free of debris.

**END OF SECTION**

SECTION 32 84 00

PLANTING IRRIGATION

PART 1 - GENERAL

1.1 GENERAL CONDITIONS

The requirements of the "General Conditions of the Contract" and of Division 1, "General Requirements", shall apply to all work of this Section with the same force and effect as though repeated in full herein.

1.2 SCOPE OF WORK

- A. Provide all labor, materials, transportation, and services necessary to furnish and install Irrigation Systems as shown on the drawings and described herein.
- B. Related work in other sections:
  - 1. 32 92 23 SOD
  - 2. 32 93 00 TREES, SHRUBS, AND GROUNDCOVERS
- C. The term of "LICENSED IRRIGATOR" shall refer to Teague Nall and Perkins, Inc., 5237 N. Riverside Drive, Suite 100, Fort Worth, Texas 76137.

1.3 QUALITY ASSURANCE & REQUIREMENTS

- A. Permits and Fees: The Contractor shall obtain and pay for any and all permits and all observations as required.
- B. Manufacturer's Directions: Manufacturer's directions and detailed drawings shall be followed in all cases where the manufacturers of articles used in this contract furnish directions covering points not shown in the drawings and specifications
- C. Ordinances and Regulations: All local, municipal, and state laws, and rules and regulations governing or relating to any portion of this work are hereby incorporated into and make a part of these specifications, and their provisions shall be carried out by the Contractor. Anything contained in these specifications shall not be construed to conflict with any of the above rules and regulations or requirements of a better quality, higher standard, or larger size than is required by the above rules and regulations, the provisions of these specifications and drawings shall take precedence.
- D. Explanation of Drawings:
  - 1. Due to the scale of drawings, it is not possible to indicate all offsets, fittings, sleeves, etc., which may be required. The Contractor shall carefully investigate the structural and finished conditions affecting all of his work and plan his work accordingly, furnishing such fittings, etc., as may be required to meet such conditions. Drawings are generally diagrammatic and indicative of the work to be installed. The work shall be installed in such a manner as to avoid conflicts between irrigation systems, planting, and architectural features.
  - 2. All work called for on the drawings by notes or details shall be furnished and installed whether or not specifically mentioned in the specifications.
  - 3. The Contractor shall not willfully install the irrigation system as shown on the drawings when it is obvious in the field that obstructions, grade differences or discrepancies in area dimensions exist that might not have been considered in engineering. Such obstructions or differences should be brought to the attention of the Licensed Irrigator immediately. In the event this notification is not performed, the Irrigation Contractor shall assume full responsibility for any revision necessary.

1.4 SUBMITTALS

- A. Material List:
  - 1. The Contractor shall furnish the articles, equipment, or processes specified by name in the drawings and specifications. No substitution will be allowed without prior written approval by the Licensed Irrigator.

2. Complete material list shall be submitted prior to performing any work. Material list shall include the manufacturer, model number, and description of all materials and equipment to be used.
  3. Equipment or materials installed or furnished without prior approval of the Licensed Irrigator may be subject to rejection, and the Contractor required to remove such materials from the site at his own expense.
  4. Approval of any item, alternate, or substitute indicates only that the product or products apparently meet the requirements of the drawings and specifications on the basis of the information or samples submitted.
  5. Manufacturer's warranties shall not relieve the Contractor of his liability under the guarantee. Such warranties shall only supplement the guarantee.
- B. Record and As-Built Drawings:
1. The Contractor shall provide and keep an up-to-date and complete "as-built" record set of blue line ozalid prints which shall be corrected daily and show every change from the original drawings and specifications, the exact "as-built" locations, sizes, and kinds of equipment. Prints for these purposes may be obtained from the Licensed Irrigator at cost. This set of drawings shall be kept on the site and shall be used only as a record set.
  2. These drawings shall also serve as work progress sheets and shall be the basis for measurement and payment for work completed. These drawings shall be available at all times for inspection and shall be kept in a location designated by the Licensed Irrigator. Should the record blue line as-built progress sheets not be available for review or not up-to-date at the time of any inspection (refer to Section 3.09 - Observation Schedule), it will be assumed no work has been completed and the Contractor will be assessed the cost of that site visit at the current billing rate of the Licensed Irrigator. No other observations shall take place prior to payment of that assessment.
  3. The Contractor shall make neat and legible notations on the as-built progress sheets daily as the work proceeds, showing the work as actually installed. For example, should a piece of equipment be installed in a location that does not match the plan, the Contractor must indicate that equipment has been relocated in a graphic manner so as to match the original symbols as indicated in the irrigation legend. The relocated equipment and dimensions will then be transferred to the original as-built plan at the proper time.
  4. Hand drawn: In lieu of electronically drawn, before the date of the final inspection, the Contractor shall transfer all information from the "as-built" prints to a sepia Mylar, or similar Mylar material, procured from the Licensed Irrigator. All work shall be in waterproof India ink and applied to the Mylar be a technical pen made expressly for use on Mylar material. Such pen shall be similar to those manufactured by Rapidograph, Kueffell & Esser, or Faber Castell. The dimensions shall be made so as to be easily readable, even on the final controller chart (see Section C). The original Mylar "as-built" plan shall be submitted to the Licensed Irrigator for approval prior to the making of the controller chart.
  5. Electronically drawn: In lieu of hand drawn, before the date of the final inspection, the Contractor shall transfer all information from the "as-built" prints to an AutoCAD electronic file procured from the Licensed Irrigator. All work shall be documented on a unique and separate layer. The electronically drawn "as-built" plan shall be submitted to the Licensed Irrigator for approval prior to the making of the controller chart.
  6. The Contractor shall dimension from two (2) permanent points of reference - building corners, sidewalks, road intersections, etc. - the location of the following items:
    - a. Connection to existing water lines
    - b. Connection to existing electrical power
    - c. Gate valves
    - d. Routing of irrigation pressure lines (dimension maximum 100' along routing).
    - e. Irrigation control valves.
    - f. Routing of control wiring.
    - g. Quick coupling valves.
    - h. Road and sidewalk borings. With a small masonry blade label each sleeve location with an "S" cut directly above all sleeve ends.
    - i. Other related equipment as directed by the Licensed Irrigator

7. On or before the date of the final inspection, the Contractor shall deliver the corrected and completed sepias to the Licensed Irrigator. Delivery of the sepias will not relieve the Contractor of the responsibility of furnishing required information that maybe omitted from the prints.
- C. Controller Charts:
1. As-built drawings shall be approved by the Licensed Irrigator before controller charts are prepared.
  2. Provide on (1) controller chart for each controller supplied.
  3. The chart shall show the area controlled by the automatic controller and any area under a manual irrigation. The chart shall be the maximum size which the controller door will allow.
  4. The chart is to be a reduced drawing of the actual as-built system. However, in the event the controller sequence is not legible when the drawing(s) is reduced, it shall be enlarged to a size that will be readable when reduced.
  5. The chart shall be a black line or blue line ozalid print. A different color shall be used to indicate the area of coverage for each station.
  6. When completed and approved, the chart will be hermetically sealed between two (2) pieces of plastic, each piece being a minimum 10 mils thickness.
  7. These charts shall be completed and approved prior to final inspection of the irrigation system.
- D. Operation and Maintenance Manuals:
1. Prepare and deliver to the Licensed Irrigator within ten (10) calendar days prior to completion of construction, two (2) hard cover binders with three (3) rings containing the followings information:
    - a. Index sheet stating Contractor's address and telephone number, list of equipment with name and addresses of local manufacturer's representative
    - b. Catalog and parts sheets on every material and equipment installed under this contract.
    - c. Guarantee statement.
    - d. Complete operating and maintenance instructions on all major equipment, i.e. the automatic controller(s).
  2. In addition to the above mentioned maintenance manuals, provide the Licensed Irrigator with instructions for major equipment and show evidence, in writing, to the Licensed Irrigator at the conclusion of the project that this service has been rendered.
- E. Equipment to be Furnished:
1. Supply as a part of this Contract the following tools:
    - a. Two (2) sets of special tools required for removing, disassembling and adjusting each type of irrigation head and valve supplied on this project.
    - b. Two (2) five foot valve keys for operation of the ball and remote control valves.
    - c. Two (2) keys for each automatic controller.
    - d. One (1) quick coupler key and matching hose swivel ell for every five (5), or fraction thereof, of each type of quick coupling valve installed.
- 1.5 PRODUCT DELIVERY, STORAGE AND HANDLING
- A. Handling of PVC Pipe and Fittings: The Contractor is cautioned to exercise care in handling, loading, unloading, and storing of PVC pipe and fittings. All PVC pipe shall be transported in a vehicle which allows the length of pipe to lie flat so as not to subject it to undue bending or concentrated external load at any point. Any section of pipe that has been damaged will be discarded and, if installed, shall be replaced with new piping.
- 1.6 SUBSTITUTIONS
- A. If the Contractor wishes to substitute any equipment or materials for those equipment or materials listed on the drawings and specifications, he may do so by providing the following information to the Licensed Irrigator for approval:
1. Provide a statement indicating the reason for making the substitution. Use a separate sheet of paper for each item to be substituted.
  2. Provide descriptive catalog literature, performance charts, and flow charts for each item to be substituted.
  3. Provide the amount of cost savings if the substituted item is approved.

- B. The Licensed Irrigator shall have the sole responsibility in accepting or rejecting any substituted item as an approved equal to those equipment and materials listed on the irrigation drawings and specifications

1.7 GUARANTEE

- A. The guarantee for the planting irrigation system shall be made in accordance with the attached form. The general conditions and supplementary conditions of these specifications shall be filed with the Owner and the Licensed Irrigator prior to acceptance of the irrigation system.
- B. A copy of the guarantee form shall be included in the operations and maintenance manual.
- C. The guarantee form shall be re-typed onto the Contractor's letterhead and contain the following information:

ONE-YEAR WARRANTY & GUARANTEE FOR PLANTING IRRIGATION SYSTEM

We hereby guarantee that the planting irrigation system we have furnished and installed is free from defects in materials and workmanship, and the work has been completed in accordance with the drawings and specifications, ordinary wear and tear and unusual abuse, or neglect excepted. We agree to repair or replace any defects in material or workmanship which may develop to repair or replace any damage resulting from the repairing or replacing of such defects at no additional cost to the Owner for a period of one year after final acceptance of the project. We shall make such repairs or replacements within a reasonable time, as determined by the Owner, after receipt of written notice. In the event of our failure to make such repairs or replacement within a reasonable time after receipt of written notice from the Owner, we authorize the Owner to proceed to have said repairs or replacements made at our expense and we will pay the costs and charges therefore upon demand.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. General: Use only new materials of brands and types noted on drawings, specified herein, or approved equals.
- B. PVC pressure main line pipe and fittings:
  - 1. Pressure main line piping for sizes 3" and larger shall be PVC Class 200 with o-ring gasket joints. All tees, ells and other fitting shall be solvent welded.
  - 2. Pressure main line piping for sizes 2 1/2" and smaller shall be PVC Class 200 with solvent welded joints.
  - 3. Pipe shall be made from NSF approved Type I, Grade II PVC compound conforming to ASTM resin specification D1784. All pipes must meet requirements as set forth in Federal Specification PS-22-70.
  - 4. PVC solvent-weld fittings shall be Schedule 40, 1-2, II-I NSF approved conforming to ASTM test procedure D2466. All male adapters shall be SCH 80 PVC.
  - 5. Solvent cement and primer for PVC solvent-weld pipe and fittings shall be of type and installation methods prescribed by the manufacturer.
  - 6. All PVC pipe must bear the following markings:
    - a. Manufacturer's name
    - b. Nominal pipe size
    - c. Schedule or class
    - d. Pressure rating in P.S.I.
    - e. NSF (National Sanitation Foundation) approval
    - f. Date of extrusion
  - 7. All fittings shall bear the manufacturer's name or trademark, material designation, size, applicable I.P.S. schedule and NSF seal of approval.
- C. PVC Non-Pressure Lateral Line Piping:
  - 1. Non-pressure buried lateral line piping shall be PVC class 200 with solvent-weld joints.
  - 2. Pipe shall be made from NSF approved, Type I, Grade II PVC compound to ASTM resin specification D1784. All pipes must meet requirements set forth in Federal Specification PS-22-70 with an appropriate standard dimension ratio.
  - 3. Except as noted in paragraphs 1 and 2 of Section 2.01B, all requirements for non-pressure lateral line pipe and fittings shall be the same as for solvent-weld pressure main line pipe and fittings as set forth in Section 2.01B of these specifications.
- D. Copper Piping and Fittings:
  - 1. Copper piping shall be type "K" hard-drawn with "sweat" type fittings.
  - 2. Pipe and fittings shall be assembled with 50/50 soft solder and non-erosive flux. Solder shall take up capillary action and joints shall be made tight without build-up head.
  - 3. Pipe ends shall be squared, reamed to remove burrs, and cleaned bright with fine sandpaper and steel wool.

- E. Ball Valves:
  - 1. Ball valves 3" and smaller shall be similar to those manufactured by Lasco, or approved equal.
  - 2. Ball valves 3" and smaller shall have threaded ends shall be equipped with a hand lever.
  - 3. All ball valves shall be installed per installation detail and the manufacturer's recommendations.
- F. Quick Coupling Valves: Quick coupling valves shall have a brass two-piece body designed for working pressure of 150 p.s.i. operable with quick coupler. Key size and type shall be as shown on the plans.
- G. Backflow Prevention Units:
  - 1. Backflow prevention units shall be of size and type indicated on the drawings. Install backflow prevention units in accordance with irrigation construction details.
  - 2. Wye strainers at backflow prevention units shall have a bronzed, screwed body with 60 mesh monel screen and shall be similar to Bailey #100B, or approved equal. Mount wye strainers sideways so they are easier to service.
- H. Automatic Drain Valves:
  - 1. Automatic drain valves shall be plunger type, duty virgin PVC construction, with small thread inlet.
  - 2. Drain valve shall be installed at an angle of 30 to 45 degrees horizontal, in a direction to facilitate pipe drainage.
  - 3. Provide sump pit for drainage.
- I. Control Wiring:
  - 1. Connections between the automatic controllers and the electric control valves shall be made with direct burial copper wire, AWG-U.F. 600 volt.
  - 2. Pilot wires shall be a different color wire for each automatic controller.
  - 3. Common wires shall be white with a different color stripe for each automatic controller.
  - 4. Install in accordance with valve manufacturer's specifications and wire chart. In no case shall the wire size be less than #12 gauge.
  - 5. Wiring shall occupy the same trench and shall be installed along the same route as pressure supply or lateral lines wherever possible.
  - 6. Where more than one (1) wire is placed in a trench, the wiring shall be taped together at intervals of ten (10) feet.
  - 7. An expansion curl shall be provided within three (3) feet of each wire connection. Expansion curl shall be of sufficient length at each splice connection at each electric remote control valve, so that in case of repair, the valve bonnet may be brought to the surface without disconnecting the control wires. Control wires shall be laid loosely in the trench without stress or stretching of control wire conductors.
  - 8. All splices shall be made with Scotch-Lok #3576 Connector Sealing Packs, Rain Bird Snap-Tite wire connector, or approved equal. Use one (1) splice per connector sealing pack.
  - 9. Field splices between the automatic controller and electrical control valves will not be allowed without prior approval of the Licensed Irrigator. All approved field splices shall be placed in a Control Valve Box and labeled appropriately.
- J. Automatic Controllers:
  - 1. Automatic controllers shall be of size and type shown on the plans.
  - 2. Final location of the automatic controller shall be approved by the Licensed Irrigator.
  - 3. Unless otherwise noted on the plans, the 120 volt electrical power to each automatic controller location shall be furnished by the Contractor. The final electrical hook-up shall be the responsibility of the Contractor.
- K. Electrical Control Valves:
  - 1. All electric control valves do not have to be the same manufacture as the automatic controller.
  - 2. All electric control valves shall have a manual flow adjustment.
  - 3. Furnish and install one (1) control valve box for each electric control valve.
- L. Control Valve Boxes:
  - 1. Use 10" round box for all field splices, Oldcastle Enclosure Solutions Model 910 with green cover, or approved equal. Extension sleeves shall be 6" PVC minimum size.
  - 2. Use 14" X 19" standard rectangular box for all gate valves and quick coupler valves, Oldcastle Enclosure Solutions Model 1419 with green, "Drop-N-Lock" lid cover, or approved equal. Extension sleeves shall be 6" PVC minimum size.

3. Use 13" X 24" jumbo rectangular box for all electric control valves, Oldcastle Enclosure Solutions Model 1324 with green, "Drop-N-Lock" lid cover, or approved equal. Extension sleeves shall be 6" PVC minimum size.

M. Irrigation Heads:

1. All irrigation heads shall be of the same size, type, and deliver the same rate of precipitation with the diameter (or radius) of throw, pressure, and discharge as shown on the drawings, or specified in these special provisions.
2. Spray heads shall have a screw adjustment.
3. Riser units shall be fabricated in accordance with the details shown on the plans.
4. Riser nipples for all irrigation heads shall be the same size as the riser opening in the irrigation body.
5. All irrigation heads of the same type shall be of the same manufacture.

### PART 3 - EXECUTION

#### 3.1 INSPECTION

A. Site Conditions:

1. All scaled dimensions are approximate. The Contractor shall check and verify all size dimensions and receive the Licensed Irrigator's approval prior to proceeding with work under this section.
2. Exercise extreme care in excavating and working near existing utilities. The Contractor shall be responsible for damages to utilities which are caused by his operations or neglect. Check existing utilities drawings for existing utility locations.
3. Coordinate installation of planting irrigation materials including pipe, so there shall be NO interference with utilities or other construction or difficulty in planting trees, shrubs, and ground covers.
4. The Contractor shall carefully check all grades to satisfy himself that he may safely proceed before starting work on the planting irrigation system.

#### 3.2 PREPARATION

A. Physical Layout:

1. Prior to installation, the Contractor shall stake out all pressure supply lines, routing and location of irrigation heads.
2. All layout shall be approved by the Licensed Irrigator prior to installation.

B. Water Supply:

1. Planting irrigation system shall be connected to water supply points of connection as indicated on the drawings.
2. Connections shall be made at approximate locations as shown on the drawings. The Contractor is responsible for minor changes caused by actual site conditions.
3. The point of connection shall be as shown on the drawings and shall be furnished by the Contractor, unless otherwise specified.

C. Electrical Supply:

1. Electrical connections for the automatic controller shall be made to electrical points of connection as indicated on the drawings.
2. Connections shall be made at approximate locations, as shown on the drawings. The Contractor is responsible for minor changes caused by actual site conditions.

#### 3.3 INSTALLATION

A. Trenching:

1. Dig trenches straight and support pipe continuously on bottom of trench. Lay pipe to an even grade. Trenching excavation shall follow layout indicated on the drawings, and as noted.
2. Provide for a minimum of eighteen (18) inches cover for all pressure supply lines.
3. Provide for a minimum cover of twelve (12) inches for all non-pressure lines.
4. Provide for a minimum cover of eighteen (18) inches for all control wiring.

B. Backfilling:

1. The trenches shall be backfilled a maximum of 50% with all joints exposed until all required tests are performed. Trenches shall be carefully backfilled with the excavated materials approved for backfilling, consisting of earth, loam, sandy clay, sand, or other approved materials, free from large clods of earth or stones. Backfill shall be mechanically compacted landscaped areas to a dry density equal to adjacent undisturbed soil in planting areas. Backfill will conform to adjacent grades without dips, sunken areas, humps, or other surface irregularities.
  2. A fine granular material backfill will be initially placed on all lines. No foreign matter larger than one-half (1/2) inch in size will be permitted in the initial backfill.
  3. Flooding of trenches will always be permitted and preferred.
  4. If settlement occurs and subsequent adjustments in pipe, valves, irrigation heads, lawn or planting, or other construction are necessary, the Contractor shall make all required adjustments without cost to the Owner.
- C. Trenching and Backfill Under Paving:
1. Trenches located under areas where paving, asphaltic concrete or concrete, will be installed shall be backfilled with sand (a layer of six [6] inches below the pipe and three [3] inches above the pipe) and compacted in layers to 95% standard proctor, using manual or mechanical tamping devices. Trenches for piping shall be compacted to equal the compaction of the existing adjacent undisturbed soil and shall be left in a firm, unyielding condition. All trenches shall be left flush with the adjoining grade. The Contractor shall set in place, cap, and pressure test all piping under paving prior to the paving work.
  2. Generally piping under existing walks is done by jacking, boring, or hydraulic driving, but where any cutting or breaking of sidewalks or concrete is necessary, it shall be done and replaced by the Contractor as part of the contract cost, to the satisfaction of the Licensed Irrigator. Permission to cut or break sidewalks or concrete shall be obtained from the Licensed Irrigator. NO hydraulic driving will be permitted under concrete paving.
  3. Provide for a minimum cover of eighteen (18) inches between the top of the pipe and the bottom of the aggregate base for all pressure and non-pressure piping installed under asphaltic concrete paving.
- D. Assemblies:
1. Routing of planting irrigation lines as indicated on the drawings is diagrammatic. Install lines (and various assemblies) in such a manner as to conform to the details per plans.
  2. Install NO multiple assemblies in plastic lines. Provide each assembly with its own outlet.
  3. Install all assemblies specified herein in accordance with the respective detail. In the absence of detail drawings or specifications pertaining to specific items required to complete the work, perform such work in accordance with the best standard practice, with the approval of the Licensed Irrigator.
  4. PVC pipe and fittings shall be thoroughly cleaned of dirt, dust, and moisture before the installation. Installation and solvent welding methods shall be as recommended by the pipe and fitting manufacturer.
  5. On PVC to metal connections, the Contractor shall work the metal connections first. Teflon tape, or approved equal, shall be used on all threaded PVC to PVC, and on all threaded PVC to metal joints. Light wrench pressure is all that is required. Where threaded PVC connections are required, use threaded PVC adapters into which the pipe may be welded.
- E. Line Clearance: All lines shall have a minimum clearance of six (6) inches from each other and from lines of other trades. Parallel lines shall not be installed directly over one another.
- F. Automatic Controller: Install the automatic controller(s) in accordance with the manufacturer's instructions. Remote control valves shall be connected to the controller in the numerical sequence as shown on the drawings.
- G. High Voltage Wiring for Automatic Controller:
1. 120 volt electrical service for the automatic controller shall be the responsibility of the Contractor. The Contractor shall be responsible for permitting and getting the electrical utility service company to install the appropriate electrical service and meter base necessary to operate each automatic controller. The final location of the electrical meter base shall be approved by the Licensed Irrigator.
  2. 120 volt electrical service connection to the automatic controller shall be provided by the Contractor.

3. All electrical work shall conform to local codes, ordinances, and union authorities having jurisdiction.
- H. Remote Control Valves: Install remote control valves where shown on the drawings and per the detail. When valves are grouped together, allow at least thirty-six (36) inches between valves. Install each remote control valve in a separate valve box. Each valve number (per the drawings) shall be stenciled on the valve box lid with exterior paint. Paint color shall be flat black. Stencil number size shall be 3" in height. Additionally, on each valve install a waterproof tag with the valve number legibly written. Afix to the valve using plastic tie or galvanized wire that will not impede the manual operation of the valve.
- I. Ball Valves: Install ball valves where shown on the drawings and per the detail. When valves are grouped together, allow at least thirty-six (36) inches between valves. Install each ball valve in a separate valve box. Each ball valve shall have stenciled on the valve box lid, "BV" with exterior paint. Paint color shall be flat black. Stencil letter size shall be 3" in height.
- J. Quick Coupler Valves: Install where shown on the drawings and per the detail. Install each quick coupler valve in a separate valve box. Each quick coupler valve shall have stenciled on the valve box lid, "QC" with exterior paint. Paint color shall be flat black. Stencil letter size shall be 3" in height.
- K. Flushing of the System:
  1. After all new irrigation pipe lines and risers are in place and connected, all necessary diversion work has been completed, and prior to installation of the irrigation heads, the control valves shall be opened and full head of water used to flush out the system.
  2. Irrigation heads shall be installed only after flushing of the system has been accomplished to the complete satisfaction of the Licensed Irrigator.
- L. Irrigation Heads:
  1. Install the irrigation heads as designated on the drawings. Irrigation heads to be installed in this work shall be equivalent in all respects to those itemized.
  2. Spacing of heads shall not exceed the maximum indicated on the drawings. In NO case shall the spacing exceed the maximum recommended by the manufacturer.
- M. Field Splices: Install field splices of control valve wiring in a valve box (see Section 2.01 L.1). Each field splice valve box lid shall have stenciled "Field Splice" on it with exterior paint. Paint color shall be flat black. Stencil letter shall be 3" in height.

### 3.4 TEMPORARY REPAIRS

The Owner reserves the right to make temporary repairs as necessary to keep the irrigation system equipment in operating condition. The exercise of this right by the Owner shall not relieve the Contractor of his responsibilities under the terms of the guarantee as herein specified.

### 3.5 FIELD QUALITY CONTROL

- A. Adjustment of the System:
  1. The Contractor shall flush and adjust all irrigation heads for optimum performance and to prevent overspray onto walks, roadways, and buildings as much as possible.
  2. If it is determined by the Licensed Irrigator that adjustments in the irrigation equipment will provide proper and more adequate coverage, the Contractor shall make such adjustments prior to planting. Adjustments may also include changes in nozzle sizes and degrees of arc as required.
  3. Lowering raised irrigation heads by the Contractor shall be accomplished within ten (10) calendar days after notification by the Licensed Irrigator.
  4. All irrigation heads shall be set perpendicular to finished grades unless otherwise designated on the drawings.
- B. Testing of Irrigation System:
  1. The Contractor shall request the presence of the Licensed Irrigator, in writing, at least 24 hours in advance of the testing.
  2. Test all pressure lines under hydrostatic pressure of 150 pounds per square inch, and prove watertight. Note that the testing of pressure main lines shall occur prior to installation of the electric remote control valves.

3. All piping under paved areas shall be tested under hydrostatic pressured of 150 pounds per square inch, and proved watertight, prior to paving.
4. Sustain pressure in lines for not less than eight (8) hours. If leaks develop, replace joints and repeat the test until the entire system is proven watertight.
5. All hydrostatic tests shall be made only in the presence of the Licensed Irrigator. NO pipe shall be completely backfilled until it has been inspected, tested, and approved in writing.
6. Furnish necessary force pump and all other test equipment.
7. When the planting irrigation system is completed, perform a coverage test in the presence of the Licensed Irrigator, to determine if the water coverage for planting areas is complete and adequate. Furnish all materials and perform all work required to correct any inadequacies of coverage due to deviations from plans, or where the system has been willfully installed, as indicated on the drawings, when it is obviously inadequate, without bringing this to the attention of the Licensed Irrigator. This test shall be accomplished before any ground cover is planted.
8. Upon completion of each phase of work, the entire system shall be tested and adjusted to meet site requirements.

### 3.6 MAINTENANCE

- A. The entire planting irrigation system shall be under full automatic operation for a period of seven (7) calendar days prior to any planting.
- B. The Licensed Irrigator reserves the right to waive or shorten the operation period.

### 3.7 CLEAN-UP

Clean-up shall be made daily as each portion of the work progresses. Refuse and excess dirt shall be removed, all walks and paving shall be broomed or washed down, and any damage sustained on the work of others shall be repaired to the original condition.

### 3.8 FINAL OBSERVATION PRIOR TO ACCEPTANCE

- A. The Contractor shall operate each system in its entirety for the Licensed Irrigator, at the time of the final observation. Any items deemed not acceptable by the Licensed Irrigator shall be re-worked to the complete satisfaction of the Licensed Irrigator.
- B. The Contractor shall show evidence to the Licensed Irrigator that the Owner has received all accessories, charts, record drawings, and equipment as required before final inspection can occur.

### 3.9 OBSERVATION SCHEDULE

- A. The Contractor shall be responsible for notifying the Licensed Irrigator, in advance, for the following observation meetings, according to the time indicated:
  1. Pre-Job Conference - 7 days.
  2. Pressure supply line installation & testing - 48 hours
  3. Automatic controller installation - 48 hours
  4. Control wire installation - 48 hours
  5. Lateral line and irrigation installation - 48 hours
  6. Coverage test - 48 hours
  7. Final inspection - 7 days
- B. When observations have been conducted by other than the Licensed Irrigator, show evidence, in writing, of when and by whom these observations were made.
- C. NO site observations will commence without as-built drawings. In the event the Contractor calls for a site visit without as-built drawings, without completing previously noted corrections, or without preparing the system for the said visit, he shall be responsible for reimbursing the Licensed Irrigator at his current billing rates per hour, portal to portal (plus transportation costs) for the inconvenience. NO further site visits will be scheduled until this charge has been paid and received.

END OF SECTION

PLANTING IRRIGATION  
32 84 00 - 11

SECTION 32 92 13

HYDROMULCHING

PART 1 - GENERAL

1.1 GENERAL CONDITIONS

The requirements of the "General Conditions of the Contract" shall apply to all work of this Section with the same force and effect as though repeated in full herein.

1.2 SCOPE OF WORK

- A. Furnish all labor, material, equipment, and services necessary to provide all landscape hydro-seeding work, complete in place, as shown on the drawings and as specified.
- B. Work specified in this Section: The work includes, but is not necessarily limited to:
  - 1. Soil preparation
  - 2. Fine grading
  - 3. Seeding via Hydrosprayer (A slurry of seed, fertilizer, water, tackifiers, biologically active soil conditioners, a color dye, and organic mulch fibers)
  - 4. Clean-up
  - 5. Maintenance
- C. Related work in other Sections:
  - 1. 32 84 00 PLANTING IRRIGATION
  - 2. 32 92 23 SOD
  - 3. 32 93 00 TREES, SHRUBS, AND GROUNDCOVERS
- D. Definition: The term of "Landscape Architect" shall refer to Teague Nall and Perkins, Inc., 5237 N. Riverside Drive, Suite 100, Fort Worth, Texas 76137.
- E. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern.
  - 1. American Society for Testing and Materials (ASTM): D 1557 Moisture Density Relations of Soils and Soil Aggregate Mixtures Using 10 lb. (4.54 kg) Rammer and 18 in. (457mm) Drop.

1.3 SUBMITTALS

- A. Samples and Product Information: Representative samples or product information of the following materials shall be provided to the Landscape Architect from the supply source that is to be used for turf seeded areas and native wildflower or native grass seeded areas:
  - 1. Topsoil
  - 2. Soil Amendments
  - 3. Fertilizer: specifications and guaranteed analysis.
  - 4. Biological Amendments: ingredients, chemical analysis, and manufacturer.
  - 5. Seed type and purity analysis. Save labels for field inspection by LA.
  - 6. Tackifier material components and manufacturer.
  - 7. Hydromulch manufacture and type of mulch to be used.
- B. Construction Schedule: At least two weeks prior to start of work, submit seeding schedule.
- C. Maintenance: Submit three copies of typewritten instructions recommending procedures to be established by the Owner for the maintenance of the lawns for an entire year. Submit prior to Notice of Substantial Completion. See Section 3.10, 90 DAY MAINTENANCE
- D. Chemicals: Submit products, rates of application, and anticipated uses of any pesticides, herbicides, and fumigants.

1.4 QUALITY ASSURANCE

- A. Contractor's Qualifications
  - 1. The work of this section shall be performed by a Contractor specializing in hydro-seeding.
  - 2. The Contractor shall have successfully completed at least 5 installations of this type, size, and complexity in the last four years.
- B. Materials shall comply with all government regulations prevailing at the supply source and the job site.

- C. Fertilizers; Mixed Commercial. Federal Specification: 0-F-241D

#### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Handling and Storage of Seed: Seed shall be kept dark, cool (between 40-50 degrees F), and dry until time of planting.

#### 1.6 JOB CONDITIONS

- A. Do not install seed on saturated, excessively dry, or frozen soil.
- B. Seed installation shall be subject to suitability of the weather and other conditions affecting seed germination.
- C. Planting season may be extended only with the written permission of the Landscape Architect.

#### 1.7 SAMPLES AND TESTS

- A. The Landscape Architect reserves the right to take and analyze samples of materials for conformity to specifications at any time. The Contractor shall furnish samples upon request by the Landscape Architect. Rejected materials shall be immediately removed from the site at the Contractor's expense. Cost of the testing of materials not meeting specifications shall be paid by the Contractor.
- B. After rough grading is complete, Contractor shall order and pay for a soil test which includes recommendations. Take a minimum of one soil test per 10 acres - or more as site conditions mandate. Take approximately 15 cores from each uniform soil area. Mix them thoroughly in a clean plastic or paper container. Fill the soil sample bag one-third to one-half full from this representative sample. Acceptable labs are:
  - 1. TPS Lab: "SO-05, TPSL® Plant Natural™ Soil Test + LOI Organic Matter + Solvita®"
  - 2. A&L Plains Agricultural Laboratories: "Basic Test S2" and "Basic Test S3" and "Organic Matter – by Combustion" (all three tests are required)
- C. Submit results to Landscape Architect for adjustment to soil amendments and fertilizers.

#### 1.8 MAINTENANCE

- A. All stored plant material shall be maintained in a healthy, vigorous condition by the Contractor. Maintenance includes, but is not necessarily limited to, mowing, weeding, edging, watering, trash removal, street and gutter cleaning, erosion repair, removal of siltation in drainage areas, and insect and disease chemical applications. The storage area shall be mowed, weeded, and trimmed weekly during the course of construction and the life of the storage area.
- B. Within the limits of construction, the site shall be maintained in a neat, well-kept appearance by the Contractor. Maintenance includes, but is not necessarily limited to, mowing, weeding, edging, watering, trash removal, street and gutter cleaning, erosion repair, removal of siltation in drainage areas, and insect and disease chemical applications.
- C. Contractor shall maintain plant material as described in Part 3.10, 90-DAY MAINTENANCE

#### 1.9 GUARANTEE AND REPLACEMENT

- A. Warrant all hydromulched areas for a period of one year from date of Notice of Substantial Completion, to be at least the quality and conditions as at Final Acceptance. Promptly reseed bare or unacceptable areas during the warranty period as directed by the Landscape Architect.
- B. Lawns shall be uniform in color, grass type, leaf texture, leaf and root density, and free from weeds, diseases, and other visible imperfections at acceptance.
- C. Damage to the irrigation system by other trades or persons (such as shutting off of water or power to the irrigation system) shall not affect the warranty. This means that, especially in the warm season, the Contractor shall make daily visits to the site to inspect and repair the irrigation system up until final acceptance.

#### 1.10 FINAL INSPECTION AND ACCEPTANCE

- A. The Landscape Architect will inspect all work for Substantial Completion upon written request of the Contractor. The request shall be received at least ten calendar days before the anticipated date of inspection.

- B. Acceptance will be based on establishment of a uniform stand of turf grass, defined as coverage of specified grass at a density of 95 percent coverage, with no bare spots greater than one square foot, free of weeds, undesirable grass species, disease, and insects. For grass varieties selected, allow a minimum of 90 days for establishment and maintenance of an acceptable strand of grass.
- C. In areas that are grassed and not irrigated. An acceptable strand of grass shall be established and the Landscape Architect will inspect the work for Substantial Completion upon written request of the Contractor.
- D. Upon completion and re-inspection of all repairs or renewals necessary in the judgment of the Landscape Architect, the Landscape Architect will recommend to the Owner that the work of this Section be accepted.

## PART 2 - MATERIALS

### 2.1 HYDROMULCHING

- A. All seed shall be fresh, clean, dry new crop seed tested for minimum percentages of purity and germination and label in accordance with the U.S. Department of Agriculture regulations. Seed tags shall not be more than 9 months old.
  - 1. Pure Live Seed (PLS) shall not be less than 90 percent.
  - 2. Maximum weed content shall be 0.30 percent.
- B. Bermuda seed type shall be hulled certified 'Sahara II' Bermuda by Pennington Seed. Seed shall contain certified seed composed of the following PLS (by weight):
  - 1. Material: Permanent seed variety.
  - 2. Seed: Must be Certified Sahara II.
  - 3. Inert Material: Less than 1%.
  - 4. Other Crop Seed: Less than .5%.
  - 5. Weed Seed: Less than 1%.
  - 6. Coating: MYCO Advantage coated.
  - 7. Packaging: 25lb Plastic container
- C. Southeast Recovery Mix shall be a specified mixture of grass and wildflower seeds from Native American Seed (800) 728-4043.
- D. Root Inoculant: SaberEx for Wheat and Cereals by ABM (or approved equal). Apply as a dry seed treatment prior to seeding:
  - 1. Active Ingredient: 1.0% Trichoderma harzianum 2.5x10<sup>7</sup> cfu/gm
  - 2. Inert Ingredients: Graphite 60.0%, Cellulose 24.0%, Talc 15.0%
- E. Tackifier: By Profile Products or approved equal. Tackifier shall be included in Hydromulch and factory mixed. Follow manufacturer's recommendations.
- F. pH Soil Doctor: (granular humate soil amendment) from Browning Seed, Inc. (800) 243-5271, <http://www.browningseed.com> or approved equal, with formulation of:
  - 1. Humic Acid 37.50%
  - 2. Calcium (CaSo<sub>4</sub>) 10.00%
  - 3. Sulfur (S) 7.00% (to lower pH)
  - 4. Calcium Sulfate(CaSo<sub>4</sub>) 34.00% (Derived from quarried calcium sulfate)
  - 5. Water Soluble Binder-lignosulfonate .50%
- G. Fertilizer for Hydromulch areas: Italtollina 4-4-4 or approved equal. Product shall be an OMRI registered organic fertilizer of a guaranteed analysis, 4-4-4, containing no less than 41% total organic Carbon, 71% organic matter, and 5% humic acid. Contact: Allen Olson (817) 368-8615, [allen@gdrsistemas.net](mailto:allen@gdrsistemas.net)
- H. Hydromulch: Shall be manufactured by Profile Products LLC or approved equal. Hydromulch shall be a fully biodegradable, Hydraulic Mulch composed of 100% recycled Thermally Refined wood fibers, cellulose fibers, and wetting agents (including high-viscosity colloidal polysaccharides). Hydromulch shall be phytosanitized, free from plastic netting, and upon application form an intimate bond with the soil surface to create a porous, absorbent and flexible erosion resistant blanket that allows for rapid germination and accelerated plant growth.
  - 1. Seeded areas less than 5:1 slope: Soil Cover Blend with Tack, by Profile Products:
    - a. Thermally Refined® Wood Fibers (minimum) – 58%
    - b. Cellulose Fiber (maximum) – 27%
    - c. Polymer Tackifier – 3% ± 0.5%
    - d. Moisture Content – 12% ± 3%

2. Seeded areas with slopes 5:1 or greater: Flexterra HP-FGM, by Profile Products:
  - a. All components of the HP-FGM shall be pre-packaged by the Manufacturer to assure both material performance and compliance with the following values. Under no circumstances shall field mixing of components be permitted. No chemical additives except for fertilizer, soil neutralizers and biostimulant materials should be added to this product.
  - b. Thermally Processed\* (within a pressurized vessel) Virgin Wood Fibers – 80%
  - c. \*Heated to a temperature greater than 380 degrees Fahrenheit (193 degrees Celsius) for 5 minutes at a pressure greater than 50 psi (345 kPa)
  - d. Wetting agents (including high-viscosity colloidal polysaccharides, cross-linked biopolymers, and water absorbents) – 10%
  - e. Crimped Biodegradable Interlocking Fibers – 5%
  - f. Micro-Pore Granules – 5%

## 2.2 TOPSOIL

- A. All existing topsoil stripped for this work and suitable for reuse shall be stored on site as directed by the Landscape Architect. Dispose of all excess topsoil on the site as directed by the Landscape Architect.
- B. Utilize on-site and imported topsoil to provide a minimum six inch (6") layer of approved soil for hydromulch installation as specified and indicated on the Drawings.
- C. If on-site topsoil is not available, imported topsoil shall be used as indicated on the drawings and as follows:
  1. Imported Top Soil shall be natural, loose, fertile, friable, screened agricultural soil, having characteristics of representative productive soils in the vicinity, and obtained from naturally well-drained areas. Imported Soil for seeded areas to be: "Enriched Top Soil", by Soil Building Systems, (972) 831-8181, or approved equal, submit a 1-quart package with supplier label attached to sample
  2. Silt plus clay content of the import soil shall not exceed 20% by weight with a minimum 95% passing the 2.0 millimeter sieve. The sodium absorption ratio (SAR) shall not exceed 6 and the electrical conductivity (ECe) of the saturation extract of this soil shall not exceed 3.0 millimhos per centimeter at 25 degrees centigrade. The boron content shall be no greater than 1 part per million as measured on the saturation extract. In order to insure conformance, samples of the import soil shall be submitted to the laboratory for analysis prior to, and following, backfilling.
  3. Imported Top Soil shall be free of insects, harmful nematodes, soil-borne diseases, toxins, heavy clay, select fill, inorganic subsoils, heavy metals, trash, petroleum by-products, rocks over 1" diameter, rubble, roots, weeds, or weed seeds.
  4. Imported Topsoil shall have a pH between 6.5 - 7.3.

## PART 3 - EXECUTION

### 3.1 INSPECTION

- A. Obtain written certification from the General Contractor that final grades to within 0.10' have been established prior to commencing planting operations. Provide for inclusion of all amendments, settling, etc. The Contractor shall be responsible for shaping all planting areas as indicated on the drawings, or as directed by the Landscape Architect.
- B. Inspect site to ensure that it is ready to be seeded and that irrigation system is working for all areas to receive seed.

### 3.2 EXCAVATION

- A. In all hydromulched and seeded areas, the Contractor shall *thoroughly* remove from the construction site all limestone larger than 1/2" in diameter and all heavy clay to a minimum depth of 6". The LA shall verify that this is complete before the Contractor is authorized to proceed with fill of specified topsoil or grading. Scarify subsoil after removal of rock or heavy clay before adding topsoil so as to break up any surface tension.
- B. The Contractor shall thoroughly remove from the construction site all the following particles that are larger than 1/2" in diameter: inorganic select fill, heavy clay, limestone, and construction debris, mortar, concrete, paint, paint thinner, chemicals, weeds, plastic, paper, steel, wire, mortar, masonry, construction debris, and other substances that are harmful to plant growth. Remove the above items to these depths: 6" minimum in turf and seed areas, and 18" minimum in planting beds. The LA shall verify that the above

items are removed before the Contractor is authorized to proceed with fill with specified topsoil or grading.  
**DO NOT PLACE ANY FILL ON CONSTRUCTION DEBRIS.**

- C. After clean-up described above and establishment of subgrade, drag entire planting area with teeth of bucket to scarify subsoil to a depth of 4" to break up surface tension and allow water to pass downwards through the soil.
- D. If soils are rocky or full of limestone or heavy clay, install irrigation system before adding topsoil to keep limestone or clay below imported topsoil and the root zone of plants.
- E. Excavation for planting shall include the stripping and stockpiling of all acceptable topsoil encountered within the areas to be excavated for trenches, tree holes, plant pits, and planting beds.
- F. Excess soil generated from the planting holes and not used as backfill or in the establishment of the final grades, shall be removed to an on-site location, as approved by the Owner. Unacceptable excess soil shall be removed to an appropriate off-site location.
- G. Protect all areas from excessive compaction when trucking plants or other material to the planting site. Existing vegetation identified by the Landscape Architect to remain, shall be protected from trucking operations during the course of construction.

### 3.3 PRE-PLANT WEED CONTROL

- A. After the irrigation system is operational and approved by the Landscape Architect, apply water for seven (7) to ten (10) calendar days, as needed to achieve weed germination.
- B. If live perennial weeds exist on site at the beginning of the work, spray with a non-selective, systemic contact herbicide, as recommended and applied by an approved, licensed landscape pest control applicator. Leave sprayed plants intact for at least fourteen (14) days to allow systemic kill. Reapply at 2-week intervals until a complete kill is achieved.
- C. Clear and remove these existing, dead weeds by mowing or grubbing off all plant parts at least 1" below the surface of the soil over the entire area to be planted.
- D. Maintain the site weed-free until final acceptance by the Landscape Architect, utilizing mechanical and chemical treatment.

### 3.4 SOIL PREPARATION

- A. Grade Preparation
  1. Immediately before hydromulching, power-rake, scarify, loosen, float and drag the upper 6" of topsoil to bring it to the proper condition. Remove foreign matter larger than 1/2" in diameter. Hydromulch areas shall have topsoil that is light and fluffy after preparation.
  2. If there is not sufficient existing approved topsoil on site, apply imported topsoil as specified in Section 2, MATERIALS, to achieve finish grade. If required, import specified and approved topsoil to achieve depth of (6") depth in all seeded areas.
  3. Amendments: Apply pH Soil Doctor granular Humate at a rate of 500 lbs. per acre directly into slurry.
  4. Fine Grading: After tillage and cleaning, all areas to be planted shall be leveled, fine graded, and drag with a weighted spike harrow or float drag. The required result shall be the elimination of ruts or depressions that would cause water to stand or pond immediately after rainfall or operation of the lawn irrigation system, humps, and objectionable soil clods. This shall be the final soil preparation step to be completed before the commencement of fertilizing and planting.
  5. If the prepared grade is eroded or compacted by rainfall prior to fertilizing, rework the surface to specified condition.
  6. Hydromulch tp be placed after final grade is approved in a timely manner not to exceed a 48-hour period from time of approval to hydromulching.
- B. Spreading of Topsoil:
  1. Topsoil and subgrade shall be damp when topsoil is spread. Top of subsoil shall be scarified and loose, not a hardpan before adding topsoil.
  2. Areas to be seeded shall be top-soiled to a minimum depth of six inches (6"), compacted measure. Provide additional topsoil depths as required to construct the grades indicated on the Drawings. Topsoil shall be compacted to 85%, determined in accordance with ASTM: D 1557. Onsite topsoil is to be used unless it is not available, or is more than 25% clay, or is more than 10% limestone, or is rocky.

### 3.5 HYDROMULCHING

- A. Apply seed via Hydromulch only (not via drill box or hand-spreading) during the periods indicated below unless otherwise approved by the Landscape Architect. Do not sow seed when weather conditions are unfavorable, such as during drought, rain, extreme cold or heat, or high winds. All seed shall be pre-treated at seed supplier with Root Inoculant (See Section 2.1C). Ship and plant seed immediately.
- B. Hydromulching is much preferred over drill box or spreader. However, under certain circumstances, and if approved in writing by Landscape Architect, and if site is large enough and allows room for a tractor, the Landscape Architect may approve seeding using equipment such as cultipacker seeders (preferred), grass seed drill, or wildflower seeder. Seeds shall be evenly installed in multiple passes to a depth of  $\frac{1}{4}$ " -  $\frac{1}{2}$ " under the surface of the soil at the rate specified on the plans.
- C. Warm season turf grasses: Apply between April 15 and September 1, or when the ground temperature is above 65 degrees Fahrenheit.
- D. Cool season turf grasses: Apply between September 1 and March 15, when temperatures are above 40 degrees Fahrenheit.
- E. Native Grass Seed Mixes:
  - 1. Without irrigation: Sow between March 1 and May 30.
  - 2. With irrigation: Sow from March 1 to Sep 15 –(do not irrigate until after Apr. 1)
- F. Native Wildflower Seed Mixes: Sow between September 15 and Nov 15.
- G. If seeding cannot occur within the specified period; an alternative will be proposed by the Contractor for approval by Landscape Architect.
- H. For seeded turfgrasses areas only - apply fertilizer (see section 2.1 F) with specified prescriptive agronomic formulations recommended in soil test. Hydromulch turf seed at a rate of 300 lbs. per acre over properly prepared surfaces. Confirm loading rates with equipment manufacturer.
- I. Do not apply seed onto saturated soils or substrates.
- J. Do not apply seed if rain is anticipated within 48 hours.
- K. Prior to seeding, ensure that all soil shall be smooth, loose, and fluffy to a depth of 6".
- L. Hydromulching: All seeded areas are to be sprayed with a slurry using conventional Hydro-Mulch equipment as manufactured by the Bowie Machine Works, or an approved equal. See Section 2.1, HYDROMULCHING for manufacturers of materials. The hydromulch slurry shall be thoroughly mixed with seed and applied at the rate of:
  - 1. Seed: Variety and rate as called out on plans.
  - 2. Hydromulch: 46 pounds per one thousand 1,000 SF (2,000 pounds per acre)
  - 3. Water: 23 gallons per 1,000 square feet (1,000 gallons per acre).
  - 4. Granular humate soil amendment: (10) lbs. per 1000 SF (435 pounds per acre)
  - 5. Fertilizer: Apply 1200 lbs. per acre or 28 lbs. per 1000 sq. ft.
- M. Strictly comply with equipment manufacturer's installation instructions and recommendations. Use approved hydro-spraying machines with fan-type nozzle (50-degree tip).
  - 1. To achieve optimum soil surface coverage, apply Hydromulch from opposing directions downward to soil surface.
  - 2. Use pressure of sprayer to force seed downward, 1/8" deep into soil.
  - 3. Apply evenly to achieve 75% minimum cover.
  - 4. Rough surfaces (rocky terrain, cat tracks and ripped soils) may require higher application rates to achieve specified cover.
  - 5. Slope interruption devices or water diversion techniques are recommended when slope lengths exceed 25 feet (8 m). Maximum slope length is for product applications on a 4H:1V slope. For application on steeper slopes, slope interruption lengths may need to be decreased based on actual site conditions.
  - 6. Do not install in channels or areas with concentrated water flow. No chemical additives with the exception of products listed above should be added to slurry.
- N. Water thoroughly and immediately with a fine mist until soil is soaked to a depth of 3". Maintain soil in a moist condition until seeds have sprouted and reached a height of 1". Water thereafter at least once every 7 days unless natural rainfall has provided equivalent watering.

### 3.6 CLEAN-UP

- A. After all planting operations have been completed, remove all trash, excess soil, empty plant containers, pallets, ties, rubbish, and all debris associated with this contract from the site. All scars, ruts, trench settlement, or other marks in the ground caused by this work shall be repaired and the ground left in a neat and orderly condition throughout the site. The Contractor shall pick up all trash resulting from this work no less frequently than each Friday before leaving the site, once a week, or the last working day of each week. All trash shall be removed completely from the site.
- B. The Contractor shall leave the site area broom-clean and shall wash down all paved areas within the Contract area, leaving the premises in a clean condition. All walks shall be left in a clean and safe condition.
- C. Excess topsoil not required for lawns or planting shall be stockpiled on site for future use as directed by the Owner's representative.
- D. Repair existing lawns damaged by operations under the contract. Repair shall include finish grading, seeding as required to match existing grade and lawn, and maintenance of repaired areas.

### 3.7 OBSERVATION SCHEDULE

- A. The Contractor shall be responsible for notifying the Landscape Architect in advance for the following site visits, according to the time indicated:
  - 1. Pre-job Conference - 7 days
  - 2. Final grade review - 2 days
  - 3. Seed material review - 2 days
  - 4. Soil Preparation and planting operations - 2 days
  - 5. Pre-maintenance - 7 days
  - 6. Final inspection - 7 days
- B. When observations are conducted by someone other than the Landscape Architect, the Contractor shall show evidence, in writing, of when and by whom these observations were made.
- C. NO site visits shall commence without all items noted in previous Observation Reports either completed or remedied unless such compliance has been waived by the Owner. Failure to accomplish punch list tasks or prepare adequately for desired inspections shall make the Contractor responsible for reimbursing the Landscape Architect at his current billing rates per hour, portal to portal (plus transportation costs) for the inconvenience. NO further inspections shall be scheduled until this charge has been paid and received.

### 3.8 GUARANTEE

- A. All plant material shall be guaranteed by the contractor for a period of one (1) year from the date of final acceptance.
- B. At the end of the guarantee period the Landscape Architect and Contractor shall inspect plant material. Any plant material under this contract that is dead or of an unsatisfactory growth condition shall be removed and replaced in a timely fashion by the contractor, at no cost to the owner.

### 3.9 ACCEPTANCE OF WORK

- A. The contractor and Landscape Architect shall conduct an on-site inspection of all work and materials to determine compliance of work with the construction documents.
- B. The contractor shall within reasonable means provide the Landscape Architect with sufficient data to demonstrate compliance with the construction documents.
- C. The contractor shall be notified in writing of any non-conforming items, which are to be corrected (punch-list).
- D. The contractor and Landscape Architect shall conduct an on-site inspection to verify completeness of punch list items.
- E. Acceptance of work by the Owner shall begin upon verifying completion of punch list items and receipt of all deliverable items to Owner including letter of guarantee; release of liens waiver, record drawings denoting deviations from contract drawings, product data and maintenance guide.
- F. The contractor shall receive written notification of date of final acceptance and ending date of required guarantee periods from the Landscape Architect.

### 3.10 90 DAY MAINTENANCE

- A. The maintenance period shall commence when the Notice of Substantial Completion is issued and shall continue as required for a period of 90 days.
- B. Immediately after hydromulching, the area shall be protected against traffic or other use by erecting barricades as needed, and by placing approved warning signs at appropriate intervals.
- C. Contractor shall touch-up hydromulch areas as required to achieve full coverage at no cost to Owner.
- D. Mow turf grasses only (not wildflower or native grass areas) during establishment only for the purpose of weed control and to promote quicker spreading.
  - 1. Mow Bermuda and Zoysia Grass to a 2" height.
  - 2. Mow at least once a week in the growing season once turf is rooted and growing.
- E. Fill any depressions, settlement, or washouts that occurs within 90 days following installation. Reseed bare spots that occur during the maintenance period as directed by the Landscape Architect at no cost to Owner.
- F. Keep lawns clean and protected from damage during the maintenance period. Debris that accumulates shall be removed from the site. Promptly repair damaged lawns except as provided in Section 1.9, GUARANTEE AND REPLACEMENT.
- G. Irrigate as required to supplement natural rainfall so that all lawn areas receive sufficient water for normal plant growth. Furnish all irrigation equipment needed for watering and be responsible for securing adequate supply of water if an automatic irrigation system does not exist, is not operating or is damaged.
- H. A second fertilizer application shall be made 60 days after installation to turfgrasses. The specified fertilizer shall be a ratio of 15-5-10 applied at 800 pounds per acre.

END OF SECTION

SECTION 32 92 23

SOD

PART 1 - GENERAL

1.1 GENERAL CONDITIONS

The requirements of the "General Conditions of the Contract" shall apply to all work of this Section with the same force and effect as though repeated in full herein.

1.2 SCOPE OF WORK

- A. Furnish all labor, material, equipment, and services necessary to provide all landscape sodding, and sprigging work, complete in place, as shown on the drawings and as specified.
- B. Work specified in this Section: The work includes, but is not necessarily limited to:
  - 1. Soil preparation
  - 2. Fine grading
  - 3. Sodding (Solid rolled Sod)
  - 4. Clean-up
  - 5. Maintenance
- C. Related work in other Sections:
  - 1. 32 84 00 - PLANTING IRRIGATION
  - 2. 32 93 00 - TREES, SHRUBS, AND GROUNDCOVERS
- D. Definition: The term of "Landscape Architect" shall refer to Teague Nall and Perkins, Inc., 5237 N. Riverside Drive, Suite 100, Fort Worth, Texas 76137.
- E. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern.
  - 1. American Society for Testing and Materials (ASTM): D 1557 Moisture Density Relations of Soils and Soil Aggregate Mixtures Using 10 lb. (4.54 kg) Rammer and 18 in. (457mm) Drop.

1.3 SUBMITTALS

- A. Samples and Product Information: Representative samples or product information of the following materials shall be provided to the Landscape Architect from the supply source that is to be used for turf areas:
  - 1. Topsoil
  - 2. Soil Amendments
  - 3. Fertilizer: specifications and guaranteed analysis.
  - 4. Biological Amendments: ingredients, chemical analysis, and manufacturer.
  - 5. Sod certification documentation to include the following:
    - a. Kind – Bermuda 419, Common Bermuda, St. Augustine, etc.
    - b. Variety –Bermuda 419, etc.
    - c. Lot Number – If applicable
    - d. Record of square feet of sod shipped.
    - e. Bill of Lading / Invoice # - This is an invoice number that can be referenced to the purchaser of the shipment.
    - f. Field # - the field number references the harvested grass to the production field. The field number must be the same as on the certification application and field inspection report.
    - g. Harvest Date – Record the date the grass was harvested.
    - h. Grower Name and Address- Record the production company name and address. Use of a stamp is acceptable if it shows on all copies.
- B. Construction Schedule: At least two weeks prior to start of work, submit sodding schedule.

- C. Maintenance: Submit three copies of typewritten instructions recommending procedures to be established by the Owner for the maintenance of the lawns for an entire year. Submit prior to Notice of Substantial Completion. See PART 3, 90 DAY MAINTENANCE.
- D. Chemicals: Submit products, rates of application, and anticipated uses of any pesticides, herbicides, and fumigants.

#### 1.4 QUALITY ASSURANCE

- A. Contractor's Qualifications
  - 1. The work of this section shall be performed by a Contractor specializing in sodding or landscape installations.
  - 2. The Contractor shall have successfully completed at least 5 installations of this type, size, and complexity in the last four years.
- B. Lawn materials shall comply with all government regulations prevailing at the supply source and the job site.
- C. Fertilizers; Mixed Commercial. Federal Specification: 0-F-241D

#### 1.5 DELIVERY, STORAGE, AND HANDLING

- A. Digging Sod
  - 1. Do not dig sod at the nursery or other approved source until ready to transport sod to the project site or approved storage location.
  - 2. Before stripping, sod shall be mowed at a uniform height of 2".
  - 3. Sod to be cut and delivered in rolled widths.
  - 4. Cut sod to specified thickness and to standard width and length desired.
- B. Transporting Sod
  - 1. Sod transported to the project in open vehicles shall be covered with tarps or other suitable covers securely fastened to the body of the vehicle to prevent injury to the sod. Closed vehicles shall be adequately ventilated to prevent overheating of the sod. Evidence of inadequate protection against drying out in transit shall be cause for rejection.
  - 2. Sod shall be kept moist, fresh, and always protected. Such protection shall encompass the entire period during which the sod is in transit, being handled, or in temporary storage.
  - 3. Transporting sod in excess of 20 miles from the site shall be done during evening, night, early morning hours during summer months
  - 4. Upon arrival at the temporary storage location or the site of the work, sod shall be inspected for proper shipping procedures. Should the roots be dried out, the Landscape Architect will reject the sod. When sod has been rejected, the Contractor shall remove it at once from the area of the work and replace it at no cost to Owner.
  - 5. Unless otherwise authorized by the Landscape Architect, the Contractor shall notify the Landscape Architect at least 48 hours in advance of the anticipated delivery date of sod. A legible copy of the invoice, showing species and variety of sod included for each shipment shall be submitted to the Landscape Architect.
  - 6. Certificate of Inspection when required must accompany each sod shipment.
- C. Handling and Storage of Sod
  - 1. No sod shall remain in temporary storage over 30 hours, and less time may be required during extremely high temperatures.
  - 2. Sod shall be kept moist and shall be stored in a compact group to prevent drying out or freezing.
  - 3. Contractor shall take extreme care in the handling of sod material to avoid breaking or tearing strips. Sod that has been damaged by poor handling may be rejected by the Landscape Architect.

#### 1.6 JOB CONDITIONS

- A. Do not install sod on saturated, excessively dry, or frozen soil.
- B. Sod installation shall be subject to suitability of the weather and other conditions affecting sod growth.
- C. Planting season may be extended only with the written permission of the Landscape Architect.

#### 1.7 SAMPLES AND TESTS

- A. The Landscape Architect reserves the right to take and analyze samples of materials for conformity to specifications at any time. The Contractor shall furnish samples upon request by the Landscape Architect. Rejected materials shall be immediately removed from the site at the Contractor's expense. Cost of the testing of materials not meeting specifications shall be paid by the Contractor.
  - B. After rough grading is complete, Contractor shall order and pay for a soil test which includes recommendations. Take a minimum of one soil test per 10 acres - or more as site conditions mandate. Take approximately 15 cores from each uniform soil area. Mix them thoroughly in a clean plastic or paper container. Fill the soil sample bag one-third to one-half full from this representative sample. Acceptable labs are:
    - 1. TPS Lab: "SO-05, TPSL® Plant Natural™ Soil Test + LOI Organic Matter + Solvita®"
    - 2. A&L Plains Agricultural Laboratories: "Basic Test S2" and "Basic Test S3" and "Organic Matter – by Combustion" (all three tests are required)
  - C. Submit results to Landscape Architect for adjustment to soil amendments and fertilizers.
- 1.8 MAINTENANCE
- A. All stored plant material shall be maintained in a healthy, vigorous condition by the Contractor. Maintenance includes, but is not necessarily limited to, mowing, weeding, edging, watering, trash removal, street and gutter cleaning, erosion repair, removal of siltation in drainage areas, and insect and disease chemical applications. The storage area shall be mowed, weeded, and trimmed weekly during the course of construction and the life of the storage area.
  - B. Within the limits of construction, the site shall be maintained in a neat, well-kept appearance by the Contractor. Maintenance includes, but is not necessarily limited to, mowing, weeding, edging, watering, trash removal, street and gutter cleaning, erosion repair, removal of siltation in drainage areas, and insect and disease chemical applications.
  - C. Contractor shall maintain plant material as described in PART 3, 90-DAY MAINTENANCE.
- 1.9 GUARANTEE AND REPLACEMENT
- A. Warrant all lawns for a period of one year from date of Notice of Substantial Completion, to be at least the quality and conditions as at Final Acceptance. Promptly re-sod unacceptable areas during the warranty period as directed by the Landscape Architect.
  - B. Lawn shall be uniform in color, grass type, leaf texture, leaf and root density, and free from weeds, diseases, and other visible imperfections at acceptance.
  - C. Damage to the irrigation system by other trades or persons (such as shutting off of water or power to the irrigation system) shall not affect the warranty. This means that, especially in the warm season, the Contractor shall make daily visits to the site to inspect and repair the irrigation system up until final acceptance.
- 1.10 FINAL INSPECTION AND ACCEPTANCE
- A. The Landscape Architect will inspect all work for Substantial Completion upon written request of the Contractor. The request shall be received at least ten calendar days before the anticipated date of inspection.
  - B. Acceptance will be based on establishment of a uniform stand of turf grass, defined as coverage of specified grass at a density of 95 percent coverage, with no bare spots greater than one square foot, free of weeds, undesirable grass species, disease, and insects. For grass varieties selected, allow a minimum of 90 days for establishment and maintenance.
  - C. In areas that are grassed and not irrigated, grass will be established and the Landscape Architect will inspect the work for Substantial Completion upon written request from the Contractor. Unirrigated grass areas must be fully established to the same standard as fully irrigated grass areas.
  - D. Upon completion and re-inspection of all repairs or renewals necessary in the judgment of the Landscape Architect, the Landscape Architect will recommend to the Owner that the work of this Section be accepted.

## PART 2 – MATERIALS

### 2.1 SOLID SOD

- A. Sod shall be as specified on plans, nursery grown on cultivated mineral agricultural soils. Sod shall have been mowed regularly and carefully and otherwise maintained from planting to harvest. Sod must be mowed two (2) days prior to cutting.
- B. All sod shall be "Certified Sod" from a licensed and certified sod producer. Provide test results from a plant pathology lab to LA for approval before purchase.
- C. For sports fields, or if called out on plans, use only rolled solid sod.
- D. Thickness of Cut: Sod shall be cut to have minimum pad thickness of:
  - 1. Bermuda Grass: 3/4" minimum thickness, with plus/ minus 1/8" tolerance
  - 2. St. Augustine, Buffalo, and Zoysia Grass: 1" thick, with plus/ minus 1/8" tolerance
- E. Width and Length of Sod: Maximum allowable deviation from standard widths and lengths shall be plus or minus 1/2" on width, and plus or minus 5% on length. Broken strips and torn or uneven ends will be rejected.
- F. Strength of Sod Strips: Sod strips shall be strong enough to support their own weight and retain their size and shape if suspended vertically when grasped in the upper 10% of the section.
- G. Moisture Content: Sod shall not be harvested or transplanted when moisture content (excessively wet or dry) may adversely affect its survival.
- H. Sod shall consist of live growing plants secured from sources which have dense, thickly matted root system throughout the soil of the sod for a minimum of one inch. Sod shall be free of weeds or other varieties of grasses.
- I. Reject any Sod whose roots are dried because of sun or wind. The landscape architect has the right to reject any or all of sod due to lack of care, improper cutting, or other agronomic problems.
- J. Time Limitations: Sod shall be harvested, delivered, and transplanted within a 30-hour period unless a suitable preservation method is approved by the Landscape Architect prior to delivery. Sod not transplanted within this period shall be inspected and approved by the Landscape Architect prior to its installation.
- K. Thatch: Sod shall be relatively free of thatch. A maximum on 1/2" (uncompressed) thatch will be permitted.
- L. Sod shall be free of diseases, harmful insects, nematodes, soil borne diseases, nutsedge, and all other grassy and broadleaf weeds.
- M. Fertilizer for Sod areas: Itaipollina 4-4-4 or approved equal. Product shall be an OMRI registered organic fertilizer of a guaranteed analysis, 4-4-4, containing no less than 41% total organic Carbon, 71% organic matter, and 5% humic acid. Contact: Allen Olson (817) 368-8615, allen@gdrsistemas.net

## 2.2 TOPSOIL

- A. All existing topsoil stripped for this work and suitable for reuse shall be stored on site as directed by the Landscape Architect. Dispose of all excess topsoil on the site as directed by the Landscape Architect.
- B. Utilize on-site and imported topsoil to provide a minimum six-inch (6") layer of approved soil for sod installation as specified and indicated on the Drawings.
- C. If on-site topsoil is not available, imported topsoil shall be used as indicated on the drawings and as follows:
  - 1. Imported top soil shall be natural, loose, fertile, friable, screened agricultural soil, having characteristics of representative productive soils in the vicinity, and obtained from naturally well-drained areas. Imported soil for sod areas to be: "Enriched Top Soil", by Soil Building Systems, (972) 831-8181, or approved equal, submit a 1-quart package with supplier label attached to sample.
  - 2. Silt plus clay content of the import soil shall not exceed 20% by weight with a minimum 95% passing the 2.0-millimeter sieve. The sodium absorption ratio (SAR) shall not exceed 6 and the electrical conductivity (ECe) of the saturation extract of this soil shall not exceed 3.0 millimhos per centimeter at 25 degrees centigrade. The boron content shall be no greater than 1 part per million as measured on the saturation extract. In order to ensure conformance, samples of the import soil shall be submitted to the laboratory for analysis prior to, and following, backfilling.
  - 3. Imported top soil shall be free of insects, harmful nematodes, soil-borne diseases, toxins, heavy clay, select fill, inorganic subsoils, heavy metals, trash, petroleum by-products, rocks over 1" diameter, rubble, roots, nutgrass, or weeds, or weed seeds.
  - 4. Imported Topsoil shall have a pH between 6.5 - 7.3.

## PART 3 - EXECUTION

### 3.1 INSPECTION

- A. Obtain written certification from the General Contractor that final grades to within 0.10' have been established prior to commencing planting operations. Provide for inclusion of all amendments, settling, etc. The Contractor shall be responsible for shaping all planting areas as indicated on the drawings, or as directed by the Landscape Architect.
- B. Inspect site to ensure that it is ready to be sodded and that irrigation system is working for all areas to receive sod.

### 3.2 EXCAVATION

- A. In all sod areas, the Contractor shall *thoroughly* remove from the construction site all limestone larger than 1/2" in diameter and all heavy clay to a minimum depth of 6". The LA shall verify that this is complete before the Contractor is authorized to proceed with fill of specified topsoil or grading. Scarify subsoil after removal of rock or heavy clay before adding topsoil so as to break up any surface tension.

The Contractor shall thoroughly remove from the construction site all the following particles that are larger than 1/2" in diameter: inorganic select fill, heavy clay, limestone, and construction debris, mortar, concrete, paint, paint thinner, chemicals, weeds, plastic, paper, steel, wire, mortar, masonry, construction debris, and other substances that are harmful to plant growth. Remove the above items to these depths: 6" minimum in turf and seed areas, and 18" minimum in planting beds. The LA shall verify that the above items are removed before the Contractor is authorized to proceed with fill with specified topsoil or grading. **DO NOT PLACE ANY FILL ON CONSTRUCTION DEBRIS.**

- B. After clean-up described above and establishment of subgrade, drag entire planting area with teeth of bucket to scarify subsoil to a depth of 4" to break up surface tension and allow water to pass downwards through the soil.
- C. If soils are rocky or full of limestone or heavy clay, install irrigation system before adding topsoil so as to keep limestone or clay below imported topsoil and the root zone of plants.
- D. Excavation for planting shall include the stripping and stockpiling of all acceptable topsoil encountered within the areas to be excavated for trenches, tree holes, plant pits, and planting beds.
- E. Excess soil generated from the planting holes and not used as backfill or in the establishment of the final grades, shall be removed to an on-site location, as approved by the Owner. Unacceptable excess soil shall be removed to an appropriate off-site location.
- F. Protect all areas from excessive compaction when trucking plants or other material to the planting site. Existing vegetation identified by the Landscape Architect to remain, shall be protected from trucking operations during construction.

### 3.3 PRE-PLANT WEED CONTROL

- A. After the irrigation system is operational and approved by the Landscape Architect, apply water for seven (7) to ten (10) calendar days, as needed to achieve weed germination.
- B. If live perennial weeds exist on site at the beginning of the work, spray with a non-selective, systemic contact herbicide, as recommended and applied by an approved, licensed landscape pest control applicator. Leave sprayed plants intact for at least fourteen (14) days to allow systemic kill. Reapply at 2-week intervals until a complete kill is achieved.
- C. Clear and remove these existing, dead weeds by mowing or grubbing off all plant parts at least 1" below the surface of the soil over the entire area to be planted.
- D. Maintain the site weed-free until final acceptance by the Landscape Architect, utilizing mechanical and chemical treatment.

### 3.4 SOIL PREPARATION

- A. Grade Preparation
  - 1. Immediately before sodding, power-rake, scarify, loosen, float and drag the upper 6" of topsoil to bring it to the proper condition. Remove foreign matter larger than 1/2" in diameter. Sod areas shall have topsoil that is smooth and compacted to 85% after preparation.

2. If there is not sufficient existing approved topsoil on site, apply imported topsoil as specified in PART 2, MATERIALS, to achieve finish grade. If required, import topsoil to achieve depth of (6") of approved topsoil in all turf areas.
3. Fine Grading: After tillage and cleaning, all areas to be planted shall be leveled, fine graded, and drug with a weighted spike harrow or float drag. The required result shall be the elimination of ruts or depressions that would cause water to stand or pond immediately after rainfall or operation of the lawn irrigation system, humps, and objectionable soil clods. This shall be the final soil preparation step to be completed before the commencement of fertilizing and planting.
4. If the prepared grade is eroded or compacted by rainfall prior to fertilizing, rework the surface to specified condition.
5. Sod to be placed after final grade is approved in a timely manner not to exceed a 48-hour period from time of approval to laying of sod.

B. Spreading of Topsoil:

1. Topsoil and subgrade shall be damp when topsoil is spread. Top of subsoil shall be scarified and loose, not a hardpan before adding topsoil.
2. Areas to be sodded shall be top-soiled to a minimum depth of six in. (6"), compacted measure. Provide additional topsoil depths as required to construct the grades indicated on the Drawings. Topsoil shall be compacted to 85%, determined in accordance with ASTM: D 1557. Onsite topsoil is to be used unless it is not available, or is more than 25% clay, or is more than 10% limestone, or is rocky.

C. Fertilizing for Sod Areas:

1. Till specified fertilizer (along with any amendment) into the top 1" of area to receive sod. Work fertilizer into the soil to a depth of ½"-1" after fine grading & not more than 2 days prior to grass planting. Cultivating equipment shall be set so the fertilizer will not penetrate the soil more than 1 inch. Do not apply fertilizer when there is a possibility of rain before lawn areas can be sodded.
2. Uniformly distribute granular sod fertilizer by mechanical means at the rate of 1200 lbs. per acre or 28 lbs. per 1000 sq. ft., See PART 2, SOLID SOD.
3. Irrigate soil after fertilizer application and 1- 4 hours prior to laying sod.

### 3.5 SODDING

A. Weather Conditions

1. Schedule work for periods of favorable weather.
2. Do not place Sod on days that, in the judgment of the Landscape Architect, are too hot, sunny, dry, cold, wet, or windy for optimal growth.

B. Placement Pattern

1. The first row shall be laid in a straight line with subsequent rows parallel to the first row and tightly abutting each other.
2. Lateral joints shall be staggered. Care shall be exercised to ensure that the sod is neither stretched nor overlapped. Joints must be butted tightly to prevent voids that could permit air to dry out roots.
3. Immediately after placing, sod shall be pressed firmly into contact with sod bed by tamping or rolling to eliminate air pockets.
4. When on slopes steeper than 4 to 1, sod shall be secured by galvanized pins, wood pegs or other methods approved by the Landscape Architect.
5. Sand joints and top dress turf with topdressing sand as necessary to provide a smooth uniform finished surface.
6. Immediately after sodding operations have been completed, entire surface shall be compacted with a roller or other approved equipment. The completed area after sodding shall be uniformly even, firm, and true to finished grade lines.

C. Rolled Sod

1. For sports fields, or if called out on plans, use rolled solid sod.
2. Runs of rolled sod shall be maximized to minimize small pieces. Lay sod to avoid small or skinny pieces.
3. A bobcat and/or tractor with extra-wide tires and a "big roll" attachment shall be used to lay the rolls of sod.
4. Plastic netting shall be removed as sod is rolled out and properly disposed of upon installation as shown in the following photo:

- D. Watering:
  - 1. Provide an adequate supply of water to keep the sod thriving at the site prior to and during transplanting of the sod.

### 3.6 CLEAN-UP

- A. After all planting operations have been completed, remove all trash, excess soil, empty plant containers, pallets, ties, rubbish, and all debris associated with this contract from the site. All scars, ruts, trench settlement, or other marks in the ground caused by this work shall be repaired and the ground left in a neat and orderly condition throughout the site. The Contractor shall pick up all trash resulting from this work no less frequently than each Friday before leaving the site, once a week, or the last working day of each week. All trash shall be removed completely from the site.
- B. The Contractor shall leave the site area broom-clean and shall wash down all paved areas within the Contract area, leaving the premises in a clean condition. All walks shall be left in a clean and safe condition.
- C. Excess topsoil not required for lawns or planting shall be stockpiled on site for future use as directed by the Owner's representative.
- D. Repair existing lawns damaged by operations under the contract. Repair shall include finish grading and sodding as required to match existing grade and lawn, and maintenance of repaired areas.

### 3.7 OBSERVATION SCHEDULE

- A. The Contractor shall be responsible for notifying the Landscape Architect in advance for the following site visits, according to the time indicated:
  - 1. Pre-job Conference - 7 days
  - 2. Final grade review - 2 days
  - 3. Sod material review - 2 days
  - 4. Soil Preparation and planting operations - 2 days
  - 5. Pre-maintenance - 7 days
  - 6. Final inspection - 7 days
- B. When observations are conducted by someone other than the Landscape Architect, the Contractor shall show evidence, in writing, of when and by whom these observations were made.
- C. NO site visits shall commence without all items noted in previous Observation Reports either completed or remedied unless such compliance has been waived by the Owner. Failure to accomplish punch list tasks or prepare adequately for desired inspections shall make the Contractor responsible for reimbursing the Landscape Architect at his current billing rates per hour, portal to portal (plus transportation costs) for the inconvenience. NO further inspections shall be scheduled until this charge has been paid and received.

### 3.8 GUARANTEE

- A. All plant material shall be guaranteed by the contractor for a period of one (1) year from the date of final acceptance.

- B. At the end of the guarantee period the Landscape Architect and Contractor shall inspect plant material. Any plant material under this contract that is dead or of an unsatisfactory growth condition shall be removed and replaced in a timely fashion by the contractor, at no cost to the owner.

### 3.9 ACCEPTANCE OF WORK

- A. The Contractor and Landscape Architect shall conduct an on-site inspection of all work and materials to determine compliance of work with the construction documents.
- B. The Contractor shall, within reasonable means, provide the Landscape Architect with sufficient data to demonstrate compliance with the construction documents.
- C. The Contractor shall be notified in writing of any non-conforming items, which are to be corrected (punch-list).
- D. The Contractor and Landscape Architect shall conduct an on-site inspection to verify completeness of punch list items.
- E. Acceptance of work by the Owner shall begin upon verifying completion of punch list items and receipt of all deliverable items to Owner including letter of guarantee; release of liens waiver, record drawings denoting deviations from contract drawings, product data and maintenance guide.
- F. The Contractor shall receive written notification of date of final acceptance and ending date of required guarantee periods from the Landscape Architect.

### 3.10 90 DAY MAINTENANCE

- A. The maintenance period shall commence when the Notice of Substantial Completion is issued and shall continue as required for a period of 90 days.
- B. Immediately after sodding, the area shall be protected against traffic or other use by erecting barricades as needed, and by placing approved warning signs at appropriate intervals.
- C. Contractor shall touch-up sod areas as required to achieve 100% coverage at no cost to Owner.
- D. Mow turf grasses only (not wildflower or native grass areas) during establishment only for the purpose of weed control and to promote quicker spreading.
  - 1. Mow Bermuda and Zoysia Grass to a 2" height.
  - 2. Mow St Augustine Grass to a 4" height.
  - 3. Mow at least once a week in the growing season once turf is rooted and growing.
- E. Fill any depressions, settlement, or washouts that occurs within 90 days following installation. Re-sod bare spots that occur during the maintenance period as directed by the Landscape Architect at no cost to Owner.
- F. Keep lawns clean and protected from damage during the maintenance period. Debris that accumulates shall be removed from the site. Promptly repair damaged lawns except as provided in PART 1, GUARANTEE AND REPLACEMENT.
- G. Irrigate as required to supplement natural rainfall so that all lawn areas receive sufficient water for normal plant growth. Furnish all irrigation equipment needed for watering and be responsible for securing adequate supply of water if an automatic irrigation system does not exist, is not operating or is damaged.
- H. A second fertilizer application shall be made 60 days after installation to turfgrasses. The specified fertilizer shall be applied at 800 pounds per acre or 18 lbs. per 1,000 SF., See PART 2, SOLID SOD.

END OF SECTION

SECTION 32 93 00

TREES, SHRUBS, AND GROUNDCOVERS

PART 1 - GENERAL

1.1 GENERAL CONDITIONS

The requirements of the "General Conditions of the Contract" shall apply to all work of this Section with the same force and effect as though repeated in full herein.

1.2 SCOPE OF WORK

- A. Furnish all labor, material, equipment, and services necessary to provide all landscape planting, complete in place, as shown on the drawings and as specified.
- B. Work specified in this Section: The work includes, but is not necessarily limited to:
  - 1. Soil preparation
  - 2. Fine grading
  - 3. Metal edging
  - 4. Planting
  - 5. Staking and Guying
  - 6. Clean-up
  - 7. Maintenance
- C. Related work in other Sections:
  - 1. 32 84 00 - PLANTING IRRIGATION
  - 2. 32 92 23 - SOD
- D. Definition: The term "Landscape Architect" or "LA" shall refer to Teague Nall and Perkins, Inc. 5237 N. Riverside Drive, Suite 100, Fort Worth, Texas 76137.

1.3 SUBMITTALS

- A. Samples and Product Information: Representative samples or product information of the following materials shall be provided to the Landscape Architect from the supply source that is to be used for Trees, Shrubs, and Groundcover areas: Plant type and nursery with clear pictures showing a measuring rod and person for scale.
- B. Samples and product information: one-quart size sample in a quart-size baggie, list of ingredients, guaranteed chemical analysis, and manufacturer for:
  - 1. Topsoil
  - 2. Soil Amendments and Compost
  - 3. Fertilizer
  - 4. Weed Barrier for DG (cut-sheet only)
  - 5. Decomposed Granite
  - 6. Mulch
  - 7. Trip/ Delivery tickets on all above items to verify delivery date, source, type, and quantity
- C. Construction Schedule: At least two weeks prior to start of work, submit planting schedule.
- D. Maintenance: Submit three copies of typewritten instructions recommending procedures to be established by the Owner for the maintenance of the landscape for an entire year. Submit prior to Notice of Substantial Completion. See PART 3, 90 DAY MAINTENANCE.

- E. Chemicals: Submit products, rates of application, and anticipated uses of any pesticides, herbicides, and fumigants.

#### 1.4 QUALITY ASSURANCE

##### A. Qualifications

1. The Contractor shall be a company specializing in landscape installation.
2. The Contractor shall have successfully completed at least 5 installations of this type, size, and complexity in the last four years.

##### B. All materials and work shall comply with applicable sections of the following references:

1. American Association of Nurserymen, Inc., (AAN) Standard: American Standard for Nursery Stock (ANSI Z60.1, Most recent addition).
2. ANSI A 300 – Standard Practices for Tree, Shrub and other Woody Plant Maintenance, most current edition and parts.
3. Florida Grades and Standards for Nursery Stock, current edition (Florida Department of Agriculture, Tallahassee FL).
4. Interpretation of plant names and descriptions shall reference the following documents. Where the names or plant descriptions disagree between the several documents, the most current document shall prevail.
  - a. USDA - The Germplasm Resources Information Network (GRIN) <http://www.ars-grin.gov/npgs/searchgrin.html>
  - b. Manual of Woody Landscape Plants; Michael Dirr; Stipes Publishing, Champaign, Illinois; Most Current Edition.
5. Pruning practices shall conform to recommendations "Structural Pruning: A Guide For The Green Industry" most current edition; published by Urban Tree Foundation, Visalia, California.
6. Glossary of Arboricultural Terms, International Society of Arboriculture, Champaign IL, most current edition.
7. Fertilizers; Mixed Commercial. Federal Specification: 0-F-241D

##### C. Source Quality Control:

1. Submit documentation to the Landscape Architect within ten (10) calendar days after award of the Contract that all plant material is available. The Contractor shall be responsible for all material listed on the plant list. Any substitutions due to unavailability must be requested, in writing, prior to confirmation of ordering. All material shall be subject to inspection by the Landscape Architect at any time after confirmation of ordering.
2. Plants shall be subject to inspection and approval of the Landscape Architect at the place of growth, or upon delivery for conformity to the specifications. Such approval shall not impair the right of inspection and/ or rejection during the progress of the work. Inspection and tagging of plant material by the Landscape Architect is for design intent only and does not constitute the Landscape Architect's approval of the plant materials in regard to their health and vigor as specified in PART 2, Plant Material.
3. The health and vigor of the plant material is the sole responsibility of the Contractor. Submit written request for inspection of plant material at the place of growth to the Landscape Architect. Written requests shall state the place of growth and quantity of plants to be inspected. The Landscape Architect reserves the right to refuse inspection at this time if, in his judgment, a sufficient quantity of plants is not available for inspection.
4. The Contractor shall submit specifications of any item being used on site, upon the request of the Landscape Architect.
5. The Contractor shall obtain and pay for all permits required by local codes.
6. Ordinances and Regulations: All local, municipal, and state laws, and rules and regulations governing or relating to any portion of this work are hereby incorporated into and make a part of these

specifications, and their provisions shall be carried out by the Contractor. Anything contained in these specifications shall not be construed to conflict with any of the above rules and regulations, or requirements of a better quality, higher standard, or larger size than is required by the above rules and regulations, the provisions of these specifications and drawings shall take precedence.

#### 1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

##### A. Delivery:

1. Deliver fertilizer to the site in the original, unopened containers bearing the manufacturer's guaranteed chemical analysis, name, trade mark, and conformance to State law.
2. The Contractor shall furnish the Landscape Architect with copies of receipts for all amendments specified in PART 2, MATERIALS, or amended by the Soils Report specified in PART 3, SOIL PREPARATION.
3. Deliver all plants with legible identification labels.
  - a. Label trees, bundles of containers of like shrubs, or groundcover plants.
  - b. State the correct botanical plant name and size indicated on the plant list, on the drawings.
  - c. Use durable waterproof labels with water-resistant ink which will remain legible for at least 60 calendar days.
4. Protect plant material during delivery to prevent damage to the root ball or desiccation of leaves.
5. Tarp trees and plant material with canvas, or similar material, during delivery of any length, on any open-air transport.
6. Transporting trees in excess of 20 miles from the site shall be done during evening, night, early morning hours during summer months. The Contractor shall routinely stop the transport and water root balls at pre-determined intervals. Intervals shall be in agreement with the Landscape Architect, as determined in advance of the transport.
7. The Contractor shall notify the Landscape Architect seven (7) calendar days in advance of delivery of all plant materials and shall submit an itemized list of the plants in each delivery.

##### B. Storage:

1. An on-site location shall be made available for plant material storage. Security and protection of the storage area shall be the Contractor's responsibility.
2. Store plant material in shade and protect from weather.
3. Maintain and protect plant material not to be planted within four (4) hours in a healthy, vigorous condition.
4. Storage of plant materials shall be neat, orderly, and grouped according to like plants.
5. Plant material, upon delivery, shall be inspected for transport damage, disease, and insect infestation. Any infected material shall be immediately removed from site at Contractor's expense. Notify Landscape Architect in writing upon discovery of any pests.
6. The Contractor shall be responsible for completely restoring the storage area to the original condition prior to final acceptance of construction. Restoration shall occur within seven (7) calendar days of written notification by the Landscape Architect.

- C. Handling: The Contractor is cautioned to exercise care in handling, loading, unloading, and storing of plant materials. Plant materials that have been damaged in any way will be discarded, and if installed, shall be replaced with undamaged materials at the Contractor's expense.

#### 1.6 JOB CONDITIONS

- A. Perform actual planting only when weather and soil conditions are suitable in accordance with locally accepted practice.
- B. Scheduling: Install trees, shrubs, and groundcover before hydraulic seeding or sodding operations are commenced.

#### 1.7 SAMPLES AND TESTS

- A. The Landscape Architect reserves the right to take and analyze samples of materials for conformity to specifications at any time. The Contractor shall furnish samples upon request by the Landscape Architect. Rejected materials shall be immediately removed from the site at the Contractor's expense. Cost of the testing of materials not meeting specifications shall be paid by the Contractor.
- B. After rough grading is complete, Contractor shall order and pay for a soil test which includes recommendations. Take a minimum of one soil test per 10 acres - or more as site conditions mandate. Take approximately 15 cores from each uniform soil area. Mix them thoroughly in a clean plastic or paper container. Fill the soil sample bag one-third to one-half full from this representative sample. Acceptable labs are:
  1. TPS Lab: "SO-05, TPSL® Plant Natural™ Soil Test + LOI Organic Matter + Solvita®"
  2. A&L Plains Agricultural Laboratories: "Basic Test S2" and "Basic Test S3" and "Organic Matter – by Combustion" (all three tests are required)
- C. Submit results to Landscape Architect for adjustment to soil amendments and fertilizers.

#### 1.8 MAINTENANCE

- A. All stored plant material shall be maintained in a healthy, vigorous condition by the Contractor. Maintenance includes, but is not necessarily limited to, mowing, weeding, edging, watering, trash removal, street and gutter cleaning, erosion repair, removal of siltation in drainage areas, and insect and disease chemical applications. The storage area shall be mowed, weeded, and trimmed weekly during construction and the life of the storage area.
- B. Within the limits of construction, the site shall be maintained in a neat, well-kept appearance by the Contractor. Maintenance includes, but is not necessarily limited to, mowing, weeding, edging, watering, trash removal, street and gutter cleaning, erosion repair, removal of siltation in drainage areas, and insect and disease chemical applications.
- C. Contractor shall maintain plant material as per PART 3, 90 DAY MAINTENANCE.

#### 1.9 GUARANTEE AND REPLACEMENT

- A. All materials (living and non-living) and workmanship shall be guaranteed for a period of one year after the Date of Acceptance by the Owner. When the work is accepted in parts, the guarantee periods shall extend from each of the partial acceptances to the terminal date of the last guarantee period. Thus, all guarantee periods terminate at one time.
- B. Plants shall be healthy, free of pests and disease, and in flourishing condition at the end of the guarantee period. Plants shall be free of dead and dying branches and branch tips, and shall bear foliage of normal density, size, and color.
- C. Contractor shall promptly replace all dead plants and all plants not in a vigorous, thriving condition, as determined by the Landscape Architect during and at the end of the guarantee period, without cost to the Owner, as soon as weather conditions permit and within the specified planting period. Replacements shall match adjacent specimens of the same species. Replacements shall be subject to all the requirements stated in this Specification. Contractor to make all necessary repairs due to plant replacements. Such repairs shall be done at no cost to the Owner.
- D. The guarantee of all replacement plants shall extend for an additional one-year period from the date of their acceptance after replacement. If a replacement plant is not acceptable during or at the end of the said extended guarantee period, the Owner may elect one more replacement or credit for each item.
- E. Damage to the irrigation system by other trades or persons (such as shutting off of water or power to the irrigation system) shall not affect the warranty. This means that, especially in the warm season, the Contractor shall make daily visits to the site to inspect and repair the irrigation system up until final acceptance.
- F. Scheduling of replacements within a reasonable time shall be as determined by the Owner. In the event of failure to make such repairs or replacements within a reasonable time after receipt of written notice

from the Owner, the Contractor authorizes the Owner to proceed to have said repairs or replacements made at Contractor's expense and Contractor agrees to reimburse Owner within 60 days.

#### 1.10 FINAL INSPECTION AND ACCEPTANCE

- A. At the end of the guarantee period, the Landscape Architect will, upon written notice of end of guarantee period inspect the work for Final Acceptance. Request shall be received at least ten calendar days before the anticipated date for Final Inspection.
- B. Upon completion and reinspection of full repairs or replacements necessary in the judgment of the Landscape Architect at that time, the Landscape Architect will recommend to the Owner that Final Acceptance of the Work of the Section be given.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS

- A. The following specified soil amendments and fertilizer are to be used for bid prices basis only. Specific amendments and fertilizer specification will be made after rough grading operations are complete and soil samples are tested by the Laboratory at the Contractor's expense.
- B. All materials shall be of standard, approved, and first-grade quality and shall be in prime condition when installed and accepted. Any commercially processed or packaged material shall be delivered to the site in the original, unopened container bearing the manufacturer's guaranteed analysis. The Contractor shall supply the Landscape Architect with a sample of all supplied materials accompanied by analytical compliance or bearing the manufacturer's guaranteed analysis.
- C. Soil Amendment for shrub and groundcover beds and stand-alone tree planting: "Gumbo Buster", by Soil Building Systems, 972-831-8181, or approved equal. See PART 1, SUBMITTALS.
- D. Fertilizer for Tree, Shrub, and Groundcover Areas: Italtollina 4-4-4 or approved equal. Product shall be an OMRI registered organic fertilizer of a guaranteed analysis, 4-4-4, containing no less than 41% total organic Carbon, 71% organic matter, and 5% humic acid. Contact: Allen Olson (817) 368-8615, allen@gdrsystems.net.
- E. Imported Topsoil shall:
  - 1. Be loose, fertile, friable, screened horticultural soil, having characteristics of representative productive soils in the vicinity, and obtained from naturally well-drained areas. Imported Topsoil for planting beds to be: "Ready-to-Plant", by Soil Building Systems, (972) 831-8181, or approved equal. See PART 1, SUBMITTALS.
  - 2. Include fully composted cotton burrs, local grass, leaves, brush and processed wood fiber and shall add an average of 1.44 lbs. of N, 0.22 lbs. P, and 0.9 lbs. K of pure consumable organic nutrients per 100 square feet for each inch depth added plus minerals and trace elements. Compost shall not include food waste, stable waste, treated lumber, pallets, pine bark, raw manure or mushroom compost waste. Compost shall not include any man-made materials or chemicals. Do not use mixed municipal solid waste compost. Ensure compost does not contain any visible inorganic refuse, other physical contaminants, or any substance considered harmful to plant growth. It must be turned at least 5 times and not exceed a temperature of 160 degrees Fahrenheit. Each turning cycle should not be shorter than 14 days minimum. Supporting compost process documentation should be made available by compost vendor upon request.
  - 3. Be comprised of pH Balanced Compost, select screened soil, and screened non-washed sand.
  - 4. Have 98.5% of media passing through a ½ screen and 99%+ passing through a ¾ inch screen. The imported topsoil will weigh between 1,900 and 2,250 lbs. per cubic yard.
  - 5. Not contain, or be created from, treated lumber, pallets, construction waste, pine bark, straw, raw mulch, raw manure, livestock stable bedding litter/waste, food waste, or mushroom compost waste.
  - 6. Be free of insects, harmful nematodes, soil-borne diseases, toxins, heavy clay, select fill, inorganic subsoils, heavy metals, trash, petroleum by-products, rocks over 1" diameter, rubble, roots, weeds, weed seeds, Clopyralid, or Picloram.

7. Have a pH between 6.0 and 7.0.
  8. Silt plus clay content of the import soil shall not exceed 20% by weight with a minimum 95% passing the 2.0-millimeter sieve. The sodium absorption ratio (SAR) shall not exceed 6 and the electrical conductivity (ECe) of the saturation extract of this soil shall not exceed 3.0 millimhos per centimeter at 25 degrees centigrade. The boron content shall be no greater than 1 part per million as measured on the saturation extract. In order to ensure conformance, samples of the import soil shall be submitted to the laboratory for analysis prior to, and following, backfilling.
- F. Plant Material:
1. Name and Variety: Provide plant materials true to name and variety described in Quality Assurance PART 1.
  2. Plants shall be in accordance with the Texas State Department of Agriculture's Regulation for nursery inspections, rules, and ratings.
  3. All plant material shall be No. 1 grade nursery stock or better, grown in accordance with good horticultural practice. Plants shall be free of disease, insects, eggs, larvae, and defects such as knots, sunscald, injuries, abrasions, or disfigurement. They shall be sound, healthy and vigorous, of uniform growth, typical of the species and variety, well formed, free from irregularities, with the minimum quality conforming to American Standard for Nursery Stock.
  4. Plants indicated as specimen shall be exceptionally heavy, symmetrical, and tightly knit, cultured, to be unquestionably superior in form, branching, compactness, and symmetry.
  5. The minimum acceptable sizes of all plants shall be measured before pruning and with branches in normal position. Unless otherwise designated on the plant list, all plant dimensions shall conform to those listed in ANSI Z60.1, American Standard for Nursery Stock.
  6. Branching point is the distance above ground where balanced branching occurs or where a dimension in trunk appears to form the head of the tree.
  7. Trees shall not have included bark in the crotches of the limbs. Trees with included bark shall be rejected.
  8. Root Treatment: Root treatments on all plants shall conform to the requirements of ANSI Z60.1. Plants shall be dug and prepared for shipment in a manner that will not cause damage to branches, shape, and future development after planting.
  9. Plants furnished in containers shall have the roots well established in the soil mass and shall have growth in the container for at least one growing season. Containers shall be large enough to provide earth root mass of adequate size to support the plant tops being grown.
  10. Container-grown trees shall have a root ball measuring 10" of diameter for each 1" of tree caliper. The tree caliper shall be measured on the trunk, 12" above the finish grade or root flare of the tree. Plants, other than ground covers, over established in the container, as evidenced by pot bound root ends, will not be accepted.
  11. B&B and Collected Plant Material (only permitted if specifically called out on plans) shall have a root ball measuring 12" of diameter for each 1" of tree caliper. The tree caliper shall be measured on the trunk, 12" above the finish grade or root flare of the tree.
  12. If plants are specified as balled and burlapped (B&B), then B&B plants shall have a firm, natural ball of earth of sufficient diameter and depth to encompass the fibrous and feeding root systems necessary for full recovery of the plant. Balls shall be securely wrapped with burlap and bound with cord or a wire basket. Ball sizes shall meet the requirements of the ANSI Z60.1, or as indicated on the Drawings. B&B trees shall have been hardened off, meaning that they shall have been dug 6-52 weeks prior to shipment.
  13. Provide healthy stock, grown in a nursery and reasonably free of die-back, disease, insects, eggs, bores, and larvae. At the time of planting all plants shall have a root system, stem, and branch form that will not restrict normal growth, stability and health for the expected life of the plant.
  14. Plant materials are subject to final approval by the Landscape Architect at the job site.

15. All plants not conforming to the requirements herein specified, shall be considered defective and such plants, whether in place or not, shall be marked as rejected and immediately removed from the site of the work and replaced with new plants at the Contractor's expense. The plants shall be of the species, variety, size, and conditions specified herein or as shown on the drawings. Under no conditions will there be any substitutions of plants or sizes listed on the accompanying plans, except with the expressed, written consent of the Landscape Architect.

G. Plant Root Quality

1. Plant roots shall be normal to the plant type specified. Root observations shall take place without impacting tree health. Root quality at or below the soil line shall comply with the project Root Acceptance details and the following:
  - a. The roots shall be reasonably free of scrapes, broken or split wood.
  - b. The root system shall be reasonably free of injury from biotic (e.g., insects and pathogens) and abiotic (e.g., herbicide toxicity and salt injury) agents. Wounds resulting from root pruning used to produce a high quality root system are not considered injuries.
2. A minimum of three structural roots reasonably distributed around the trunk (not clustered on one side) shall be found in each plant. Root distribution shall be uniform throughout the root ball, and growth shall be appropriate for the species. Plants with structural roots on only one side of the trunk (J roots) shall be rejected.
3. The root collar shall be within the upper 2 inches of the substrate/soil. Two structural roots shall reach the side of the root ball near the top surface of the root ball. The grower may request a modification to this requirement for species with roots that rapidly descend, provided that the grower removes all stem girdling roots above the structural roots across the top of the root ball.
4. The root system shall be reasonably free of stem girdling roots over the root collar or kinked roots from nursery production practices.
5. At time of observations and delivery, the root ball shall be moist throughout. Roots shall not show signs of excess soil moisture conditions as indicated by stunted, discolored, distorted, or dead roots.

H. Staking Materials:

1. Tree support stakes shall be Tree Frog Pro Series above ground guying system or approved equal. (352) 735-7411. Install according to manufacturer's instructions.
2. Size according to:
  - a. Pro 20 – up to 2" caliper trees
  - b. Pro 40 – up to 4" caliper trees
  - c. Pro 60 – up to 6" caliper trees
3. Straps to be 3/4" wide, woven, green polypropylene, 900 lb. break strength, UV resistant strapping, provided by manufacturer.
4. Anchors to be arrowhead-shaped aluminum alloy (HD).
- I. Tree Paint (for Oaks only to prevent spread of Oak Wilt): Tanglefoot Tree Wound Pruning Sealer (emulsified asphalt) or approved equal.
- J. Weed Barrier: Do not use weed barrier in planting beds. Weed Barrier product for DG or gravel or stone areas shall be "Weed Barrier Pro" as supplied by DeWitt Company 1-800-888-9669 or approved equal.
- K. Water: Source furnished by the Contractor, cost and transport of water, as required, by the Contractor.
- L. Mulch: "Fine Cut Hardwood Mulch" by Soil Building Systems, or approved equal - submit sample.
- M. Drainage Sand: course, clean, sharp, washed river sand, with no debris.
- N. Metal Edging: Shall be Permaloc 3/16-inch thick x 4-inch high, extruded aluminum, 6063 alloy, T-6 hardness, landscape edging for straight-line and curvilinear applications in corrugated straight profile, as manufactured by Permaloc Corporation, Holland MI 49424, telephone (800) 356-9660 or approved equal. Each section shall have loops on its side to receive stakes spaced approximately 2 to 3 feet apart along its length. Steel edging is not acceptable.

1. For straight runs: Permastrip "L" shape, (Ref #: 006-045)
2. For curved runs: Cleanline, (Ref #: 006-0165)
3. Finish: Black Duraflex
4. Stakes: 12" long, color matched to edging
5. Length: 16'-20' long interlocking pieces

### PART 3 - EXECUTION

#### 3.1 INSPECTION

- A. Obtain written certification from the General Contractor that final grades to within 0.10' have been established prior to commencing planting operations. Provide for inclusion of all amendments, settling, etc. The Contractor shall be responsible for shaping all planting areas as indicated on the drawings, or as directed by the Landscape Architect.
- B. Inspect trees, shrubs, and groundcover plant material for injury, insect infestation, and trees and shrubs for improper pruning.
- C. Do not begin planting of plants until deficiencies are corrected.

#### 3.2 EXCAVATION

- A. In all planting beds, the Contractor shall *thoroughly* remove from the construction site all limestone larger than 3/4" in diameter and all heavy clay to a minimum depth of 18". Use a power rake to remove rocks from sites with more than 1 rock per SY. The LA shall verify that this is complete before the Contractor is authorized to proceed with fill of specified topsoil or grading. Scarify subsoil after removal of rock or heavy clay before adding topsoil to break up any surface tension.
- B. The Contractor shall thoroughly remove from the construction site all the following particles that are larger than 3/4" in diameter: inorganic select fill, heavy clay, limestone, and construction debris, mortar, concrete, paint, paint thinner, chemicals, weeds, plastic, paper, steel, wire, mortar, masonry, construction debris, and other substances that are harmful to plant growth. Remove the above items to these depths: 6" minimum in turf and seed areas, and 18" minimum in planting beds. The LA shall verify that the above items are removed before the Contractor is authorized to proceed with fill with specified topsoil or grading. **DO NOT PLACE ANY FILL ON CONSTRUCTION DEBRIS.**
- C. After clean-up described above and establishment of subgrade, drag entire planting area with teeth of bucket to scarify subsoil to a depth of 4" to break up surface tension and allow water to pass downwards through the soil.
- D. Excavate planting beds so that the rough grade is 8"-9" below top of adjacent pavement or curbs to allow for addition of compost, planting soil, and mulch.
- E. If soils are rocky or full of limestone or heavy clay, install irrigation system before adding topsoil to keep limestone or clay below imported topsoil and the root zone of plants.
- F. Excavation for planting shall include the stripping and stockpiling of all acceptable topsoil encountered within the areas to be excavated for trenches, tree holes, plant pits, and planting beds.
- G. Excess soil generated from the planting holes and not used as backfill or in the establishment of the final grades, shall be removed to an on-site location, as approved by the Owner. Unacceptable excess soil shall be removed to an appropriate off-site location.
- H. Protect all areas from excessive compaction when trucking plants or other material to the planting site. Existing vegetation identified by the Landscape Architect to remain, shall be protected from trucking operations during construction.

#### 3.3 PRE-PLANT WEED CONTROL

- A. After the irrigation system is operational and approved by the Landscape Architect, apply water for seven (7) to ten (10) calendar days, as needed to achieve weed germination.

- B. If live perennial weeds exist on site at the beginning of the work, spray with a non-selective, systemic contact herbicide, as recommended and applied by an approved, licensed landscape pest control applicator. Leave sprayed plants intact for at least fourteen (14) days to allow systemic kill. Re-apply at 2-week intervals until a complete kill is achieved.
- C. Clear and remove these existing, dead weeds by mowing or grubbing off all plant parts at least 1" below the surface of the soil over the entire area to be planted.
- D. Maintain the site weed-free until final acceptance by the Landscape Architect, utilizing mechanical and chemical treatment.

### 3.4 SOIL PREPARATION

- A. Topsoil: If there is not enough existing approved topsoil on site, apply imported topsoil as specified in PART 2, MATERIALS, to achieve finish grade. If required import topsoil to achieve depth of 24" of approved topsoil in planting beds and tree pits.
- B. Amendments: After finished grades have been established, soil shall be conditioned in the following manner:
  - 1. For stand-alone tree pits: (1) part soil amendment to (2) parts native or imported topsoil.
  - 2. For planting beds:
    - a. After rough grade is established, thoroughly till 2" of Gumbo Buster 2" into existing soil until there is a 4" soil layer that is evenly mixed, loose, and friable.
    - b. Add a full 6" of "Ready-to-Plant" soil mix on top of soil mix.
- C. Fertilization:
  - 1. Trees: Fertilize tree pits at time of planting. Apply specified fertilizer See PART 2, MATERIALS into tree pits at the rate of 1/4 cup per caliper inch to backfill around the root ball. Apply the fertilizer in the presence of the landscape architect. Failure to apply the fertilizer in the presence of the Landscape Architect will result in the Contractor's responsibility to apply a second fertilization, at a time determined by the Landscape Architect, at no additional cost to the Owner. See PART 2, MATERIALS.
  - 2. Shrubs, groundcover, and seasonal color areas: Till fertilizer into the top 6" of the planting bed at the rate of 20 lbs. per 1000 SF. Irrigate immediately following the application. See PART 2, MATERIALS.
- D. Fine Grading: Contractor shall fine grade all areas for approval by LA. Contractor shall be responsible for providing 2% positive drainage in all planting areas. No planting or mulching will take place until all construction, clean-up, fine grading, and irrigation is complete in the immediate area. Final finish grading shall be reviewed by the LA before any planting takes place. Contractor shall be responsible for any additional topsoil required to create a smooth condition prior to planting.
- E. All planting areas shall drain away from buildings by at least 2%.

### 3.5 PLANT INSTALLATION

- A. General:
  - 1. Actual planting shall be performed during those periods when weather and soil conditions are suitable and in accordance with locally accepted practice, as approved by the Landscape Architect. Do not plant when raining or into waterlogged or frozen soil.
  - 2. Only as many plants as can be planted, staked, and watered on that same day shall be distributed in a planting area.
  - 3. Containers shall be opened and plants shall be removed in such a manner that the ball of earth surrounding the roots is not broken and they shall be planted and watered as herein specified immediately after removal from the containers. Containers shall not be opened prior to placing the plants in the planting area.
- B. Lay-Out of Trees: Locations for Trees and bedlines shall be marked on the ground by the Contractor before any tree pits are dug. All such locations shall be approved by the Landscape Architect.

1. If underground construction or utility lines are encountered in the excavation of planting areas, other locations for planting may be selected by the Landscape Architect. It shall be the Contractor's responsibility to confirm with the Owner, Landscape Architect, and all governing agencies, the location and depth of all underground utilities and obstructions.
  2. Lay-out shall be accomplished with flagged grade stakes indicating tree names and specified plant size on each stake.
- C. Container Removal: Cut the container on the sides with an acceptable can cutter. Do not injure the root ball. After removing the plant from the container, superficially cut the edges of roots with a sharp knife in three (3) equally spaced locations.
- D. Ball & Burlap Removal: Cut off the top 6" of the wire basket. All wire on the root ball with less than a 4" x 4" grid pattern shall be removed entirely and disposed of at an off-site location. Remove all burlap, rope, twine, and wire from around the plant trunk. Lay any burlap back approximately 12", exposing a minimum of the top one-third (1/3) of the root ball. All material or fabric used as a substitution for burlap and is not equal to the degradable qualities of burlap, shall be removed entirely from the root ball and disposed of at an off-site location.
- E. Box Container Removal: Remove the bottom of the plant boxes before planting. Place the plant in the pit, position, and backfill to a minimum of one-third the depth of the root ball. Remove the sides of the boxes without damaging the root ball.
- F. Planting of Trees and Shrubs:
1. Planting pits shall be round and sized in accordance with outlines and dimensions shown on the drawings.
  2. All excavated tree holes shall have sloped sides (see detail) with roughened surfaces and shall be of a size that is two (2x) times the diameter of the root ball for all trees. The depths of all excavated holes shall have a roughened pit bottom and shall be of a depth equal to the depth of the root ball or roots for all trees and shrubs.
  3. If rotating augers or other mechanical diggers are used to excavate holes, the vertical sides of the pits shall be scarified, fractured, or otherwise broken down to eliminate impervious surfaces.
  4. Loosen or scarify the bottom of all plant pits to a depth of 4 inches.
  5. SCARIFY ALL ROOTBALLS (#1 and larger) to prevent plants from remaining pot-bound. This is to be done by hand or with a 3-prong cultivator but never with a shovel or machete.
  6. Center the plant in the pit or trench.
  7. Place shrubs and groundcovers so that the top of the rootball is ¼" to ¾" above finish grade. Trees shall be set 1" above finish grade for each caliper inch of trunk. Example: A 3" tree shall be set 3" above finish grade. DO NOT, UNDER ANY CIRCUMSTANCE, PLANT TREES, SHRUBS OR GROUNDCOVER BELOW FINISH GRADE. DO NOT PLACE ANY SOIL ON TOP OF ROOTBALLS.
  8. Set the plant plumb and hold rigidly in position until the soil has been tamped firmly around the root ball or roots.
  9. After the plant has been placed, backfill shall be added to the hole to cover approximately one-half (1/2) the height of the root ball. At this stage, water shall be added to the top of the partly filled hole to thoroughly saturate the root ball and adjacent soil. WATER IN AND COMPACT PLANTING BACKFILL TO PREVENT FORMATION OF AIR POCKETS.
  10. Backfill the remainder of the hole after the water has percolated and is not standing in the hole. Construct a three-inch (3") water saucer around the edge of the hole. The planting shall be immediately irrigated after planting until the entire area is saturated to the full depth of each hole.
- G. Staking and Guying:
1. Each tree shall be staked into undisturbed soil immediately following planting. Plants shall stand plumb after staking. See detail for staking guidelines. All stakes and guys shall be installed taught, equally spaced, and beyond the root ball. Refer to the detail on drawings.
- H. Pruning:

1. Pruning shall be limited to the minimum necessary to remove injured twigs and branches. All limbs growing in a conflicting, crossing fashion with one another shall be pruned. Pruning may NOT be done prior to the delivery and acceptance of the plant material. PRUNING SHALL BE DONE ONLY IN THE PRESENCE OF THE LANDSCAPE ARCHITECT.
  2. Do not use pruning paint except for Oak Trees. For Oaks, follow best practices by TexasOakWilt.org
    - a. Clean all pruning tools with 10% bleach solution or Lysol between sites and/or trees.
    - b. If possible, avoid pruning Oaks from Feb 1 - June 30.
- I. Planting of Groundcovers and Seasonal Color:
1. Plants shall be grown in pots as indicated on the drawings. Plants shall remain in those pots until the time of transplanting into the designated areas. The pot's soil shall contain enough moisture so that it will not fall apart when lifting the plants from the pot.
  2. Groundcover and seasonal color shall be planted in straight rows, evenly spaced, and at spacing called out on the drawings, unless otherwise noted on the drawings. Triangular spacing shall be used unless otherwise noted on the drawings.
  3. Each rooted plant shall be planted with its proportionate amount of soil. Planting shall be immediately irrigated after planting until the entire area is saturated to the full depth of each hole.
  4. Care shall always be exercised to protect the plants after installation. Any damage to the plants by trampling or other operations of this Contract shall be repaired immediately.
  5. Seasonal color material and placement will be selected by the Landscape Architect at the time of installation.
  6. The Owner and Landscape Architect reserves the right to review and approve all plant material at the nursery or grower.
- J. Mulch Cover:
1. All trees, shrubs, groundcover, and seasonal color areas shall be top-dressed with a (4) four-inch (3" inches after settlement) minimum layer of mulch within 48 hours after planting. Install no more than 1.5" of mulch over the top of the root balls of all plants. See PART 2, MATERIALS.

### 3.6 CLEAN-UP

- A. After all planting operations have been completed, remove all trash, excess soil, empty plant containers, rubbish, and all debris associated with this Contract from the site. All scars, ruts, trench settlement, or other marks in the ground caused by this work shall be repaired and the ground left in a neat and orderly condition throughout the site. The Contractor shall pick up all trash resulting from this work no less frequently than each Friday before leaving the site, once a week, or the last working day of each week. All trash shall be removed completely from the site.
- B. The Contractor shall leave the site area broom-clean and shall wash down all paved areas within the Contract area, leaving the premises in a clean condition. All walks shall be left in a clean and safe condition.

### 3.7 OBSERVATION SCHEDULE

- A. The Contractor shall be responsible for notifying the Landscape Architect in advance for the following site visits, according to the time indicated:
  1. Pre-job Conference - 7 days
  2. Final grade review - 2 days
  3. Plant material review - 2 days
  4. Plant lay-out review - 2 days
  5. Soil Preparation and planting operations - 2 days
  6. Pre-maintenance - 7 days
  7. Final inspection - 7 days

- B. When observations are conducted by someone other than the Landscape Architect, the Contractor shall show evidence, in writing, of when and by whom these observations were made.
- C. NO site visits shall commence without all items noted in previous Observation Reports either completed or remedied unless such compliance has been waived by the Owner. Failure to accomplish punch list tasks or prepare adequately for desired inspections shall make the Contractor responsible for reimbursing the Landscape Architect at his current billing rates per hour, portal to portal (plus transportation costs) for the inconvenience. NO further inspections shall be scheduled until this charge has been paid and received.

### 3.8 90 DAY MAINTENANCE

- A. The maintenance period shall commence when the Notice of Substantial Completion is issued and shall continue as required for a period of 90 days.
- B. Plants shall be inspected at least once per week by the Contractor during the installation period and needed maintenance performed promptly.
- C. The Contractor shall irrigate all plants adequately to maintain optimum supply of moisture within the root zone; recurring overly dry or wet conditions shall be grounds for rejection of plant material. If the irrigation system is inoperative, hand watering shall be accomplished from a source approved by the Landscape Architect. Water shall not be applied with a force that will displace mulch or cause soil erosion and shall not be applied so quickly that it cannot be absorbed by the mulch and plants.
- D. Plants shall be pruned, and mulch shall be replaced as required.
- E. Tree stakes and guys shall be adjusted or replaced as required. Repair eroded plant saucers.
- F. Always maintain all plant beds and tree saucers weed-free.
- G. Keep plants free of insects and disease. All insecticides and fungicides applied to control pests and maintain plants in a healthy growing condition shall be approved by the Landscape Architect.
- H. Fertilize plants at once during the warranty period. Fertilization shall be applied by topdressing 2 pounds per 100 square feet of bed area, and 3 to 5 pounds each tree. Fertilizer for the application shall be a controlled release type used for the installation.
- I. Remove and replace, at no cost to Owner, dead and unacceptable plants as their condition becomes apparent.

END OF SECTION

**SECTION 33 30 00  
SANITARY SEWERAGE UTILITIES**

**PART 1 - GENERAL**

**1.01 RELATED DOCUMENTS**

- A. Provisions established in the North Central Texas Council of Governments (NCTCOG) Standard Specifications for Public Works Construction, City/County and the Drawings are collectively applicable to this Section.

**1.02 SUMMARY**

- A. Work Included:
  - 1. Installation of pipe material.
  - 2. Construction of manholes.
  - 3. Connection to existing sewer system.
- B. Related Work Specified on Other Sections
  - 1. Section 31 23 33 - TRENCHING AND BACKFILLING
  - 2. Section 33 00 00 - EARTHWORK

**1.03 COORDINATION**

- A. Verify flowline elevation at connection to existing manhole; notify architect if elevation is more than 0.1' above plan elevation.
- B. Coordinate installation with other construction throughout the site.
- C. All construction shall conform to NCTCOG and applicable City/County Standard Specifications for Construction.

**1.04 REFERENCES**

- A. ASTM D3034: Specifications for PVC Sewer Pipe 4" through 15" in diameter.
- B. ASTM D2321: Practice for Installation of Underground Installation

**1.05 SUBMITTALS**

- A. All pipe and fittings not covered by this specification shall be approved by the engineer seven days prior to bid.

**PART 2 - PRODUCTS**

**2.01 PIPE**

- A. Polyvinyl Chloride (PVC) sewer pipe and fittings with dimension control.
  - 1. Pipe shall be SDR-26 or SDR-35 per plans.
  - 2. Pipe Fittings: Pipe fittings shall conform to ASTM D1784. Fittings approved by the Engineer shall also be acceptable.
  - 3. Balance of specifications shall be covered by Item 501.17 per NCTCOG.

**2.02 STRUCTURES**

- A. Materials for the construction of manholes shall be as specified in Division 700, "Concrete Structures" of the NCTCOG's Standard Specifications for Construction.

**PART 3 - EXECUTION**

**3.01 GENERAL**

- A. The locations of all structures and lines and grades of all pipes shall be staked by a registered surveyor. All facilities shall be located according to the site layout plans.
- B. Contractor shall utilize necessary measures including temporary pumping and collection until the public sewer improvements are installed and operational.

**3.02 PIPES**

- A. All pipe shall be inspected prior to installation. Damaged pipes shall not be used. Replacement of damaged pipe shall be made by the Contractor at no expense to the owner.
- B. Installation shall be in accordance with NCTCOG and City/County specifications and as recommended by the

pipe manufacturer. Backfill shall be per plans.

### **3.03 STRUCTURES**

- A. Construction of manholes shall be as specified in Division 700, "Concrete Structures" of NCTCOG and the City's/County's Standard Specifications for Construction.
- B. Connections of pipe to structures shall be completely mortared around the perimeter of the pipe to ensure connection to the structure prior to backfilling. Pipe shall have a rubber boat placed over the end prior to pouring concrete structure or grouting.
- C. All manholes in pavement areas shall be held below pavement and the frame/lid shall be adjusted to final grade with grade rings. There should be no abrupt grade changes at manholes rims. If abrupt grade changes are present, grade adjustments will be required.

**END OF SECTION**

## **SECTION 33 40 00 STORM DRAINAGE UTILITIES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Provisions established within the General and Supplementary General Conditions of the Contract, Division 1 - General Requirements, and the Drawings are collectively applicable to this Section.

#### **1.2 SUMMARY**

- A. Work Included:
  - 1. Installation of pipe material.
  - 2. Construction of drainage system structures including curb inlets, junction boxes and catch basins.
  - 3. Ditch-out for storm drainage system discharge.
- B. Related Work Specified in Other Sections
  - 1. Section 31 23 33 - TRENCHING AND BACKFILLING
  - 2. Section 31 00 00 - EARTHWORK

#### **1.3 COORDINATION**

- A. Contractor shall coordinate installation of drainage system with other construction throughout the site.
- B. All construction shall conform to applicable City/County Specifications for Construction.
- C. All work of this Section shall be completed within the limits of the site property boundary or designated offsite easements.

#### **1.4 REFERENCES**

- A. ASTM C76: Specification for Reinforced Concrete Pipe
- B. AASHTO M294 HDPE Pipe
- C. ASTM F477 HDPE Fittings

#### **1.5 SUBMITTALS**

- A. All pipe and fittings not covered by this specification shall be approved by the engineer seven days prior to bid.

### **PART 2 - PRODUCTS**

#### **2.1 PIPE**

- A. Reinforced concrete pipe shall be Class III.
- B. Plastic pipe shall be PVC SDR35 or Schedule 40 or HDPE heavy wall meeting the requirements of AASHTO M294 and ASTM F477 with corrugated exterior with smooth lined interior. All pipe joints and fittings shall be watertight.
- C. ADS HP Storm polypropylene pipe (dual wall) meeting the requirements of AASHTO M330, and ASTM F2881 with smooth inner wall and annular exterior corrugations.

#### **2.2 DRAINAGE STRUCTURES**

- A. Materials for the construction of inlets and junction boxes shall be as specified in Division 7, "Structures" of the NCTCOG's Standard Specifications for Construction.

### **PART 3 - EXECUTION**

#### **3.1 GENERAL**

- A. The locations of all structures and lines and grades of all pipes shall be staked by a registered surveyor. All facilities shall be located according to the site layout plans.
- B. Contractor shall utilize necessary measures, including temporary pumping in order to drain storm water offsite until the public drainage improvements are installed and operational.

#### **3.2 PIPES**

- A. All pipes shall be inspected prior to installation. Damaged pipes shall not be used. Replacement of damaged pipe shall be made by the Contractor at no expense to the owner.

- B. Installation shall be in accordance with ASTM D2321 and as recommended by the pipe manufacturer. Backfill shall be ASTM D2321 Class I, II or III soils.
- C. Pipe installation shall conform to the North Central Texas Council of Governments (NCTCOG) Standard Specifications for Public Works Construction.

### **3.3 DRAINAGE STRUCTURES**

- A. Construction of curb inlets tops and catch basins in pavement areas shall be cast-in-place only with no precast structures allowed. All manholes in pavement areas shall be held below pavement and the frame/lid shall be adjusted to final grade with grade rings. There should be no abrupt grade changes at manholes rims. If abrupt grade changes are present, grade adjustments will be required. Catch basins and headwalls outside of pavement areas shall be either cast-in-place or precast.
- B. Connections of pipe to structures shall be completely mortared around the perimeter of the pipe to ensure watertight connection to the structure prior to backfilling. All bends and tees shall be precast/preformed.
- C. Inlet top and throat shall be poured once pavement improvements are in place.
